

Student Government Association

By Rick Tank

If you've ever run short of cash in a week when the rent was due or lost your wallet the night before a heavy date, you're probably familiar with the emergency loan program handled by Financial Aids.

by Financial Aids. Since 1967, the Financial Aids office at this campus has run a Student Emergency Loan program. In 1871, 20,000 dollars was privately donated to the program by the UW Foundation. There has been concern about the loss in available funds due to delinquent loans. Many students nave been saved by runs convenient and vital service. If you are not acquainted with this program, read on, the information may be helpful sometime in the future. If you're already aware of it, certain new developments may interest and surprise you.

you re already aware on it, Certain new developments may interest and surprise you. During the eight years the program has been running, over 8,000 dollars has been lost in unpaid loans. Loan averages have decreased over the years from an average of \$88.68 in 1970-71 to only \$32.00 in 1975-76. This amount coupled with the fact that \$9,000 was being held on thebooks in the Accounting office without the knowledge of Financial Aids led to the cessation of the program. Since May, no emergency loans have been given . Dozens of students have been turned away. Enough complaints were expressed, however, that on June 25th, a meeting was held with the Foundation, Financial Aids and Student Leadership. As a result of this meeting, the Emergency Loan I Program will be continued next year. New guidelines have been set and a crackdown on delinquent loans put into effect. Because of the \$9,000 which was 'misplaced'' by accounting last year, Financial Aids internally reduced the \$100 maximum loan to \$25. It was felt by all sides at the June 25th meeting that this amount was too low a figure. The new guidelines now permit a maximum loan of \$100.

meeting that this amount was too low a figure. The new guidelines now permit a maximum loan of \$100. These guidelines are also intended to discourage delinquency. Students with past delinquent loans are considered bad risks and will not be granted any additional emergency loans for a period of one year. The payment period will be set at four weeks after which time the loans are considered in the delinquent category. No interest or service charge will be added, however. Another recent development is that delinquent loans will

not be placed into installment billing where they were often marked as such and therefore the student never really knew

what he was paying for. This much needed program will now be continued, but only if the students use it as they would a private loan. It should be stressed that this service is not run with state monies but with private donations.

Responsibility is a must and repayment is an understood and accepted part of the package. It's up to us to keep this

This weeks issue uncovers some of the hidden highlights of summer session activity. We extended our feelers in every department and are now ready to unveil our findings.

department and are now ready to unveil our findings. Many unique but often overlooked places and things are featured. For example, did you know that all those dried teas at the Coop are grown by local folks in an Amherst commune? When properly prepared, these teas can be tasty, medicinal and maybe even magical. The News section makes for rather intense reading with a follow up on the Vet sleeping beneath a war memorial while awaiting disability payments. The future of Old Main is threatened and a debate ensues over postcard registration. News Editor, Jim Tenuta, provides a concentrated look at some of the problems facing middle income students with the current financial aid criteria. Readers are shown an inside look at the local En-

Readers arc shown an inside look at the local En-vironmental Health office in the Environmental department. A new approach to some old ecological concerns emerges in a new book, "Small is Beautiful," in the Eco-Bookshelf.

new book, "Small is Beautiful," in the Eco-Booksheir. The Arts section is especially complete with a photo-preview feature on current theater productions. We've also included the Polish exhibit in the CNR building and the opening of the Edna Carlsten gallery. We hope you find the reading satisfying and entertaining. The next Pointer will arrive July 30.

Article Bombs

To the Pointer,

To the Pointer, I have serious doubts as to the worth of a paper that utilizes space on articles such as "Stanton Preps for W.V.III," June 18, page 7. Following are a few comments I felt compelled to say.

Comments I felt compelled to say.
Everyone is aware of the present world situation, or should be. Things are a bit absurd, but great progress has been made in world politics. Read the paper, watch the news.
Realisticl y (sic) speaking, there will be no nuclear holocaust. Both the Russians and the U.S. are aware of the results of all-out warfare. No one will survive, even if spared being fried by an initial blast. Fallout.
A third world scrimmage will be just that a scrimmage. Syria recently

3. A third world scriminge will be just that a scrimmage. Syria recently pushed quite near the Israeli-Lebanese border in it's (sic) conflict with the Palestinians. The Israeli's sat on their ranestimans. Ine israel's sai ou their hands. Egypt is rebuilding it's (sic) towns and cities along the Suez. People don't rebuild when they expect to die. Any stupid use of a nuclear bomb by a small country will be instantly immed upon and endergoed

by a small country will be instantly jumped upon, and condemned. 4. World trade is constantly bringing nations closer. People are tasting luxuries they never dreamed of, and it's amazing the steps people will take to avoid losing their comfortable lives. War ends all conforts but one, which will all experience approach

War ends all comforts but one, which we'll all experience anyway. 5. As to the military side of the world s (sic) major powers-a third world war, if any does occur, will be fought in Europe, with the Russians attempting a 3 day (sic) sweep using conventional weaponry. Tanks, planes, infantry. The strategy would be to take Europe, so as to have a pressure point on the U.S. However, over 50 percent of Russian military force is aimed at China, their long time enemies. If you don't believe me, read about China right now. Their preparations for war, conventional, are amazing. The entire Russian-Chinese border is a maze of underground cities.

Russian-Chinese border is a maze of underground cities. 6. Lastly look at how far man has progressed in 100 years. Have some faith for Christ's sake. Don't learn just enough to back your pessimistic con-demnations. Unemployment? Star-vation? Alienation? Facts of life. But what of the world conference recently held which had world food production as it's (sic) main theme? What of countries helping others? It happens everyday. And don't forget the past 2 years. Did you see any bread lines? This paper should deal with pertinent

lines? This paper should deal with pertinent issues, not crap. Land use policies, birth control, the oceans, pollution, standards of education (which at present don't exist), mass transit, the energy crisis, the crumbling tax base of American cities. How about some good, healthy, educational reporting? Let's become literate about life.

Dennis Wilson 917 Washington Ave. Stevens Point

Editor's Note:

Editor's Note: The June 18th issue evolved around a time warp theme. "Stanton Preps For WW III" represented the <u>futuristic</u> element. It was a feature story dealing with one unique individual's speculative views. Thank you for providing us with vours

me on

Rape Retort

To the Pointer. I was quite upset over the article "Detectives Rap on Rape." In my opinion, there are fallacies in the in-terview with the Police Department which I would like to point out.

which I would like to point out. I was a victim of rape this year. I waited three days to go to the Police, because I was afraid the rapist would retaliate. I gave my story to the Police, the district attorney, a lawyer, and the hospital. It was a long and aggrevating procedure. From my experience, the only consideration I received was from the hospital and the lawyer. I decided to prosecute which was a hard decision to make, because the new rape bill had not been nased yet. been passed yet. The Police knew who the rapist

and told me they were going to pick him up. It has been seven months and they and told me they were going to pick him up. It has been seven months and they still have never even questioned him! You would think they would be con-siderate enough to contact me about their decision, but they never have. It had to continually call them to see what they were doing even after they had said they would call me. They sent my otothes to the crime lab in Madison and I still don't have them back. In the interview they said their main foncern is the ''welfare of the victim.'' I net that the Police were very inefficient in this aspect, even though this should be their main concern. Three months ago, I had a meeting with three detectives. They emphazied and how they would straighten it out right away. They told me they would stevens Point Police Department only fills a rape victim with false hope, something she doesn't need at all. Name Withheld Upon Request

RAPE: ANOTHER VIEWPOINT

BY THE PORTAGE COUNTY ANTI-RAPE UNIT

24-HOUR CRISIS LINE: 341-0700

A Rape A Minute. The incidence of rape is on the rise because of society's attitude toward the relative roles of men and women, because of the prevalence of myths, and because the law enforcement and criminal justice system often do not recognize rape as a legitimate crime. Between 1960 and 1973, there has been a 351 percent increase in the incidence of forcible rape (Wis. Dept. of Justice). One rape is occurring in the U.S. every minute.

In our society, sexual myths often obstruct justice. One common myth is that a rapist is a sick man who must be treated with sympathy. According to Manachim Amir's classic study, "Sex offenders do not corstitute a unique or psychopathological type; nor are they invariably more disturbed than the control groups to which they are compared.

Another myth: Rape is committed in a heat of passion by men who have no other release for their sex drives. But rape is not a crime of pleasure or passion. Amir's study shows that 75 percent of all rapes are preplanned acts of violence, and 3 out of 5 rapists are married and have regular sex.

The"Bad Girl" Myth. Another widespread belief is that only "Bad Girls" get raped. However statistics indicate that victims fall into all socio-economic groups all ages (an N.Y.P.D. study included victims of two months to 90 years), and from all walks of life. Tied to this previous myth is that women "ask" to be raped by wearing fashionably short or brief clothing. A study by the National Commission on the Cause and Prevention of Violence indicated that rape ranks the lower thereent age of victim precipition of all crimes of the lowest percentage of victim precipitation of all crimes of violence: 4.4 percent of all rapes are classified as victim precipitated, cantrasting with 22 percent for homocide and 14.4 percent for other assaults.

6 out of 10 Go Unreported. Existing statistics do not discolse the total incidence of rape. Given the prevalence of myths, women have been justifiably hesitant to report their assaults to officials. The FBI extimated conservatively that 6 assaults to ornicials. The FBI extimated conservatively that 6 out of 10 rapes go unreported. In 1973, 51,000 founded founded rape cases were reported. Founded cases are those which law enforcement officials believe an assault has oc-curred: 15 percent of the time officials do not believe the victim. In 51 percent of these believed cases the suspects wereapprehended; 74 percent of this number were prosecuted; and 47 percent of this group were acquitted. These who are finally convicted came only user what can Those who are finally convicted serve only very short sen-tences in Wisconsin; (This should change soon, under the new sexual assault law.).

What can we do to combat this increase in sexual assaults? The Anti-Rape Unit of Portage County suggests that awareness of the reality of rape; awareness of community resources; awareness of what to do should you be raped.

The Anti-Rape Unit stresses the gravity of reporting an assault immediately. This strengthens the victim's credibility and facilitates the gathering of evidence. As soon as you are in a safe place, call the local police or the sheriff's department. Two female officers with the Steven's Point Police Dept. (in cooperation with the Sheriff's Dept.) have special training in handling sexual assault cases. Request special training in handling sexual assault cases. Request that one of these women handle your case.

The police will take you to the emergency room at St. Michael's Hospital. If you need immediate medical attention and have transportation available, go to the emergency room first, then contact the police or sheriff.

Anti-Rape Unit Support. If you are not comfortable with these alternatives, your initial step can be to contact the Anti-Rape Unit. A member of the Unit will come to give you immediate support, information, and whatever help you need. The Unit can provide transportation, make the initial contact with the police or sheriff, accompany you to the hospital and bring you home.

Jot down important facts while they are fresh in your mind : Jot down important facts while they are fresh in your mind: the time of the assault, where it occurred, description of the assailant, and the circumstances. The police will conduct a detailed interview. Reread your police statement carefully before signing it; request a copy for yourself. If you do not prosecute, it is still important that you complete an in-formational report for the police. This report will be con-fidential, and will lend credibility to other assault reports. At the hermital you will be avamined for injuring, and

At the hospital you will be examined for injuries, and evidence will be collected, should you choose to prosecute. The doctor will discuss the possibility of venereal disease and pregnancy. Make or request a list of medication and medical advice received, including a copy of the medical report. Arrange to have a change of clothing with you.

The Anti-Rape Unit also provides other support services: a victim rap group, volunteer counselors who are willing to talk to you on an individual basis, and long term counseling with area professionals. The Unit has also proposed a women's escort service to provide transportation for women students.

Keep an ear toward the southeast campus in the days to come. Any quiet mornful breaze could quite well be the last sigh of despair from Old Main. Resting on its precarious perch of survival, her cupola will once again be rocked by debate over demolition.

As in the past, there are the optomists who plead for her life, basing this plea on a belief in continued usefulness and historical value. Then again there are those who have already prepared an epitaph.

Although the historical value of the 84 year old structure is obvious, its status as one of the last Old Mains ona UW campus may not be enough to save the building. Even the efforts of may not be enough to save the building. Even the efforts of the State Historic Preservation Board place Old Main on the national register may be in vain.

The question to answered now is one regarding cost of renovation. Old Main's present condition of deterioration is largely due to neglect. Rather than maintaining the building, UWSP officials have chosen three times in the past to place her on the discard heap tipping decisions in favor of new buildings.

In spite of an apparent reversal of the chancellors stand on Old Main's future, questioning of his credibility may be unwarrented. For with impending doom, has come revaluation of the buildings potential.

Besides the activities of the Historical Society there has been an appeal by many who oppose the razing of Old Main. There has been an attempt by the Alumni Foundation to raise money for the feasibility study. It has been suggested that only the center section be renovated. Plans for the utilization of space beyond the administration have been considered. Much of this concern, however, is merely a thin overt showing for the intagibles of heritage and tradition.

overt showing for the intagibles of heritage and tradition. Old Main is an undisputable symbol of both the university and Stevens Point. One can look at the new Stevens Point city flag and find it there. Perhaps no other reminder existing in Stevens Point so pointedly represents the town's develop-ment. Nor is any structure on this campus more enduring or endeared to it's students than Old Main. The practical reality of tax money expendature is certainly a matter deserving objective evaluation. However, the value of Old Main cannot be measured solely in dollars and num-bers of cinderblocks for a new characterless monolithic box. The destruction of Old Main without an appraisal of remodeling costs would be callous absurdity. Even if warrented as may be the case, reducing her to rubble would be a loss of the campus' greatest personality and a personal loss to the thousands who have identified with this historic cornerstone.

۰.

Memorial Sleep-In Moves V.A.

By GEORGE GUENTHER

Disabled Viet Nam veteran, Michael "Skip" Winter, slept at the Church Street veterans memorial for six nights in June.

When asked why he slept there Winter said, "Because I didn't have any money and I din't have anyplace to stay, because vocational rehabilitation has not paid me since the middle of April."

Winter is attending the University of Wisconsin at Stevens Point under the Veteran Administration (V.A.) vocational rehabilitation program. He sustained a back injury in Viet Nam where he was blown off a truck

As a result of Winter's sleep-in he is receiving over \$1,500 in back payments. A phone call was made

from the Portage County V.A. office to John Bunger, the Regional Director of the V.A. in Milwaukee Regional Winter started Two days later getting checks.

Winter's problems with the V.A. go back a long way. He said, "My service connected back problem is severe enough to keep me from getting a job, but the V.A. is only compensating me at the vial is only per month." He also said, "I lost my family because of money hassles

due to irregular vocational rehabilitation payments last fall." "They (the V.A.) made it im-possible for me to study in a normal atmosphere. The only chance I got for a good life is to get an education and they're making it impossible for me to do that'' said Winter. He

Mail Registration by mail will bon be possible as the result of a cent state statute change. The main when state statute change. The

soon be possible as the result of a recent state statute change. new law aimed at? those cannot register in person. who

"There are people who find it difficult to register in person," said Phyllis Wisniewski, City Clerk. However, Wisniewski said the new law is "a lot of expense and a lot of work."

The mail registration forms will be postpaid by the city and that will be expensive, she said. It has been the consensus of city clerks around the state that the new law will add complications to the registration complications to the registration process, according to Wisniewski. "In our city it has never been difficult for most people to register." she said."We didn't want to do it for the person who can walk in to the city clerks office. "

"I'm going to make it easy for "I'm going to make it easy top someone to register without doing it by mail," she said. Wisniewski announced there will be special days and locations for registration scheduled sometime before the Sent 14th Primary, "The normal scheduled sometime before the Sept. 14th Primary. "The normal healthy person should be able to register by all these special setups." registration. He feels the new mail registration law is a practical means for increasing and insuring

means for increasing and insuring voter participation. Updike stated, "Voting is not a privilege, it is a right. Anything which serves as an obstacle to voting takes away from the rights originally given by our Founding Fathers."

In his opinion, past registration procedures served as an obstacle to voting. He would like to see a greater voter turn out and feels the voter is entitled to this new con-venience despite any increased paper work or bureaucratic changeover hassles.

For the person who wishes to register by mail, no personal ap-pearance is necessary but in-formation entered on the form must be substantiated by two other eligible voters living in the ward or district.

Eligible electors may receive a postpaid registration form from the city clerk when they become available.

added, "they say the reason for my not getting my checks is because the school time I lost while I was sick and in the hospital." Winter proposed another reason

Winter proposed another reason why he was having trouble with the V.A. He said, "Some persons in the V.A. might be trying to get even with me." In 1974 Winter was in-volved with the National Steering Committee of the Viet Nam Veterans Against the War (VVAW).-& a memory of the VVAW As a member of the VVAW Winter participated in the takeover of the V.A. office building on Water Street in Milwaukee

Milwaukee. While Winter was making his home at the Church Street memorial he had many visitors who were sympathetic to him. People bought him coffee and sandwiches and offered him a place to stay. But Winter was determined to stay, but winter was determined to stick it out until the V.A. came across. Winter put it this way, "I haven't got any choice I've tried everything

got any cnoce 1've tried everything else short of walking into the V.A. with a gun." "A lot of people stopped by," said Winter, "a lot of vets that are having trouble with the V.A. showed m. It isn't just me that's being up. It isn't just me that's being screwed with."

Winter ended his story with a bit of irony, "The last time I slept at a veteran's memorial was when I was about. I slept at a vet memorial in

Milwaukee to protect the American flag from desecration by the SDS (Students for a Democratic Society).

University Seen as Aid to Managua

By George Guenther

On June 21, the Stevens Point Common Council passed a resolution adopting Managua, resolution adopting Managua, Nicaragua as Stevens Point,s partner city. Before the partpartner city. Before the part-nership is finalized it must meet the approval of Dr. Jose Canton, approval of Dr. Jose Canton, president of the Nicaragua Wisconsin Committee, in Nicaragua. Also a co-ordinating committee must be set up in Managua.

Mayor James Feigleson said

Stevens Point would mainly supply a cultural resource. The primary cultural resource in Stevens Point is the university. Chancelor Lee S. Dreyfus and Vice Chancelor John Dreytus and vice Chancelor John Ellery have expressed their ap-proval of the partnership. Partners of the Americas is a nationwide voluntary organization. The organization stresses in-

(Cont'. on Pg. 7)

Last Chance for Old Main

by Jim Tenuta

Old Main may receive its final death blow at the next State Building Commission meeting on

"I will, on July 22, give the facts as I know them," said Chancellor Dreyfus, who will be present at the meeting. "If restoring Old Main to meet state codes would be more expensive, I agree, tear it down.

"On the other hand, if the data indicate the space on these two floors can be renovated to meet the codes for less than the cost of tearing it down, I think I'm obligated to til them. I'm just asking them to spend the \$25,000 to find." he addrd.

However, the issue of spending the \$25,000 for studying the feasibility of renovating Old Main may be past the point of discussion. On Tuesdar, June 22, the State Building Commission refused to authorize the \$25,000 for the study. However UWSP officials were

not given notice of the meeting and no one was there to represent the University. Dreyfus said he has been getting " a lot of heat on this issue" and said even his credibility has been questioned.

If the outcome of the July 22 meeting is negative, Old Main will be torn down in 1977 and Nelson Hall will become the new site of the campus adminstrative offices.

Old Main, which was built in 1894, has been nominated to be placed on the National Register of Historical Places. Dreyfus said besides the possibility of saving money by restoring Old Main, there is the issue of the buildings sentimental value. "This building represents the whole university for 17,000 alum-nists," he added.

Everyone agrees the future of Old Main looks dismal. As Dreyfus said, "Once these bureacrats get a fix like this building has to come down, it's hard to change that.

News Notes

Blind Meters Beheaded

Those nasty blind meters, the ones that take your money and hide how much time you have. are going to be done away with this fall.

The blind meters located next to the U.C. are going to be replaced by the conventional meters which show the time. The meters which been eliminated by action recently taken by the Faculty Senate. But all parking news is not good.

The Faculty Senate also denied a motion to open all University parking lots to the public at 5:00 p.m. Had the motion been passed, anyone could have parked in a University lot without having to has only ensuring to without having to pay or fear getting a ticket. The inaccessability of free and con-venient parking for evening ac-tivities has long been a P.R. problem for $\underline{U}.W.S.P.$

Keep On Bussin

If you've been thinking about climbing on the bus to come to classes, this fall is the time to do it

because it's going to be free. Starting August 20 through September 30, all fares will be free in an effort by the Point Area COOP to attract new customers.

PABCO recently received a \$7,811 grand from the Dept. of Tran-sportation to start the project.

Mrs. Mary Thurmeier, PABCO General Manager said, "We will try to get people in the habit of using the bus in the morning. We hope to change the ridership pattern so we will have more paying customers during that time of day." Mrs. Thurmeir said PABCO has

had free fare days before and it has

helped attract new riders. The COOP will be conducting periodic studies of ridership before, during and after the free period. The studies will determine how many new customers PABCO had retained as a result of the program. Housing Prepares for Enrollment Increase

UWSP Housing officials believe there are enough beds in residence halls on campus and private homes in the community to accommodate probable enrollment increase this fall

Currently, 3518 persons have paid \$75 deposits for residence hall rooms this fall. More than 260 vacancies still exist, and approximately 80 cancellations are expected before July 1. Then added to those two figures is the number of

125 beds in Nelson Hall which are being added this fall after that facility is transformed from an office building to its original use as a dormitory.

All told, the university expects to house about 3,900 persons on campus as opposed to 3,450 last year. The additional accommodations came as a result of an elimination of some single rooms, transferring of lounges to temporary bedrooms plus the re-opening of Nelson Hall.

Off campus, says Melvin Karg of the Housing office, the most desirable places have been rented in terms of location, price, and condition.

Students who have waited until now, and especially those who put off their house hunting until the beginning of the fall semester, face a "vexing experience," according to Karg. But he believes that despite the "frustrations" they will encounter in dealing with the "less desirable places," they will be able to locate the second to locate vancies.

In case the present supply of housing is inadequate, Karg said, the management of the Whiting Motor Hotel is willing to accommodate some students.

DISON'S MEND ANNOUNCES OP the SECOND ANNIVERSARY SALE MONDAY, JULY 19th TO SATURDAY, JULY 31st FEATURING TWO OUTSTANDING SYSTEMS

Current projections by UWSP Registrar Gilbert Faust suggests a university enrollment for fall in excess of 8,800 or about 600 students above last year.

Debate Resolved

By Jim Tenuta

"I'm very satisfied with the way things are going now," said Dr. Donald Johnson, director of the Student Health Services. Dr. Johnson threatened to resign his post three weeks ago if the funding for a consulting psychiatrist con-tinued to come from the student

health fee. At the time, Johnson said it wasn't necessary to pay for the wasn't necessary to pay for the services of the psychiatrist out of the student health fee, because the same services were provided by the County through the Human Ser-vices Board (HSB). Dr. Johnson said the demand for psychiatric time here on campus could be met bu pofering students to the UCP. by referring students to the HSB.

The HSB receives close to \$100,000 from the state and federal govern-ment by virtue of the student population, to provide mental care to all county residents. Dr. Dennis Elsenrath, of the

counseling center, disagreed on the grounds that the students have special needs that could not be met the HSB, because they are already overburdened with other county patients. Both doctors had a point and in

the past few weeks the two have gotten together and came up with a plan that is acceptable to both. On July 22, both Dr. Johnson and

Dr. Elsenrath are going before the County Board to propose that the University receive an eight-hour block of time for a psychiatrist to see students on campus.

Johnson pointed out that the County Home brings in \$1,000 a year County Home brings in \$1,000 a year from the government and they receive 15 hours of team time from the HSB. "Team time," said Johnson, "includes one hour of psychiatric counseling." "We bring in one hundred times more money," he said. "For us to ask for four times as, much psychiatric time I think is reasonable." In a related issue Johnson said

In a related issue, Johnson said the UWSP Health Center may have a new physician in the fall.

Johnson said the need for another doctor has been justified "on the basis of the 10 percent increase in patients we saw last year." The increase last year was just a recorded increase which means there were probably more they didn't get to see. Johnson said the Health Center expects to see even more patients next year. It is possible the new physician

will be a woman. Johnson expects a large percentage of the increase next year will be women seeking pelvic exams. "Many of the women requesting to be examined have sais they would like to be examined by a woman, at least the first time

He said there is a women physician in LaCrosse who has met with students here and "is interested in the programs we have here and the relationships we have with students. I consider this a rare opportunity," he said.

Are You Feeling The Middle Income Squeeze?

Have those checks from home stopped coming in the mail? Has the office of financial aids turned down your request for a little extra cash to pay the bills? Do you come from a family with a yearly income between \$12,000 and \$18,000?

If you find yourself answering "yes" to any of these questions, some might say you're feeling the middle income squeeze.

It is possible that a college education is increasingly limited to two groups of students, mainly the rich and the poor. The rich because they can afford the rising costs, and the poor because they tend to qualify for need - basic grants and scholarships.

Here are a few facts:

Research data from the University of Michigan indicates that an average American family will have to spend one third of its entire income to send a child to college.

Tuition at UWSP has just gone up 3.8 percent or \$20.00

Eighty percent of middle income parents want to send their children to college.

These facts seem to indicate that things are really bad for the middle income kid aspiring to go to college, right? Maybe not. There are some who say the middle income squeeze doesn't exist. A group of researchers in the field of higher education met recently in Washingtrgton and discovered there is a lack of evidence that will either confirm or deny the reports that higher education is less accessible to middle income students.

Those who tend to doubt the theory say it is an attempt to dilute the amount of financial aids available to minority groups. It has been pointed out by a Howard University professor that the percentage of income paid for college education by middle income families is lower than the percentage of income paid by lower income families.

Phillip George, director of financial aids at UWSP thinks there is a squeeze but of a different sort. "You hear a lot of talk about a squeeze in the \$18,000 and above income level but these people are talking about going to private institutions that cost \$4,000 and up," he said.

"Where the squeeze is, in my mind, is in the freedom of choice. I think the middle income students are restricted or being squeezed in the sense of their freedom of choice. Their freedom of choice is restricted to the less expensive public institution."

George said that at the public institution "there is a great deal of assistance available."

Managua and Point Join Hands Cont.

ternational development and people-to-people cultural studies to foster better understanding between nations.

The common Council has validated the program, but it is not obligated to pay funds and expenses for travel and material aid. As for the university, Ellery said that it can not commit any general programming revenue funds to the partnership depends upon the interest and commitment of the private sector of the cities that are involved. However the Partnership of the Americas program does receive some funds from the U.S. Agency for International Development.

It is uncertain where the funding for expenses will come from at this time. A co-ordinating committee in Stevens Point is looking into possible areas of funding and to discover specific ways that Stevens Point can help Managua.

Deadline Today for Teaching Exams

Comprehensive examinations for the Master of Science in teaching and Masters of Arts in teaching degrees, in history and social science will be given at 1:00 p.m. on Friday, July16 in Room 472 College of Professional Studies Building. Graduate students interested in taking the exams at that time must register with the department of history (Dr. Justus Paul for history; Dr. Guy Gibson for social science) no later than Friday, July Exactly how students will become involved will not be known until the co-ordinating committee comes up with specific proposals.

In a letter to Stevens Point, Canton warned that this city should not build up Managua's hopes for a solid partnership only to back down later. The affirmation to the partnership by the Common Council expressed the high level of interest of many community organizations.

of many community organizations. The cities of Marshfield, Wausau, and Wisconsin Rapids have been invited by Mayor Feigleson to join Stevens Point in the partnership with Managua. There is no affirmation from those cities at this time. Feigleson said that many people think it is important for him to travel to Managua to meet that city's mayor, although he is not sure that this is absolutely important. The co-ordinating committee in Stevens Point is awaiting Canton's approval and the set-up of a committee in Managua.

Go to the nearest hospital, take a change of clothing with you. Call a friend, or the Anti-Rape Unit for support Anti-Rape Unit of Portage Cty. 341-0700 24 hrs., every day.

At UWSP there has been an increase in grant assistance in the past year from \$7000,000 to about \$1,2000,000 and roughly four and one half million dollars is given out in financial aids every year.

George summed it up by saying ,"we've come a long way. Ithink the fact is that many students in the middle income range are getting finacial aid here at UWSP".

Break down on the financial aid situation at UWSP for the 1975-76 school year: 4,955 people applied for financial aids last year

2,389 were given financial aid in the form of grants, loans and work study.

767 found jobs and didn't need aid.

339 were denied aid who did not seek other assistance. Roughly 25 percent of these people did not come back to school.

457 received guaranteed loans from banks.

392 were offered financial aid but turned it down.

Exploring Nature at Sunset

Central Wisconsin Environmental Center

It's a shining spring morning and birds, bugs and ticks are bustling amongst the towering pines of the Central Wisconsin Environmental Center. The small group of counselors-to-be waits nervously their first class. Then alien to this woodland morning comes the sound of a school bus and it is acknowledged: "The kids are here?" here!

When the bus reaches the parking lot, Rick Wilke, director of the Center, climbs aboard and welcomes everyone telling them what to expect for the day.

The youths range from kin-dergarten to high school age, but most are 4-6 graders. Whatever the age, they're always excited because they've heard about this unique

they've heard about this unique place from their friends. A year ago, after Wilke had earned his M.S. from UWSP, specializing in Outdoor Education and Resource Management, he heard about an opening for an assistant director of the Center Wisconein Environmental Center Wisconsin Environmental Center.

It wasn't until shortly after that, that the UWSP Foundation signed a 20-year lease for Camp Chickagami, located on Sunset Lake northeast of Nelsonville.

Recently, he has succeeded Dr. Schmatz as director, and Ron Zimmerman has joined the staff this spring as the new assistant director. One look at the architecture of the

cabins is enough to tell you that it is "Early Boyscout", since 1921 in fact. The Scouts still have first dibs

on weekend camping, but the camp itself is going through great renovations. Work-study students and Youth Work Experience groups this summer are working on nature trails, building improvements and learning aids (ever seen a tree stump that's really a garbage can?).

Rate of development depends in part on outside contributions. A fund drive currently being con-ducted among Stevens Point area businesses has a goal of \$50,000 with

half of that amount earmarked for the station's winterizing project. The counselor to student ratio is excellent, about 5:1. When the kids get off the bus, they divide into their

Students Stalk Small Pond Inhabitants

groups, each group under the leadership of one of their new teachers for the day. An hour or so later they arrive back at the meeting place a little wiser, still full of energy and with a new ford. of energy, and with a new friend. Most of the units taught out at the Center have been designed by the Education 350 (Outdoor Education) class. The units range from compass reading to tree iden-tification, and water testing to determine what fish live in Sunset Lake. When the school groups stay overnight they are entertained with campfires, night hikes and star gazing. Field trips to the Center are

becoming increasingly popular; much of the next school year is already booked. There are, already booked. There are, however, still time slots available for organizations to use the facility all this summer and during the winter months.

Rick and Ron do not teach every group; much of their time is taken up with administrative work. The real core of teachers is the un-iversity students. For the Outdoor Education class last semester 72 hours of work at the Center was required.

Several people work under the internship program, receiving from 1 to 6 credits. Other classes that require time at the Center teaching are the Science Methods classes Environmental Interpretation -and Camp Leadership classes. In addition, the station is getting use from artists and even a philosophy class which will focus on en-viromental aesthetics this summer.

Ideally situated, Wilke points out that the station is within close range of four lakes, sloughs, forests of different varieties, grasslands, open fields and even an old churchyard cemetery where children learn some history, sociology and mathematics by studying stones memorializing old Norwegian settlers and figuring out how old people were when they died.

The most rewarding aspect about working at the center, Rick feels, is "Seeing the kids and students enjoying themselves and learning...and that I can _____p these students turn on to nature." One thing especially exciting is the change the Center sometimes brings about in the kids. The one labeled as the trouble-maker by the regular teacher often becomes the

most dynamic and inquisitive.

Working at the Center, besides being practical experience, is a great way to get out of the school rat race for awhile and reestablish a few ties with nature. But sit also means sharing your feelings and knowledge of nature; helping someone else open their eyes and understand something about their environment. Being a college student in a world of lectures, theories and exams, it's difficult to remember how kids' minds work at age twelve: "Can we raid the boy's cabins tonight? Everybody else is. Can we puleeze (sic)?" You know you were successful

when the kids, clutching their jars of crayfish and milk cartons of benthos climb back on their bus and you wave acknowledging their fond farwells.

There's always a chance to get boosts in morale by reading the cards of thanks that come almost daily to the station from previous visitors. Many of the children mention Moses, Wilke's popular Chesapeake Bay Retreiver And there are frequent com-pliments for the cook, Mrs. Yvonne Craig, a recent home economics major at UWSP.

Big Brother Program Grows

By Carol Rucks

There are hundreds of children and adolescents in Portage County who belong to a family with only one parent, either through death or divorce. How can a child with only one parent hope to have the same benefits as a child with two parents?

One possible solution is the National Organization of Big Brothers and Big Sisters. They match children and adolescents between the ages of eight and seventeen with volunteer adults in hopes of establishing meaningful friendships to help the child or

adolescent through the early years of development.

Portage County has had a local chapter of Big Brothers since 1971. Currently, it has 21 Big Brother-Little Brother matches. A Big Sister organization has recently been founded with the help of the Junior Women's Club, but no Big Sister-Little Sister matches have yet been established. In Portage County, Big Brothers and Big Sisters work basically as one organization; both receive funds from United Way, and both work strictly on a volunteer basis. The 18 adults who serve as the Board of Directors are volunteers as well.

Essentially, the Big Brothers and Big Sisters are endeavoring to offer each child of a single-parent family some of the normal opportunities afforded children with two parents. The volunteers share a variety of experiences with the children on a regular basis.

Ordinarily, after a match between a volunteer and a child has been established they will meet for a number of hours every week for at least a year. Sometimes Big Brother-Little Brother friendships

endure for several years. Frequently the children and adolescents dealt with in the organization are those who are in real need of companionship and

guidance. Others may be starting to show anti-social behavior patterns, possibly stemming from a breakdown in their home life.

The Big Brother and Big Sister collectively set up activities for their group. They do such things as car washes, bake sales, picnics, and olympics.

Residents of the community are kesidents of the community are usually the ones who volunteer their time, energy, and help, but Big Brothers and Big Sisters also welcome student volunteers. If you are interested, or have further questions write: Larry Wegger, 2105 Division Street, or call 341-0661.

By Bob Ham Let's begin with an important preliminary destinction. What is the difference between bugs and insects?

Insects are fictional creatures which can be found only on brilliantly colored plates in the family encyclopedia, under "I". In the entire history of the world, no insect has ever been seen outside of this two dimensional habitat. There are thousands of varieties of in-sects, all offering hours of fascinating study.

Bugs, on the other hand, are all Bugs, on the other hand, are all too real. They are deceptively simple creatures, consisting of a small but highly efficient pair of wings, and an enormous set of venomous teeth. Their sole purpose on this earth is to annoy higher life forms, especially man. Bugs are mean, hateful, and so plain nasty, it just makes you want to scream. might speculate that God intended to populate the earth with insects, but something went wrong, and all the interesting, colorful parts spoiled. What survived became Here are some facts about bugs. bugs.

Crafts Center Open For Business A few of the life-time students on campus may remember the old bookstore down in the recesses of the union. For a long time, the large room remained empty, devoid of its bookshelves and school supplies. But in the summer of 1975, a transformation took place. Equipment, tools, worktables, and various materials filled the room. A useless storage area was con-verted into the University Arts and Crafts Center, a resource facility of materials and knowledge covering a wide range of arts and crafts. The list of the center's resources

reads like the latest arts and crafts catalog of supplies. For ceramic buffs, there is a pottery wheel,

They come in a variety of sizes, all of which are curiously immune to Pest Strips, bug sprays, and anti-bug lamps. They are attracted to sweat, perfume, insect repellant, light, darkness, human flesh, and anything else you'd care to mention. They can bite through ten layers of clothing.

Bugs have an arsenal of ways to be pesty. Take for instance the kamikaze method, practiced regularly by those incredibly tiny green bugs--the kind that can penetrate the most discriminating penetrate the most discriminating screen. These microscopic mites look upon every human being as a potential funeral parlor. They circle crazily around your face, until they find a suitable place to commit suicide. The corner of your eye would be perfect. Your mouth and nose are also favorites. If none of these are available, a tall, cool drink will do just fine.

Another popular tactic is the old buzz-in-your-face. Bugs have unlimited stamina, and can stay airborne for days if necessary. They are also capable of emitting a buzzing noise of a particularly annoying frequency, and do so

ceramic tools and a kiln. Jewelry

workers have use of a silver buffer,

tools, and special jewlry casts. For the weaver, two table-top looms and

their creativity at stained-glass windows, printmaking, or sewing goose down goods with the available Frostline kits. The center not only offers material and equipment, but knowledge and plenty of workspace. A library of arts and crafts handbooks and magazines or available for immediate use as

are available for immediate use as

well as overnight checkout. What

use.

continually, just to let you know they're around.

Of course, the favorite method of aggression is the old fashioned bite. Some so-called experts will hite tell you that not all bugs bite. Some, they say, sting, which is really not the same, since it is only done in self-defense. Others, they admit, do bite, but they do it not for spite, but merely to wet their tonsils with our vital bodily fluids. Bullfeathers! Biting is biting, and all bugs do it, whether for protection, nourish-ment, or the pure fun of it. And you can bet that most bugs do it for fun.

Let's take for example the familiar mosquito. Mosquitos supposedly bite for nourishment. But then, they leave this annoying secretion in your skin that causes excruciating itching sensations. This is known as biting the hand that feeds you and that's bad table manners.

Now we come to the larger varieties. Here bugs cease to be irritating and become an actual threat to civilization. They have threat to civilization. They have bodies straight out of the Twilight Zone, and are armed with some really vicious artillery.

Crafty Ideas for Summer

the books can't tell you, the center workers can. Sally Eagon, on duty this summer, specializes in ned-dlecraft, sewing, and weaving. She knows 'a little bit about everything,' but as she says, 'lf there's something we don't know, we'll find somebody who does to help you.

The cost for all these services is minimal. The tools run three cents per hour while use of electrical equipment is fifteen cents per hour. Materials such as paints, yarn, leather, and small tools can be purchased for reasonable prices in the center's sales area. The center worker's advice is free.

This summer, the center's renovation plans will get underway center's The current workspace will be slightly rearranged into five main

wasps, and hornets fall into this category. Finally, there's the monster bugs. These are truly enormous, and are These are truly enormous, and are often mistaken for hairy birds They can usually be found con-suming small trees, and chasing terrified children all about the countryside. The bigger they are, the clumsier they get. They like nothing better than to "in-nocently"stumble into your face and end up in your mouth Yaur and end up in your mouth. Your subsequent gagging fit is music to their ears.

Let's face it, bugs are the world's way of getting even. They are impossible to kill, and either so that you can't keep track of them or so large that they show up on missile radar, and pose a threat to national security. don't bite, they bump, buzz, or commit suicide in your Harvey Wallbanger. We try swatting, spraying, and pest stripping them, to no avail. Screens can't keep them out. They are clever and vindictive and I don't know how to get rid of them either, but I'm working on it. You'll know me when you see me. I'll be the guy with the flamethrower.

The power tool area work areas. will have a press, vacuum, hotplate, vibrator, torches, casts, a polishing lathe, and a power saw. Exhaust lathe, and a power saw. Exhaust vents will be installed in addition to the ceramic area's kiln, drying shelves, pottery wheel, and work tables. A general work area will drawing, leatherwork, and printing. Its equipment includes a paper cutter, dry mount press, hand press, sink, and long work tables. The biggest addition to the arts

and crafts center is a darkroom. Former storage areas will provide a workroom with film dryers, print dryers, sinks with water control valves, white lights and red safelights, counter and worktable space, and locking cabinets for storage.

Horehound Expels Worms

Herbal Teas with Medicinal Properties

By Bob Ham All you people who think tea is a brown instant drink mix you use when you run out of pop, look again. Your friendly neighborhood Ellis Street Co-op has over sixty different birds of teap, from places of for Street Co-op nas over sixty different kinds of teas, from places as far away as Korea and as close as your back yard. You'll find teas there with names like goldenseal, com-frey, horehound, and ginsing. There are also teas made from dandelions, rose hips, raspberry leaves, and red clover flowers. And these aren't pre-brewed. freeze these aren't pre-brewed, freeze dried powders either. These teas are, if you'll pardon the expression, real grass-roots stuff.

We spent two hours at the Co-op, talking with the "tea people," Bob Ramlow and his wife, Mugsy, who live on a farm and grow, among numerous other things, teas. Some kinds they cultivate, and some kinds grow wild. They bring in more than twenty-five different kinds of tea for their own use, and supply the Co-op with seven or eight kinds

Kinds. The rest of the Co-op's tea comes from suppliers who glean it from all over the world. Mugsy explained that the Co-op was very careful about where they got their tea, since much tea is grown in count-tries where slave labor is used.

Pointer July 9, 1976 Page 10

Bob became aware of herbal teas, Bob became aware of herbal teas, as well as other natural foods, when, as a Natural Resources major, he became disillusioned with artificial and processed foods. He also became disillusioned with the "Pop a Pill for Every Pain" school of modern medicine, which is where his interest in teas comes in. Herbel teas are birthy more used

Herbal teas are highly renowned Herbal teas are highly renowned for their medicinal properties. Bob explained that the use of herbal teas for medicinal purposes goes back to an earlier type of medicine and an earlier philosophy of all-around good health. Herbal teas are not instant cures. Their effects come about gradually, with regular use. Each individual tea attends to its own medicinal functions own medicinal functions.

own medicinal functions. Did you know, for instance, that peppermint, coltsfoot, catnip, and rhubarb teas are all good for headaches? Or that comfrey tea makes a good mouthwash, and can also be applied externally on burns, insect bites, and bruises? I chewed on a piece while doing the in on a piece while doing the in-terview, and can personally attest to feeling serene throughout---although this may have been due to the extreme friendliness of the Co-or prometries of the Coop personnel

The Co-op also has a number of herbal blends on hand, for those of you who like mixed drinks. There

was a large jar of something called "Red Zinger," for example. Contrary to what the name might imply, it is neither a Mexican liquer, nor an aphrodesiac. It is a mixture of orange peel, mint, rose hips, alfalfa, and hibiscus, and it's a very popular tea. The Co-op has its own special herbal blend too, made from peppermint, chamomile, sage, mullen, and chickweed. Not only does it make a great hot drink, but it's a good substitute for tobacco, for those of you who prefer to take your tea by the toke.

We talked to Bob and Mugsy at some length about stalking your own tea. Bob said that about seventy-five percent of the Co-op teas could be found around here. He teas could be found around here. He explained that the usual method for preparing the tea for use was to pick it, bundle it, hang it until very dry, then strip the leaves. Bob stressed that the tea should be left in leaf form, if possible, until ready for use, since this cuts down on exposed surface area and, con-sequently, oil loss. (The Co-op provides a number of teas in leaf form.) When you're ready to make the tea, crush the leaves (or whatever), toss your tea (about one tablespoon per cup) into your an-cient grandmother's teapot, and brew away. brew away.

brew away. According to Mugsy, there are a number of different ways to brew tea. A common method is the "infusion," in which you pour boiling water on a measured quantity of herbs in a teapot, and let it steep for five to ten minutes. The tea Mugsy made at the Co-op (a feat which is repeated every Thursday. by the way) was made in

Thursday, by the way) was made in a coffee maker, in much the same way as you would make coffee. Mugsy explained that this was necessary compromise, due to the large amount of tea they had to make. Our tea was made from raspberry leaves, red clover, and licorice root. Some of the partakers added a little honey to the tea, for extra flavor.

Although growing tea for a living would be a rather high-work, lowprofit venture at best, you might be interested in growing it or gathering it for your own use, as Mugsy and Bob do. It would be a good idea to become friendly with the local herbs. Find out what they look like, their medicinal properties, how each is best prepared, and how they all taste.

Of course, you'll want to ex-periment with blending. Trying out new combinations is part of the fun. Blending might also come in handy if you should find yourself taking a bitter tea for an ailment. In such a case, you might want to mix your medicine with one of the more flavorful teas, such as spearmint, lemon balm, catnip, or peppermint.

Wornwood

You don't have to go about your tea tasting haphazardly either. There are a number of good books on herbs. There's The Herb Book, by John Lust, The Weed Cookbook, by Adrienne Crowhurst, and a very interesting book you'li find in the op's tea section, Back to Eden, by Jethro Kloss. Back to Eden goes into explicit detail about the uses of herbal teas. It's arranged alphabetically, both by herb and by ailment. You'll find entries under everything from headaches to hemorrhoids.

If frolicking and gamboling through copse and glen, in search of tea doesn't appeal to you, you should stop at the Co-op and look at their stuff. You can give yourself an herbal education just by reading the labels on the tea jars. You'll learn, for instance, that chicory makes a fine coffice substitute as do makes a fine coffee substitute, as do dandelion roots. (and who can't get a hold of dandelions?) You learn more than you every thought possible about alfalfa. It makes a delicious beverage, rich in vitamins A, B, C, D, E, V, K, Iron, Magnesium, Phosphorus, Calcium, Niacin, and organic salts. When Niacin, and organic salts. When taken every day, it will improve your appetite and attend to your regularity. You'll learn that raspberry leaves make an especially refreshing iced tea. If you look carefully, you'll pick up a useful recipe for making cough lozenges from horehound. You'll even find classy bamboo tea strainers.

strainers

But best of all, you find the teas Sixty different varieties, each with its own unique tast, and its own useful medicinal properties. Each offers a pleasant, refreshing, and most of all, healthy change from all those sugar loaded, carbonated atrocities you've been pouring down your throat. They're all there, ready for your imaginative use.

Come on over to the Co-op and lose yourself among the leaves for awhile. Or stop by some Thursday afternoon and let Bob and Mugsy treat you to some strange brew. They'll be glad to talk with you about the different herbal teas, and their uses

So, if you're looking for great teas, look at the Co-op. And look around you.

Photos by Matt Kramar

A Competitive Sport Frisbee-eee:

Ever since the first Frisbee was flung, millions of these brightly colored, multiple sized objects have whizzed and lofted through this country's skies. Young and old alike display their prowess of the toss in parks, on college campuses, in backyards or anywhere there is enough space to fling a frisbee.

Versions of these flying disks have been around for centuries. The Greeks gave us a heavier version, the discus, in the Olympic Games. But it was Fred Morrison, a Los Angeles building inspector, inspired by the aerodynamics of the Frisbee Baking Company's pie tins who recognized the plate's potential in plastic.

The Whamo Manufacturing Company of San Gabriel, California bought the rights to Morrison's product in 1957. Having kept the basic rib design, Whamo manufactures a "pro model", "mini-frisbees", the "moonlighter" which glows in the dark, and the old standby, the "regular". Other companies have tried to get a piece of the action with Frisbee spinoffs---"Identified Flying Objects", "Flying Saucers", "Flingers", and "Tosser Saucers". Even so, Wham o's Frisbee holds the lead in sales and is doing so well that they decline to reveal any specific sales figures. Mastering the technique of flinging the plastic plate is not difficult, once you learn the basics. The Frisbee thrower holds the disk firmly in his hand, thumb on top, index finger along the rim, and flips the disk away from his body with a backhanded snap. From here the frisbee flinger can expand. He can boomerang the disk into the air or bounce it off the ground. Some try tricky catches using one finger or behind the back snatches, and other daring devils leap into the air catching

Some try tricky catches using one inger or behind the back snatches, and other daring devils leap into the air catching the frisbee between their legs. Frisbee football and "gut frisbee" are popular group games. Gut frisbee consists of two five men teams standing behind lines 15 yards apart taking turns tossing. Frisbees at each other. The throwing team receives a point if the op-posing team fails to catch the disk before it hits the ground. The receiver gets a point if the throw is too high, too low or too

Punch

wide. Each catch must be a clean grab. The team to reach 21 points first wins. For those Frisbee players with professional expertise and

higher ambitions, there is the International Frisbee Tourngner amotions, there is the international Frisbee four-nament held each summer in Eagle Harbor, Michigan. Frisbee freaks from as far as California and Massachusetts come to compete in distance throwing, frisbee football and gut frisbee. Winner of the Gut frisbee competition receives the Julius T, Nachazel Memorial Trophy named for an old Michigan Tech professor. The trophy, made out of a coffee can lid and tin cans, is considered to be the highest Frisbee honor.

^ЭYogurt Recipee

2 cups warm water 1 can condensed milk

3

11/2 tbsp. plain yogurt culture 1 cup instant powdered milk

In a two-quart saucepan, thoroughly mix water and In a two-quart saucepan, thoroughly mix_water and powdered milk. Place over medium heat and stir in con-densed milk. Just before scalding, remove from heat and pour into a quart jar. Let mixture cool to 100-110 degrees. Add the yogurt culture mixing well. Cover jar and leave untouched in a warm place four to eight hours. A few tried and successful methods for this procedure include: Wrapping the jar in a down sleeping bag; Setting the mixture in a car window exposed to strong⁴ sunlight:

sunlight:

Allowing the mixture to sit in a warm oven which has been preheated to 250 degrees and turned off. This process is a bit tricky, so don't be discouraged if the first attempt is not successful. Patience and a bit of practice will provide a pleasing concoction. Compliments of Ellis Street Coop Street Co-op.

ERVIRORARERT

Sanitarians Make the Rounds

By Vicky Billings Stevens Point has its own environmental health office located in the County-City Building. The office staff consists of two sanitarians. Bob Schmitz and Roman Kaminski. Just recently, on May 1, this city health office merged with the county health office. According to Bob Schmitz the merger will bring better services and enforcement of health regulations to the county area.

Environmental health is concerned with how man's immediate environment affects his health. Generally that means it is concerned with public sanitation. Any public places like hotels, motels, restaurants, restrooms, taverns, pools, beaches, school lunchrooms and restrooms, grocery store meat and vegetable counters, etc. must follow the sanitary regulations outlined for their respective establishments in the Wisconsin Administrative Codes.

The sanitarians conduct unan-nounced inspections of those places in Stevens Point to make sure that they are correctly following the regulations and to take a bacteria and coliform count of the food sources and equipment. Along with the regular checking of the food served to the public, there is a special Grade A Milk Program inspection. The sanitarians collect

samples of milk and milk products from all the brands purchased in every city grocery store and test the products like the other food. Since milk is so highly perishable this special testing program is considered necessary to insure

maximum safety. In most food sources, the bacteria count and the coliform count may not exceed 50,000 and 10 parts per million respectively. The regulations are stricter for the milk food sources for which the bacteria count may not exceed 20,000 parts per million and the coliform may not exceed 10. Mr. Schmitz said that the establishments are quite willing to follow regulations as they want to

stay in business. During an inspection the sanitarian notes the things that should be corrected by the proprietors. For example he may properly washed and that the floor needs scrubbing. If the proprietor has been warned about the corrections and still hasn't taken care of them, the establishment will be closed until he does. Most businesses are not willing to risk closure. Contrary to public opinion, that includes places like the taverns on the square and fast food driveins

The sanitarians also handle rabies and pigeon control. The health office is especially concerned about these serious problems. In the case of rabid animals, if a person is bitten and the "suspect" animal isn't captured the victim is required to take a series of shots as a guard against getting the disease himself. The pigeons are other disease carrying animals. The pigeon droppings help spread about three respiratory diseases according to Mr. Schmitz.

The health office also handles certain garbage problems. For example, someone may register a complaint of a neighbor dumping garbage in their backyard. The sanitarians will then investigate the sanitarians win then investigate the situation. Or the office may receive complaints about street litter. In that case, the sanitarians try to track down the source of the down the source of problem. The sanitarians may be asked to

determine to the amount of toxic fumes present in industrial buildings. Often toxic fumes occur where a combustible motor is being used in a building with relatively poor ventilation. The industry must then remedy the ventilation problem.

Other things the environmental office is responsible for is testing the radiation emmission of microwave ovens upon request, giving vaccination certificates to people traveling abroad, inspecting foods and beverage vending machines, and for taking part in

food training seminars held at UWSP and elsewhere. As part of the UWSP and elsewhere. As part of the seminars the sanitarians may explain how they conduct restaurant inspections and show food poisoning films. The food poisoning films. The sanitarians conduct other training programs as well and as part of these take UWSP dietetic students on their routine inspection trips.

One final thing the environmental health sanitarians do is to conduct "on site" inspections of land. The U.S. Soil Conservation Standards Wisconsin land according to its quality, usability, etc. Some land was found to be suitable for developing, some was considered questionable. The sanitarians inspect questionable land if a potential developer asks of it is OK to build on such land. Keeping the evaluation in mind the sanitarians make an appropriate assessment of the land knowing its advantages and limitations.

With all the inspections and such to carry out the sanitarians are certainly kept busy. As Mr. Schmitz says it is a job of constant sur-veillance. He said they don't use ''gestapo-like'' tactics for alleviating sanitary problems. Their job is to inform the public about unsanitary conditions and enforce their correction — it is an educational program.

Eco Briefs

Water Pollution Film

The University of Wisconsin--Stevens Point has received a \$45,000 grant for the production of a 281/2 minute 16mm. color film on water pollution control efforts underway in the United States.

The National Association of Conservation Districts is funding the project with Dr. Robert Burull, director of University Broadcasting at UWSP as producer-director.

The national association serves 3,000 conservation districts throughout the country, and copies of the film are intended to be distributed to each for use in illustrating how land owners and managers can work with con-servation specialists in reducing such problems as nutrient and pesticide runoff. The films are expected to be broadcast on television as well as shown at public meetings.

The project is funded through 1978, but Burull expects to have the job done by next summer. He is attempting to have representative segments from the various seasons as sell as the various parts of the country.

The university grant was of-ficially accepted by the UW system Board of Regents at its May meeting last week in Madison. The

board also accepted a \$645 grant to UWSP from the Department of Natural Resources for researching the age of bear in the state through a process of extracting teeth from the animals.

Humans Among Endangered Species?

Dr. Ruth Hine of the DNR, informed a meeting of the Protect Animal Life (PAL) organization that there are now 18 endangered animal species in the state of Wisconsin. According to Dr. Hine, the greatest threat to both plant and animal species is the human developmental projects. Dr. Hine stated, "If we do not maintain our natural environment, we will soon have no more animals at all and then we will have no more people.

Paper Wastes May Be Enriching Nekoosa Paper Inc. has awarded the UW-Madison a grant to research the usage of paper waste as a soil reconditioner. Previous as a soil reconditioner. tests by the paper company indicate that sandy soils can be enriched by the organic matter which wastes provide.

If test at UWM prove wastes to be of long term benefit, wastes may become an important economic soil additive in the future

Small is beautiful preaches E.F. Schumacher and promptly provides us with a protacted argument to convince even the most disagreeable reader. Schumacher, a sometime economist with the prestigious British Coal Board, has made a long and careful study of the scale of organizations and the industrial civilization of the twentieth century in particular. Few people have thought about this subject of growth, assuming it to be natural for organizations to evolve into larger units. Schumacher did not accept this inevitability and this book is a testimonial to that fact.

Nothing is more contentious today than to dispute the legitimacy of the large scale organizations which dominate our society. These include large hospitals, schools, varsities, cities, and corporations. In fact, this argument has drawn plenty of fuel from many quarters. Some contend that large organizations permit economies of scale while the opponents retort with statistics proving exactly the opposite. Society is deeply divided on this subject and such division is manifested in the debate currently in the United States senate on the breaking up of large oil conglomerates.

Small Is Beautiful

Schumacher contends that large organizations alienate man and do not reap the potential as he is only a small cog in a dehumanising machine. Also these large organizations do not allow the freedom of an individual.

Freedom can only exist in decentralized units where decision making is on a local level and where the choice is open to the participants of the unit. Large units cannot afford such luxury because they have to have an enormous amount of order to function. However large units can de devolved into smaller automonous units such as General Motors has done successfully. Schumacher offers the example of his own organization. The British Coal Board, which exerted little or no control over the autonomous quaisifirms.

Schumacher's dislike for profits is not surprising. He begins his book with the problem of production and holds profit responsible for such crisis. He explains that profits or the love it causes industry to make abundant goods using large quantities of fuel and resources which are finite and soon will deplete. This causes the problem of production. Their problems will also occur as the greedy industrial complex clash with the poor nations in search for minerals and as pollution and labor umrest become unmanageable. These problems will further precipitate in society as cities become livable and the countryside eroded.

The only way out of this maliase is to scale down units. He wishes to return to the advent of the Industrial Revolution where the small entrepreneur ruled the market. But at the same time he wants planning to be there and profits should not constitute the goal of the enterprise. Schumacher and other economists know well that it is the big corporations who have reduced the need for profits. In fact, the reduction of profits is one of the attacks levelled against the corporate executives by shareholders.

Also corpor ations are on the forefront to improve many aspects of the environment. It is true that they are reponsible for much of the social maladies, such as pollution, but it is also the fault of the elected representatives who did not bring these companies to heel. The voters are no less palpable because no one wanted to lose jobs.

by E. F. Schumacher

The large corporations are perfect for the society of today and tommorow. They can afford a large range of experts and research. Being more concerned with stability and acceptance of consumers than with profits, they will be willing to bend considerably more than smaller units in industry. Also the record of corporations is impeccable in many aspects. They were the first to support minimum wage, encourage academic study of many economic subjects and currently are examining the energy alternatives available to society.

Protractors again will point out to the more dismal showings of the corporate and perhaps the most prominent complaint is pollution. Again, it is the fault of corporate leadership as well as government that society has not moved to better techniques of pollution control and found financial ways of supporting such heavy expenditure. However I, as any other supporter, do believe that the cor-

However I, as any other supporter, do believe that the corporation has to improve. It has to humanize its approach even more, create diversity as well as provide permanance through increased innovation. All these improvements, Schumacher points out, we need.

Changes Mark Major League Baseball

by John Rondy

Several years ago, people began to voice complaints that big league baseball was dull. It was time for a change. So, owner Charlie Finley of the Oakland A's started a trend by outfitting his team in circus-like green, white and gold uniforms and white shoes. Soon, the rest of baseball followed suit in rapid succession. The Atlanta Braves got rid of their traditional howing indian and tomahawk in favor of brilliant blue and white colored Jerseys. I remember my dad remarking that they looked more like a softball team. I had to agree.

Along with the uniform trend came brilliant new ballparks and ballgirls. The new stadiums feature picturesque scoreboards, and in a few parks, tremendous colored fountains beyond the outfield fence. Pretty girls sweep the bases between innings, flitting around like hugh Hefner's bunnies while playfully swatting the umpires on the rear.

All of this is "Pure gimmickry," All of this is "Pure gimmickry," you might say. 'Enough to make Babe Ruth roll in his grave." True enough but baseball had to do something, so they took the Madison Avenue approach. Besides, the Babe would have loved it. I'll bet he wouldn't mind being reincarnated as a .250 singles hitter, just to see how things have changed - and to watch the girls of course.

In addition to increased en-tertainment slight rule changes have been adopted to get more offense into the game. The pitcher's mound was lowered con-siderabyly, and the American League pioneered the designated hitter, where a good hitter bats instead of the traditionally weak hitting pitcher.

The fans are once again deciding who will play on the all-star team. This system is about as fair as the electoral process in a communist country, but it helps create fan interest. At least the Al and NL managers are allowed to select their pitching staff and second team players. Jones is a "rags to riches" pit-ching sensation with the San Diego Padres. In the space of one season, he turned around and won 20 games after losing 20 the year before. In the process, he has transformed the once pitiful Padres into contenders. This year, he stands to win 30 games, which is considered phenomenal for a pitcher (he's already there).Jones gives hitters fits with his notoroiously slow pitch, the sinker ball. He works fast and keeps his fielders on their toes. The Padres always seem to play well behind Jones.

Montefusco, a cocky pitcher for the San Francisco Giants, has made a name for himself by making rash

A new breed of stars and superstars have replaced the old ones. Gone are Willie Mays, Sandy Koufax, Bob Gibson and Ernie Banks. Hank Aaron is quietly Banks. Hank Aaron is quiety ending his illustrious career with the Brewers. Now, names like Randy Jones, Mark Fidrych, John "The Count" Montefusco, and Ron LeFlore are making news.

predictions that often come true. The Count can always be counted on for his outspoken comments, and brash predictions. In the dull, predictable world of jocks, Mon-tefusco is the sportswriter's dream. Surprisingly enough, his peers don't resent his unmitigated bragging. they seem to like him as much as the fans do

Fidrych has taken baseball by storm with his unparalled antics. While pitching, he talks to the ball, and gets down on his hands and knees to pat the dirt on the pitcher's mound. He pitches with the en-thusiasm of a total lunatic, cheering every play his fielders make behind him

Two weeks ago on national TV, Fidrych turned in an incredible performance at Tiger Stadium in Detroit. The fact that he beat the

red hot Yankees, 4-1, seemed only secondary to the show he put on. A capacity crowd went totally beserk over him, and would not leave until he reappeared out of the dugout to take a final bow after the game. Theatrics aside, the hard throwing rookie is 9-1, and like Jones, has brought his team back to respectability.

Lamp Anxious For Football Season Jim Lamp, a 1976 graduate of Watertown high school, will attend UWSP in the fall and play football for coach Monte Charles' "Aerial Circus.

Lamp, a 6'5" 250 lbs. defensive lineman, received an honorable mention notice in the Little 10 Football Conference at defensive guard. The well-built blond lettered in football, basketball and track at Watertown.

His football coach at Watertown, Dan Herbst, said he is aggressive and very competitive. "Jim is very anxious to play at Point," said Herbst. "Jim has the overall problem of tall players; this being "peekitis." He likes to occasionally stand and survey the area on the field. He has made tremendous advancement in our program. I think he will be a better player as the competition increases, cluded Herbst con-

Illinoisan Joins Pointers

Bob Holsinger, a junior transfer student from Illinois Valley Community College will football for UWSP. Alt play Although Holsinger is 5'10 150 lbs., his past record indicates that his size has been no detriment to success.

At La Salle High School, Ill., Holsinger was named to the All-Conference honorable mention team as a senior at offensive end, and received the William Pelke Award for persistence and deter-mination in the same senior season.

As a freshman at Illinois Valley Junior College, Holsinger was named to both All-Conference and All-State Honorable Mention teams at defensive back. Last year, he was named first team All-Conference and All-State at offensive end.

Bakken Sticks With Bennett

Tim Bakken, a graduate of Eau Claire Memorial High School, will follow his high school basketball coach to UWSP and play basketball

for the Pointers. Bakken appeared headed for UW--Oshkosh until Dick Bennett, UPI's state "Coach of the Year", left Memorial to take the Stevens Point coaching job. Bakken had been suvugyh heavily by Oshkosh. feel it's an opportunity for me to continue with Coach Bennett," Bakken said. "He's a great coach.

Wausau Stars To Play for Point Gene Ploeckelmann and Tom Glavich, athletic stars at Wausau East High School will enroll at UWSP this fall and play football for coach Monte Charles' Pointers. Ploeckelmann is a husky 6'1' 230 lbs. lineman, while Glavich is 5'11'

and 195 lbs.

A three year letterman in foot-ball, Ploeckelmann was named to the Valley All-Conference team at offensive tackle while a sophomore. In that same year (1973),

received honorable mention on the Channel 7 All-Star team.

Bakken, who played two years at Chetek before transferring to Eau Claire, was a two-year star for the Old Abes and emerged as a statewide star with his great clutch pay in the state tournament at Madison last March.

The 5'11" guard made the big plays to lead the cinderella Abes within two points of a state championship. Bakken was the championship. team leader from his backcourt position and led the club in scoring

position and led the club in scoring with 300 points and a 13.3 average. He was named All-City, All-Big Rivers, All-Northwest, Most Valuable Player in the Big Rivers Conference and second team all-state by both AP and UPI for his performance last season. Bakken also excelled on the Eau Claire besehall team and was

Claire baseball team and was named MVP and also played wide receiver on the Memorial football team last fall.

Last year, Ploeckelmann gained honorable mention berths at both offensive and defensive tackle on the All-Valley team. He copped similar honors on the Channel 7 All-Stars in his senior year.

Last year, Ploeckelmann gained honorable mention berths at both offensive and defensive tackle on All-Valley team. He copped similar honors on the Channel 7 All-Stars in his senior year. Also a heavyweight wrestler,

Ploeckelmann pinned down a first place at the Lakeland Invitational in 1976.

Glavich was elected team captain in his senior year, and was named a High School All-American on the 1976 national honor squad. He garnered All-Conference honorable mention listings in his last two seasons

Glavich could help shore up the linebacking crew on the Pointer, which is the thinnest position on the team.

Pointers Gain Sharpshooter

Ron Allen, former Wisconsin Rapids basketball standout, will attend UWSP and play for the Pointers, announced recently appointed coach Dick Bennet. Allen, a diminutive 5'11," led the

Allen, a diminutive 5'11," led the Valley Conference in scoring and field goal percentage in his junior year, and was an All-Conference selection in both his junior and senior seasons. The sharpshooting guard missed seven games last year with a severe ankle injury, but still averaged 23 points per game. Allen shot a record shattering 64.3 percent in his junior year including a 13 for 14 performance against Merrill

Jack Cepek, Allen's high school coach, said UWSP is getting an outstanding prospect. "I think with his athletic ability and intelligence, Ron stands a fine chance to start on the Point team. He's an excellent shooter and a smart floor player."

Dan Jessie, a former Rhinelander Dan Jessie, a former runnerander swimming standout, will enroll at UW-Stevens Point announced swim coach Lynn "Red" Blair. Jessie is one of the best in what Blair terms "the best recruiting

year ever in Point swimming." 5'11" and 1401bs., Jessie was named most valuable player in both his junior and senior seasons on the always powerful Rhinelander team. He also landed All-State honors in each of his MVP seasons at Rhinelander.

Jessie took fifth place at the state meet in the 200-yard intermediate swim both his junior and senior years. At last year's state meet Jessie placed third in the 100-yard breast stroke.

Blair says Jessie is the best breast stroker ever to attend UW-Jessie captained the Rhinelander squad in his junior and senior years

Karate Club Kicks Back Again

The UWSP Karate club has recently reorganized with instruction from Tony DeSardi. The club will be meeting Tuesday and Thursday in the Ballet room of the Phy-Ed building.Emphasis will include self defense and sparring techniques as well as general physical and mental training.

Curtain Rises at Jenkins Theater

The Summer repertory Theatre Company at UWSP will stage three Company at UWSP will stage three productions for its 1976 season; "Plaza Suite," a Neil Simon comedy to be directed by Anthony Schmitt; "Who's Afraid of Virginia Woolf?," a prize-winning drama by Edward Albee with Robert Baruch as the director; and "Scapino!," an updated version of a French farce by Moliere, directed by Seldon Faulkner.

"Plaza Suite" opens the season on July 13. From then until July 31 the three shows will be performed on alternate nights, Tuesday through Saturday. Curtain time is 8 p.m. in the air-conditioned Jenkins Theatre in the UWSP Fine Arts Center.

Season Coupon Books currently are on sale for \$5.00 at the box office (Monday-Friday from 9 to 4: call 346-4100 after hours) and at the Travel Shop in Stevens Point and Wisconsin Rapids. The coupon book entitles the holder to entry to all three shows--at a considerable savings--when a coupon is exchanged for a reserved seat ticket. Single tickets are also on sale.

This summer's repertory company includes 19 young actors and actresses. Paul Bentzen, a native of Stevens Point, will appear in the leading roles of both "Plaza Suite" and "Who's Afraid of Virginia Woolf?" As an undergraduate at UWSP in the mid '60s Bentzen had major roles in many of the university's theatre productions and later returned to campus for the 1971 summer theatre season. He recently appeared in a science fiction movie filmed in this area and also heads a local band. He is the son of Mr. and Mrs. Herbert Bentzen, 2016 College Ave.

In "Plaza Suite", a series of three one-act plays taking place in a suite at the famous New York Plaza Hotel, Bentzen has the male lead in "Visitor from Mamaroneck," is the tale of a couple intending to celebrate their 23rd anniversary in the place where they had spent their honeymoon, but discover their marriage has gone sour. The second, "Visitor from Hollywood," is about a film director who sets out to seduce his childhood sweetheart. The third, "Visitor from Forest Hills," is an old-fashioned farce in which the parents of a shy bride have a terrible time trying to persuade their reluctant daughter to come out of the bathroom in which she has locked herself and proceed downstairs to her wedding.

Other members of the company appearing in the "Plaza Suite" are: Jill Holden of Oak Park, Ill., who Julie Holden of Oak Park, III., who plays the leading ladies in all three short comedies; Julie Levo, a UWSP junior from Mequon; Kerry Schussler of Bloomington, Minn.; Schussler of Bloomington, Minn.; and three high school drama workshop students: Mark Snowden, son of Mr. and Mrs. Terrence Snowden , 402 Sunrise, Stevens Point; Carol Campbell, daughter of Mr. and Mrs. J. I. Campbell, 2901 Della SL, Stevens Point, and Paul Smith of Erie, Pa.

Cast Rehearsal "Who's Afraid of Virginia Woolf?"

Bentzen has the role of "George" in Albee's powerful drama "Who's Afraid of Virginia Woolf?" which has its premier performance on campus July 14. The drama won all the prizes awarded in the spring of 1963 for the best play of the New York season and has been hailed as one of the truly great American dramatic successes of the century. Its explosive dialogue and uninhibitedly rough language however caused it to be so con-troversial that the Pulitzer Prize Advisory. Based desided against Advisory Board decided against giving it their coveted prize.

Despite its title, the play has nothing to do with the illustrious English writer, Virginia Woolf. Said to have been inspired by some graffiti the playwright saw scrawled on a Greenwich Village wall, the title refers to a song used in the play parodying her name to the tune of a nursery song.

the tune of a nursery song. In addition to Bentzen as the history professor will be Ginny-Lynn Safford of Bolder, Colo., as his wife "Martha," Bradley Bowton of Appleton as "Nick," the young biology teacher, and Julie Levo of Mequon as his wife "Honey."

ARTS

Scapino At Work

The third production of the season Kerry Schussler as "Scapino." His "Scapino!" has its opening per-co-conspirator in underling ef-formance Thursday, July 15, with a frontry, "Sylvestro" will be cast of 14. Slap-stick comedy at its Bradley Bowton and Spencer best, the show is a 1974 English Prokop of Big Bend as "Geronte," version of a play written some three the boss he humiliates and in-hundred years ago by Moliere, one furiates. Mark Snowden and Julie of the greatest comic dramatists of Levo, as "Ottavio" and "Giacinta," all time. The Frank Dunlop Jim will act the pair of lovers whose Dale version to be staged at the romance is aided by Scapino's UWSP theatre is set in a seedy cafe trickeries, and others in the cast in present day Naples, and tells the will be: Michael Janowiak of hilarious story of the adventures of New Berlin, Paul Smith, Paul a sly and lovable rogue who resorts Bentzen. Carol Campbell, Jill to devious schemes to see to it that Holden, Thomas Jollie of Green the right boys get the right girls, Bay, Ginny-Lynn Safford, and high despite parental objections. Seen in the leading role will be Breuer of Port Edwards, and John Belanger of Green Bay. The third production of the season Kerry Schussler as "Scapino." His Belanger of Green Bay.

Polish Heritage Displayed for All

By Dr. Alexandra Kaminska

To celebrate the two hundredth birthday of the United States and the centennial since Alexander Fredro's death, an exhibit of fine arts, decorative embroideries, cutouts, crystals and dolls in Polish national costumes has been arranged by the Polish-American Institute. Dr. Alexandra Kaminska, Mrs. Eleanor Yankowski (Neenah), Mr. Jan Cieszynski (Oshkosh), and Vaclav Bartosz represent the chosen committee. A mini-history of the Polish past in America may contribute to celebrate the Bicentennial:

The best proof of Poland's sympathies toward the American Revolution were Polish volunteers who crossed the ocean to fight in the ranks of the patriots. The most

Photos by Matt Kramar

famous of them and the first foreign fighter for the American Revolution was Thaddeus Kosciuszko. He came to Philadelphia in 1776, as a young military engineer, "to defend this country." He was rewarded with the rank of Colonel of Engineers for his work in fortifying Billingsport, near Philadelphia. Kosciuszko also contributed highly to the victory of Saratoga. Many touching episodes are associated with Kosciuszko's strengthening the American defenses and with his charity towards war prisoners. Made General towards the end of

the war, he then returned to Poland. Casimir Pulaski was another celebrated officer who distinguished himself during the American Revolution. He was a political exile forced by the fussian oppression to leave his home country. His friends from France interceded for him with Benjamin Franklin, who engaged

Benjamin Frankin, who engaged him for the American service. At Brandywine, on September 11,177, while still a volunteer, he saved the retreating American army from being cut off by the British, by a dashing attack with a handful of men. He then reorganized the existing regiments of dragoons, formed a new detachment of horse armed with famous Polish lances - a new weapon on this continent - and supplied the American cavalry with its first set of service regulations. For these services he received the title, "Father of the American Cavalry." Both great heroes, Kosciuszko and Pulaski, have many monuments in the United States and abroad. Before his departure to Poland, Kosciuszko authorized his friend, Thomas Jefferson to employ his whole property for the purpose of purchasing Negroes from slavery and giving them an education in trades.

Besides Kosciuszko and Pulaski many Poles gave important services to the American Revolution. They came to the U.S. with the purpose of fighting for liberty and justice.

The American Revolution broke out four years after the First partition of Poland between the Prussians, Austrians and Russians. Frederick the Great was prepared to go over to the side on which fortune should declare herself (His Memoirs) The The Russain Empress, Catherine II, was considered an ally of England as late as 1778, and there is evidence that she was prepared to send 20,000 Cossacks against the Americans. The reason why she did not sell her soldiers to George III was the same like that of Frederick, namely, her greed for new conquests in Poland. It was Poland which shielded with her dying body the birth of the American Republic. Were Prussia and Russia not embroiled in Polish affairs too deeply, the history of the American Bevolution might have been different.

might have been different. Poland changed her frontiers many times. Where is Poland? This question can be considered from many points of view. One thing is sure: Poland is in the heart of Polish people. Polish are those who love and are devoted to Polish customs and traditions. It is not a question of who does something for Poland, but that one does for the conservation of Polish artifacts and how one does it. For those who cherish Polish

For those who cherish Polish tradition and appreciate the Polish-American cultural relations, the opportunity of the Bicentennial festivities is a date to remember. The Polish-American Istitute Inc. (Plainfield) celebrates the American Birthday by the exhibit of Polish artifacts nin the College of Natural Resources, graciously offered for this purpose by Dean Trainer. Everyone appreciates his generous offer and his helpful attitude.

There are traditional costumes, dolls, embroideries, stamps, cutouts, prints of pictures of great Polish painters, etc. The exhibit is on Monday through Friday until July 15th.

dorms qualify and their counselors too!

New

Video Productions

by Bob Kralapp

There is, in the organizational stage, a project headed by Jack Caldwell working through the Communication Department to produce a series of television productions of a generally dramatic nature t be seen this fall and spring.

The program, modeled partially on the television theatrical acaptations seen on the Public Broadcasting Station, is being designed in cooperation with community theatre groups from the Central Wisconsin area, as well as the Theater Arts and Dance Department here.

The point of the whole thing is twofold; involvement with area theater on a scale not ordinarily witnessed, and exposure of various talents to a situation that can be enlightening and significant to them. The other reason for this program exists in the degree of technical expertise required to produce television of this caliber. The sort of television being considered, in general complexity on all levels, is beyond anything being produced currently on campus, and in this respect could be considered a masters class. It is to develope a new area in television that this project is partially concerned with.

Now, I am not meaning to place any television being done by anyone here at a lower position or status. It is the degree of technical complexity and sophistication on a large scale that I am speaking. Primarily for this reason, only students having had experience or courses in television production will be considered for higher production roles.

Although it is not now the case, the program will eventually extend to establishing course offerings in video dramatics. As it is now, credit can only be earned through independent study or media activity course offerings through the Communications Department.

Providing this sort of theater in the home fulfills two things, one of which is high quality entertainment for those who cannot ordinarily see live theater and, the other, perhaps most important of all, is in joining the University with the rest of the community in improving (for it can always be improved) the present state of the arts. The University itself is liable to benefit from such an experience as this, both in public relations and the recruiting of prospective students and, also, the improvement of departmental sympathies and strengths.

Personalizing the medium is another consideration operating here. The idea is that, by putting community theater on television, a graeater recognition of the various theater groups can occur and allow the contributors to see themselves in a way not now available.

The programs will be broadcast on at least one of the cable stations, twice every other week for eight consecutive weeks. The times of broadcast are tentatively 3:00 p.m. Wednesdays and 8:00 p.m. Thursdays. 

RASTAMAN

The Wailers are a Jamaican rock group that have been around since the early sixties, but have emained relatively obscure in the states until recently. As a group, back in 1964, they called themselves "The Wailing Rudeboys" and sang songs about the tough petty criminal subculture of the ghetto in a bouncy rock style known as "Ska".

But now Bob Marley and the But now bob Mariey and the Wailers are beginning to build themselves somewhat of an in-ternational popularity with their "reggae' music. Reggae is Jamaican street music. — rough, rude, bouncy, and funky. It is

The Joy of Sex, Alex Comfort, M.B., Ph.D.

Reviewed by Mary Owens;

After a ludicrous, commercial barrage of erotic, love-making manuals, a sound, sane book emerges above the gutter. The book is The Joy of Sex by Dr. Alex Comfort. It's objective is to demonstrate how love and sex can be combined in an all new inventive, uninhibited fashion.

In frank, unpretentious terms, the author explains all facets of human

sexuality. Myths and taboos are exposed and explained. Problems such as impotence, premature ejaculation and frigidity are discussed with solutions given. The book also gets into the realm

the unique, suggesting many

characterized by African quarter tones, insistent polyrhythms and repeated phrases verging on chant. Their band consists of eight men and two female back-up vocalists. They play music that is alluring, seductive, and burning with rhythmic passion.

The Wailers mix their driving dance music with the lyric jargon of the "Rastafari Movement" — a religious movement that has been going on in Jamaica since the thirties. The movement encompasses such unlikely things as black racial pride, political violence, the worship of an Ethiopian king named Haile Selassie, dreadlocks, and con-spicuous consumption of herb. The religious and political influences of Rastafarianism is easily visible on "Rastaman Vibration" in songs like "Rat Race" and "War":

and until the ignoble and unhappy regime that now hold our brothers in Angola, in Mozambique, South Africa in sub-human bondage, have been toppled or utterly destroyed until that day the African continent

will not know peace With musical harmonies that have their roots in African chant, New Orleans rock, and black gospel music, the Wailers produce a unique sound which is further ef-fectual with Bob Marley's personable voice, some occasional saxophone blares, and strange

percussion sounds. Their music, with its pounding heavy bass line, is designed to sooth and transcend pain:

ou're gonna spend those lonely hours You're gonna shed

Review

those lonely tears

walk back through the heartaches walk back through the pain This is a very enticing and exotic album, especially the first side. The best song on the record, despite the fact that its lyrics are silly and empty enough to the object of ridicule in a Thomas Pyncheon novel, is entitled "Want More." It is easily the most addicting song on a very addicting album.

Fireside Book, Simon and Schuster. \$5.95, 253 pages

body function in a manner understandable to the layman. Outderstandable to the layman. Out-side from the vague supposition, "Male sexual response is far brisker and more automatic," (a common idea yet to be proven), it accurately describes the basics of sexual behavior. This book is not suggested for these individuals behavior.

those individuals harboring a closed mind. Nor is it intended to be a step by-step guide to successful seduction. Rather, it intends to seduction. Rather, it intends to invite individual experimentation by eleviating embarassment and frustration. The Joy of Sex aims to show people how to achieve full physical and emotional satisfac-tion, and it does so very well.

"The Joy of Sex"

creative positions and stimilating techniques of oral sex. Emphasis here is placed upon mutual ten-

nere is placed upon mutual ten-derness and sensitivity. Sex is not presented as a com-plicated, mechanical manuever. As Dr. Comfort points out, "Sex ought to be a wholly satisfying link between two affectionate people from which they emerge unanxious, rewarded, and ready for more."

The Joy of Sex is a valuable aid in this divorce prone society. It is both tragic and senseless for any relationship to be killed by boredom or imcompatibility. The book proves monogomy needn't be associated with monotony. Refreshingly enough, no standards of "normalcy" are set. Statistics aren't included and value judgements are avoided. The only two established rules are, "Don't do anything you don't really enjoy" and "Find out your partner's needs and don't balk them if you can help it.

The illustrations are candid and direct for the most part. It's ap-propriate that the couple depicted are ordinary people as opposed to the endowed blonde and macho jock stereotypes

The book is also sound from a biological standpoint, being based on the studies of a practicing physician. It adequately explains

... "Ode To Billy Joe Secret of Tallahatchie Bridge Revealed

The most popular and puzzling song of the year 1967 was "Ode to Billy Joe," a narrative ballad sung by Bobbie Gentry in a husky con-tralto laced with delta accents. Six weeks after its release, it had sold over a million records.

The tune, the lyrics, the voice were obviously appealing, but even more so was the mystery: what was thrown off the Tallahatchie Bridge and why did Billy Joe McAllister jump to his death from the rickety old span? According to Bobbie Gentry herself, "The song is a study of the innocent cruelty in the way some people deal with personal tragedy in the most matter-of-fact terms." And the secrets of the terms." And the secrets of the bridge, or rather of the muddy waters of the Tallahatchie, she says, are left to the listener to draw his own conclusion.

No longer. For today in the new Warner Bros. motion picture, "Ode to Billy Joe," the Tallahatchie gives up the answers while Bobbie Gentry's voice, re-tells the story of that June 3, "another sleepy, dusty delta day.

Permission to film the narrative behind her haunting ballad was granted by Miss Gentry to Max Baer, the young film-maker who took a Hollywood crew to the heart of the Delta to bring life to a legend

on the spot where it happened. The picture is a joyous and sometimes heartbreaking story of young romance in the Mississippi Delta. The turbulent love affair is a source of tenderness and humor until the disaster at the Tallahatchie that brought an end to Billy Joe's romance with Bobbie Lee Hartley

Bobbie Gentry can still recall the backwoods of her Mississippi childhood, and she can still recite the names of her teachers and remember what her friends wore to church. Her grandmother still lives in Houston, Miss., near the con-fluence of the Tallahatchie and Yazoo Rivers. In Chickasaw county, where Genry was born, midway between Jackson and Memphis, "Ode^{*}to Billy Joe" was filmed

Bobbie Gentry was there for the start of the production and to watch her ballad unfold before the cameras, with Glynnis O'Connor playing Bobbie Lee Hartley, and Robby Benson playing Billy Joe

McAllister. They are just 20 years old. Featured performers include Sandy McPeak and Joan Hotchkis. The script is by Herman Raucher, author of the successful film, "Summer of '42." Gentry and "Ode to Billy Joe"

have come a long way since her song grabbed the imagination and beat of the popular music world. From a single recording with a few stringed instruments and her

childhood memories, on up through the Top Ten, a Golden Record, television, nightclub and radio shows, Geniry and Billy Joe have made it to the big screen. Miss Gentry, who has won fame as a nightclub and TV entertainer as well as a recording artist has rea-

as well as a recording artist, has re-recorded "Ode to Billy Joe" for the sound track of the film. It is also available in a new Warner Records single
