THE NAME OF THE GAME IS
WINTER SURVIVAL

January 27, 1983
Vol. 26, No. 18
I leant upon a coppice gate
When frost was speckler-gray
And winter’s dregs made desolate
The weakening age of day.

The Darkling Thrust (1900)

Don’t put that in your mouth. You don’t know where it’s been.

Jonathon Winter

When you wish upon a whim

With the passing of the old, comes the freshness of the new. Another calendar year has run its best race and retired from competition. Whether entry 1983 was successful in its cruel pursuits, we’ll let the authors of tomorrow’s history texts judge. In the meantime, it is the dawning of a new year, with all of the hopes and dreams which accompany such a turnover still intact.

So before 1983’s first disaster comes a-calling to dampen our idealistic mettle, Pointer Mag would like to take a stab at wishing for a better world. Certainly the following dream list may be a bit beyond the grasp of any one year, but should even half of our concerns be tackled, ‘heaven on earth’ would no longer be oxymoronic.

POINTER MAGAZINE WISH LIST

For Ronald Reagan and his black comedy players, we wish (and fervently beg) you’ll switch your priorities from weapons to people.

For James Watt, that you may end up in an uncompromising position while touring a strip mine, and find that there’s no one but worthless Indian socialists around to pull your butt out.

For Martin Luther King and his admiring multitudes, may you finally get the national holiday this great humanitarian merits.

That the Supreme Court may continue to stand strong on such controversial social issues as school prayer and abortion. (On a similar note, we hope abortion advocates carefully weigh their individual decisions on the basis of the lives their potential children could expect living under their roofs. At the same time, we wish pro-lifers would spend more of their explosive energies addressing the problems of those babies already born into poverty and neglect.)

For Planned Parenthood, we pray the court decides in your favor that it’s better to have loved and contracepted than it is to have loved and lost (one’s future plans and dreams) — with or without parental knowledge.

That Lee Sherman Dreyfus may finally escape the spotlight for a while and enjoy some down home Stevens Point tranquility.

For Drs. Missey, Crew, Clark, Morser, Schneider, Anderson, Art Simmons, and any of the other responsible university spokespersons, may you continue to see wrong and try to right it.

That some of our most powerful student government leaders will stop treating the words “student rights” and “confrontation strategy” like they were worthless obscenities.

For the rude assholes that are constantly weaseling ahead in lines at registration, text rental, movie queues, or wherever, may an SST crash land in your bathtub, disassembling its wings and your lower sneaky extremities in one vindictive motion.

That the Pointer basketball team may continue along its merry winning ways. Kansas City isn’t Daytona, but we’ll gladly take it.

For global village residents everywhere, we wish that someone, somehow will make it clear to everyone that we are all more alike than different, and must treat each other the way if we are to survive.

Michael Daehn
Mom, can I have a few friends over?

UWSP will host about 11,000 visitors this summer who will participate in conferences, workshops, camps and miscellaneous events ranging from one day to three weeks. The number of people to be served does not include approximately 2,000 students who are expected to be enrolled in the annual summer session.

The largest event will be the Wisconsin Special Olympics for handicapped children and adults. Scheduled in early June, it will attract an estimated 2,700 athletes and coaches plus another 1,600 local volunteer workers and spectators. This event has been growing annually since the first one was held in 1973.

The American Suzuki Institute of Stevens Point will involve the participation of about 3,000 children, teachers and parents in several different sessions during the first three weeks in August. The institute is one of the oldest and largest music-based programs of its kind outside of Japan. It attracts participants from several countries.

The annual Wellness Conference also has become internationally known and has an audience of more than 700 people. This year's sessions will run from July 17 to 23. Junior and senior high school students, mainly from the state, will be coming here by the hundreds to attend either athletic, leadership or fine arts activities.

The annual Point Music Camp for junior high youth will be from June 12 to 16 with about 350 registrants. The senior high sessions will be from June 19 to 25 for about 250 students.

The Wisconsin Association of Student Councils will hold leadership sessions from July 10 to 15 for about 125 junior high students and from July 24 to 29 for about 225 senior high students.

Basketball camps for boys and girls will be led by UWSP's head coach of the men's basketball team, Dick Bennett, on about five weekends in June and July.

Volleyball camps and clinics for coaches of men's and women's teams are tentatively scheduled for two weekends in late July and early August.

About 50 members of the cloth will be attending the Annual Clergy Economic Education Workshop in June.

For senior citizens, three different week-long Elderhostel programs will be held in June and July. They will involve more than 100 people in total.

The College Week for Women is expected to attract about 400 participants from across the state from June 21 to 23.

Other activities will include meetings of organizations of varying size which rent facilities from the university for their meetings, lodging and food service. Many groups use facilities both in area restaurants and motels and at UWSP as part of their total conference programming.

Such a group is comprised of representatives of United Methodist churches in Wisconsin. About 1,100 delegates are scheduled to be at the annual conference from May 31 to June 5. The gathering will be the second for the religious body at UWSP.

All told, about 42 organizations sponsored programs and private gatherings will be scheduled at the university this summer.

The number of total visitors is up slightly from the approximately 10,000 people who were logged last summer, according to university officials.

Sherill Stahl, head of the conference and reservations office reports that some of the events which are held each year, such as the Suzuki Institute and the Special Olympics are continuing to grow in size. Those increases more than offset the decline in facilities use that has been taking place as the result of cutbacks in spending by state and federal governmental agencies.

Ms. Gutman says UWSP was an important meeting center for University of Wisconsin staff and employees. But "a lot of these people no longer have the budgets for travel," she observes.

Ms. Gutman suggests that people interested in signing up for the programs open to public participation such as the music and athletic camps which are offered.

Hoch to hit high note Feb. 7

Soprano Beverly Hoch, recipient of the Kathleen Ferrier Memorial Prize of Young Concert Artists, will perform at 8 p.m., Monday, Feb. 7 at UWSP.

The performance in Michelle Hall, Fine Arts Building, is sponsored by Arts and Lectures, as part of the Fine Arts Series and the Young Concert Artists Series at UWSP. Tickets go on sale Monday, Jan. 24 in the Arts and Lectures office.

Hoch opened the 1980-81 Young Concert Artists Series in the Terrace Theatre and Kennedy Center and sang in the opening concert in New York at the 52nd Street V.

She was a regional winner of the 1977 Metropolitan Opera auditions and won the Sterling Staff International Competition. She made her New York debut as a winner of the 1979 Young Concert Artists International competition.

June 1981 marked the soprano's Carnegie Hall debut with Pinchas Zukerman and the St. Paul Chamber Orchestra in three performances of the Bartok-Schoenberg Festival.

A native of Kansas, she earned a bachelor's degree in 1977 from Oklahoma City University and a Master of Music degree from Wichita State University. A recipient of many of grants from the Martha Baird Rockefeller Fund and the Institute of International Education, Hoch now lives in New York City and works with Michael Trimble and Paul Sperry.

Great American smoke-out

People having difficulty deciding which major to pursue at UWSP are offered the use of a computer to explore their options.

The ranks of undecided students is a big bloc among UWSP freshmen, representing about 30 percent of each year's incoming class.

Being undecided early in one's collegiate career is being touted as something positive on campus. Admissions Director John Larsen says "it's healthy."

There is plenty of time during the first few semesters for students to explore what interests them both academically and careerwise, he explains. Patricia Doeherty, associate director of counseling and human development, concurs with Larsen as she helps the undecided with the assistance of a computer program called "SIGI." That name comes from the System of Interactive Guidance and Information.

The program was the first one of its kind offered at a college or university in the state.

Leased from Educational Testing Service which developed SIGI, the program is updated annually to keep pace with the current job market.

One important thing to keep in mind when considering career options, according to the counselor, is the number of times each individual changes jobs in a lifetime. Human career development goes on and on and adaptability to change is an asset she maintains.

For example, experts currently predict that 75 percent of the jobs people will have in 1990 didn't exist in 1980.

SIGI is available to students in the UWSP Counseling Center, Deitell Hall.

An ancient Medieval art, English smocking, will be taught at UWSP this year and sponsored by Middle Earth arts and craft shop at the University of Wisconsin-Stevens Point. The instructor is Helena Appleton who is one of the few "smockers" in the country.

English smocking dates back to Medieval times and was used in the past as a way to gain elasticity from fabric. Basically it is done by threading a running thread through them. Examples of smocking can be seen in Middle Earth's gallery where students, artists and work. Smocking is used on the cuffs and bodices of girl's dresses, ornaments, pillows and dishcloths, pictures, and aprons.

The workshop is scheduled for Saturday, Jan. 29, from 10 a.m. to 2 p.m. There will be a course fee of $2. If you are interested in taking this course and would like more information call 564-4747.

Prof wants foreign students to study American law

Welder works on UWSP's $565,000 energy modification project in Collins Classroom Center. Recently, the project was dubbed "a disaster" by UWSP Administrator Zeke Torzewski. (Photo by Rick McNih)

Bureaucratic bungle

In addition, Torzewski claimed the bureaucracy between the state Department of Administration (DOA) and the University of Wisconsin-Stevens Point became confused in overseeing the project. The DOA's engineers, who worked with the architect, were only generally familiar with the "hidden costs" of disrupted classes and labs in addition to water heating systems.

It does not make any difference to me or my job, but it does make a difference, where it counts," conceded the assistant chancellor.

That was a judgement call by the System personnel and the DOA," Torzewski contended.

According to the assistant chancellor, the strong demand for firms with the capability to do large-scale modifications made it difficult for agencies involved to let the architect go. If the firm was released it could take months, possibly years, to contract another firm because of high demand.

Torzewski views the bungled project as a delay in the architectural learning experience for all involved.

Hopefully, out of it we'll get some needed changes.

One of the changes alluded to was the approval of the implementation process for some changes already done.

"It's a new ball game. Other schools have reported similar difficulties with these projects. Other schools have been unfairly burdened with too many simultaneous projects.

"This, in my perspective, may not be in the best interests of the state," said Torzewski.

Torzewski noted UW construction personnel will have to dismantle much of the project, at an undetermined further cost to the taxpayers. Originally scheduled for completion March 7 of this year, the reconstruction project should be completed this August.

Zeke Torzewski

original blueprints of campus buildings and failed to note some changes since their construction. Torzewski felt the DOA should deal more directly with the university in these projects, because the university holds the plans and is responsible for calling current building changes.

The problems inherent in modification projects have been compounded by a state bureaucracy familiar with erecting new buildings, but not changing the old ones, Torzewski claimed.

"It's a new ball game. We're retrofitting many buildings. We were used to building new and we're not used to the game of retrofitting."

When the architect came to campus to examine the buildings he failed to confer with occupants, said the assistant chancellor, were unequipped with several projects that were being planned earlier according to the semester ends. Although the council has not decided yet what direction it will follow after the semester ends, Overholt says the council will probably meet less frequently unless a need arises.

One of the projects that the council hopes to accomplish is the establishment of a minority hotline. Although the Minority Affairs Committee of the Student Government Association would play the major role in establishing the hot line, the council would be on hand to help and ensure that the project is completed and goes into operation. The hotline will be operated through the Minority Affairs Committee.

Overholt says the hot line is important because it will allow minority students to voice their problems and concerns. As such, various complaints and sources will be collected on students and teachers.

Bureaucratic bungle

Did you ever tell a friend something and have someone else come back to you a week later with the story, though wildly embellished? In the tangled labyrinth of governmental communication, controverted meanings can cost the tax-payers and state agencies many wasted dollars.

On January 7, 1983 Zeke Torzewski, Assistant Chancellor for Business Affairs stopped a "botched up" $565,000 energy modification project for UWSP's Collins Classroom Center, College of Professional Studies, and Phy Ed Building. He attributed the mistake to a "major bureaucratic snafu" within the state government and its agencies.

In 1980 the Department of Administration chose an architectural firm to modify the three buildings in hopes of saving the University $80,000 annually in energy costs. Unfortunately, state expenditures will top $1.141 million this year.

On January 13, Torzewski issued a memo to all faculty and staff members detailing the extent of the modifications.

"Those modifications included the new lighting in some areas, reducing some window areas, insulation, laying new lead and others that will reduce the number of units necessary for air conditioning and lighting of all heating and ventilating areas. In addition to that, vestibules will be built to reduce wind chill in the buildings, and the Quadrant Gym was to be retired, following the ball and ballast noise reduced."

Why has the modification, in Torzewski's words, turned out "a disaster?"

"My feeling generally is that one of the major oversights on the consultant's part was not to spend anything," Torzewski said in an interview with Pointer Magazine.

The assistant chancellor however, refused to place sole blame on the Appleton architectural firm Fischer and Shutte, saying other groups and individuals also contributed to the muffed project.

"I'm also concerned whether or not the state is paying these architectural firms a sufficient amount of money for what they expect them to do in these energy modification projects. They may be expecting entirely too much for the dollar."

In January 13, Torzewski attributed the bait to something and have someone else can cost the dollars.

The assistant chancellor, the strong demand for firms with the capability to do large-scale modifications made it difficult for agencies involved to let the architect go. If the firm was released it could take months, possibly years, to contract another firm because of high demand.

Torzewski views the bungled project as a delay in the architectural learning experience for all involved.

Hopefully, out of it we'll get some needed changes."

One of the changes alluded to was the approval of the implementation process for some changes already done.

"It's a new ball game. Other schools have reported similar difficulties with these projects. Other schools have been unfairly burdened with too many simultaneous projects.

"This, in my perspective, may not be in the best interests of the state," said Torzewski.

Torzewski noted UW construction personnel will have to dismantle much of the project, at an undetermined further cost to the taxpayers. Originally scheduled for completion March 7 of this year, the reconstruction project should be completed this August.

University ties to business discussed

HUNDREDS of people representing universities and industry across the nation gathered in Madison in mid-November to discuss the impending linkage of university brains and big business bucks.

This forum followed the Board of Regents approval of the UW system’s 1983-85 budget request to the state, which emphasizes the potential role of the university in the state’s economic revitalization.

The meeting of professors and profit-seekers, described by The Milwaukee Journal as a “courting dance”, is raising difficult questions concerning the compatibility of values, interests and goals for both parties. One UW-Madison student newspaper, The Daily Cardinal, recently interviewed Nobel laureate Howard Temin, who described “the dangers which he thinks are likely to occur as big business involvement in academic affairs becomes more prevalent.” Temin cited faculty conflicts of interest, and said that the “university’s emphasis on gaining more state financial support and in turn helping revitalize the state economically is not a valid argument in favor of increased ties with industry.”

A report released in October by the Carnegie Foundation for the Advancement of Teaching concluded that the “marriage” of colleges and business interests would ultimately jeopardize the integrity of higher education.

Conversely, the UW system’s “Profile of University Service to Business and Industry — 1980-82” asserts that the relationships which develop between the university and businesses are “within the academic mission of the institutions and are not designed to compete with the private sector.”

MPIRG suit

The Minnesota Public Interest Research Group (MPIRG) filed suit in Federal District Court November 23 against the University of Wisconsin for “University Service to Business and Industry.” The group is also the term “Center System,” claiming the center is designed to compete with private business and industry.

What’s in a name?

The UW Center system will be phased out by next year, at least as far as phraseology is concerned. UW system president Robert O’Neill, in an attempt to streamline Wisconsin’s network of two-year campuses, is changing the Center System to “Empire of Wisconsin Centers.”

The changes are more than just nomenclature, notes O’Neill. In the November Board of Regents meeting O’Neill announced other significant changes for the Center System. Among these include a decentralization of the Center System administration, the elimination of the Center System Chancellor position (to be replaced by an “executive dean”), and more vigorous attempts to link the centers with other institutions.

Budget casualties

Twenty-four degree programs will be eliminated and enrollment will be reduced by 1,000 at the University of Washington by 1986, according to a recent article in the Chronicle of Higher Education. The cutbacks in that system are a reaction to a 7 percent reduction in state appropriations, and indicate which degree programs in academe — among them certain language, drama, art, music, dance and business education programs — are doomed due to cuts in education spending.

Extravagant Ed. Sec.

Education Secretary Terrel H. Bell, the scoundrel of financial aid and the dismantler of the Department of Education, has spent over $10,000 this year to re-decorate his office. Of the 15 Cabinet members whose expenses to improve their quarters were itemized by the General Accounting Office, Bell was third in amount spent — right behind the Secretaries of Commerce and the Army.

Bell’s suite came to $6,279.

U.C. WISCONSIN ROOM

$1.00 ADVANCE $4.50 AT THE DOOR

TOURED WITH MICHAEL MURPHY 1981 SOUTHWESTERN TOUR
By Lisa Penny
Polter News Writer

At the first Student Government meeting of the semester, members of the Student Senate Finance Committee heard from two organizations. 90 FM presented $1,000 to hire a consulting engineer to determine the feasibility of a new antenna for the station, and Intramurals requested a $46,000 base allocation for 1980.

90 FM explained that they were at a point where they needed professional consultation concerning the research for the impending antennae project and the money allocated, the money will be used for student salaries, fringe benefits, supplies, service and travel.

Intramurals is ordering supplies in bulk and the cost has decreased from $3,000 to $8,600.

Two groups presented themselves to the program committee. The two groups were the Players and the Political Science Association. The Players requested $800 to fund an improvisational workshop for theatrical awareness on campus. Two women who have graduated from UWSP and formed their own group in New York are coming to direct this workshop. This workshop will be open to all students free of charge.

The Political Science Association collected $45.78 for hotel expenses incurred last weekend for a debate on world population was here.

Two resolutions were proposed at the end of the meeting, a university smoking policy and an SGA computer purchase.

The university smoking policy was approved by the Environmental Health and Safety Committee. The resolution states: "Always be responsible for your fellow halls including those fastened to wall, but excluding those just inside door, and that these be designated as receptacles for extinguishing tobacco products only. Also, the dean's safety officers for each academic building designate appropriate smoking areas, if any, and post signs on doors thereon.

SGA presented a resolution requesting a computer for their use. The reasons of reasons were presented: information on budgets are a minimum of each month, SGA uses computer services from other areas which wastes computer time and could waste time, and time could be sold to others to share the cost of the computer, but SGA doesn't think they will have the extra time to sell.

President West announced that Kevin Shibleki has been elected the new city council liaison. Shibleki will be representing the students of UWSP. He took last semester to study the United States Student Association on a national level.

Off-campus Security Reports

**Break-ins spoil return**

A stereo set, consisting of a stereo receiver, turntable and a pair of speakers worth over $1,000, was stolen from 1242 Wisconsin street by Margaret J. Cummings on November 21. An SGA member reported that the burglary took place sometime between Dec. 21 and Jan. 4. Cummings was away on a Christmas vacation that time and was gone from Dec. 21 to Jan. 18. The burglary was discovered by a friend of hers who checked the residence periodically. The burglars gained entry by prying the door open with a tool, the report said.

Besides the stereo set, Cummings also lost a $100 black and white television set, a pair of headphones, cassette tapes and albums, making the total value of $1,629.00, according to the report.

A few other burglaries which occurred during the Christmas break were reported to the police. Martha T. Fashbanger, residing at 740 Vincent Court, lost a stereo set. The equipment is worth about $935.00. Fashbanger was away on holiday and found the items missing on her return. Entry to her apartment was gained by throwing a snowball through the door jamb and sliding the door bolt open, then they also used the kitchen facilities to cook something to eat before leaving. The door was found relocked.

Vince Court, reported that their apartment was broken into, and they found many of their belongings missing. Wine and beer bottles were missing, Jody L. Pence and Fred W. Fox of Smith Hall lost two guitars, an amplifier, an organ and a tape recorder at $175. Nancy L. Thompson and Leanne S. Holmes, of 740 Vincent Court lost an alarm clock, a radio and a pair of goggles which are items. The burglar, thought to be a student, lost his wallet, contained with $78.00 and credit cards.

Jennifer C. Weidens, residing at 433 W. Clark lost her stereo, a camera and a pair of shoes. Also, a check for $100.00 was taken from one of the students.

C. Richter, residing at 1236 University Avenue was given a receipt to fill her stereo set was missing when she returned from a trip.

Steve D. Hoffman, of 1228 B Second Street, lost his two guitars, a stereo system, at $250.00, owned by Nancy L. Thompson and Leanne S. Holmes, of 740 Vincent Court.

**Squeeze every drop out of your furnace**

By Barb Harwood  
Pointe Features Writer  

For many, the thought of dealing with the winter takes some common sense. But staying warm could also end up taking all your available cents. Landlords, tenants, and Student Government Association (SGA) have rounded words of advice on how to save.

Ways to cash in on some energy-saving tips are explained in a brochure provided by SGA. The brochure, published by the University of Wisconsin Extension, tells how to make your dwelling more energy efficient.

Tips include heating only the rooms that are being used, keeping the front area of the heating register clear, and turning the thermostat down when not at home.

The brochure also recommends caulking and weatherstripping to prevent drafts from windows, foundation walls, and anywhere else that cool air may seep in. In addition, storm windows and even plastic covering over windows can cut heat loss.

---

**Setting things right when the flu bugs bite**

By Scott Carlson  
Pointe Features Writer  

Students in School of Business, up, lectures and labs blow by, tests scream at you. And then there are in bed, tired and nauseated. You peek out, wonder how you got so sick. And now, how do you get rid of it?

Unfortunately, the cold and flu seasons are common winter problems that face many college students. Flu and colds are caused by viruses usually inhaled in a spray (sneezing). The flu season is commonly October and March. During the colder months between October and March, ear aches are prominent.

Mononucleiosis, however, doesn't follow a seasonal pattern. The number of mono patients runs average throughout the year, said Dr. John Hendrickson, director for the Student Health Center. Mono takes on many symptoms (a sore throat, pain on tonsils, and little pep), and can be very confusing to a healthcare provider. Reassuringly, Betinis said that mono is not common, and that usually you're suffering from a cold.

The dreaded flu and cold can be avoided. "Dressing right is important," Stevens Point physician David Hendrickson said. "A pair of gloves, inhaled boots, a sturdy, warm jacket, and a hat are normal winter clothing." Layering is also important. Dress with several layers of clothes so that you can adapt your outdoor attire to the weather. You can go out in any weather if properly dressed but, he continued, if it is extremely cold, it's not advisable.

If you must journey out, make sure that your body is covered completely and use an air tunnel effect around your face. This keeps the wind off the skin, Hendrickson said. If frostbite occurs, it should be warmed at slightly above body temperature. Keep it warm so the tissue is protected. The major concern with frostbite, Hendrickson explained, is not to traumatize it and never rub it with snow. Then contact a physician, he advised.

Along with protective winterwear is protective internal care. "A balanced diet, careful salt intake, and stopping at the cold clinic will help," said Betinis.

The cold clinic is a self-help, self-examination center that tells you how to prevent and treat a cold. At the clinic you go through a step-by-step procedure. Take home literature is also available.

Betinis added that "abusing the body with alcohol and cigarettes increases the chance for cold viruses." When the body is stressed, the body's defenses are down. Alcohol is a depressant that concentrates on ridding itself of the excess alcohol which uses energy efficiency. The常用 smoke to reduce this effect.

Cigarettes, on the other hand, are an abuse of the respiratory system, Betinis warned. This hampers the intake of oxygen and the ability of the body to recover from colds. It also lowers the resistance of the respiratory system.

Hendrickson suggested a simple test for breathing condition. Close your mouth, and breathe. "We take breathing for granted," he pointed out, "and that test is what the body will eventually have to go through to get oxygen if you smoke." Betinis also suggested keeping your room well humidified. This helps flush out the viruses that could start in the respiratory system. Besides, he added, breathing is easier in a humidified room. He also warned that if you think you're catching a cold, go to the cold clinic or see a doctor. Ignoring these signals from your body will only make them worse, he cautioned.

In treating a cold, antibiotics won't help, said Betinis. In fact, they may cause additional problems because they kill bacteria that your body needs.

A flu shot will help immunize you against the strain from the last flu. If you go out, but these shots do not prevent the viruses that cause common colds. So, how do you get rid of your cold? Slow down, rest and try for ten hours of sleep every night. Drink plenty of fluids, (eight glasses of water or juice), avoid alcohol and cigarettes, gargle with an eight ounce glass of salt water (if your throat bothers you) and humidify your room. If necessary, take aspirin or a decongestant.

The common cold usually runs from the fall to the summer. So, be patient, the doctors advise, and allow your body to heal.

If you feel worse, get in contact with a doctor. The Delzell Health Center is open for students on Monday, Wednesday, and Friday 8 a.m. to 4:15 p.m. and Thursday and Tuesday from 9 a.m. to 4:45 p.m.
Energy Assistance

Fueling your empty checkbook

By Laura Sternweis

Pointer Features Writer

If you can't pay your utility bills, Wisconsin Public Service can shut off your gas, electricity, or both.

A credit representative of Wisconsin Public Service said that your power can be shut off if 1) the company contacts you personally, 2) the outside temperature is more than 32 degrees Fahrenheit, and 3) there's no bad weather in the immediate forecast.

Whether or not power will be shut off depends on each individual case, the representative said. For example, if you're only two months behind in your payments, your power won't be cut off unless you have a record of nonpayment.

When you get behind in your payments, Public Service will contact you and get as much information as possible about why you haven't paid your bills, the representative said. If you need financial assistance in order to pay, Public Service will help you get it by referring you to the Portage County Community Human Services Department.

For the last three years, the Portage County Community Human Services Department has provided emergency energy assistance. This assistance will be available for the 1982-83 heating season from now until March 31 for households with a fuel emergency. Your household is in a fuel emergency when you're refused service because you can't pay or arrange credit for your bill, or when the energy source that heats your home is inoperable.

Energy coordinator Sharon Spencer said that students who work 20 hours a week or who are on work study can be eligible. The department looks at your gross income for the month prior to when you apply for assistance to determine if you are eligible for the program. Your gross income must be under 150 percent poverty level. This is the gross income of your household; your income and the income of your roommate(s) is added together and divided by the number of months in the semester in order to determine your monthly income.

Married students with dependents are also eligible for the program. If you are interested in this program you can call Sharon Spencer at 346-4556.

If you are eligible, you'll get an energy assistance check in three to four weeks. The check may be made out to you and your energy supplier. If so, you should endorse it and send it to your supplier.

If your energy costs are included in your rent, your landlord must say so in a signed and dated statement. If you heat with wood, you should save your wood receipts. Under these circumstances, your energy assistance check will be made out to you alone, and you should endorse it when you're ready to cash or deposit it. An energy assistance check is to be used only for paying your energy bills. Quality Controls of Madison looks over the Community Human Services Department's file to guard against fraud. (So if you cash your check at Bruiser's, you'll get caught.)

You'll only be eligible for emergency energy assistance once during the 1982-83 heating season. If you should need additional assistance, you'll only be able to get it through Protective Payee Services, Spencer said.

Under Protective Payee Services, you'll be assigned to a homemaker. The cost depends on the individual's circumstances. For more information, you can call 346-3798.

Eric Clapton has spent the last several months finishing a new studio album, Money and Cigarettes, his first release on Warner Brothers Records is scheduled for a January 25 release. A five week Clapton tour of the United States will follow at the end of February. Jeff Beck has started work on a new album with drummer Simon Phillips. In a move away from his recent jazz-rock ventures, Beck's new album can be expected to have a distinct blues style. Asa returned to the studio in November to begin work on a follow-up to their debut album which sold over two million copies in two months last spring.

Producer Steve Lillywhite is working on their third album, War, scheduled for a late January release. It reportedly contains the most aggressive music that U2 has ever recorded...Steve Winwood has hinted that he is considering a limited return to the stage. He hasn't played on tour since 1974 with Traffic...The soundtrack for Warner Brothers' film, King Of Comedy is being cut with artists including Van Morrison, B.B. King, Doc Ocasek, Tom Petty, Donald Fagen, Robbie Robertson, The Pretenders, Rickie Lee Jones, Ray Charles, and Bob James...Al Jarreau's Breakin' Away has been certified platinum, his first...Notable releases this week: Garland Jeffreis, Guts For Love; Red Rider, Nebraska; Peter Erskine, Contemporary; Phil Lynott, The Phil Lynott Album.
Land here and your dog team goes out of control. Lose 30 degrees and go sliding madly through the doggie detour. Mush!

Your anatomically correct snowman loses his head during a warm spell. Gulp five degrees, and next time use a carrot.

Graduate with honors. Add one degree.

Anti-freeze helps you warm up, but it doesn't work on your girlfriend. Lose 15 degrees trying to jump-start her.

The power goes out while you're skiing, and you're stuck on a tree stump. Wander up and lose 20 degrees.

Land here and get lost in a blizzard! Lose 20 degrees and go wandering down the blizzard detour. You poor devil. If you land in the ice hole, lose all your degrees.

Get through your ski weekend with both femurs intact. Gain 10 degrees and have yourself a nice hot drink.
INSTRUCTIONS

Hi there, b-b-boys and g-girls, and welcome to Stay Warm, Pointer Magazine’s cuddly winter survival game. It’s a game you’ll want to snuggle up with on those cold, blowy days when no one wants to play outside, but everyone wants to play—if you catch our five-foot drift. Just follow these simple instructions and nothing can go wrong.

Markers. Use buttons, coins, acorns, markers from other games, paper clips, Cheez-Its, rings, doorknobs, artificial heart valves, or anything else you can think of.

How to start. Spin the dial on the game board and advance your marker the appropriate number of spaces. To do this, you’ll have to cut out the thermometer-pointer, put a cardboard backing on it, and fix it to the center of the dial with a tack or something. If you don’t feel like doing this, just roll dice instead. The fact that we spent hours making the dial shouldn’t even be a consideration. Just forget it. See if we care.

How to play. Everyone starts with 65 degrees and advances around the squares and footprints of the game board, gaining or losing degrees according to the instructions on the spaces they land on. When a person runs out of degrees, he or she should immediately be warmed up by a player or two of the opposite sex. Once thawed, the player gets thirty free degrees and resumes play. How you warm each other up is none of our business. Could be with hot cocoa. Could be something else. We’re certainly not suggesting anything naughty or immoral. Uh-uh. Not us.

How to win. Before starting, set a time limit for play. The warmest person at the end of the time period wins. Of course, if you’re having too much fun warming each other up, you can forget about time and keep playing for as long as you want. This isn’t one of those games where you have to follow all the rules to have a good time. Rules were made to be broken. These rules were made to fill up space on the game board.

Blizzards, Dog-Teams, etc. If you land directly on the Blizzard or Dog-Team square, you lose degrees, and have to follow the black footprint or doggie-paw detours. If you land directly on the Lose-your-shoes space, it’s off with your booties, kid. If you just land on a barefoot square, forget it. It’s not your problem. You still have your shoes.

Alcohol, drugs, and taking your clothes off. We believe that the use of alcohol, drugs, or special rules where you have to take your clothes off can make this game much more enjoyable, provided they’re not used in moderation.

Stay Warm was created by Bob Ham, Mike Daelm, and Jim Drobb. Copyright, 1983.

Girlfriend gets a package from Frederick’s of Antarctica—crotchless longjohns. Add 10 degrees.

Land here and lose your every. Lose 20 degrees for every bare footstep you land on.

You contest your gas bill, and Public Service sends you a complimentary copy of “Cooking Without Heat.” Lose 13 degrees and your appetite.

You discover that your pet polar bear needs more personal space. Move into your bathroom and lose 20 degrees.

Your polar bear decides he needs more personal space. Move into your bathroom and lose 20 degrees.

You discover that a croquet ball button has a cure for the common cold, but your girlfriend won’t sit still for it. Lose 10 degrees trying to suit your own.

You discover that a croquet ball button has a cure for the common cold, but your girlfriend won’t sit still for it. Lose 10 degrees trying to suit your own.

Make the dust bundles under your bed into a towel with sandwich, go outside with five more degrees.
A spontaneous way to melt down winter's blues

By Mark Witteven

Early last week I watched a friend of mine lose his legs on this great little patch of ice outside Collins. The dumbass had on hard-soled, no-groove shoes. Not an uncommon choice of footwear but one hell of a way of adapting to winter, especially if one's coordination is comparable to a stoned high-wire walker.

Winter tosses obstacles into the paths of all college students, both physical and mental. It's not that I can't brave the weather, I simply don't want to. I rationalize, "Who knows, there could be some freshly-laid, steaming, mountain of hunchscheis waiting for me to step in. I better not go, it's just not safe out there." The danger of this is nonactivity and, hence, nonproductivity. To avoid these two evils, the bane of the lower half of a friend of mine loss his legs outside Collins. The dumbass groove shoes. Not an uncommon choice of footwear but one hell of a way of adapting to winter, especially if one's coordination is comparable to a stoned high-wire walker.

The landlord replaced a cracked back door with a new door, and the house is sufficiently insulated and has storm windows.

The students themselves have taken measures to keep the heat in. They applied weatherstripping around windows and doors, and sealed off the front door. They go through the garage to get into the house.

Efficiency standards in rental units have a long way to go, said one member of the Stevens Point Advocates for Rental Efficiency (SPARE).

But that group, Rene Daniels, said, has "died out."

SPARE's goal, she said, was to "adopt an entire energy code for rental units."

The group was defeated by the Stevens Point Common Council, which only approved the measure to make storm windows on rental units mandatory. Daniels said the council had a "get the government out of the people's backs" attitude. The council didn't think they were in a position to tell landlords what to do, she explained. They thought it would cost the landlords too much money.

However, landlords Heerey and Sommer gave different standards for caulking and weatherization program at the council's settling for only the storm windows as a "cop out in terms of what could be done." He felt set standards for caulking and insulation could have been established.

Clay said that his studies of other cities where landlords had made rental units energy efficient showed that the increased cost passed on to renters was only $5 to $10. Landlords did not pass the cost on to the tenants, he said.

In his view, utility costs are rising faster than rental costs. "Utility costs show no sign of declining," he explained. So, he feels that what SPARE was pushing for would have benefited landlords and tenants. Landlords would be strengthening the building, making it last longer, and also improving the value and worth of the property. Renters, he believes, would have a smaller heating bills.

Clay pointed out that when it comes to paying the bill, a tenant should always see a copy of the bill. Problems arose in the past when the bill was mailed to the landlord. In one case, the landlord never showed the bill to the tenants, but wrote what the charges were on a piece of paper and gave it to them. When the tenants asked to see the bill, he refused. Clay explained that Public Service needs the permission of the landlord before they can show copies of the bill to renters.

Clay stressed not to sign a lease where the tenant does not have access to the utility bill, and to write anything until he see the bill," he said.

Fuel assistance, rent, emergency funding you receive will be given to this homemaker who will assist you in budget planning for three months. If you receive energy assistance and own your own home, you may be eligible for 10% to 50% of your weatherization of your home. Community Action Program (CAP) Services offers a free weatherization program to homeowners. If you qualify, a specially trained and trained crew will run an audit on your house to determine how to make your home more energy efficient.

SPARE's plan. "I don't have my own house insulated the way they want," said Heerey. "I just don't have the staff for excessive things to be done." Sommer commented that SPARE was asking for too many little things to be done that "he wasn't sure would specially-trained weatherization there were conflicts between SPARE and state legislature ever again.

Ernest Clay, a member of the Tenant Association, saw the council's settling for only the storm windows as a "cop out in terms of what could be done." He felt set standards for caulking and insulation could have been established.

Clay said that his studies of other cities where landlords had made rental units energy efficient showed that the increased cost passed on to renters was only $5 to $10. Landlords did not pass the cost on to the tenants, he said.

Nuclear waste referendum
drawn up by Legislators

By John C. Savaglan
Pointe Environmental

Radioactive waste will not just be a problem in America's past and present, it is also a growing problem that will not go away by ignoring it. While the people of Wisconsin have remained unscathed by this problem, other states such as Washington, Nevada, and South Carolina have been dumping their radioactive waste in Wisconsin. As a result, Wisconsin has become a growing problem that will not go away by ignoring it. The Department of Energy (DOE) has studied numerous plans for storing this waste. Most plans call for building a high-level nuclear waste disposal technology. However, these plans have been shown to be unsuitable for a viable and cost-effective long-term solution. Yet, these proposed plans still have not been ready for implementation. For this reason, Wisconsin was one of the states that used to have a high-level nuclear waste repository to handle, in a permanent manner, this nation's nuclear weapons waste and reactor garage. The Department of Energy (DOE) has some new proposed plans for storing the nuclear waste.
Apostle Islands’ sale earns Obey’s ire

Congressman Dave Obey said last week he has written the U.S. Interior Department “to find out what in the world they are up to with the Apostle Islands National Lakeshore.”

Obey pointed out that according to reports in the last few days, the Interior Department is considering a plan to sell national parkland on one of the Apostle Islands as a vacation estate in the hands of a private family.

The 7th District Congressman blasted the plan and declared, “Local community members as opposed as I am decided to settle the Apostle Islands issue years ago and everyone thought we were in a hands-down position.”

He went on to say, “It’s outrageous that they’re considering changing the rules and we would have to deal with it all over again.”

Obey added, “As Interior Secretary Watt, Obey said, “is that he keeps resurrecting old issues that everybody thought were laid to rest long ago. One day he’s talking about giving companies the right to resume drilling in wilderness areas. The next day he’s underwriting the assault on the Apostle Islands.”

Obey added that “everybody has to spend so much time putting out new fires that that yahoo starts every day that it’s not possible to deal with the real environmental and natural resource problems that we face. He’s just a radical goad who is totally deranged.”

“What makes the Apostle Islands land plan particularly irresponsible,” Obey said, “is that it appears to involve an accommodation of a special interest.”

In his letter to Watt, Obey, a congressman Bob Kastenmeier, who was author of the original Apostle Islands legislation, Obey asked for a full report on the Interior Department’s intentions to sell land back to private hands in the Lakeshore, as well as copies of pertinent documents which would inform Obey and Kastenmeier to review the plan on their own and decide whether it is consistent with current law, regulations and legislative intent.”

The congressman wanted to be kept “fully informed about any further actions with regard to the matter that Interior Department officials may be considering.”

Obey added, “If Watt ‘really wants to be constructive, he ought to spend some time figuring out how we can put kids to work in national parks and use them as a tool to attack unemployment and upgrade the parks at the same time.’”

Obey, said, “Watt is going in the opposite direction. Since Watt was in Washington he has spent most of his time trying to destroy the basic environmental and natural resource values.”

Obey added, “Both the administration and the Interior Department would be a whole lot better off if Mr. Watt returned to his private law practice and some bright, young, being the office of Interior Secretary.”

There’s a more dependable way to get there.

Greyhound is going your way with trouble-free, economical service. You can leave directly from campus or other nearby locations. Most schedules have stops at convenient suburban locations. And talk about comfort, you get a soft, reclining seat and plenty of room for carry-on bags.

So next trip, go with the ride you can rely on. Go Greyhound.

**Record-breaking Pointers shellack Superior**

By Tom Burkman

Point Sportswriter

The final score really tells the story - UW-Stevens Point 38, UW-Superior 36 - but, perhaps, not the whole story.

In coasting to their 13th win of the season here last Saturday night, the Pointers (now 6-4 in conference play) set two all-time school records and also came close to setting two others.

The two records included limiting Superior to eight second half points breaking the old mark of 13 against Northland College set in 1980-81, and their second half points breaking the old mark of 13 against Lakeland College.

Second best records in the game were field goal percentage and fewest points allowed. The Pointers connected on 59.4 percent of their shots only to fall short of the 70.2 clip set in 1979-80 against LaCrosse. And the 36 points allowed was only four points shy of the 1953-54 record set against Lakeland College.

The Pointers hadn’t played at home since their season opening victory against St. Norbert back on Nov. 30. During that span, Point has only lost twice, winning 13 of 15 games. But against Superior, the margin of victory, not the victory itself, was in question.

The Pointers began shooting at a torrid pace hitting their first six shots from the floor. The string was broken at 15:42 when Fred Stemmeller was fouled but he hit both free throws.

In all, 13 Pointers played while 11 scored.

Fred Stemmeller led the Pointers with 36 points and 14 rebounds to surpass Sue Brogaard as the school’s all-time leader in that category with 717.

Three other Pointers scored in double figures as Kathy Bennett hit 8 of 11 field goals for 15 points, Dawn Mansbach drilled 7 of 9 attempts to finish with 14, and Regina Bayer made 4 of 6 floor shots and finished with 13.

UWRF displayed accurate free throw shooting, canning 14 of 16 compared to 15 of 18 for UWSP. Each team collected 79 rebounds, but the Falcons managed to make only 13 of 39 second half attempts.

Senior Ann Beaumanel led UWSP with a career-high 28 points by hitting 10 of 18 field goals and 8 of 11 free throws. She also pulled down 14 rebounds to surpass Sue Brogaard as the school’s all-time leader in that category with 717.

When the half ended, the Pointers led 55-38, shooting 73 percent (24 of 33) from the field and the rout had already started.

The Yellowjackets (1-17 on the season) only suited up eight players while one of their starters, Mitch Lindstrom, was ill and unable to play. Also, Ken Priester, another starter who scored only two points, played with tendinitis in his shooting hand.

With 15 minutes to play, we had three players with four fouls so we just wanted to finish the game,” said first-year Superior head coach Chris Ritchey. Ritchey was an assistant under Pointer head coach Dick Bennett a year ago.

The most excitement during the game might have been whether or not the Pointers could hit the century mark. Freshman Todd Barnes hit a 12-foot jump shot with 14 seconds remaining to give the Pointers their final points.

Point scored the last 22 points of the game while Superior hit only four shots in the second half.

In fact, most of Superior’s offense was provided by Tony Smith who ended with 21 points - 17 in the first half.

“I’ve been on the other side a few times in my coaching career,” Bennett said. “Scoring 100 points is like sticking the needle in. I feel bad that Chris had to experience that, but with reserves wanting to play hard and score.”

He then added, “I’m sure we won’t have anymore of those so we’ll enjoy it while we can. We played loose with intensity.”

In addition to the shooting percentages for Point (43 of 62), they outrebouded Superior (43-21), had fewer turnovers (9-18), and had 14 more assists. Superior shot a dismal 33 percent from the floor including a lowly four of 21 in the second half.

“When you shoot the ball that well” Bennett said, “you eliminate a lot of mistakes like turnovers and over-the-back fouls. If you shoot like we did, you don’t have to worry about much else.”

“After the first eight minutes or so, our defense began to assert itself and forced some turnovers”, recalled Bennett. “Then the defense controlled the play the rest of the way.”

Dave Schlundt played 21 minutes, scoring 17 points and grabbing eight rebounds. Terry Porter (15 points, eight assists) and John Mack (11 points) joined them in double figures.

In addition, Tim Skalnoksi added eight points with eight rebounds in 13 minutes of action.

“Point has a tremendous program,” mentioned Ritchey. “They definitely have a chance to go all the way.”

**Women shoot down Falcons**

By Tamash Houlihan

Point Sportswriter

The UWSP women’s basketball team pounded the Falcons in the second win in a row Friday night, outscoring UW-River Falls 70-48.

The Pointers’ excellent field goal shooting was the dominant factor in the game, as they hit 35 of 61 attempts for a hot 57 percent. UWRF managed to make only 29 of 55 shots for 53 percent.

River Falls shot well in the first half, connecting on 16 of 26 floor shots for 61.5 percent and trailed just 36-28 at intermission. But the Pointer defense took control, as the Falcons managed to make only 13 of 39 second half attempts.

Senior Ann Beaumanel led UWSP with a career-high 28 points by hitting 10 of 18 field goals and 8 of 11 free throws. She also pulled down 14 rebounds to surpass Sue Brogaard as the school’s all-time leader in that category with 717.

Uncle Bob strikes back at pro football

By Bob Ham

As Pointer Magazine’s resident pigskin authority, and a man well known for his uncanny ability to watch football games, TV and drink beer at the same time, I’ve been asked to say a few words about the 1985–86 professional football season. Specifically, I’ve been asked to comment on the strike and its effects.

I could lie and say I think the players all deserve lots more money, that the strike has vastly improved the quality of NFL games, and that all parties concerned to give my feelings on the strike among football fans. My roommate started reading more. My dad took up carpentry and built his grandson a swell toybox. I took up sleeping until three in the afternoon, moping in my bedroom, and clipping complete strangers on the street. I even watched baseball, which ordinarily bores me to tears, and had a Saturday night hangover, a 12-pack of suds in my street. I even watched complete strangers on the street, and bores me to tears, and

There were many reactions to the strike among football fans. My roommate started reading more. My dad took up carpentry and built his grandson a swell toybox. I took up sleeping until three in the afternoon, moping in my bedroom, and clipping complete strangers on the street. I even watched baseball, which ordinarily bores me to tears, and

Swimmers stroke past Whitewater

SID — The UWSP men’s swim team jumped off to a 61-42 lead and then swam exhibition the rest of the meet and finally claimed a 61-42 win over UW-Whitewater in the Gelwicks Memorial Pool Saturday.

The victory was the third in four dual meet decisions for the Pointers this season. UW-SP will be in action again on Saturday, January 29, when it meets UW-La Crosse in another dual contest in La Crosse.

Jeff Stepanski, the former Wisconsin high school state champion, was the only double winner for the Pointers as he finished first in the 50 and 100 freestyle events. He had times of :22.11 and :50.47, respectively.

Also capturing firsts for the pointers were Rick Lower, 200 freestyle, 1:51.77; Chris Morse, 200 individual medley, 2:05.14; Baron Richardson, 200 butterfly, 2:04.95; Pete Samuelson, 2:05.25; and John Heitzinger, one meter, required 1:57.90 points.

UWSP’s 400 medley relay unit of Samuelson, Scott Slabaugh, Richardson and Stepanski was also an easy winner with a clocking of 3:46.73. No one would have thought that I have a terrible feeling that I’m going to start doing those things again, once the Super Bowl has passed. But perhaps the strike has made me a little tougher. Maybe I’ll make it to the next season without any fuss. Maybe I’ll have no withdrawal symptoms at all.

Swimmers stroke past Whitewater

SID — Behind one of its top performances of the year, the UWSP wrestling team captured fourth place in the Northwestern College Invitational Meet, in Roseville, Minn., Saturday.

Waldorf College won the eight team meet with 58 points while Rochester College was second with 62.

Grapplers net fourth at Northwestern Invitational

SID — The UWSP men’s swimming exhibition. was 61-42 over UW-Whitewater in a rematch of last season’s meeting in La Crosse.

The victory was the third in four dual meet decisions for the Pointers this season. UW-SP will be in action again on Saturday, January 29, when it meets UW-La Crosse in another dual contest in La Crosse.

Jeff Stepanski, the former Wisconsin high school state champion, was the only double winner for the Pointers as he finished first in the 50 and 100 freestyle events. He had times of :22.11 and :50.47, respectively.

Faculty are students too

Two artists, a philosopher and a writer have been granted one-semester sabbaticals during the next academic year to do research that will result in new dimensions to the curriculum of UWSP.

The UW System Board of Regents, meeting Friday in Madison, approved sabbaticals for a total of 67 faculty members in the system, including UWSP’s: David L. Smith, associate professor of art; Daniel Fabiano, associate professor of art; Robert K. Miller, associate professor of English; and Thomas W. Overholt, professor of philosophy.

Smith has been at UWSP since 1967 as a specialist in programs to prepare artists as elementary and secondary teachers. He will use his sabbatical to acquire additional training and experience in developing art programs for children with exceptional educational needs in order to start a new course in this field for student teachers.

Fabiano, who like Smith, joined the faculty 15 years ago, will spend his semester (for 11 months) leave to investigate how computers and neon lights can be used as an art form for inclusion as part of several courses on computer-media design.

In addition to his in-depth study of a new medium to be put to use in his courses plus a new one in computer art, Fabiano also intends to create works that will form an exhibition in the Edna Carlsten Gallery on campus at a later date.

Miller and Overholt both intend to write books as the result of their research.
