Honored only in death

A deep melancholy hung heavier than the warm dew over a crowd of 76 marchers as they slowly moved up Reserve Street Tuesday evening. The soft luminescence of candlelight added solemnity to their faces as each gave silent emotional support to the families of 230 U.S. servicemen killed in the recent bombing of a U.S. barracks in Beirut, Lebanon.

American flags were proudly displayed by a few of the marchers in the front of the procession. It was nice to see the flag displayed with pride rather than buried or ripped in a moment of anger. But somehow I could not forget that for the 230 young men murdered in Beirut those stars and stripes would ultimately be more than a patriotic symbol. It would also be their burial cloth.

The sincere, patriotic crowd stopped at various spots on campus to sing traditional songs celebrating America. Our National Anthem, "My Country ’Tis of Thee" and "God Bless America" filled the moist night air with a special reverence. But as touching as these songs were, their recitation disturbed me. Were the marchers mouthing the words as mere Pavlovian response to the new patriotic fervor that has taken the front of the procession? It was another tragic addition to the hands of terrorists seemed just another tragic addition to the Reap-er's legion. Like Shakespeare, I wondered "Death, where is thy sting?"

As we remembered one tragedy, another tragedy was playing itself out among us. These 230 men, a mere fraction of our total troop strength, had earned our prayers only in death. Their comrades remained the targets of real and potential aggressors, unprotected and unremembered by the prayers of their countrymen who have traditionally recalled them only after it was too late.

The crowd wound its way between the dorms on the northwest corner of campus. Blank faces appeared behind the dorm windows—young faces that could someday represent us in Beirut or another international hotspot. As we started back at them, a cruel, ironic thought crossed my now tumultuous mind: before we are ready to lay down our willingness to die for a cause, we should first be ready to live with it.

I shuffled slowly along with the crowd and heard a male deride us from the upper floor of one dorm, "All right, let's go to war!" Within seconds, one of the marchers shot back, "We already are."

Although I didn't agree with his response, a small tear rolled down my cheek when I realized I didn't know why.

Chris Colichowski
Trull and Higbie perform
in Encore Room, Nov. 10

by Kathryn Jeffers

Thursday, November 10, at 8 a.m. in the University Center Encore Room. Etch the date on your calendar to catch one of the most delightful duos of the contemporary music scene: Theresa Trull and Barbara Higbie.

There are only a handful of white female vocalists around today who can corral the stamina, mood and vocal resonance required for belting out believable gospel-based rhythms and blues. The name of Theresa Trull may soon be added to their ranks. Trull is a sultry singer with a husky style like Phoebe Snow, only better. She has a natural beauty and uncontrived soulfulness that can project and call to

alternately warm your heart and chill your spine. Add to this her contagious, dynamic range and offbeat sense of humor, and you have in Trull a performer you can count on to deliver.

The depth and resonance of Trull's vocals are matched by Barbara Higbie's instrumental prowess. Higbie is a consummate musician, having the ability to cover a range from cosmic seriousness to pure whimsy. A prize-winning fiddler who plays regularly with Terry Garthwaite and the Robin Flower Band, Higbie lives up traditional fiddle tunes with warmth and wit. In addition to her top-notch fiddling, she has a mastery of piano keyboards. Her playing is sheer delight—fanciful, surprising and witty.

The real magic comes from the combination of the two together. Trull's voice teamed with Higbie's instrumentation makes for a dynamic musical hoot. They've created a compelling music and comedy team. The two will bring down the house as their energy and enthusiasm rub off on their audience.

Peace Corps will recruit here

Peace Corps representatives will be on campus at UWSP describing their role as director of an upcoming production of "Kismet.

Alice Peet Faust, who came to UWSP in 1965 and has spent the past six years as head of her department, will return to teaching halftime at the end of the academic year.

She says she's delighted to be doing Kismet because it's big, it's technically challenging and it has good dramatic music. She also will direct a production of "Equus" during February, but "that's a different type of play," she explains.

The performances will open at 8:30 p.m. Friday, Nov. 11, and continue at 8 p.m., Nov. 12-13 and 15-19 in the Jenkins Theatre, Fine Arts Center. Tickets are on sale in the theatre arts box office, Fine Arts Center.

The musical is "a wild and woofy love story with complicated relationships and mistaken identities," Peet says. An Arabian nights tale, it is the story of Haji, a beggar and poet who lives in legendary Baghdad. His adventures include stealing the wife of Wasiir, the chief of police. She of course falls in love with the romantic thief. The play is known for songs such as "Stranger in Paradise," "Baubles, Bangles and Beads" and "This Is My Beloved." The play opened on Broadway in 1953 with Alfred Drake and Richard Kiley, who eventually became the "Man of La Mancha," in its leading roles. It opened during a newspaper strike in New York and became a smash hit before the critics could destroy it -- the reviews, when they finally came out, were not favorable. It was made into a movie in 1965.

The music and lyrics are by Robert Wright and George Forrest, from the themes of Alexander Borodin. Borodin was a mid-nineteenth century Russian chemist, tenor and composer, who composed works such as "Prince Igor" and "Polovetsian Dances."

Faust promises new faces and new leading players in her 43-member cast, with at least 30 of them performing multiple roles.

Agriculturalists...

You're Needed All Over the World.

Ask Peace Corps volunteers why their agriculture degrees or farm backgrounds are needed in developing nations. Ask them how, then knowledge of crops, livestock or beekeeping methods help alleviate hunger, increase personal income and develop technical skills. They'll tell you of the rewards of seeing direct results of their efforts. Peace Corps is the toughest job you'll ever love.

Horvath wins 71st District Assembly seat

by Joseph Vanden Plas

Democrat William Horvath easily defeated Republican Ralph Scott Moody Tuesday in a special election for Wisconsin's 71st Assembly District seat. It became vacant Aug. 2 when former representative David Helbach was elected to the state Senate.

Horvath, who will serve the remainder of Helbach's term, which runs until January 1985, received 11,422 votes, good for 59 percent. McQueen garnered 2,604 votes for 13 percent.

Horvath indicated he was not surprised by the outcome. "My reaction is that the election results came as no surprise," he said. "We were aware of comparing notes on what happened to Supreme Court Justice Babitch. The first time he ran in an election here, it was about 60-40. And, Dave Helbach, in his first election attempt, was 60-40 as well. And, I'm about 59 percent I guess and so from that standpoint, that's a pretty good return.

The new representative cited broad community support and experience as major reasons for his success. "We had solid community support. The election committee were people who were all over the community, they were active, they led lives which involved a lot of things in the community. The second thing is just the fact that I've had ten years in the community working with the government in a relationship with other outlying areas, including townships and the county government. And people, to some degree, know who I was and what I stood for and how I conducted myself and I think that was probably the most important aspect (in the outcome)."

Horvath's campaign was centered on fair resolution of the ground water contamination issue, the reduction of taxes when the state's fiscal situation improves, and maintaining programs which contribute to the "quality of life" in Wisconsin. He said the ground water issue will be of particular importance in the next legislative session. "Obviously, for this 71st district, the issue of ground water is certainly one that will play a very prominent role."

"The other issues and agendas are always set for the state legislature when it reconvenes in January, so I'm not going to have that much choice on what I'm going to be dealing with, at least in this first session," he concluded.

Predictably, McQueen was disappointed in the outcome but said he would consider running again. "I'm keeping my options open," he said. According to McQueen, another run for political office would depend on the political climate in the district, his financial resources and his employment situation. He indicated he would not work full-time and run for public office at the same time.

McQueen, who has never held a public office, bases his political philosophy on his interest in Christian principles. During the campaign, he opposed Gov. Earl's tax increases and abortion.

He lamented about having less than one month to campaign against Horvath and admitted his opponent outspent him.

William Horvath

by Laura Stelter

"I want to increase the visibility and credibility of United Council," said Sue Znirdoka, the council's newly elected president. United Council delegates elected Znirdoka after unanimously voting to remove former president Scott Bentley from office at a meeting in September or two weekends ago.

Znirdoka is concerned that United-Council serve its member schools as they want to be served. "Schools in United Council are looking for communication with the U.C. office. They want information," she plans on making United Council accessible to member schools by setting regular, staff hours, sending out a newsletter.

She is also considering hiring a communication director to take charge of the newsletter and handle phone calls from schools and the press. Znirdoka said she doesn't mind answering phone calls herself, but a communication director would add to United Council's effectiveness in responding to calls. "The schools in United Council deserve to know what's going on," she added.

Znirdoka plans on hiring a new executive director and secretary. She hopes to establish contacts with the Board of Regents and UW system administration. She is also concerned that United Council attend to the issues of voter registration, drinking age legislation, and stipends of programs within the council.

Znirdoka said that there is a lot of work to be done in United Council, including "a lot of little things." "The car needs repair and the office needs scrubbing," she said. "The office is a disaster -- the locks of it, and the files. It needs help in every direction."

This is a hectic time for Znirdoka because she still is co-president of the Wisconsin Student Association (WSA) and will continue in that position until a new president is elected. "I'm going back and forth between United Council and WSA right now," she said.

Znirdoka, for United Council president was a "bitter-sweet" decision for Znirdoka. "I had mixed emotions about running. My heart was with WSA. It took a lot of decision making."

Znirdoka decided to run for United Council president because she felt she would be "the perfect person for the job." She said she had the advantage of already being in Madison, and was beginning to establish a rapport with the people the United Council president would be working with.

The United Council president needs to be a "spokesman and a PR person, besides being able to direct staff," she said. She said she was qualified to be that kind of president.

A political science and English major, Znirdoka has had a long interest in politics. She was formerly an aide at the state capitol and has worked on gubernatorial and other state campaigns.

International

Beirut, Lebanon--The death toll from yesterday's suicidal bombing of a United States Marine bastion reached 229.

It was revealed that a guard on duty at the time could not prevent a truck full of explosives from entering the compound because his rifle wasn't loaded. Greater security measures were taken in response to the beheading of U.S. soldiers said the Marines have to remain visible in order to be effective "peace-keeping" forces.

The extra security measures failed to prevent a rocket-propelled grenade attack, which wounded two Marines Saturday. The injuries sustained were not serious, however.

Lebanese President Amine Gemayel was optimistic that upcoming reconciliation talks between Christian and Moslem factions could mark the beginning of a peaceful era in war-torn Lebanon.

Grenada -- With the House of Representatives implementing the War Powers Act, 6,000 U.S. troops strengthened their hold on Grenada last week.

The only resistance remaining consists of scattered snipers. The US has captured Marxist Gen. Hudson Austin, who fled a bloody coup to take over the island two weeks ago.

The official toll for US forces stands at 18 with six Americans wounded and one missing.

The House voted 403-23 to invoke the War Powers Act, which would require President Reagan to withdraw US troops from Grenada within 60 days pending Senate approval. The War Powers Act was enacted in the mid-sixties to prevent presidents from undeclared wars such as Vietnam.
Reagan hasn't grasped Lebanon complexities

With the United States' invasion of Grenada, President Reagan has diverted attention from the tragic result of his policy in Lebanon. However, patriotic euphoria should not blind us to the inherent dangers of interventionism. We must not forget that more than 200 young Americans were slaughtered in Beirut, because we have a president who does not understand the complexities of foreign affairs. Simplistic solutions and slogans are no substitute for a well-reasoned and coherent foreign policy.

President Reagan has defined our presence in Lebanon as crucial to the struggle between good and evil, arguing that we are defending democracy against godless communism. Such a posture shows not the slightest grasp of Lebanese realities, and it is a simplistic approach worthy of the Ayatollah Khomeini. Certainly the Soviets are interested in Lebanon, and they will try to take advantage of the turmoil there, yet the superpower aspects of the conflict are not nearly as important as regional and local aspects. Even if Marx and Lenin had never existed, Lebanese would still be fighting and killing one another. The country, created by the French after World War I, is a crazy-quilt of competing groups. None of these groups is close to being a majority, and none of them can-without external support—impose its will upon the other minorities. However, the Maronites, perhaps 20 percent of the population, have long enjoyed an artificial political, social and economic dominance, which the U.S. is viewed as perpetuating. This guarantees that the Druze, the Shi'ites, the Sunnis, the Palestinians and the rest will oppose U.S. attempts to reestablish Maronite power in Lebanon. Any legitimate peacekeeping role the Marines had in Beirut evaporated when the U.S. provided logistic and artillery support to the Maronite dominated army. This makes the Marines a natural target for Lebanese opposition groups.

The complexities of the local conflict are compounded by regional rivalries, particularly the major struggle between Arabs and Israelis. It should be remembered that the Marines originally went into Lebanon in the aftermath of the brutal Israeli invasion, and most Arabs regard the U.S. as doing everything it can to maximize Israeli advantages. This also makes the Marines an obvious target.

The Marines were needlessly at risk in Beirut. Not only should they not have been there, but their position was, and is, militarily untenable. The surrounding heights are controlled by hostile elements who are armed with the latest in murderous hardware, and the Marines cannot respond to sniper and artillery fire without harming non-combatants. Moreover, the president's ridiculous pretense that they were not in a combat zone was deadly, since, for the sake of appearances, the Marines were denied authority to really defend themselves. For example, the guards on the gate that tragic Sunday did not even have clips in their weapons. This was a fatal restriction.

None of the four options regarding the Marines in Beirut are attractive, but three of them would clearly deepen the waste and the tragedy: (1) If the Marines remain in Beirut at present levels, more will die, and nothing of substance will be accomplished; (2) If the Marines expand their presence into an effective combat role, carnage will result, more Marines will die, and nothing of substance will be accomplished; (3) If the Marines call upon the Israelis for protection (the Kissinger option), carnage will result, more Marines will die anyway, and U.S. prestige among Arabs and Muslims will sink to new lows; and finally, the least harmful alternative, (4) If the Marines are pulled out, there will probably be some initial loss of prestige, but Marine lives will be spared, and the United States will remove itself as a major irritant to the Lebanese conflict. Since a pull-out would be a tacit admission of a failed policy, Reagan will not adopt this option except under great pressure from Congress and the American people.

An additional advantage of an American pullback in Lebanon would be to allow the U.S. once again to focus upon the crucial Arab-Israeli conflict. In a major timing and priority blunder, Reagan has postponed U.S. attention to that crisis until Lebanon is reconstituted as a sovereign, peaceful and democratic nation. Such a Lebanon is clearly unattainable at present and probably will be unattainable for decades.
DREYFUS: Pointer Mag interview II

(This is part two of Pointer Magazine's interview with the current president of State University, Leonard Laid, M.D., Ph.D. This week the former UWSP chancellor and ex-governor of Wisconsin talked about his experiences on the UWSP campus and what the difference is between today's students and the students of ten years ago.)

by Bruce Assardo

Could you reflect on your experiences at UWSP? I think of the "Old Main" alumni as I always call them. That's a different group than you people. They were forced into the institution when the whole blasted institution, for that matter, was available in that building. That's a different faculty. It wasn't a big faculty and they knew the students very well.

And early on that impressed me. The university really perpetuated on and forced when I was in the present day office, the names of buildings would be the names of teachers that contributed to peoples' lives through teaching. By the way, that's not a smart economic decision. You name it after someone who gives you a million bucks. You put half a million bucks and you have your name on a building. It's a giant tombstone monument. It is a cost thing for people to do with their money; it's a way to encourage them to do that.

We did not do that here. There is no name on that campus anywhere that is related to a contribution in terms of money. All of it is related to contributions to students' education.

There are a couple named after regents; Nelson Hall and Thompson Hall. Albertson, a former president of the university who died in Vietnam...that's one of the reasons I came here was to finish up part of his term. He was a friend of mine. I learned some things about my colleagues. I'm dealing with Dean Jenkins. I had come on as president and he was a dean...that's a category. He was Professor Jenkins and I have ennumerable people say to me, "He changed my life." That's a hell of a statement. That man changed my life.

There are many people you can talk about. Sue Colman..."want to do what is best for the gorillas." Bridgette and Oscar had no comment.

From sea to shining sea
Lake Erie is cleaning up its act, according to Charles Herdendorf of Ohio State University's Center for Lake Erie Area Research. Forty-nine beaches have opened or reopened, he said, and there are lower levels of mercury in the fish. Levels of toxic materials and chemicals have also been reduced, and water that was considered "dead" is coming back to life.

Most important, the walleye have returned, Herdendorf said. Sport fishermen caught three million walleyes last year, an increase from 115,000 in 1975. The U.S. and Canada started cleaning up the lake in the 1970s, and at least $2 billion has been spent on sewage treatment plants and cleaning up industrial wastes. Fertilizer and soil runoff from farmland still needs to be controlled before all parts of the lake will be clean, Herdendorf said.

Cosmic debris
by Laura Sternewald

Long time, no see
Extended-wear soft contact lenses may cause over a million dollars to be spent on eyes every year that are suffering from corneal erosion and increased growth of blood vessels in the eye, while 29 percent suffered from swelling of minor vessel complications.

Extended-wear contacts can remain in the eyes for two or more weeks and have been on the market since 1981. Frank Jeppson, a spokesman for Baush & Lomb, the U.S.'s largest soft contact lens manufacturer, found the study "hard to believe."

Monkey business
Gorillas Bridgette and Oscar are finding out what kind of trouble a little "monkey around" can cause. Bridgette was missing her own business at the Henry Doorly Zoo in Omaha, Neb., when officials sent her to Columbus, Ohio, to mate with Oscar at the zoo there. Last week, Bridgette gave birth to male twins—the second born silve in captivity and the first in the Northern Hemisphere—and the custody fight began.

Although neither zoo wants to break up the twins, both zoos want to keep them. However, Columbus Zoo Director Jack Hasta said the zoo "want to do what is best for the gorillas." Bridgette and Oscar had no comment.

Capuleto, cont.
It was reported that Grande had made secret treaties with Cuba and the Soviet Union that would have integrated the Island nation's military forces with Soviet and Cuban forces.

National
Washington, D.C.—It was reported that Rev. Jerry Jackson will officially announce his candidacy for the Democratic presidential nomination here today.

Jackson joins seven other Democratic hopefuls, including front runners John Glenn and Walter Mondale.

Clarence—James W. Lewis was convicted of trying to extort $1 million from the Johnson & Johnson Co.

Lewis had sent a letter to the company last year after seven people died from eyed side glanced Tylanol. In the letter, Lewis demanded that Johnson & Johnson pay the money for the killings to be stopped.

No charges have been filed in the murders.

State
Madison—The state Legislature approved a bill that would reduce Wisconsin's legal minimum drinking age to 19.

The bill contains no reciprocity provisions and would not allow 18-year-olds to legally purchase or consume alcoholic beverages.

If signed by Gov. Earl, it would go into effect next July 1.

Zinrho, cont.
For new position with United Council fits in with her career goal of becoming an elected official.

Zinrho is enthusiastic about her new position with United Council. "Representing the concerns of Madison is unique. It's almost like being mayor of a small city," she said.

Commenting on former president Bentley, Zinrho said that historically, his activism in the office would remain with United Council. However, she hoped that the changes that he put Bentley and his actions in the past.
Draft debate here Monday

Should there be a draft? Is the draft ethical?

The UWSP Interfaith Council is sponsoring a debate on Monday, November 7 that will deal with these questions and others on the draft issue. The debate will be held from 12:00 noon to 1:00 p.m. in the Encore Room of the University Center. The debate will last for approximately 45 minutes, with the remaining time being devoted to questions and comments from the audience.

The debaters will be Jerry Henthorpe and Gilliam Kerley. Mr. Henthorpe is a senior majoring in Psychology at UWSP. He was in the U.S. Army from 1977-1980, and spent two of those years working in military intelligence. Mr. Kerley is a full-time free lance writer and peace activist, an organizer of the Madison based Resistance Coalition. On September 6, 1982, he became the eight man in the country to be indicted for refusing to register for the draft since the Selective Service System was resurrected in 1980.

TACOS

Dreyfus, cont. other than was programmed nationally. And I think they've stopped thinking of "Little U" wants to be "Big U"-type of thing. I think they recognize there was a growing sense of independence on this campus, and I think on most of the campuses. And finally when they say things like a bombing of a building or the death of a person...hold it tight. Hold it right there now. Who says I want to emulate that campus or Berkeley or anybody else. I think there has grown a sense of self-confidence about who and what they are and that largeness is not quality and also that an institution this size is a large institution. It's the size of Notre Dame. It's the size of Old Miss. And with that, along with what's happened in society, I think you have a pendulum swing now back to a conservative kind of notion, that is, that there is a growing awareness that says we are not going to have security and peace and freedom simply by insisting on it or by spending a lot of time singing ballads about it or by disarming ourselves on one side of an argument. I see the reality of what's happened to America must not allow a tiny pocket of aggression to exceed the previous one. So I think what's happened is that students at this point have changed. The evidence was resurrected in Vietnam and you have almost seen a godotice of a people. I don't know if we'll ever again see Cambodian or Vietnamese people as a total culture. That may be obliterated from the earth because the invasion of Grenada was a going to maintain the peace? I know now that violence is THE solution to everything. It's taken three years for President Reagan to convince me that militarism is the solution to everything. I've finally seen the light. Can you ever forgive me, Ron, for thinking I knew better?

I know now that violence is THE answer. Why, all I had to do was watch "The A-Team," a few NHL games and a lousy relationship or two to figure that out.

Lebanon is another example. We can't pull our boys out now. Oh, pooh-pooh. We must subject them to more violence so that the lives already lost will not have been sacrificed in vain. America must not allow a tiny pocket of resistance, namely the majority of Lebanese society, to dictate its foreign policy. We aren't out there to force the Christian government on anyone. If we were, we would have sent Ralph McQueen, huh Ron? The invasion of Grenada was a stroke of genius. Ron. That will teach the Russians a lesson in global ethics. But why you'll never forget. You really proved what an evil empire they were for their invasion of Afghanistan and what a bozo republic we are for over-taking Grenada. That's using the old noose.

Conquering a nation the size of Plo- ver will strike a fear of God into communists everywhere. Today Grenada, tomorrow the world! I bet Nicaragua is scared to hell. Go for it, Ron. I don't understand why congressional liberals are so riled up about the invasion, Ron. Why, every Grenadian the Marines talk to thanks for liberating them. It's amazing how nice and polite defenseless people can be to a contingent of armed invaders.

Besides, we cannot allow a brutal brand of injust things to terrorize the world. We must show them that terrorism is wrong by annihilating every one of them. Good thinking, Ron.

The evidence is thus overwhelming. If we don't use force, how are we going to maintain the peace? I'm forever indebted to you, Ron. Joseph Vandenberg

- School phobia: one sure way to get out of school

by Kim Jacobsen

As the nine-year-old second grade boy prepared for a day at school, he was suddenly overwhelmed with nausea. He began to vomit and develop severe stomach pains. However, this wasn’t the first time this had happened, and chances are, it wouldn’t be the last. The boy, held back in school twice, suffered from “school phobia,” an incapacitating condition that generally affects male elementary school students who come from close-knit families or have undergone major stress.

In a book titled, Case Studies in Abnormal Psychology, by John M. Neale, Thomas F. Oltmanns and Gerald C. Davison (John Wiley & Sons, 1982), it points out that every fifth American school-age child is disturbed by a malady called “school phobia.”

There is but one debate among psychologists about the definition of this illness. Some say it is caused by a fear of separation from a favorite person, while others say it is caused by a fear of school. Whatever the reason, the condition that generally accompanies this illness is incapacitation.

There are many examples of stressors that we come into contact with every day.

Stress

Likely to affect body rather than mind

by Jill T. Flashbinder

A culprit that exists, unfortunately in all of our lives at one time or another, and that can cause a disturbance of our well-being is stress. Stress is one of the leading problems that people face. Americans every day. School, work, friends and relatives, plus many other things are all examples of stressors that we come into contact with every day.

Stress is defined in Webster’s Dictionary as, “strain or straining force; a force exerted upon a body that tends to strain or deform its shape.” But how can an exam, a teacher or even your own mother impose such an effect upon you that may “strain or deform” your body? Perhaps it’s not these things or people that disturb you, but rather the events that happen upon you, but your reactions and interpretations of these problems.

When we encounter stressful situations, normally, instinct would work to relieve the stress, we add to the tension, stress can create up the muscles of our body. Clenching of the jaw, tightening of the face and shoulders are all examples of adding unnecessary tension to our problems. Learning to relax and deal with stress is the whole trick to avoiding the “trapped” or “helpless” feeling.

There are several theories believed to be successful in relieving and avoiding stress, the option exists only for the one that works best for you.

The periodical Mother Earth News claims that organizing your life will help you to reduce stress. They have established nine guidelines to follow. They are...
1. Keep a planning notebook.
2. Maintain a daily “to do” list.
3. Establish lifetime objectives.
4. Use an appointment calendar and schedule time for self-care.
5. Establish a regular planning time.
6. Examine how you use your day.
7. Don’t let “impossible” problems intimidate you.
8. Learn to unload unnecessary tasks... and say no.
9. Don’t hesitate to ask for help.

Another view, taken from Self magazine, states that, "the No. 1 stress stopper is time. Learning to relax and deal with stress is the whole trick to avoiding the "trapped" or "helpless" feeling."

One sure factor is that school phobia can last forever if it goes untreated. However, treatment can require extended visits to therapists resulting in a fat bill going as high as $1,500 for 25 sessions.

In Milwaukee, they are treating several cases of school phobia. Here in Beavens Point, Senator High attendance officer Ramon Stade, who is responsible for grades 10-12, said he had no way of knowing how many kids suffer from school phobia because the diagnosis of it is terribly subjective. "I may say there are only five cases, and you may say there are 20," he remarked.

Stade said counseling was made available to the student. "Our school counselor even went to the student's house a number of times." But this extra measure didn't seem to improve the student's immediate condition.

Cont. on p. 15

Halloween does strange things to the mind

by Paul T. Gaertner

The mind, yes, it is an interesting part of the human anatomy, and the very strange thing about it is the mechanism which drives it to drive us to do the thing that we normally wouldn’t do.

Ever since we can remember, Halloween has been a time for us to dress up in articles of clothing (or not in any) that appear strange to the common eye. On Monday, Oct. 31, I covered the Brainerd's Halloween Costume Party. The night was filled with many interesting costumes. But there were a few which made me think twice. One has to wonder about the seriousness of the term ‘sexually’ after spending a couple of hours down there Monday night.

Granted, it was Halloween, but what is the dilemma and maybe decently helpful minds of the five men (if they can be called such) that dressed up in those exaggerate of costumes? The costumes of three of these “bent-minds” were not much to talk about material-wise. However, if talked about any other way, they are definitely worth explaining.

Two of these three costumes were dressed in U.W.S.P. cheerleading outfits. They bore make-up, plaided back hair, and overly exaggerated “mammalian protuberances.” I think these two were gay-boyfriends, because they always had guys hanging over them. But who knows, they could have been girls dressed as guys.

There were two people dressed as Boy George. One had black boot feet, while the other was white with exceedingly exaggerated green eyes, the body was covered somewhat with a chast, the right arm bore a heart shape, and the word “BOSS” printed over it. He/she was black pan- ties with a garter belt holding up fishnet stockings, and over each forearm there were fingerless dinner gloves. The only reason why this person was alone, was so he/she could lure some poor unsuspecting person to the word's evil grasp of "LUST".

The fourth and fifth of these hopeless “Freudians” were dressed in U.W.S.P. cheerleading outfits. They bore make-up, plaided back hair, and overly exaggerated “mammalian protuberances,” I think these two were gay-boyfriends, because they always had guys hanging over them. But who knows, they could have been girls dressed as guys.

Stade said symptoms he has seen aren’t as severe as they used to be. He said he had seen a case last year where the student felt he/she was unable to get out of bed—“he just couldn’t get up.” This year the student is “attending on a relatively regular basis and seems to be involved in extracurricular activities.”

Stade said counseling was made available to the student’s house a number of times.” But this extra measure didn’t seem to improve the student’s immediate condition.

Oh no! Bubble-gum bop invades A.O.R. radio

by Paul T. Gaertner

A new chapter in the history of rock and roll will open on Nov. 15-19. Since 1975, when Devo first started making videos on a regular and visually commercial basis, videos have been made by every type of band playing every type of music.

Now, in 1983, Billboard is finally going to give recognition to the best videos in the field.

This week the nominees were released in 16 different fields in which they will compete. Similar to the Oscars, the fields go from Best Overall Video to Most Socially Conscious. Michael Jackson is the favorite to clean up, being nominated in nine of the 18 categories and having both of his popular videos, "Beat It" and "Billie Jean," being nominated together in three of these fields. Billy Joel is a close second in nominations with 12 out of 16. Outside of those two, the field is pretty well split up, with supergroups like Men at Work and Deep Purple only having two nominations apiece.

For all you A.O.R. (Album Oriented Rock) radio geeks, you better hope radio pays cable, because soon many stations similar to WAPL in Appleton may be switching to a mast appeal, top 40 sound. In the last year, many A.O.R. stations have switched from the '70s rock sound to the more appealing sound of the '80s melody influenced sound. Closest to home, we have witnessed one A.O.R. station in Milwaukee, go from rock to "TOP 20 HIT RADIO." Why have they chosen this route? The demographic range in radio has changed dramatically. According to Billboard, the A.O.R. had the audiences of 18-25. But now, as top 40 is becoming better and more acceptable, many of that market has moved to the top 40. Now, 15-19-6 is in many areas of the country, and since a radio station lives and dies on rating shares, the station must adopt to the newer format.

But don't despair all you METAL-BEAVERS. According to Arnold of Milwaukee's metal station QFM, he states that metal is mainstream rock with a metal edge to it, which is what people want. When the people come up with the rest of the world, we will probably find Lee Arnold sitting at his desk at the Milwaukee County Music Theatre with a smile on his face, as Toffler puts it best, "SECOND WAVE IN INDUSTRIAL ROCK."

Applications may be picked up starting Nov. 9th

Applications due Nov. 23rd at 4pm.
Life twice as exciting for Womack sisters

by Chris Colebrook

I rapped quietly on the door of Room 309, hoping I’d been given proper directions. The music of “Midnight Star” pulsed from inside and the door swung open smoothly. An attractive woman with glasses was first at the door, and as I stepped into the room, I was struck by double vision. I hadn’t dropped in on a wild dorm party, but I had found the Knute Hall room of identical twins Wanda and Twanda Womack.

As an identical twin myself, the slight differences between the sisters were readily apparent from the moment our interview began. However, most folks would find them two figures cut from the same cloth. Two very pretty, young black women of medium height, both have similar features, almost identical physical traits.

The twins frequently dress alike, their hair always in the same styles, both wear glasses, and, like all identical twins, are cast in the same genetic mold. However, they get slightly agitated when people assume that similarities in one area mean similarities in every area.

“They hear the word ‘twin’ and that’s all they need,” said Wanda. She noted that she and Twanda have very noticeable physical differences—Twanda’s face is thinner, Wanda is the taller and “ceilier” of the two—yet they both wear the same clothes and styles.

“I think people think we constantly think alike and breathe at the same time,” Wanda said.

As they grew up, most people treated the twins alike, including occasionally their parents. When Christmas or their birthday rolled around, they each got two gifts addressed to both of them while their sisters got individual presents.

Although they were often treated alike by their parents, the twins’ mother fed Wanda twice, changed her diaper twice, and dressed her twice, thinking she had done so for each twin. At first she couldn’t understand why Twanda lay crying, while Wanda seemed so content. She finally realized her mistake and blushingly corrected it.

The twins found similar interests in high school, playing on the softball and tennis teams and playing the clarinet. They did everything together, however, while Wanda dribbled the ball up the floor on the basketball team, Twanda was practicing high-kicks as a member of the pom-pom squad.

The twins noted that some facets of their relationship with peers have changed since high school. In high school, according to Twanda, their friends and acquaintances all treated them as one person. In college, however, things have changed.

“At first it (treating us alike) started as a game. But when they got to know us, they wanted to have us as friends,” said Wanda. “I guess, in college, you mature,” she conceded.

Some psychologists have advanced theories seeking to prove the presence of extrasensory perception (ESP) in twins. Twanda and Wanda both believe they have some ESP abilities.

“When we were kids,” remarked Wanda, “my mother used to whisper something to my younger sister Yolanda. She told her what hospital Twanda and I were born in. When she asked Twanda and I the same question, at different times, we both gave the wrong answer. However, we both told her the name of the same wrong hospital,” said Wanda.

Twanda also recalled an incident in which her mother was having trouble locating some nails Wanda had been using last. She asked Twanda to “think like Wanda would” so that she could help her find the nails. With a matter of minutes, Twanda found the nails. The twins also said they could communicate over fairly long distances using their minds. Twanda noted they were both clairvoyant, however, she added this “power” seemed to have diminished as they grew older.

This summer the twins were separated over a prolonged period for the first time in their lives. Wanda attended basic training for the Army Reserve in South Carolina while Twanda remained behind in Brown Deer. Twanda had planned to join her sister in training, but found out at the last minute that a minor health problem excluded her from the program.

“I never had such an awful time in my life,” said Twanda. Both agreed the prolonged split was hard to deal with.

A few people wonder why the twins haven’t “grown” dressing alike. It’s not contrary to the sisters. According to Twanda, most of their clothes are alike and continuing the practice over the years has made it a habit.

“When we roll out of bed in the morning, the first thing we ask each other is ‘what are you going to wear?’” noted Wanda. “Twanda’s idea. We still dress alike because we think twins are special.”

Twanda’s remark reveals a lot about the twins. They know they are special and feel aided, rather than hindered, by their special relationship. Last year the twins used this pride in their uniqueness to secure modeling jobs with the Milwaukee-based Bitchoff Modeling Agency.

Since their initial involvement with Bischoff, Twanda and Wanda have commuted from Point Pleasant virtually every weekend for training. By January or February they expect to be “in the market” as the subjects of magazine ads and television commercials. In addition, there is a possibility they may see their gracing the cover of Vogue or another popular fashion magazine.

As our society grows more complex, it seems that the faith of the mental illness increases proportionally to the speed of living. Each generation has expressed concern that this is a forerunner to the dissolution of its social-psychological structure. Even primitive man was affected by these concerns: he made use of amulets and a witchdoctor’s or shaman’s power to help cope with the spirits of the natural world. Gradually these magical practices became an integral part of some religious beliefs and modernized in day-to-day life. In the midst of the hectic, turbulent world, faith in God is a necessity.

Christianity itself came to play an important role in the treatment of mental illness. Christians believe symptoms of mild and severe illnesses are the result of supernatural causes, and that only faith in God can cure the sick. Christian faith also helps those who are afflicted with mental illness. It provides them with a sense of community, purpose, and a reason to exist.

Christianity offers a personal relationship with God, a spiritual source of strength, and hope for the future. It also offers a way of life that is different from the world’s way of life. It offers a way of life that is different from the world’s way of life. It offers a way of life that is different from the world’s way of life. It offers a way of life that is different from the world’s way of life.

But just how do you tell if the student is really suffering from school phobia? How does a counselor know that the student isn't just some kid who doesn't want to be bothered by things like an education.

According to Stade, "You just can tell. I've seen a number of cases where I was convinced there was emotional upset or stress involved and the kids involved didn't get better. You just can't develop generalizations (about the causes or legitimacy of a person's condition).

How are college students affected by school phobia? Can it exist within the confines of our university? The answer to these questions, according to Fred Littmann, counselor at the Counseling and Human Development Center, is no. "It doesn't exist. College students have a choice whether or not they want to be in school. In the grades you usually see this type of thing; the kids have to be there (in school) by law.

Littmann said at this level you generally won't see phobias which he defines as being "so strong that it leads to avoidance behavior." He explained that in college you see a lot of people who have anxieties, but "it is away from the term phobia." Littmann, who specializes in counseling students who suffer from test anxiety, said that is the major thing the Counseling Center sees.

Littmann felt that such problems were certainly serious, but not as incapacitating as a phobia.

He concluded that, "Once in a while you'll meet somebody who experiences a phobic reaction where they out-in-part panic (about a situation) and have a desire to avoid the situation completely." He felt most students could handle college in general, but in specific situations they develop anxieties.

In the final analysis, it appears school phobia still exists at the elementary and high school levels but not at the college level. So the next time you take a test and your palms get clammy, your armpits drip, and you feel butterflies in your stomach, take it easy. It's probably only an anxiety attack, not a phobia.
SCHNAPPS NEVER TASTED SO COOL.

Back in the 1840’s legend has it Dr. A.P. McGillicuddy achieved fame and fortune throughout Canada. They say his special concoction called Mentholmint Schnapps had a taste so refreshing going in, so smooth going down, that thirsty trappers came from miles around just to buy it.

Dr. McGillicuddy is long gone, but his Mentholmint Schnapps lives on in your favorite tavern or liquor emporium.

Try Dr. McGillicuddy’s Mentholmint Schnapps straight up, on the rocks, or with your favorite beer. Any way you pour it, schnapps never tasted so cool.

Pointers stampedede in third straight loss

by Bill Laste

The River Falls Falcons literally ran over the Pointer football team at Goerke Field Saturday, dropping the Pointers' record to 1-5 in the WSUC and 3-5 overall. The final score was 49-29. The Falcons' ground game amassed 612 yards, smashing the all-time WSUC single game rushing mark of 449 yards set by the '75 Falcons against the Pointers.

Jim Bednarek rushed for 342 of the Falcons' yards on 36 carries. His effort, however, was negated by a questionable pass interference call and the Falcons had a first down at the Point 35. Three plays later, Bednarek picked up 27 yards on an option play around left end and two plays after that, he plowed into the end zone from the one. A bobbled hold left the Falcons without the complementary PAT, but they still led 29-0 with 14:36 left in the half.

The Pointers weren't real. Cont. on p. 21

Rugby alive and well at UWSP

by Bill Laste

Ever try to figure out a Rugby game? It's probably a little easier for the average Joe to understand if he looks at it in terms of football, the American kind.

Basically, there are two types: running up and down the field almost continuously, each of them trying to score touchdowns, which are called tries and are worth four points instead of six. If they score a try, a member of that team gets to kick an extra point, which, in Rugby, is worth two points.

The players punt the ball often and should the ball roll out of bounds, they have a kind of a jump ball (oops, wrong sport) to put the ball back in play.

In addition, the ball will rarely stay in one player's hands for more than a couple of seconds. Pitchouts are common, as are fumbles and turnovers. But in Rugby, possession isn't necessarily nine-tenths of the law.

But one of the most interesting aspects of the game is the scrum. Seven players from one team interlock arms, legs and heads to create a 14-legged animal which then collides with a similar beast made up of opposing team members. The ball is rolled into the center of the creature and the hooker, whose duties are similar to those of football's center, tries to kick the ball back through his side of the scrum. When the ball finally appears outside of the scrum, the scrum half can pick it up and run with it, or pitch it back to his teammates.

Plus, a field is called a pitch and a team is called a side. Understand?

Neither did a bit of the members of the Stevens Point Rugby Football Club when they first started playing the game. Paul Champ, now a coach of the team, was one of them.

"Like most of the guys who play, I knew nothing about the game when I first started out. I just knew a couple guys on the team.

"Most people don't go out looking for a Rugby team to join. In most cases you've got somebody who knows you on the team who drags you in."

Champ was a playing member of the team back in the early days of the club, when Point was establishing a reputation as one of the top notch Rugby organizations in the Midwest.

"I've been associated with the team since '71. That was..." Cont. on p. 19

Kevin Hynesman shadows an Appleton Rugby as Tim Zobel looks on.
Rugby, cont.

the second year the club had been in existence.

"We've had some real successful teams since then. We did pretty well. The 1971-72 side that had a lot of seniors who had been playing together for four years.

"We took second in the Midwest a couple of years ago and just missed a trip to the national finals. When you're talking about competing with schools like Michigan and Ohio State, that's quite an accomplishment.

"While we were building that championship team, we were kind of setting a standard for college Rugby in the state. A lot of teams looked up to us and gauged their success in the season to how they did against us. If they beat Point, that made their season.

Jeff Woods, president of this year's club, said that an awareness of the Point Rugby tradition still exists on the team.

"Point has been pretty well known around the Rug-

by circuit—being a good team. When I started playing, a lot of the old boys who were the 'dynasty' were kind of filtering out. But the tradi-

tion of the club hasn't really been broken.

Rugby, of course, is a bruising sport but that doesn't seem to put a damper on it for any of the players. Kevin Hyne-

man, for example, said that he plays the game mostly because it's fun and isn't really dangerous as many people would think.

There are a lot of rules designed to make it safe. For example, when you tack-

le, you have to use your arms. You can't just throw your body into a guy. It's probably not as rough as it might seem.

Woods agreed, saying, "If you play it properly it's not dangerous. It's a contact sport but you don't have the same kind of contact you would in football.

There you've got the pads and the helmetets and you can almost use them as a weapon. When you don't have pads, it's just a matter of latching on.

Woods also said that people get into Rugby to enjoy success as a Rugby player. "You don't have to be a big guy. Look at our team. We've got all shapes and si-

zes."

One thing that practically any Rugby Club member will talk about is the camaraderie involved in playing the game. Club members talk about the group almost as if it were a fraternity.

"The camaraderie is really unique to Rugby," said Woods. "It's a hell of a game.

That camaraderie and friendship are also extended to the opposing team. After the game, it's a tradition for the home team to host a par-

ty for the visitors.

"It's really weird," said John Goltz, the team's hooker. "You can get out there, both ends hit people but as soon as you walk off that field, that's where it stops.

"The parties are fun. You're more of a sore

er after wards and the parties make all the aches and pains not seem so bad.

Hyne man brought up an other purpose for the par-

ties. "At the parties you can talk Rugby with the other team and you learn things from them. Then you sing songs, give cheers to the other team, cheers to the ref and you have a good time. It really is a gentleman's sport.

But the administration of the organization is almost as important as the on-field and post-game activities, according to Champ.

"It takes both aspects to be a successful club. We hosted a touring English side once and the upper echelon of the Rugby administration at the national level considers that to be a very serious matter. We jumped at the chance to do it because it's really the essence of Rugby to host a touring side. You really put your reputation on the line when you represent your area overseas."

While the club appears to be getting along well with the Rugby administration, their relationship with the university administration has been marred by a series of incidents relating to last year's Arctic Fest.

The club printed t-shirts depicting a naked woman holding a dog team that was drawing a line in the sand. Many people were outraged by the false representa-

tion of mujeres and a move-

ment, spearheaded by the Women's Resource Center, approached SGA to condemn the incident.

At the fest itself, there were problems involving alcohol use in the annex of Quadrant and the locker room, where the club had permission to use. Film, university officials claimed that the grounds were not sufficiently cleared of empty beverage containers and other trash and said that no one had per-

mission to drink on the field.

Finally, there was an inci-

dent at the Arctic Fest party at the Starlite Ballroom, where a woman was bitten in the rear end. The bite left teeth marks and the woman's mother called the university and complained about the incident. The per-

son responsible for biting the woman was a Point Rugby player.

"This last incident was probably the straw that broke SGA's back. Their ini-

tial reaction was to termi-

nate the club as a student organization. However, through appeals the club reduced the penalty to probation for one year.

"It was just a snowball effect," said Woods. "It seemed with SGA, it all of a sudden became popular to say 'let's get the Rugby Club.'

"But we admit our T-shirts were a mistake. I guess we just looked at them with igno-

rance. We thought, 'hey, those shirts will sell.'

"I was understood that there would be no drinking in the annex so we kept, as best we could, the alcohol out of there. But there was macho drinking on the field and we caught flak for that.

Nobody ever really told us that we couldn't drink on the sideline.

"Then, at Starlite, we didn't see a lot of the stuff that happened. In fact, when we heard about it later, no-

body knew it was going on. Sure, there were beer wars and other crazy stuff but it was all just in fun.

"There were girls getting bit at the party. Yeah, it's kind of crude but it goes both ways. I've had girls bite my butt out there too.

"I don't know that it's fair that we get singled out. The football team does a lot of that too. I think they're crazier team.

"But they say 'live and learn' and I guess that's what happened to us."

The Rugby Club comes up for review when their probationary period ended in March. According to Woods, the basic terms of the probabil-

ity for this team. This is his

season to how where it stays.

"You're talking about people but you don't have to be drinking. We've got some real sure-

re going on in the university. In fact, we're building a Student Organization Recognition Committee (SORC) has been keeping an eye on them.

"From what we know, there have been no prob-

lems," said West. "The Rugby Club has attended every leadership development ses-

sion we've got on and has attended every meeting I've scheduled for presidents of organizations. Plus, their advisor (Deb Meyer) has been meeting with Tracey (Tosney, SGA vice presi-

dent). So far as I know they've been doing pretty good."

The Point Ruggers have been "doing pretty good" on the pitch lately too. The team is currently tied for first place in the confer-

ence and won one of two games last weekend. They lost to the Appleton city side but walloped Eau Claire 33-7 in a conference match.

Tom Rolf scored three tries for the Point Ruggers while Timmy Lavan and Joel Werner picked up one try each in the Eau Claire match. Also deserving credit for the victory was Brad Redwine, who split the uprights on every one of his kicks, accounting for 13 of his team's points.

Rolf has been a team lead-

er throughout the season, commented Woods.

"I.A. is really an inspiration for the team. It's been a huge asset this season, with Paul being the seniors and he's really been intense. He knows the game and he's got a great team and a lot of players look up to that.

Woods said that Champ has been another important contributor to this year's team.

"We had never had a coach before this year and Paul has just been superb. I've learned so many new aspects of the game from him and his procedures for getting us into shape are excellent. This is the most I've ever run in practice.

"Everybody on the team feels the same way about him. He's done a great job for us."

While the Rugby Club may never rival the football team for fan support, they have a loyal group of followers. One of them is Floyd, a former playing member of the team who now calls himself a "so-

cial member." Floyd is probably the most vocal member of the cheering corps.

"Yeah, I yell a lot out there. I probably get as many griefs from my own team lined up as I get as guys from the other team.

Another is Wendy Erick-

son, who calls herself a "Rugger Hugger." Does that mean you hug lots of Rug-

gers, Wendy?"

"Only if she's lucky," voiced a bystander.
The University Centers

**Football, cont.**

That didn’t stop the Falcons, however. Two plays later, Derginer ran a keeper around right end from 25 yards out to put River Falls up 20-14 with 5:38 left in the third quarter. The Pointers answered by starting another 12-play drive to travel 81 yards, getting seven points closer to the Falcons. Superior has held Whitewater and La Crosse, both offensive powerhouses, in the second half in three games. The Pointers have not scored in the second half against the Falcons was a surprise, considering that the Falcons rushing defense was ranked third in the nation going into the game, and that the Pointers have not had a consistent rushing game for much of the season.

River Falls second stringers opened the fourth quarter with another touchdown drive, as Clark Lenesman scored from the three-yard line to give River Falls a 24-21 lead. The Pointers closed out the game scoring with 19 seconds remaining, giving the Falcons a fourth straight home loss, and a double loss on the road.

“We thought we had a good plan going in, but it seemed like the defense hung their heads a little bit after they put two quick ones on the board in the first quarter. We could’ve done a better job tackling and coming up and meeting the ball carrier too,” said Lenesman. The Pointers’ employment of their own running game against the Falcons was a surprise, considering that the Falcons rushing defense was ranked third in the nation going into the game, and that the Pointers have not had a consistent rushing game for much of the season.

The Pointers began to pull their next possession and had marched to the Pointer 31-yard line when Farley attempted his first pass, the team’s second of the game. This one was also picked off by Brekke, who returned it to the seven to snare the ball and returned it to the 15.

River Falls got the ball back shortly thereafter at their 14 on a Kleinshmidt punt and from there the Jim Bednarek show continued. Bednarek took a pitch off an option play around left end three consecutive times, gaining 13, 30 and 32 yards.

Two plays later, Rick Winters took a handoff from Derginer on a third and nine play, giving the Falcons a fourth down situation for the first time in the game. River Falls settled for a Farley field goal and led 23-7 with 3:36 left in the half.

Maik Gabb took the ensuing kickoff back to the Point 35, and added a Geissler pass despite being hit hard on the next play at the 50. Three plays later, the Pointer line gave Geissler what seemed to be an eternity to throw, and hit an open Tim Lau with a 39-yard touchdown pass. The Pointers trailed 23-14, but were still in the game at the half.

 Falcon Dan Kallow took the opening kickoff back to the Point 50, and added a Geissler pass despite being hit hard on the next play at the 50. Three plays later, the Pointer line gave Geissler what seemed to be an eternity to throw, and hit an open Tim Lau with a 39-yard touchdown pass. The Pointers trailed 23-14, but were still in the game at the half.

The Falcons' next possession, the 20, ended with a Sam Nielsen field goal and led 23-7 with 3:36 left in the half.

That didn’t stop the Falcons, however. Two plays later, Derginer ran a keeper around right end from 25 yards out to put River Falls up 20-14 with 5:38 left in the third quarter. The Pointers answered by starting another 12-play drive to travel 81 yards, getting seven points closer to the Falcons. Superior has held Whitewater and La Crosse, both offensive powerhouses, in the second half in three games. The Pointers have not scored in the second half against the Falcons was a surprise, considering that the Falcons rushing defense was ranked third in the nation going into the game, and that the Pointers have not had a consistent rushing game for much of the season.

River Falls second stringers opened the fourth quarter with another touchdown drive, as Clark Lenesman scored from the three-yard line to give River Falls a 24-21 lead. The Pointers closed out the game scoring with 19 seconds remaining, giving the Falcons a fourth straight home loss, and a double loss on the road.

“We thought we had a good plan going in, but it seemed like the defense hung their heads a little bit after they put two quick ones on the board in the first quarter. We could’ve done a better job tackling and coming up and meeting the ball carrier too,” said Lenesman. The Pointers’ employment of their own running game against the Falcons was a surprise, considering that the Falcons rushing defense was ranked third in the nation going into the game, and that the Pointers have not had a consistent rushing game for much of the season.

The Pointers began to pull their next possession and had marched to the Pointer 31-yard line when Farley attempted his first pass, the team’s second of the game. This one was also picked off by Brekke, who returned it to the seven to snare the ball and returned it to the 15.

River Falls got the ball back shortly thereafter at their 14 on a Kleinshmidt punt and from there the Jim Bednarek show continued. Bednarek took a pitch off an option play around left end three consecutive times, gaining 13, 30 and 32 yards.

Two plays later, Rick Winters took a handoff from Derginer on a third and nine play, giving the Falcons a fourth down situation for the first time in the game. River Falls settled for a Farley field goal and led 23-7 with 3:36 left in the half.

Maik Gabb took the ensuing kickoff back to the Point 35, and added a Geissler pass despite being hit hard on the next play at the 50. Three plays later, the Pointer line gave Geissler what seemed to be an eternity to throw, and hit an open Tim Lau with a 39-yard touchdown pass. The Pointers trailed 23-14, but were still in the game at the half.

 Falcon Dan Kallow took the opening kickoff back to the Point 50, and added a Geissler pass despite being hit hard on the next play at the 50. Three plays later, the Pointer line gave Geissler what seemed to be an eternity to throw, and hit an open Tim Lau with a 39-yard touchdown pass. The Pointers trailed 23-14, but were still in the game at the half.

The Falcons' next possession, the 20, ended with a Sam Nielsen field goal and led 23-7 with 3:36 left in the half.

Play begins at 6:30pm
Harvey Wasserman, historian and free lance writer spoke at the UWSP campus this past Wednesday. Because Wasserman is starting to get a bit too much of a commitment to tell his lecture. While a short review will be provided in next week's issue for those of you who missed him, Pointer Magazine was able to secure a telephone interview with Mr. Wasserman. The following interview was conducted on Friday, October 28. Mr. Wasserman spoke with John C. Savagian from his residence in Ohio. Here are his comments on our government's secret experiment with radiation.

P.M.: How has killing our own been received?
Wasserman: Surprisingly well. I thought it was going to get a storm of negative reviews but actually it got a storm of positive reviews. I think it's because the government has had a record of being so willing to kill people. The government in the beginning had a history of interest in killing people.

P.M.: When was the interview conducted?
Wasserman: The interview was conducted on Friday, October 28. Mr. Wasserman spoke with John C. Savagian from his residence in Ohio. Here are his comments on our government's secret experiment with radiation.

P.M.: Could it be argued that America's first decade experimenting with atomic bombs was one of playing with the unknown in that knowledge about radiation was haled and therefore the public statements made by the AEC and Pentagon officials concerning safety of citizens and soldiers, while perhaps naive, were nonetheless sincere?
Wasserman: No, for two reasons. First of all, some did know, there was some indication from earlier radiological tests. We had been getting exposure to medical X-rays since the 1890s and in only a couple years after that it became known that there were serious health problems with X-rays. By the 1920s we were having people working in radiology departments, and they also suffered from very well known problems. It also was known that uranium miners suffered from a very low rate of lung cancer from the radon gas. So there was a certain backing of information about problems with radiation.

The last thing that they (the nuclear industry) want to hear is that Three Mile Island fact, it did.

Wasserman: Yes, the basic research done at Dr. Stanislav (author of Secret Fall- out) is that radiation-induced cancers cannot be proven because of the time lag between exposure and symptoms, and because the cancers are not from any one particular source. As you mentioned in the book, it doesn't have a work's shows—and we have these two big law suits in Salt Lake City, one from the ranchers who were killed by the fallout from the Dirty Harry test in 1953—which that one was thrown out of court in 1956 and in '82, the same judge, twenty-six years later, reopened the case, saying that the government had lied to him, and the AEC (Atomic Energy Commission) had intimidated witnesses. His opinion in reopening the case is really one of the seminal documents of the nuclear age.

And of course there are more than a thousand, I think it was more than eleven hundred actually, people and their survivors who are suing based on deaths from cancer and leukemia as a result of the test program. The outcome of these two suits is going to be very important. I think there's every reason to believe that the radiation induced cancers cannot be proven because of the time lag between exposure and symptoms, and because the cancers are not from one particular source. As you mentioned in the book, it doesn't have a

P.M.: But the second point is really the more important of it is classified. The most sensitive stuff we got was in classified. National had forced to be declassified about the CIA knowledge and evidence, they blew up in Russia, which is kind of ironic. I mean, the stuff we get is not even about the United States, it's about Russia.

Wasserman: We are looking for proof positive about deaths from radiation, whether from fallout, nuclear mining, power plants or their accidents, we are still confronted with the problem of who was killed.

P.M.: It seems that when we are looking for proof positive about deaths from radiation, whether from fallout, nuclear mining, power plants or their accidents, we are still confronted with the problem of who was killed.

Wasserman: Yes, I believe that there is no scientific basis for saying that. These people, for political reasons, were saying that it was difficult to prove that there was no scientific basis, that they were really extremely irresponsible in order to turn down any claims. As I said, there is no evidence of the impact on scientific terms it's cut and dried.

P.M.: Of course the government is saying it's not.
Wasserman: They're often hear radiation induced cancers cannot be proven because of the time lag between exposure and symptoms, and because the cancers are not from one particular source. As you mentioned in the book, it doesn't have a

The Indian psyche—coexisting with nature

by Andy Savagian

"The earth is the mother of all people, and all people always have equal rights upon it.

Chief Joseph of the Nez Perce tribe

He came to the Americas some five millennia ago. He crossed the now famous and non-existent land bridge of Asia and Alaska, unaware of the significance of his move. Perhaps he was only journeying to find better hunting grounds, or to escape hostile neighbors. Whatever the reason was, he eventually spread out and settled most of North and South America, with customs as diverse as the vast lands he occupied. He was the Native American—who he was the Indian. The society which refers to these diverse peoples comes from Christopher Columbus, who mistakenly labeled them as inhabitants of the Indian he thought he had found. We have been using the term "Indian" for centuries only because the Indian never really referred to himself as "American," "Indian," "No- ble Savage" or any of the other generalized terms our culture loves to use. The Indians had a simple way of grouping—his tribe. Many of their names are quite familiar to us—Dakota, Iowa, Co- manche, Apache, Osage, Pawnee, Menomonee. His world existed only as far as his need to survive would carry him. The Indian viewed the envi- ronment as something he didn't use but as an entity he had to fight. Each tribe worshipped the fruitfulness of nature in its own way. To many Indians the trees were their children, the mountains—their bones, the earth—their mother and the stars—their sisters. They never denigrated the land, nor altered the balance of the wild to their own ends, but lived instead in a kind of kinship, one they greatly re- spected and reenacted in ceremonies of great meaning.

Throughout their history these strong, spirited people continually rejected inge- nious ways to exist in the ever-changing environment. Whether forest or tundra, plains or deserts, the natural life of each locality molded the existence of the Indian. They ate the plants and ani- mals the land supported and slept in shelters made from the raw materials it fur- nished. Columbus, comment- ing on the island people he encountered, noted the fan- tastic concept of Indian life.

"The people of this island...are so guileless and so generous with all that they possess that no one would believe it who has not seen it. They refuse nothing that they possess, if it be asked of them; on the con- trary, they invite any one to share it and display as much love as if they would give it away, without expecting to have it returned."

The white man psyche—master of all that he sees

"We shone land because we regard it as a commodity belonging to us. When we see land as a commodity to which we belong, we may begin to use it with love and respect."

—Aldo Leopold, from "A Sand County Almanac"

Westward Expansion, A History of the American Frontier, states that the European came to the outer edge of advancement, the meeting point of savagery and civilization.

The white man's idea of the environment was born from the Industrial Revolu- tion—war with nature. The Westward Expansion continued describing the essence of American agriculture. Their land (farmers) was not to adapt but to conquer.

Neither the Indian's and the white man's philosophy of man's environmental existence naturally disagreed with each other, and the two concepts clashed shortly after one culture "met" the other. The first encounter was between Indian tribesmen and fur traders and trappers. Again, according to The Westward Expansion, the fur traders "broke down Indian self-sufficiency, accustomed red men to the gun, the rifle, and firewater of the white man's higher civilization."

As the white man moved farther west and encountered more and more Indian tribesmen, the differences be- tween the cultures began to seriously affect the function of both societies. There is no better example of this con- test than the spread of the buf- falo in the 19th Century. The various tribes of Plains Indians took the buffalo in many ways. The dried meat from the buffalo could be eaten plain as jerky, or it could be made into pemmi- can by pounding and mixing the meat with hot grease and dried berries. Indians also roasted the meat over fires, along with the intestines for sausage. The hides were used for the making of tepee or buffalo robes, and required much preparation before using. The Indians also used the dried buffalo dung for their main source of fuel, and it has been said that the fire gave off a sweet smelling odor.

The white man also used the buffalo for food and clothing. The back hides and the bladder of the buffalo made very delectable, and buffalo fur coats and robes were very popular in the East. However, the white man exploited the buffalo heavily, selling the hides for three dollars apiece during large harvest periods. Soon the supply of buffalo diminished from the massive harvesting, and this affected the Indians more than the white man. The white man had other re- sources to draw upon, but the Plains Indians needed the animal to exist—without it, he could not. Smart men in the white man's govern- ment were very aware of the Indian's situation; they knew if there was no buffalo, there was no Indians, leaving the Plains open for white settle- ment. General Philip Sheri- dan, on whom you wouldn't sup- port a buffalo protection bill, has the exact 1870's, clearly defines the white man's environmental impact on the Indian psyche.

"The best way to get rid of the Indian is to destroy the buffalo by which he lives. The more buffaloes killed, the better, and what good is a buffalo anyway except for slaughter?"
ATTENTION WRITERS

The '83-'84 Horizon is looking for writers.

FORESTRY...

You're Needed All Over the World.
Ask Peace Corps Foresters why they travel half way around the world to Africa, Asia and Latin America... Ask other volunteers why they work with the local people to help them with forest management, erosion control, and watershed preservation... why they learn and speak their neighbors' language and adapt to a new culture. Ask them why Peace Corps is the toughest job you'll ever love.

PEACE CORPS

THE 1983 HORIZON YEARBOOK IS NOW IN!

Anyone who ordered a book last year, or is interested in purchasing one, should stop by the Horizon Office in the Main Lounge, U.C. Books will be available during office hours or anytime when the door is open.
Music
Saturday, November 5
X-CLEVER - This highly-acclaimed New Wave-Rock band will jam in the Encore, providing danceable music, for only a buck. The concert starts at 9 p.m. and comes to "the largest and most impressive room of its kind in all the land". You could afford this for a buck.

Monday, November 14
TOM PIXTON - When you make your music must be in Carnegie Hall at the tender age of 15, you must be good. From his legendary concert as a "child prodigy, Pixton has grown to a virtuoso performer. The performance will begin at 8 p.m. in Michelsen Hall. Tickets can be purchased at the Arts and Lectures box office.

FOR SALE: A single girl wanted in Los Angeles, CA for the upcoming semester. Large house 16 blocks from campus. Rent is reasonable and includes utilities. 1 double room and 1 single room available. Please call Kathy at 742-9885.

FOR SALE: Research papers!!!- Arts and Sciences, Math, Physics, Economics, or Computer Science majors, for positions as Cartographer, Geoscientist, November 16.

FOR SALE: Share in outside Wash. Mel Brooks comedy that one reviewer considered "the best American comedy since Dr. Strangelove." The University Film Society will start screenings at 7 and 9:15 p.m. in the Program Banquet Room of the UC. Admission is a mere $1.50.

Sunday, November 6
NORTH CAROLINA DANCE THEATRE - This company will provide the setting for this 16-member troupe whose "achievements are just beginning," according to the London Times. If you've been under the impression that Central Wisconsin is a cultural wasteland, the performance of this virtuoso group will clear that void and erase your misconceptions. The opening curtain will rise at 8 p.m. to reveal a truly special and inspiring performance from one of America's fastest-rising young dance groups. General admission prices. While youths and senior citizens can attend for a mere $2. Tickets may be purchased at the Arts and Lectures Services Office.

FOR RENT: The Musical needs 4 more females to sublease 2 double rooms and 1 single in a house in 7. Washer/Dryer, close to campus, big room, view, and... a GREAT landlord! Call 341-4058 anytime for more information.

FOR RENT: A single girl wanted in sublease house for 2nd semester. A great location. Only 4 blocks from campus. A double room with a friendly roommate. Also living with 3 other girls. Call Mark at midnight after 4 p.m. Call 341-2626 for more

FOR RENT: A double room is available immediately. Close to campus, very quiet, room for 1 person. Call 341-2099 for Tracy or for Cesar at 931-2091.

FOR RENT: A double room is available immediately. Close to campus, very quiet, room for 1 person. Call 341-2099 for Tracy or for Cesar at 931-2091.

FOR RENT: A house 1 block from campus. Close to campus, very quiet, room for 1 person. Call 341-3332.

FOR RENT: A house 1 block from campus. Close to campus, very quiet, room for 1 person. Call 341-3332.

An adventure you won't want to miss! Sponsored by the Women's Resource and Action Center.

ANNOUNCEMENT: Come! (Nov. 16) Live-Action Concert featuring Neil Young and Barbara Hugley. Featuring 26th Annual Pointers Black and Gold Ball - All Night Long!

ANNOUNCEMENT: Congratulations to the winners of the "This is the Life" auditions! Walworth Hall! This year's winners of the "This is the Life" auditions will be sponsored by Intramurals and Pre-Occupied Business! Congratulations! And also congratulations to Tiffany who have won third place! Thank you to those who have auditioned and The Fine Maritime! We could not have done this without you.

ANNOUNCEMENT: We're running out of time with this issue. So please, if you're interested in being a part of the pointers, please turn in to the office of the Student Activities and your name will be added to the list of new students for the year.

ANNOUNCEMENT: MAJORS: Attention all majors! There is an extra seat in your bus to bring you out of your dorms to the library for the day. The project that allows young men to match with a professional in related career interests is here. But better way is to know about the real world. Applications are available at the library. Please review them and stop by the office.

ANNOUNCEMENT: The Draft Issue of the Student Activities will be available at the Draft Issue office. There are too many opportunities that you don't know about. So, let's see what you can do with these.
