Wealthy parking lots—round 2

In last week’s Pointer, I wrote an editorial opposing the parking lot proposal which called for the building of a parking lot on the current site of the athletic field on the corner of Fourth and Isadore. To compensate for the loss of the athletic field, the proposal calls for portions of Lot L (located between the Village and Lot Q) to be replaced by a new athletic field.

The information used in that editorial was obtained from four sources: SGA, Resident’s Assistant’s Council (RAC), Residence Hall Association (RHA) and the CNR Student Advisory Board (STAB). As it turned out, some of this information was incorrect.

The above mentioned organizations gave me the information from the most recent proposals they had received. Apparently, updated versions of the proposals were written, but these organizations did not receive any of the copies. As it turns out, the cost of building the new lot and field is not $45,000 as I was told last week, but $175,000. The proposed lot, instead of being metered as was previously stated, would be funded by a “pay as you park” system, according to Alan Kesner.

The university is apparently violating a parking ordinance by having too many cars parked on the streets. Apparently the university has been unfaithful to its parking system, according to Alan Kesner. In any case, I still think it is ludicrous.

"Leaders and Leadership" theme for lecture series

"Leaders and Leadership" is the title of the spring semester series of lecture forum programs at the University of Wisconsin-Stevens Point. People who have been in the forefront of their professions or scholarly disciplines will be discussed by members of the faculty and one guest speaker.

The lecture forum may be taken with or without credit and is eligible to students at Stevens Point and without credit and is eligible to students at Wisconsin-Stevens Point.

It has been particularly popular with out students. The following topics will be covered:

- "The Art of Leadership" by Professor Joseph Schuler, who will discuss how leadership has been defined by philosophers, political leaders, and business executives.
- "Leadership in the 19th Century" by Professor William Ackley, who will explore how leadership has evolved over time.
- "Leadership in the 20th Century" by Professor Mark Cates, who will discuss the role of leadership in modern society.

The program will be held on Tuesday, Dec. 11 at the University of Wisconsin-Stevens Point.

"Leaders and Leadership" will be held on Tuesday, Dec. 11 at the University of Wisconsin-Stevens Point.

The concert will be held in Milwaukee Hall of the Fine Arts Center, and will feature the University Jazz Band and other arrangements by John Moore, assistant professor of music.

The jazz concert is the first of the Music Department Scholarship Season. Tickets will be available at the reduced price of $10 for students and $5 for non-students.

"Madrigal dinners will turn UWSP medieval"

Emphasis will be on holiday traditions and Christmas music this year, says Gary Bengtson, new director of the Madison dinner productions from Dec. 8-9, at the University of Wisconsin-Stevens Point.

Bengtson is working with Dean of Students Barbara, who is directing students from the departments of music, theatre arts, dance, art and home economics to create the entertainments scheduled for four successive evenings.

The courtyard of the Fine Arts Center will be transformed with wreaths, banners, candles and a large tree to resemble a medieval castle decorated for a holiday celebration, according to Bengtson. He has added more traditional Christmas touches to the main event, including carols and a candlelighting ceremony.

Guests will be greeted in the parking lot behind the Fine Arts Center and taken to the main entrance in a van driven by a beggar. They are directed to the building's upper level, where a cash bar will be in operation from 6 to 7 p.m. The University Brass Choir, directed by Donald R. Schlichte, and the UWSP String Quartet, under the direction of Dee Martin, will provide the prelude music.

An authentic roasted boar's head, a symbol of the high point of the procession before dinner. Following the singing of the "Boar's Head Carol," a meal of spinach salad, prime rib, parsnip buttered potatoes, carrots in dill sauce, and plum pudding with rum sauce-flavored will be served in the courtyard. The main course will be served under the supervision of Shirley Randall.

Bills will be sent to each of the residents, and students will be greeted with the Madrigal Singers who will perform about 28 Christmas carols.

Bengtson, who also directed the traditional Christmas dinner this fall, is an experienced Madrigal director. He has coordinated several similar events at other arrangements by John Moore, assistant professor of music.

The Point in Time, early music ensemble, will perform the entire meal and during the program. The Point in Time, who are residents Faith Deeb, Irene Warhauer, Christina Kersten, Vickie Anderson, Jean Dreier, and Shannon Cook. Joining them will be the dancers and the Madrigal Singers who will perform about 28 Christmas carols.

Bengtson, who also directed the traditional Christmas dinner this fall, is an experienced Madrigal director. He has coordinated several similar events at other arrangements by John Moore, assistant professor of music.
Parking lot supported

In last week's Pointer, an editorial appeared opposing the planned parking lot in the Quandt Field near Neale and Baldo. The author, a Senator and one who serves on the University Affairs Committee, presented his facts in many of the arguments used to oppose the lot.

This is not a new thing; the university has been issuing a weekly newsletter to attempt to get the student body to support the lot. It is not that people aren't listening, but those students aren't being listened to.

Right now over 1,000 university cars driven by students, staff and faculty are being forced to park on the streets near the university. The university of Stevens Point could very easily force the university to build more parking areas.

Another major point to keep in mind is that the university of Stevens Point could very easily force the university to build more parking areas.

Non-trads supported

To the Editor: We all know how hectic school can be, especially during finals week. To make things easier for the non-traditional students, the university has set aside a few more parking spots for these students. The non-traditional students of UWSP are often those who have entered school after their high school days or are married and have children. They are often working and tough for these students because they have to balance work and school. They would like to have somewhere to park in between full or part-time school, employment and raising their families.

Support the faculty

To the Editor: Who could have guessed that we could be so successful? The first parking lot proposal on the UWSP campus on Thursday, November 29, was a huge success and we were able to raise all 1,399 U.S. dollars missed a meal on that day. Be- cause of this meal, the university will now have a way to help those who are hungry.

Another major point to keep in mind is that the lot isn't going to be needed at all during the entire 34 hours of each day.

Several Parking Improvement Association would like to hear your views on this issue. We will be holding an Open Forum parking lot tonight (Thursday). It would be nice to have the parking lot and our students there. It would also be nice to have the parking lot and our students there.

Senator and one who serves on the University Affairs Committee, presented his facts in many of the arguments used to oppose the lot.

This is not a new thing; the university has been issuing a weekly newsletter to attempt to get the student body to support the lot. It is not that people aren't listening, but those students aren't being listened to.

Area teacher examines education's hot topics

"There is an awful lot that is right with education in Wisconsin." — Mary Miller, D.C. Everest.

by Chris Celichowski
News Edtor

Recent reports on the status of American secondary and university education alarmed the National Commission on Excellence's well-publicized "A Nation at Risk" study, have student-oriented evaluations and changes. Although Miller certainly disagrees with the "doom and gloom" evaluations of American education that have surfaced lately, she recognizes that there is substantial room for improvement from all quarters-administrators, students, and teachers.

Miller taught at the University of Wisconsin with a speech major and minors in English and secondary education. In the fall, Miller began her career at South Division High School in Milwaukee. She said earlier and heavier exposure to the classroom would have made this more of a success for her and more experienced at teaching.

Miller believes she learned more in her 50 years teaching young people in the area and saw many of the students who are "a major impediment" to American education in those early days. She said she did not interact in a classroom. However, she left the profession never to return, Miller believes earlier exposure to the classroom would have saved this particular student from "wasting" his education and becoming a career he was ill-suited for.

She thinks students preparing for a career in education should follow a teacher around for one week to better assess their future responsibilities. In addition, role playing situations—which was exposed to a while at Oshkosh—can also help aspiring educators.

Miller praised post-secondary education programs—those who teaching the teachers—"for beginning to open up more and listen to the concerns of high school teachers. Students can tell their teachers if this kind can help college instructors to better prepare future teachers and better understand the needs and pressures of those already teaching.

"The English department at UWSP, and in particular Rich Berg's, have gone to great lengths to help those of us (teachers) who have taken classes there," Miller said. "It's nice to have someone listen to what's actually going on there in the field."

Lack of a sufficient vocabulary is probably the primary weakness among high school students, according to Miller. She said an increased emphasis on foreign languages—especially those related to English, such as Latin—would help students enlarge their vocabularies.

"I had Latin in high school and that helped me along the way. It's the discipline, and Shakespeare in particular, might prove valuable vocally. She also mentioned that Miller's "challenge students beyond their current level of comprehension," Miller added. In addition, she said television should not shoulder the blame for shortfalls in vocabulary.

"Who's to say students aren't broadening their vocabulary through television and the other media?" she asserted.

The current movement toward strengthening educational requirements in U.S. schools is part of a cyclical movement. Miller was advised earlier in her career. When teaching at Wisconsin Rapids Lincoln, an other faculty member nearing retirement predicted "the pendulum would swing back again toward stiffer requirements," Miller said. This year the Wisconsin state Senate passed SB600, designed to tighten graduation requirements in high schools throughout the Badger State. She said both she and her contemporaries were never asked about the change, although they had known for some time that it was needed.

"Sometimes it's easy for those people in the ivory towers to make decisions without remembering that we're the ones in the field" who are actually teaching and must implement those decisions Miller said.

She believes the federal Department of Education and the state Department of Public Instruction are both needed because it's hard for them to access to resources local communities cannot obtain, especially money. She also criticized the way President Reagan's promise to dismantle the Department of Education.

"He's been talking about The Nation at Risk and other things, but federal grants could help improve existing programs and raise the salaries of teachers, thus attracting more qualified individuals to the profession." She said the fact that teaching was once a female-dominated profession may be one reason teacher salaries remain lower than comparatively trained professionals in other fields.

"Am I paid a fair wage? Yes, if you want to equal me with a bus driver or similarly skilled laborer," she noted. "If you want to equal me with teachers that have a four-year college education, then no."

In order to supplement her base salary Miller has directed her money coming from campus and her other school activities. The payment she receives for such projects falls to approach minimum wage when her total hours are figured in. In addition, Miller's husband Todd, who also teaches at Everest, supplements his income by coaching, scoring, and refereeing in the Central Wisconsin area. He also works for the Wisconsin Department of Natural Resources during summer vacations. All this extra income has enabled them to the ranks of the Rockefellers because, as Miller pointed out, "Third incomes are more taxable—you don't get as much as you expect..."

Miller admitted that summer vacations prevent teachers from "chasing each other." If they wanted to teach for 12 months of the year, she said, "I'd quit," and "If you want to make sure you make it attractive to students..."

Miller opposed the idea of a "Nation at Risk" and other assessments turned public attention to education. However, teachers like Miller probably can't pay much attention to them. They were already too busy trying to prove them wrong.

Parking lot proposal causing campus uproar

by Mike Verbrick
Staff reporter

The Student Senate voted to endorse a petition being circulated by Residence Hall Association that opposes plans to construct a parking lot on the present intramural field at the corner of Isadore and 4th. The petition went on to say, "We feel there are alternative solutions to the parking problem which should be given further consideration."

RHC President Joan Spink said the organization is circulating the petition because the proposed parking lot would be "aesthetically displeasing" and "take away from area used to play athletics and intramural sports."

Proponents of the parking lot say it is needed to alleviate the current parking shortage, to comply with Stevens Point City Ordinance, and to provide the number of parking spaces the university must provide, to stimulate attendance at events held at Quandt and Berg Gym and to make parking easier for visitors, commuters and non-traditional students. According to Mary Williams, University Relations, the plan to build a parking lot on the corner of Isadore and 4th would include provisions to tear up part of Lot L, near the Village, to substitute for the recreational area lost when the new lot is installed. Many senators expressed objection over the thought of students, particularly those living in Neale, Baldwin, Hansen and Steiner, having to walk to Lot L to play athletics. But Senator Kevin Hamann said the proposal was the "most practical and feasible."

"People claim this is a wellness issue," he said, "but they're too damn lazy to walk over to the intramural field to play sports."

Senator Wayne Kaboord expressed the sentiment of many senators by saying, "I'll admit there is a problem (with parking), but this is not the best alternative."

Among the alternatives suggested was the development of the area between the tennis courts and DeBot Center. The area is currently unused much of the year because it is often muddy and has uneven terrain.

Development of Lots X and Y, which have been in the Recreation Building, was also suggested. This proposal would require the university to purchase and raze four homes currently occupying the space. So far, only one owner has shown willingness to sell out.

Expansion of Lot R, located on Portage Street across the street from the library, was also suggested. This proposal is considered the most expensive because it would require the university to purchase and raze nine homes.

Opponents suggested the improvement of Lot T, behind Gray-Olms Hall. Improvements would include paving and lighting the parking lot in hopes of making it more attractive to students.

Treasury plan could hurt schools

by Al P. Wong

A Treasury Department tax proposal could be devastating to higher education if it is accepted by President Reagan and Congress, it was reported. Proposed tax changes in the budget include major tax breaks for the purchase of capital assets and construction of educational facilities. It would also levy taxes on the tuition benefits that companies provide their employees.

A report issued by the Commission on Higher Education and Adult Learning has suggested that colleges and universities are "a major impediment" to meeting the education needs of adults. Even though the number of older students on campuses has increased significantly in recent years, colleges appear unready to recognize the magnitude of the need and to confront the requisite changes. The report called on educators and the federal government to support a new national effort to increase educational opportunities for adults.

The Council of Chairs of Arts and Sciences has condemned a
The gas leak at Bhopal killed more than 1,200 people and injured 200,000 others in the central Indian city of Bhopal, it was reported Monday. The leak occurred late Sunday night and many people were found dead in their homes. Many survivors fled in panic to neighboring towns. Thousands of people were taken to hospitals and animals lay dead in the streets, the report said. Four officials of the Union Carbide plant have been arrested by police. A judicial inquiry has been ordered.

SAN SALVADOR, El SALVA­­DOR: President Jose Napoleon Duarte said rebel leaders offered "nothing serious" at the second round of peace talks held last Friday. He said the rebel leaders also rejected a Christmas truce in the five-year civil war. Both sides, however, agreed to allow free movement of traffic from Dec. 23 to Jan. 3. The five members held in Ayagualo. The date for a third round of talks has not been set yet.

CAIRO: Jordan's King Hus­­sein, on his first official visit to Egypt since 1979, asserted that there can be no Middle East peace if east Jerusalem is not returned to Arab rule. He stunned the Egyptian Parliament Sunday by denouncing the Camp David accords between Israel and Egypt. In 1979, Egypt traded peace with Israel. Hussein said that the basis of a solution should be an exchange with Israel of occupied Arab land for peace. He also said that the Palestine Liberation Organization must be a full partner in any future Middle East peace talks and that Jordan would not bargain with Israel on the Palest­­inian's behalf.

LAUSANNE, SWITZER­LAND: The 88-member Interna­­tional Olympic Committee, in its first extraordinary session to consider possible sanctions against boycotting countries, re­­jected a proposal Sunday to punish countries that boycott future Olympic Games. With hints of a Soviet-bloc boycott of the next summer's games in Seoul, South Korea, the nine­­member IOC Executive Board held that requiring any future boycott be barred from at least two subsequent games. The IOC, however, said it was the responsibility of the 160 national Olympic committees to ensure full participation.

WASHINGTON: The nation's annual foreign trade deficit has risen above $100 billion for the first time ever, the Commerce Department reported last Fri­­day. Last year's record trade deficit was $69.4 billion, Octo­­ber's deficit of $91.8 billion lifted the total deficit to $105.8 billion from January through October.

UWSP prot Houlihan pens mystery novel

A new, bonafide author of mystery/adventure stories has emerged as the result of an am­­bitious project by all members of an editing and publishing class at the University of Wis­­consin-Stevens Point.

Professor Daniel Houlihan of the communication department and a 3-year teaching assistant at UW-SP has penned a 130-page commercially-printed paperback entitled, "Sean Murphy."

The class, believed a rarity in American higher education because its students transform raw manuscripts to bookform, is the publishing arm of the producing the book. Quality of the work "demon­­strates the capacity of the students to tell a story very capably," according to Dan Houlihan, a black female basketball player. "It's very inter­­esting," according to Dan Houlihan, a black female basketball player. "But this is the kind of place I'm most familiar with."

The plot centers on Murphy's interest in learning, as he approaches age 40, a new way of defending himself. He practices throwing objects with speed and accuracy.

Houlihan's manuscript is "very well done - it's very in­­teresting," according to Dan Houlihan, a black female basketball player. He recom­­mends fellow students to choose for publication.

The class is a writing class, according to Houlihan, who teaches the class, agrees.

There are what Houlihan de­­scribes as "explicit scenes" which became sources of considerable con­­trast, according to Houlihan, a black female basketball player. One section involving incest was "fined down," according to Houlihan, a black female basketball player. said, after deliberations between the author and the students.

Throughout the project, ques­­tions that were difficult to re­­solve arise in matters ranging from finances to editorial con­­tent. All of the experiences were valuable, according to Houlihan, a black female basketball player. Because of the lessons they pro­­vided in human relations and communication.

Students are "very serious" about their roles in the "First Press Publishing" company, their professor contends, in part because they were involved in a greatly professional enterprise. About $1,500 was invested in the cost of producing the book.

The class is a writing class, according to Houlihan, who teaches the class, agrees. Quality of the work "demon­­strates the capacity of the students to tell a story very capably."

Besides choosing a manuscript from "a very good selection" of entries ranging from college assistants to school children, according to Houlihan, a black female basketball player. the students did the negotiations with the press. They de­­veloped a contract, raised money for the project, researched pricing, selected typesetters, and printers.

UK-SF has had a course in editing and publishing since the early 1990s when it was de­­veloped by Professor Mary Croft. Dieterich knows of only one other in­­stitution, the University of Notre Dame, with a similar offering. She is a student of Venita Reardon, editor of Milwaukee Journal. Mathieu,

Houlihan hopes he can use a copy to interest a major publish­­er in taking over rights to the story after the students wind up their project.

He's also giving thought to an­­other book - the story of a black female basketball player. A voracious reader, he esti­­mates that he finishes between 90 and 110 mystery books each year. He keeps a record of each one and rates them on a scale of one to four.

After having given many 2.5 scores, he decided he could do as well, if not better than, com­­mercial writers. Hence, a new avocation.

Dan Houlihan looks over his new mystery novel, "Sean Murphy."

Celebration of human dignity

by Noel Radin

The Committee on Latin America sponsored "A Celebration of Human Dignity" for the people of Central America. Through poetry, music and speeches, the Central American culture was brought to the Encore.

Danny Ben read poetry by Pablo Neruda, which explained the war-like atmosphere under Argentine junta. The poems expressed the violation of human rights used by the Pinochet government. Local musician Scott Neubert entertained the last lot with songs of the peoples of Nicaragua and El Salvador.

Chotkiss, President of COLA, stated that the amount of support for the peoples of Central America is increasing. This was emphasized by the size of the audience at the program, which numbered over 100.

Yet Reagan does not speak for the interests of Central American. Chotkiss believes a strong base of opposition to the Reagan administration's policy on Central America must continue.

Also, education of the issues as well as cultural awareness must prevail.

Treasury, cont.

plan to accredit computer-science programs on campuses. The dean of the College of Letters and Science, Dr. Allen MacKenzie, E. David Cronon, said that "accreditation distorts resources which the Computing department a buse of the par­ ticular program." At issue here is a proposal by the Computing Sciences Accreditation Board, which was estab­ lished by the Society for Computing Machinery and the Computer Society of the Institute of Electrical and Electronics Engineers, the two major national organizations of computer scientists.

The board has solicited colleges and universities to apply for accreditation. However, Prof. Feldman felt that not everyone should be given an equal "dosage" of humanities because of their different majors. A forestry major, for example, would read history of the wilderness, a subject that would relate more to the area of study.

In the humanities programs at UWSP, Prof. Feldman felt that the requirements, as stipu­ lated in the degree re­ quirements, are sufficient for students to get a good feel of humanities. "The question is not whether we would do more, but how we handle what we are doing in terms of teaching hu­ manities," Prof. Feldman said, adding that he was confident the final situation was satisfac­ tory already.

Humanities, cont.

"I would be particularly dis­ tressed if we turn out people who have little knowledge about what the culture is all about," Prof. Feldman said.

"It is a question of whether they are going to be able to contribute to the academic integrity of college and university programs. It would take a college univer­ sity $4,500 to be evaluated for ac­ creditation.

Parking, cont.

People who are currently parking in Lot P, between D.J.'s Pizza and Emmens Stationary, could park in Lot L. This would free up Lot P to be used by vis­ itors, non-traditional students and employees. The three groups most affected by the cur­ rent parking shortage will be the only one-way traffic on Reserve Street and have angle parking on one side of the street.

Senator Jeff Peterson has re­ jected the alternatives and fa­ vor the present parking lot. "I don't think the students have all the facts," said "They are going to give up an athletic field to make a parking lot. This proposal would actually give the students more athletic space."

The committee is under the need to comply with city ordinances, Pe­

How do you feel about the quality of the education you’re getting here at UWSP?

Kerry Nikutta
New Berlin, WI
Senior
Resource Management
“Overall, I think it is good. A lot of classes may not apply to what you need.”

Dan Marx
New London, WI
Junior
Business Administration
“Fairly good. Went to an extension at Menasha and the professors here are a lot better. We could use more tutors though.”

Robert Vanderhoof
Sturgeon Bay, WI
Graduate Student
Wildlife Management
“In natural resources it is outstanding. Fantastic! More money could go into graduate research, though.”

Helen Hermus
Wrightstown, WI
Sophomore
Communications
“It depends on the class; some are really good, some could be replaced. I like the advantage of being able to participate in extracurricular activities over universities of larger size.”

Vanessa Marz
New London, WI
Junior
Busines Administration
“Overall, I think it is good. A lot of classes may not apply to what you need.”

Sally Koppelkam
Sheboygan, WI
Freshman
Elementary Education
“It is good for the size of the school. More individualized for students. Very happy here.”

Michael Detthoff
Greenfield, WI
Senior
Biology
“I think it is very good compared to other schools. Professors get to know you, call you by your first name. I feel no need to transfer.”

Dan Marx
New London, WI
Junior
Business Administration
“Fairly good. Went to an extension at Menasha and the professors here are a lot better. We could use more tutors though.”

Cindy Kater
Stevens Point, WI
Sophomore
Elementary Education
“In some areas, really good. What is available is good. It is up to me to get the quality; it is available. Could be improved. A lot of teachers give good grades for poor writing. The students could strive for a little more perfection in the writing quality of their papers.”

Rod Retterath
Marshfield, WI
Junior
Computer Information Systems
“Quite good. Smaller colleges offer a wide range of academic courses. Students are not just a number. There was a shuffling of degree requirements for a major in CIS. There is a lack of information and warning with little organization as to degree requirements.”

Cheryl Hecker
Coo Rapids, MN
Senior
Interior Design
“Within my major, it is one of the better programs in the state. We get a good general education, more so than other colleges because we all have to take science and other courses.”

Julie Hughes
St. Charles, IL
Senior
Communications
“Overall, the quality of education at UWSP is good considering the size. The new general degree requirements is a good idea.”

Evan Bitter
Verona, WI
Sophomore
Music Theory
“Pretty good considering the size. Good professors. UWSP compares favorably to colleges of larger size. No changes.”
Graduation requirements strict for teachers

by Lori A. Herske

Staff reporter

Interested in majoring in education at UWSP? If you are, there are a few requirements that you should know about.

Depending upon which major you choose, Elementary Education, Secondary Education, or Exceptional Education, you must fill out an application in the Department of Professional Studies. For Elementary Education, the application must be filed in your Freshman year, for Secondary Education majors, it is filed in their Sophomore year. This must be done before the core courses, such as Education 311, can be completed.

After the application is filed, each student is assigned to an advisor in the Professional Education Department, who is available through the Advising Center for the School of Education, or the office of the Associate Dean.

In addition to the formal application for those students in the Professional Education Program at UWSP, a grade point average of at least 2.56 must be maintained in the two semesters of Freshman English. If a student does not make the grade, they must work at the Writing Laboratory until competency is verified by the lab.

The next requirement has to do with a student’s speech and hearing tests. They must complete and pass a speech and hearing test given to them, meeting the State of Wisconsin’s requirements for teacher certification. If a student fails either test, remedial services will be made available for those who wish to pursue the major.

“The speech and hearing test is very important”, says Connie Stark, a senior majoring in Elementary Education at UWSP. “If a prospective teacher has any level of an elementary basic music series. “The student who is going into Elementary Education must be able to entertain her students,” says Connie. Remember back when you were in those elementary grades, and singing around a piano was a daily activity? “That makes the music requirement very important to the major,” says Connie.

The last requirement needed for graduation is the ten different credits of student teaching. This is of extreme importance because the student is able to actually experience a classroom environment in order to learn from experienced teachers already in the field.

Placement for student teaching is made by the Student Teaching Office. They will be assigned to a school that cooperates with the university in this important phase for the professional teacher. Students who are student teaching are advised not to take other classes during this time.

Any strict requirements necessary for admission into the

U.S. colleges are better than you think

by Amy L. Schroeder

Features Editor

It’s probably safe to say that the majority of you have at some point in your life heard someone praise the high quality of education in other countries, and at the same time refer to American education as something that was uncomparable to others, right? Well the truth is that a college education overseas cannot be compared to the one you’re getting right here in “the good ol’ U.S.A.” because it is so much different.

Dr. Fang of the Foreign Students’ Office says many foreign students who come to America to get a college education are very “misinformed.”

“Some come expecting it to be very easy to get a degree here, and once they start they find it’s pretty tough, and they have a hard time adjusting to our rigor.”

Yamamoto added, in general, American colleges are much stricter, and the American students work a lot harder than in Japan.

Another major difference between American colleges and foreign universities is that foreign colleges don’t require such a broad range of study. “It’s more like working for a master’s degree here,” said Fang. “You just go to college and focus on one thing and that’s it.”

In other countries, not only do students face an entrance exam, but they are confronted with other stipulations such as religion, race and social status for any level of an elementary basic music series.

Yangmoto added, “When you graduate from a college in Japan, you are trained for one career. People don’t expand on a major to include a variety of job possibilities.”

Fang said that many American students question why they have such a broad range of requirements. “I’m all for it,” he said. “I personally feel that by having the chance to graduate from an American college, I have a far broader range of interests.”

In addition to the above requirements, for those interested in Elementary Education, they must have O which is the proficiency skills on the piano, guitar, accordion, or autoharp. They must also be able to harmonize given melody from an elementary basic music series.

The student who is going into Elementary Education must be able to entertain her students.”

A look at women and violence

by Claudia Kerevski

This spring, the women’s studies department is offering a course entitled Women and Violence in Literature and the Media (Women’s Studies 330). Ms. White approaches this course with a fresh definition of violence. She says she extends it to include “not only physical and emotional abuse but psychological manipulation and destruction as well.” Her course objectives are to establish the “appalling frequency” of violence against women, its acceptance and perpetuation by society, and exposure of this violence in literature and the media.

Ms. White begins this course with several documentaries. The students will discuss sexual and verbal abuse as expressions of power and the repercussions of such behavior. They will also view The Fear That Holds Us Five abused women are interviewed in this film, along with professionals who offer explanations for this type of violence. For the students, this documentary will bring home the fact that the violence exists and can paralyze women with fear. Students will also view A Clockwork Orange. This film also links sex with violence. Both of these works will be examined as purely male visions and world views.

Students will be exposed to women writers exploring women’s struggles to control their lives. When students read Looking for Mr. Goodbar, they will see a woman (Theresa Dunn) who had been oppressed by men throughout her life and so has no feeling of self-worth. Theresa’s psychological and emotional damage leads her to eventual destruction. Students will view female vulnerability in The Shadow Knows. This novel differs from Mr. Goodbar in that it has a brighter outlook. The class will see here that although N. is attacked in her most vulnerable areas, she survives, and grows because she learns to keep her eyes open. Students will discuss the quality of writing and the “dark” is a courageous way of coping or simply another way of giving up.

Students will see and read much more to aid their understanding of violence against women. Class discussions are a vital part of this course to help our own. But then, too, one must remember that to say getting an education in the U.S. is easy is a grim assault based on misinformation of the system.

Christmas Madrigal, a taste of ye olde Englande

by Cyle C. Bruggeman
Staff reporter

"Most noble and distinguished guests. Tis the year our Lord 1686. God save the Queen and all the world. As we gather to partake of the feast of our most gracious Lord and Layde of the Manor. Let this evening of yuletide festivities commence!"

So speakest the Lorde Chamberlain at the beginning of the Madrigal Christmas Dinner. Now in its 15th year, the Madrigal has become the social event of the Christmas season. Although the $16 ticket cost may seem prohibitive, by all accounts the Madrigal is a spectacular evening of entertainment.

The Madrigal Christmas Dinner provides a passport to early 17th century England. The courtyard of the College of Fine Arts is decorated to resemble a Great Hall in a medieval manor. The Madrigal Lords and Ladies are complemented in period costumes. A minstrel, a clown, a beggar, jugglers, dancers and a mummer (reminiscence of the mummers of old) add to the authenticity and merriment.

The viands consist of hotte wosseye punch, spinach salald, sucrers, prime rib of beeuf au poivre, parcelld batard potatoes, carrots in dyll sauce, hotte spiced tea, and plumme pudding flambe. The dinner begins with the traditional boar's head processionally accompanied by the Boar's Head Carol of Queen's College, Oxford: "The boar's head in hand bear..." The entertainment is lively during dinner, and at the close of the feast the Madrigal Singers provide a concert of traditional Christmas carols.

The Madrigal Christmas Dinner is not connected with the Society for Creative Anachronism. However, Dr. Gary Bangstad indicated that guests are welcome to come in costume.

```
The future to be examined
```

by Amy L. Schruder
Features Editor

Have you ever wondered which groups will be the most influential in shaping the future? And contemplated the future of democracy and freedom? Or questioned the development of "human potential"? If so, you might think about taking a new class being offered at UWSP next semester, Sociology of the Future (Sociology 256) which is also being cross-listed with the peace studies minor (Sociology 256-Peace Studies 379).

The course will take a "sociological perspective" on issues related to the future of American society and the world.

Bob Enright, course instructor, said, "It's not a course about predictions, but rather one that critically assesses writers and thinkers who attempted to predict the future."

The books tentatively scheduled to be used in this analysis are considered "Wagstaf, Toffler, Great Expectations: America and the Baby Boom Generation by Landon Jance, and George Orwell's 1984. Other readings will include: Person-Placards, The Creative Industrialization of Industrial Society by Theodore Rosak, and William G. Draper's The Powers That Be. Enright said he also plans to use some films and guest speakers to enhance class.

Enright said he feels there is definitely a widespread interest in the future. He added that it's important for people to have an understanding of the issues that will affect the future.

The viands consist of hotte wosseye punch, spinach salald, sucrers, prime rib of beeuf au poivre, parcelld batard potatoes, carrots in dyll sauce, hotte spiced tea, and plumme pudding flambe. The dinner begins with the traditional boar's head processionally accompanied by the Boar's Head Carol of Queen's College, Oxford: "The boar's head in hand bear..." The entertainment is lively during dinner, and at the close of the feast the Madrigal Singers provide a concert of traditional Christmas carols.

New GD requirements

by Nanette Cable

Periodically the general degree requirements to graduate from UWSP change. In the past, the GDR varied between colleges within the university and according to the type of degree a student chose to work for. Now whether a student is in the College of Fine Arts or the College of Letters and Sciences, the requirements for a bachelor of science or a bachelor of arts are standard and consistent between the colleges.

The GDR as listed in the 1983-85 course catalog did not contain any major changes as in comparison with the 1981-83 catalog. There is a writing emphasis requirement that came out during the 1983-84 school year. This requires students to have one course within their major and one course outside their major that is a writing emphasis based course.

A supplement to the 1983-85 catalog was to bring attention to the GDR for freshman students who entered this university as of August 1984. The GDR are divided into five categories. The new changes that apply to these freshmen were approved by the University of Wisconsin-Sheboygan General Degree Requirement Committee, the Academic Affairs Committee and the Faculty Senate.

The first division of the GDR is entitled "Verbal and Quantitative Skills." It includes a two-credit math requirement for all B.A. degrees and a six-credit requirement for B.S. degrees. In the past, a student could graduate from the College of Fine Arts with a B.A. degree and not have to take any math, because of the requirement of an early major.

The second division is entitled "Critical Thinking-Natural Science." This category includes the science requirement which changed over time, and the consequences of an aging American population.

Enright added, "Technology doesn't always control our lives. We need to take a look at things that aren't technological, such as social and economic problems. That's what can have an impact on the future."

Requirements, cont.

is six to 10 credits for a B.A. or 12 to 15 credits for a B.S.

In the third division which now contains the history and the humanities requirement is entitled "Critical Thinking-Cultural Awareness." If a student chooses to work for a B.S. degree, they can graduate now with only three credits of history and these three credits can also count toward their humanities requirement.

In the fourth category there is an entirely new requirement. The group is entitled "Technology and Contemporary Issues." It involves taking a three-credit course at the junior or senior level of the same title as the category.

The fifth category is the "Physical Education and Health Enhancement" requirement. In the past, students needed four credits of phy-ed to graduate with either a B.S. or B.A. The credits had to be selected from three groups. At least two of the credits had to come from Group A, which was the Aerobic-Activity and the other two could come from Group B entitled Health Concepts or from Group C which was Athletics and Intramurals. Now a student must take at least two credits of Aerobics-Activity and two credits in Health Enhancement.

The UWSP General Degree Requirements Committee is currently working to revise the requirements again.

Isn't always the best
WE'LL HELP GET YOU THE MONEY TO KEEP ON GROWING.

If you’re finishing up your first two years of college and you’ve decided to go on, to complete your education, but you don’t know where the money’s going to come from, here’s a possible solution.

The Army College Fund.

Here’s how it works. You qualify to train in a skill you’d like to learn, one that entitles you to the Army College Fund. Then each month you put aside some of your Army salary. Just like a savings account. Except the government matches your savings 5 for 1 or more.

In two years, you could have $15,200 for college. Your Army Recruiter has a booklet that explains all about Army College Fund. Pick one up.

Education should balance

by Timothy Byers

Environmental Editor

This past week I had the pleasure of interviewing Daniel Trainer, Dean of the College of Natural Resources (CNR). My aim was to discover some of his thoughts on education in the field of natural resources, and some ideas of trends for the future.

Dean Trainer sees education as a means "to provide the young, or anyone for that matter, with a base to further a career." To that end Trainer has striven to direct the CNR toward a well-rounded education, encompassing as much of the university as possible. As a student progresses through his academic years, he should be able to learn as much outside the CNR as within. As a dean he feels that money meant for one purpose should be used for another. When we work together we get to know one another. It helps credibility." Interim programs are another way for the future profession to be born and shape its ideas. Daniel Trainer is often called on to speak in areas where CNR interns have worked. He has this to say, "I give a speech and everyone smites and agrees, but if the student were to write the speech, or do the research, the public really realizes what it is we do. The student sells the program as a result of his activities. This helps develop a more well-rounded person when they leave the university.

Trainer thinks that one of the hardest tasks a university is called on to do is to get students to think. "Questioning is important. Our word is not gospel, we can be wrong. The information found in textbooks changes constantly. We shouldn't just accept what we hear, it may be an even harder task to do. With so much to absorb, it's hard to make the connection and what to accept. CNR study abroad programs may add to the problem, but the dean feels that it is well worth it. Our American program is integrated into resource management. The Germany-Poland trip really expands education. The students learn as much about the world, life and culture...

Volunteer deer count

by Linda Kurtz

Forty students from Stevens Point, including myself, volunteered to help register the anticipated large harvest of deer during the opening days of gun season this year. The DNR provided us with food at the Tower Hill State Park near Spring Green. The weekend started out at 9 a.m. Saturday. More volunteers than expected showed up, but we managed to cram everybody into one van and one bluebird. We arrived at Tower Hill a little after noon, where we met Tom Howard, area wildlife manager, and Tom Baug, Spring Green wildlife manager. They were in charge of putting us to work. We were separated into small groups and sent to different areas where deer were found throughout Sauk and Iowa counties. Those who were qualified to assist stayed at Tower Hill to help.

The first day most of us were completely busy. At some stations, cars and trucks were lined up with hunters waiting an hour or longer to register their deer. Our job was to make sure all the numbers from tags and licenses matched and fasten the metal tags to the deer. Some stations were holding "Big Buck, Big Doe" contests. We also helped with weighing some of the deer. The Reedsburg station was cooperating with members of a research project. The student volunteers who were working there helped by not only registering deer, but also by cutting out their sex glands for research.

By 8 a.m. all the stations were closed. After seeing enough blood for one day, we all met back at Tower Hill to grill our brats and finish off a half-barrel. One of the main conversations of the night was about hunters and the many stories. When you register deer all day, you can't help but overhear some of those "famous hunting stories."

We all made it through the night on those fold-up Army cots. The night was quite a cold one, but we survived (especially those of us who slept in the warm garage with the fire-trucks).

The next morning, after a delicious pancake breakfast, we went back to work. By the end of the second day I'm sure all of us were ready to head back to Point to get some sleep and a hot shower.

Cont. p. 15

In Kenya, residents dump the fruit of cashew trees into ponds where mosquitoes and snails breed, by extracting fatty acid from the fruit, which they have found kills the larvae of mosquitoes and aquatic snails. This could mean the chemical may be used as a pesticide against these two organisms which are carriers of the parasitic diseases malaria and onchocerciasis. For Third World countries it implies economic advancement in areas of vector control. At present, 51 of the 60 malaria-carrying mosquito species are resistant to man-made pesticides.

Insects are becoming more resistant to pesticides and other chemicals. The institute suggested that more research effort go into integrated pest management. This technique involves the use of natural predators and reduced chemical applications.

"Pathfinder" is a new computer system designed by scientists at the National Oceanic and Atmospheric Administration (NOAA). The system predicts oil and chemical spill movements on the Great Lakes. This will help in monitoring spills and control of pollution. Twenty-seven such spills occur on the average every year. The system can also track lost boats on the lakes. The Coast Guard now searches for lost boats weekly.

Soil conservationist Keith Wil- del suggests that it is time to think about windbreaks for farmland. Cost-saving is available from the Agriculture Environ- ment and Conservation Service. Trees are natural barriers to wind and help control soil erosion. They can protect crops, drainage ditches and homes from damage. Value of property is increased along with beauty and wildlife. A true windbreak is a house with shelter from snow and wind in the winter and from the scorch of the summer.

Deer hunters were out in full force recently. The sheriff's department in Mio, Michigan, arrested two "hunters" who...
**SPRING BREAK ALTERNATIVE**

Tall pines, dry sandy soil, no insect pests, 8 pound bass and warm April days. No this isn't Wisconsin, small bass. Can't be Minnesolita with their cold Aprils. Arizona? No. Louisiana is the new spring break hot spot, especially if crowds and spending big bucks turns you off.

The Kisatchie National Forest in central Louisiana is probably not what you have pictured in your mind. There are very few swamps because the topography is rolling sand hills. Bugs are few and far between even in the summer but especially in April. As a matter of fact, if you didn't know you were in Louisiana, you might think it looked just like northern Wisconsin. Campsites are plentiful and crowds is almost nonexistent at that time of the year. The weather can be variable in April from the 50's to the 80's but you can bet that it's a whole lot warmer than central Wisconsin.

If it's bass fishing that really turns your crank, Louisiana is the place for you. The Toledo Bend Reservoir is only a few miles from the Kisatchie. Toledo Bend, with hundreds of miles of prime "bass'n" shoreline, is considered one of the premier bass factories in the United States; some say that it's #1. Brook (sunfish), catfish, striped bass and crappie are also excellent in the reservoir. Crappie fishing peaks in the month of April with catches of 150 not uncommon, many of which will go 1½ to 2½ pounds. Resorts and campgrounds surround Toledo Bend and rates are very reasonable. You are not limited to the reservoir as there are many smaller lakes throughout the state with excellent fishing. As their license plates say, Louisianna is a "Sportsmen's Paradise."

Recreational Services, located in the lower level of the GC has Kisatchie National Forest maps along with maps of most National Forests in the U.S. We also have state maps to assist you in your travel plans. These maps are for your use and are available free of charge compliments of Recreational Services.

**Grim's hairy tales—Peter**

Moose Brute and Grim Determination are two adventurers who exist in the minds of all who have ever battled the elements. When you played games as a child you always took on some-persona which typified whatever you were doing. So, too, do Moose and Grim exist in the fantasy world of those of us who can't afford to do the things we think of. Fleet is going to answer if you're crazy. Great fishermen don't get that way by giving away their secrets. But, this magazine does pay me, so I will fill up this space with some useless advice you've probably read 10 times before... Fleet's ability to communicate scientific angling methods was nothing short of astounding. crunching across offered me from communion in the story. A was coming across. Only one human I that large—Moose angrily. Moose was I knew from reading journals that the was on land server.- I could tell as soon
goose's hollow stare thing was wrong. A s rod still dangling just gave mute testament. He tragedy. Moose relate to me. set out, the rest of the set their fate on the er rock face just a few where from where we what was leading at had unclipped from some photo of what was snow leopard loading new film, Sherpa lost his bai·
lunged off the cliff. At watching Yoplat rocks and then dis a deep crevice, Luci go on. Grim and

Moose decided to ferry some supplies up the cliff, while Laci knuckled on the face of the in·
cline. Grim had severely strained some nostril muscles gasping for breath, and after a short time the climb became too vigorous for him.

Moose's hold had been such that he couldn't get both hands free to untie the rope connecting him, so he merely cut it with his knife and free-climbed the last 300 feet. This was made more difficult since Moose had a 106-pound pack on, although he shrugged it off as "just a day pack." Of all the climbers I've known, Moose is one of the most humble.

Sitting down heavily, Moose's face seemed to withdraw into a dark shadow; the ordeal had taken its toll on the stoic native of Lousiana. With the sun setting over Everest, Moose and I sipped tea. The realization of what we had to do to save the rest of our friends was sitting like a lead weight in our guts. After a short nap, we set to work... (continued...)
Volunteer deer

by Linda Kurtz

Forty students from Stevens Point, including myself, volunteered to help register the anticipated large harvest of deer during the opening days of gun season this year. The DNR provided us with food and lodging at the Tower Hill State Park near Spring Green.

The weekend started out at 9 a.m. Saturday. More volunteers than we expected showed up, but we managed to cram everybody into one van and one Bluebird bus. We arrived at Tower Hill a little after noon, where we met Tom Howard, area wildlife manager, and Tom Hauge, Spring Green wildlife manager. They were in charge of putting us to work. We were separated into small groups and sent to different registration stations throughout Sauk and Iowa counties. Those who were qualified to age deer stayed at Tower Hill to help.

The first day most of us were constantly busy. At some stations, cars and trucks were lined up with hunters waiting an hour or longer to register the deer. Our job was to make sure numbers from tags and matched and fasten the tags to the deer. Some were holding "Big Buck" contests. We also weighed some of the deer for the Reedsburg state cooperative with members of the research project. The volunteers were there helped by not only registering deer, but also by cutting out their sex glands for research.

By 8 p.m. all the stations were closed. After seeing enough blood for one day, we all met back at Tower Hill to grill our brats and finish off a half-barrel of beer. One of the main conversations of the night was about hunters and their many stories. When you register deer all day, you can't help but overhear some of those "famous hunting stories." We all made it through the night on those fold-up Army cots. The night was quite a cold one, but we survived (especially good community relations. Dean Trainer: "Student groups help a student meet the community and vice versa. Each one can clarify the image he has of the other. When we work together..."

more lasting than a simple transit of the CNR.

Now that we've stepped on campus and met Tom Howard, area wildlife manager, and Tom Hauge, Spring Green wildlife manager, we have an opportunity to talk to them about what they do and the people they work with.

The first thing you need to know about Tom Howard is that he makes his livelihood in the outdoors. He is an avid hunter and fisherman. He also enjoys photography and bird watching. He is an expert on the outdoors and is a valuable resource for anyone interested in the natural world.

Tom Howard is the area wildlife manager for the Spring Green area. He is responsible for managing the wildlife resources in that area. He works closely with the Wisconsin Department of Natural Resources (DN)

The important thing about that weekend was that we learned that volunteer programs can be very rewarding and lots of fun! It also gave us the opportunity to meet many fun people and, possibly, some future employers. But we are not finished yet. We still have a lot of work to do. We will continue to register deer and help with the other activities.

We are planning to continue our volunteer work for the remainder of this season. We will be back next year to help with the deer registration and other activities. If you are interested in volunteering, please contact Tom Howard or me.

We are looking forward to another exciting season of volunteer work. Thank you for your support.

This past week I had the pleasure of interviewing Daniel Trainer, Dean of the College of Natural Resources (CNR). My aim was to discover some of his thoughts on education in the field of natural resources, significance of the CNR over the past year, and some ideas for trends for the future.

Dean Trainer sees education as a means to an end, young, or anyone for that matter, with a base to further a career. To that end Trainer has striven to direct the CNR towards a broadly based curriculum, encompassing as much of the university as possible. As a student progresses through the academic years, he should be able to integrate learning "not only from the CNR, but also from the humanities, biology, social science, philosophy, and what have you. Advanced courses should build on these foundations," according to the dean.

Providing a quality education in the natural resources area is not easy. Trainer feels that one of the problems today is that much is happening. All fields are advancing tremendously at the expense of looking at the "big picture." Attempts to advise students through courses based on a wide range meets with resistance. The knowledge base in many disciplines is a challenge in itself.

The numbers of students now attending the university present a problem as well. With tight budgets affecting the faculty population some individual attention may be lost. Dean Trainer, in addressing the use of simple tests (such as computer grading) rather than more lengthy essay type exam result of the student-teacher. Trainer feels that there have an effect on the student-performance. The aim should be to main high standard of quality. His favorite logic in this is the tremendous amount of involvement in or.}

Grim’s hairy tales—Peter

Moose Brute and Grim Determination are two adventurers who exist in the imaginations of all who have ever battled the elements. When you played games as a child you always took on some persona which typified whatever you were doing. So, too, do Moose and Grim exist in the fantasy world of those of us who can’t afford to do the things we read about in “Outside” magazine and “The Mountain Gazette.” Join us now as we rejoin the continuing adventures of

“Birdie” cont’d.

There is a race run concurrent with the Barkibooner called the Kortepet which is half the distance. My suggestion however is that you ski the whole thing if you’re going to do it at all.

There’s still time to enter the 1985 race but hurry because the entry fee keeps going up until the day of the race. You can enter until Dec. 1 for $50, $55 prior to Jan. 15 and $60 before race day. By the way, the race will be held on Saturday Feb.23, 1985. For more information, call the Telemark Lodge at (715) 798-3811 or write: American Birkebeiner, Telermark, WI 54821

If you lack the equipment necessary to hit the slopes, come down to Recreational Services. We have a full line of touring and light touring cross country equipment not to mention downhill outfits with new for ’85 downhill skis. Check our prices, we will beat the hill every time!

Yes! Recreational Services has applications for the 1985 American Birkebeiner!

We’re Trippers and we’ve got an outdoor alternative to boring weekends. BACKPACKING, SKIING, BIKING, CAMPING, HORSEBACK RIDING, PARACHUTING, PLUS ANYTHING ELSE YOU’D LIKE TO TRY. IT DOESN’T MATTER WHETHER YOU’RE AN “OLD PRO” OR A NOTICE LOOKING FOR ADVICE, WE CAN HELP YOU ENJOY YOUR SPORT MORE.

UPCOMING EVENTS:
PARACHUTING……DEC. int. (int. & 2nd. time jumpers)
NEXT SEMESTER LOOK FORWARD TO:
X-C SKIING
WINTER CAMPING
SNOWLARKING (IN CAVES)
BACKPACKING
CAMPING
ROCKCLIMBING & MORE
COME TALK TO US TUES. AT 9:00 PM ROOM 125 UC OR DROP US A LINE AT DESK #3 IN THE UC S.L.A.P. COMPLEX

We’ve accepted an award for UWSP va.

Be sure to look at the one picture.

We’ve improved down the line, and that improvement has come from good people working in the system.”

Briefs, cont.

were seen carrying rifles and dressed in tennis shoes. The naked men were arrested after a short chase by deputies. Each was charged with disorderly conduct.

Moose decided to ferry some supplies up the cliff, while Lucy bivouacked on the face of the in-cline. Grim had severely strained some nostril muscles gasping for breath, and after a short time the climb became too rigorous for him.

Moose’s hold had been such that he couldn’t get both hands free to unite the rope connecting them, so he merely cut it with his knife and free-climbed the last 300 feet. This was made more difficult since Moose had a 150-pound pack on, although he shrugged it off as “just a day pack.” Of all the climbers I’ve seen, Moose is one of the most humble.

Sitting down heavily, Moose’s face seemed to withdraw into a dark shadow; the ordeal had taken its toll on the stoic native of Dublin. With the sun setting overEverest, Moose and I sipped tea. The realization of what we had to do to save the rest of our friends was sitting like a lead weight in our guts.

A short nap, we set to work.

Volunteer

by Linda Karts

Forty students from Stevens Point, including myself, volunteered to help register the anticipated large harvest of deer during the opening days of gun season this year. The DNR provided us with food and lodging at the Tower Hill State Park near Spring Green.

The weekend started out at 9 a.m. Saturday. More volunteers than we expected showed up, but we managed to cram everybody into one van and one Bluebird bus. We arrived at Tower Hill a little after noon, where we met Tom Howard, area wildlife manager, and Tom Haug, Spring Green wildlife manager. They were in charge of putting us to work. We were separated into small groups and sent to different stands throughout Sauk and Iowa counties. Those who were qualified to age deer stayed at Tower Hill to help.

The first day most of us were confused. At some stations, cars and trucks were lined up with hunters waiting an hour or longer.

Our job was to register volunteers who were working there helped by not only registering deer, but also by cutting out their sex glands for research.

By 8 a.m. all the stations were closed. After seeing enough blood for one day, we all met back at Tower Hill to grill our beats and finish off a half-bottle of Canadian Club.

At the main conference of the night was about hunters and their many stories. When you register deer all day, you can't help but overhear some of these "famous hunting stories.

STAFF TESTED RECIPES

BANNOCK is an old Indian food which is a favorite among many backpackers. The sticky dough is simply fried like a pancake on each side producing a delicious fried bread. Eat with honey, peanut butter or just butter.

20 C flour (white or whole wheat)
1 C powder milk
1 C egg powder
3/4 C baking powder
1 tsp salt
1 C sugar

Can be stored in this powdered form; add 5 Tbsp shortening to mixture with 1 C water to make the better. BAKED

You are limited only by your imagination as to how many ways you can prepare GRANDOLA. Below is a staff favorite but by all means create your own masterpiece!

3 C corn oil
3/4 C unsweetened wheat germ
1 C unprocessed coconut (shredded)
2 Tbsp cinnamon
1 C flavored condensed milk (more as needed)
1/3 C honey
Mix dry ingredients together; add milk and honey to dry ingredients. Put mixture on cookie sheet and bake at 250° for 1 hr. or at 300° for 1/2 hr.

This newsletter is brought to you as a courtesy by RECREATIONAL SERVICES. We would like to know how many people get to look at this, so to make it worth your while, we've offered the gift certificate. This newsletter is primarily aimed to bring some of the activities of some of the outdoor oriented organizations to your attention. At the same time, we at Rec. Services hope this is entertaining.

RECREATIONAL SERVICES is located in the lower level of the U.C., next to Jeremiah's. We don't just rent out equipment and bring you video games, we offer many services.

- we have high-quality maps of virtually every state in the Union.
- we have county maps of most counties in WI.
- we have maps of most National Forests in the U.S.
- we have information on most of the National Parks in the U.S.
- we have files on most of the major back-packing trails in the country.

RECREATIONAL SERVICES will like to give you a 2500 gift certificate at the 1985 STUDENT COUNCIL FALL SPORT SHOP! All you have to do is fill out the blank and drop it in the box on the desk at RECREATIONAL SERVICES. Nothing to buy! Drawing will be held at 1:00 PM Mon. Dec 10th.

- We have ski brochures from most of the ski hills in the WI, MN, and MI area.

As our name implies, we are a SERVICE. Let us serve you, you'll be amazed at what we can do for you.

Grim’s hairy tales—Peter

Moose Brute and Grim Deter­mination are two new characters who exist in the minds of all who have ever battled the elements. While you who are not a child you always took on some­persona which typified whatever you were doing. So, too, do Moose and Grim exist in the fant­asy world of those of who can’t afford to do the things we read about in “Outside” magazine and “The Mountain Gaz­ette.” Join us now as we relive the continuing adventures of “Grim’s Hairly Tales.”

by The Sole American

Moose Brute could not be con­tacted this week to continue nar­ration of his latest adventure. The worldly Irish­man flew to Alaska to aid an old man who was experiencing great difficulty landing a large salmon. The fish had thunder­boxed for a week and at last report Moose had the fish almost hauled in. He hoped to land the fish within a day or two at the most. No esti­mate of the silverfish behem­oth’s weight was available, but Moose did say it was the large­st fish he’d had on in some time.

In Moose’s place this week is Peter Wilcox. The Sole American. The title was endowed on Wilcox on an expedition consist­ing of mostly European climbers where Peter had been literally the sole American. The nick­name stuck, and here’s his sto­ry.

There I was, high on the East Face of K2, relaxing with a cup of hot tea, sitting on a pile of rock. It had been a routine week. I’d slogged several peaks in the 30,000-38,000 foot range, and now I was taking it easy, thumbing through my favorite sportman’s magazine, Flyin’ Fur and Feathers. Flipping the pages, I came across a piece penned by the famed outdoor journalist, Fleet Cen­turion. Eyes riveted to the page, I read:

Stories of the summer, angler, winter is on the way, and soon the slow fall fishing will be replaced by the fast action of December’s bassin’ blizzards. Yes, that long-­waited time of year when seri­ous bassers get their bass sleds out, fire up the outboards, and head to the nearest lake­shore.

Still, for many the question of “Which baits is best for big bruisin’ buckemouths” is a per­zoning one. Still others are puzzled by the question itself. If you think of “Fleet is going to answer you’re crazy. Great fishermen don’t get that way by giving away their secrets. But, this magazine will pay me, so I will fill up this space with some use­less advice you’ve probably read 50 times before.”

Fleet’s ability to communicate scientific angling methods was nothing short of astounding. Footsteps crunching across the snow jolted me from complete immers­ion in the story. A huge figure was coming across the plateau. Only one human I knew was that large—Moose Brute! Strangely, Moose was alone, and I knew from reading the alpine journals that the expedition he was on had several­ al members. I could tell as soon as I saw Moose’s hollow stare that something was wrong. A short, ragged rope still dangling from his waist gave mute testi­mony to the tragedy Moose would soon relate to me.

As it turned out, the rest of the crew had met their fate on the 500-foot sheer rock face just a stone’s throw from where we now sat. Yoplat was leading at the time and had unclipped the rope to take a photo of what he thought was snow leopard dung. While loading new film, the hapless Sherpa lost his bal­ance and plunged off the cliff.

After helplessly watching Yoplat bounce off rocks and then dis­appear into a deep crevice, Luci could not go on. Grim and

The Sole American

Park conference

by Michae1 Queneff

“People to People: Our Pro­jects and the 1986 Plan” of the 19th annual conference for the Wisconsin Park and Recreation Association (WPRA). The con­ference was attended by a stu­dent delegation from the student chapter of WPRA at UWSP and forest recreation professor, Dr. Richard Geesey. All of the fes­tivities were held at the Paper Valley Hotel and Conference Center in Appleton.

The days were filled with many informative and educa­tional sessions presented by the park, recreation, student and ther­apeutic sections of WPRA. In addition to the sessions pre­­sented, there was an exhibi­t hall with various products used in the park and recreation profes­sion.

The student-professional lunch­eon was a huge success. Jill Miranza of UWSP received a $300 educational grant spon­sored by WPRA. Michae1 Queneff accepted an award for UWSP for increased participation at the conference.

At the student section business meeting, Lori Minch of UWSP was elected to the executive board as secretary for the 1985 term. The new state representa­tives for UWSP’s Student Chap­ter of WPRA are Valerie Rinka and Betty Watson.

The WPRA annual conference is also a time to renew old friends­ships and make new ones. This was done throughout the conference and at the social functions in the evenings. The student section sponsored a pool­side social. All the conference social theme was “Western Trails Nite.” This was a night of drinkin’, dancin’ and down home fare.

We invite anyone interested in the Wisconsin Park and Recrea­tion Association to step in Room 105 of the College of Natural Re­sources. Our 1985 conference will be held at the Americana Hotel and Resort in Lake Gene­va.

Trainor, cont.

as the do about the environ­ment or natural resources,” maintains Trainer. These travel programs are a big boost in the attempt to provide a well-round­ed education. The dean feels the expansion of these programs is a significant step. A big step has been taken closer to home, too.

“We move into Treehaven next summer. Our summer camp program is a great one. We take the classroom exper­i­ences and transfer them to the field,” emphasized Trainer. Formerly, CNR summer camp had been held at Clam Lake, Wisconsin. Our new facility is much nearer and the dean hopes “to use it for advanced courses be­cause it is close and a tremend­ously varied area.”

Dean Trainer’s outlook can be said to be buoyantly optimistic. He obviously enjoys his duties here at UWSP and that is re­flected in his thoughts on the future. “I think it’s getting better. Ten years ago we were still try­ing to get attention. Today we’re attacking problems differently, from within. I would hope that the people we are training will be able to change the pic­ture. We’ve improved down the line, and that improvement has come from good people working in the system.”

Briefs, cont.

were seen carrying rifles and dressed in . tennis shoes. The„ naked men were arrested after a short chase by deputies. Each was charged with disorderly conduct.

Grim decided to ferry some supplies up the cliff, while Luci bourouvied on the face of the in­cline. Grim had severely strained some nostril muscles gasping for breath, and after a short time the climb became too rigor­ous for him.

Moose’s hold had been such that he couldn’t get both hands free to untie the rope connecting them, so he merely cut it with his knife and free-climbed the last 300 feet. This was made more difficult since Moose had a 150-pound pack on, although he shrugged it off as “just a day pack.” Of all the climbers’ I’ve known, Moose is one of the most humble.

Sitting down heavily, Moose’s face seemed to withdraw into a dark shadow; the ordeal had taken its toll on the stoic native of Dublin. With the sun setting over Everest, Moose and I slipped tea. (continued...)
Great Lakes were dying. Lake Winnetka, IL, and he was worried that it might be on the way. In the course of action, he decided then on his course of action. He retired from his job as a naturalist. Sound complicated? Not at all. You see, I fancy myself as somewhat of an activist-teacher-naturalist. Sound complicated? It really isn’t. Roy is an example of that type of person. In 1969, he retired from his job as an executive for CRS. At that time he discovered that our Great Lakes were dying. Lake Michigan is near Roy’s home in Winnetka, IL, and he was worried that it might be on the way out. He decided then on his course of action.

He volunteered for awhile with public interest groups in the Chicago area and was invited to speak to some sixth graders. He hasn’t stopped talking since. When I saw him a couple of weeks ago, I asked if I could come with him some time in the spring after graduation. He said “of course,” in his Paul English. You see Roy even fits how I imagine myself to look at some future date; tweed jacket, statesmanlike, speaking in a refined British manner. It’s not hard to see why school children anticipate his programs with excitement. A six-week program about water resources is what Roy has developed as his contribution to the well-being of life on this planet. He uses pictures, props and maps to tell the story. He is careful not to clutter his presentations with too many number concepts are more important than dry facts. His enthusiasm is also compelling. It’s evident that he cares and hasn’t lost any of the excitement of learning. In fact, one of his favorite beliefs is, “A man’s mind, stretched to a new idea, never goes back to its original dimension.” I see that saying every time I visit my mother and father-in-law who hangs near a shell of books, appropriate, of course. It’s obvious from talking to Roy that he’s lost none of his resiliency.

A person such as Roy Porteous points out the true meaning of education, the fact that it works for you and is a result of the effort and planning you put into it. Someone like Roy is always participating in education. Who knows, maybe some day I’ll do the same things Roy does. I won’t be able to duplicate his voice, but I will be able to emulate the enthusiasm and the dedication. I hope to keep stretching that limit as he has.

**Eagles Soar**

Bald eagles are flying again

Glen Haven, WI. Bald eagles are once more soaring over southwestern Wisconsin. As cold weather moves and each fall brings, it brings bald eagles by the hundreds past Eagle Valley National Preserve, a 1,460-acre wildlife haven and bald eagle severe weather roost, just south of this Mississippi River hamlet. More than 2,000 bald eagles migrate over the nature preserve to warmer climates and open water further south. So far this fall over 450 migrating eagles have been seen by observers on top of the 400 foot bluffs overlooking the Mississippi River. The biggest flight day so far was November 15 when a west to northeast wind brought more than 225 eagles soaring overhead.

The southward migration will continue to increase until it peaks with 300-400 birds per day just before Christmas. Migrating numbers will then decline until about mid-January. In February the migration reverses itself and the birds are on the move back north to nesting areas.

Scores, if not hundreds, of eagles will spend the winter throughout the driftless area of Grant County, Wisconsin, with some throughout January, February and March a charted bus will tour the hills and valleys in search of these magnificent wild creatures. It leaves Eagle Valley Nature Center at 9:00 a.m.

Anyone interested in observing and helping to document these eagle migrations or by participating in a bus tour to see wintering eagles should contact EVE — The Eagle People, Box 135, Apple River, IL 61001 or phone 815-754-2258.

**Prevent problems**

**Urban Wildlife Control Speaker**

by Pauli Paul

Bats in the belfry? Raccoons in the chimneys? Shrews in the snowbank? A call to the Humane Animals Controls (HAC), that from Dave Pauli, proprietor of this Madison based urban animal control firm.

One of his more interesting “adventures” included capturing over 400 bats from one building. A question from the floor concerning relocation of these bats prompted a response of general ethics from Paul. He added that he relocates as many of the animals he captures as possible — with the exception of skunks, Norway rats, and the like.

Paul was quick to point out that urban sprawl and the subsequent loss of habitat has meant that certain animals are being displaced from traditional cover. This displacement means closer human contact with such species as raccoons, muskrats and squirrels. In Pauli’s words, “Someone is trespassing, but in most cases it’s not the wildlife.”

It isn’t always the case, however. Paul added that residents of some neighborhoods are unrestrained in their feeding of some animals such as squirrels. Sometimes the result is harmful. Some residents simply overfill their birdfeeders which in turn are overfed by raccoons, squirrels, skunks, Norway rats, and the like.

Pauli was quick to point out that urban sprawl and the subsequent loss of habitat has meant that certain animals are being displaced from traditional cover. This displacement means closer human contact with such species as raccoons, muskrats and squirrels. In Pauli’s words, “Someone is trespassing, but in most cases it’s not the wildlife.”

It isn’t always the case, however. Paul added that residents of some neighborhoods are unrestrained in their feeding of some animals such as squirrels. Sometimes the result is harmful. Some residents simply overfill their birdfeeders which in turn are overfed by raccoons, squirrels, skunks, Norway rats, and the like.

Pauli said that urban sprawl has meant that certain animals are being displaced from traditional cover. This displacement means closer human contact with such species as raccoons, muskrats and squirrels. In Pauli’s words, “Someone is trespassing, but in most cases it’s not the wildlife.”

Everyone knew what Jeffrey should do with his life. Everyone was wrong.
A NEW MATT DILLON ...ON THE MOVE

OK, smart guy! What would you do if you were Jeffrey Willis? It’s your last summer before choosing between college and jobless oblivion. Now comes a summer dream job at the ritzy El Flamingo Beach Club, a luxurious haunt of the New York rich absolutely dripping easy money and overrun with beautiful girls. You rub more than shoulders with a gorgeous blonde coed visiting from California, you are taken under the wing of the Club’s resident “get-rich-quick” artist and, suddenly, college is coming in a very distant second.

Matt and Janet — a breath of fresh air.

So, in September, what will it be? For Matt Dillon as Jeffrey Willis in Twenty Century Fox’s "The Flamingo Kid," the decision won’t be easy. Everyone has an idea about what he should do with his life — and they’re ALL wrong.

Flair for comedy

As the bright but less than "Easy Street" smart Jeffrey, Matt Dillon takes on a role tailored to show the talented young actor in a new light. Sure, he’s still a legend in his own neighborhood, but in "The Flamingo Kid," Dillon is a runtish fellow out of water with a flair for comedy and a crush on shapely newcomer Janet Jones. The tall, sunny blonde shines in her first major film role after brief appearances in "One From the Heart" and "Grease II." A veteran at age 22 of five seasons on the "Dance Fever" team, Janet Jones will follow her role in "The Flamingo Kid" by starring in the upcoming television series "A Chorus Line." Also starring is a seasoned trio of top performers. Richard Crenna (as slick sports car dealer Phil Brody) recently made his mark in "Body Heat" and "First Blood," and will soon reteam with Sylvester Stallone in a second "Blood" called "Rambo." Hector Elizondo (as Jeffrey’s concerned father) was last seen in the hilarious "Young Doctors in Love," and Jessica Walter (as the status-conscious Mrs. Brody) is best remembered for asking Clint Eastwood to "Play Misty For Me."

Matt Dillon is "The Flamingo Kid."

To the Editor:

I am addressing this letter to those motorists who pass through Central Wisconsin via Highways U.S. 41, Wis. 119 and U.S. 10. The reason I am writing this article is because I would like to see more support for the construction of a group in Wausau and other Highway 29 freeway. It would be only a small portion of the Green Bay areas and the Fox River Mont and Marshfield areas and serve a larger segment of the people traveling to and from the Oshkosh, Wis. — "Our future does not rest in space but on earth," said Stewart Udall in his keynote address at the University of Wisconsin-Oshkosh con- vention Wednesday. "This is the place God gave us and this is where we are going to live and die."

Udall, who served in the John- son and Kennedy administrations, said that, while he was growing up, the common thinking was that the age of atomic energy would bring about a change in the lives of Americans.

"We were told we were moving swiftly into an era where the old resources would not be used," he said.

"Today, this would be mind- blowing. This nation is produc- ing more energy with wood than with nuclear energy," he said.

Udall urged more conserva- tion of petroleum and other natu- ral resources if the nation is to avoid an energy crisis in the next 15 to 20 years.

"One of my friends once told me that we have not inherited the earth from our fathers. We are borrowing it from our chil- dren," he said.

Energy Reports Due Soon

The U.S. Department of Ener- gy (DOE) is expected to release its revised draft Regional Char- acterization Reports (RCR’s) in this fall.

The Chicago DOE office re- ported that the revised draft Regional Geologic Char- acterization Report (RCGR) and the revised draft Regional Environ- mental Characterization Re­ port (RECR) were printed No- vember 11, 1984.

From this time, the Wisconsin Radioactive Waste Review Board will have 90 days in which to deliver the lengthy documents and submit comments on the drafts. DOE is scheduled to issue the final RCR’s in May, 1985.

In May, 1983, DOE issued drafts of both the RGCR and RECR. However, they were so flawed that DOE was forced to go through another draft stage.

Nuclear Waste Show Available

"Looking at Nuclear Waste: The View from Wisconsin," is a nine-minute film program produced by the Radioactive Waste Review Board, and is now available for distribution to Wis-consin residents.

The program gives a general overview of the high-level radioactive waste disposal issue, including the federal government’s consideration of Wisconsin for a repository site, and the Review Board’s concerns and activities to inform and involve the public.

The slide show is equipped with a color control tray and is accompanied by a tape cassette.

"Looking at Nuclear Waste: The View from Wisconsin" is available for loan to any resi­dent or group in Wisconsin free of charge (except return insured postage). Be sure to indicate your first and second choices of dates. Allow two to four weeks for delivery.

For a loan copy, write Meg Wise, Radioactive Waste Review Board, 913 Tenney Building, 18 E. Main St., Madison, WI 53702; or call (608)267- 3571.

Terr Porter soars above the crowd for two of his game-high 32 against UWM.

The Pointers also got some fine individual performances from All-Tourney selections—upperclassmen Tim Naegeli and Kirby Kulas.

Naegeli, a 6'7" sophomore from Racine, made good on 11 of 16 field goal attempts, (69 percent), pulled down 11 rebounds, and also dished out six assists.

Kulas, a 6'6" junior center, shot a scorching 72 percent from the field, making good on eight of 11 shots, one of which was a powerful dunk that brought the crowd to its feet. Kulas also excited the crowd in the championship game, awing away five Luther field goal attempts.

Luther entered the game with a selective offense, and a quick hustling defense that brought the Pointers the championship trophy. For the tourney, the Pointers shot 62 percent from the floor, while UWM and Luther combined for a rather chilly 36 percent.

Needless to say, Head Coach Dick Bennett was pleased.

"We played as well as we could have. While we made some mistakes, they were honest mistakes," said Bennett.

Bennett especially praised his team's defensive play.

"I thought it was a really fine effort defensively. We've been consistent defensively day-to-day in practice so far this year, and we played well today.

Needless to say things looked pretty peachy in Pointer land, but Tuesday night things took a 180 degree turn the wrong way.

Playing Roosevelt University, a team the Pointers destroyed 97-51 last year, the Pointers came out flat, and eventually

You've heard that song, "I've gone from rags to riches" haven't you? Well this past week the Pointer basketball team did just that.

When things looked great for Bennett and company, there was sudden trouble in paradise.

Things started out rather well for the Pointers. Fresh off their near miss at Illinois State, the Pointers hosted and won their first annual Stevens Point Tip-Off Tournament. Playing the way you'd expect the nation's second ranked NAIA team to play, the Pointers defeated the UW Panthers 73-35, Friday night (the Pointers last year, the Pointers didn't disappoint. In two nights, then came back to beat Luther College 79-13 Saturday night, but it's by no means encouraging "I thought it was a really fine effort defensively. Three football players and one volleyball player from University of Wisconsin-Stevens Point have been selected to the COSI-DA Academic All-District Teams for their respective sports and are now on the national ballot.

Named to the District 5 honor team from football are Dave Geisler, a quarterback from Chippewa Falls; Jeff Crawford, offensive tackle, Wausau; and Jim Lindholm, Glenwood City.

Named to the volleyball team is Carol Larson, a setter from Milwaukee Country Day. Larson is made up of schools from Indiana, Illinois, Minnesota, Wisconsin and Canada.

The three football players were the only players from the Wisconsin State University Conference named to that honor this year. Among the one football player from the Wisconsin Women's Intercollegiate Conference named to that squad.

Geisler, a junior who prepped at Chippewa Falls McDonell High School, completed 55 percent of his passes for 2,102 yards and nine touchdowns in 1984.

For his three year Pointer career, he has completed 588 of 991 passes (59.3 percent) for 6,795 yards and 39 touchdowns. He holds NCAA Division III national records for most pass completions after the freshman, sophomore and junior years in a career.

Geisler is a business administration major and has an accumulative grade point average of 3.36. He is active in numerous business clubs.

Crawford, a graduate of Wausau West High School, is carrying a double major in political science and history.

He was a four-year starter for the Pointers. He played defensive tackle his first two years at UW-SP and then switched over to defensive tackle as a junior and senior. He was regarded as the most improved player on this year's Pointer team and as one of the team's top offensive linemen.

He earned honorable mention All-WISUC laurels.

In addition to football, Crawford is also a member of the Pointer track and field team and is active in a number of other campus activities. He has a composite grade point average of 3.39.

Lindholm, a junior, was UW-SP's leading receiver this past season with 39 receptions for 525 yards and one touchdown. He started three games as a junior and all 11 contests this season. He earned honorable mention on the All-WISUC honor team in 1984.

Lindholm, who graduated No. 1 in his class from Glenwood City High School, has a composite grade point average of 3.8 and is majoring in business administration.

Larson, a junior who is majoring in biology, was one of the key performers behind the highly successful Lady Pointer volleyball team. She was the quarter-back of the team as the setter and led the team to a 28-8 season record, a mark which included a berth in the NCAA Division III National Tournament.

She led the team with 380 set assists, had a serve accuracy rate of 97 percent with 31 service aces and had 56 digs.

BECOME A 4-LETTER MAN.

by Scot Moser
Staff Reporter

The UW-Stevens Point women's basketball team got off to a good start by beating UW-Eau Claire 69-53 in their conference opener Nov. 28 in Berg Gym. The win gives the women a 1-0 conference record while it moves their season record to 2-3.

Coach Bonnie Gehling

"We played the best half-court defense that we have all season and forced them into 38 turnovers. We kept the ball on the side and didn't let them start their offense close to the lane.

The only breakdown Zaleski noted was on the full-court press. He felt their inability to stop UW-EC on the fullcourt level was the big reason Eau Claire scored as much as they did.

The lady Pointers were in action again Saturday as they took on Vermillion Community College of Minnesota in an exhibition. The Pointers came out on top in this contest but because it was an exhibition, there were no statistics kept which Gehling was glad to see.

She said she felt her team had a good first outing despite the fact they won.

"Overall, I didn't think they played as well as I was disappointed with how we did. We came out in the second half, really flat, and we played the whole second half flat. I told the players we can't do that, because once we start doing that against Whitewater and Oakshorn and La Crosse, we're going to get killed."

Gehling said she felt the officiating they have taken away from her team's strength just a bit. I thought the officials called an extremely tight game and that takes the game plan away from an aggressive team. A little bump and run isn't going to hurt anything, but they were calling everything. So, that went against us."

In spite of the poor showing, Gehling did have words of praise for some of her players. "Sharon (Webben) came on fairly strong in that she did a better job rebounding. I also think Donna Pivonka did a nice job."

Gehling said her team would need work if they were to be strong for their game against UW-Whitewater which was Tuesday in Berg Gym.

Although the Pointers lead from the start they did not possess the hot shooting hand. The women only converted 36 percent of their field goal attempts compared to 39 percent by UW-EC. The Pointers also outrebounded the Pointers 41-32. However, the Pointers did convert 45 percent of their free throws (21-32) while Eau Claire was only able to connect on 55 percent of their charity shots (11-20). The Pointers also came out on top in the turnover department, posting just 14 turnovers compared to Eau Claire's 28.

Sharon Webben, a senior from Stevens Point, scored 18 points. She was followed by teammates Jana Rasmussen with 11 points and Shari Wubben with 10 points. Wubben also led the women with 13 rebounds.

Head coach Bonnie Gehling said she was very pleased with the way her team played and she felt a factor that may have helped them was that of playing very strong competition in the Duluth tournament two weeks ago.

"We came back really ready to play after getting whipped by some very good teams in the Duluth tournament. I think we definitely learned a few things at the Duluth tournament that helped us in this game."

Gehling once again had praise for some of her players who showed strong efforts in the game.

"Sharon Webben, who was all-tournament at Duluth, again showed that she is a steady, hard player. Amy Gradecki had a good all-around game also, and played much better than she has before."

Assistant coach Dean Zaleski pointed to the tough person-to-person defense that the Pointers applied as a key to their good showing.

Assistant coach Dean Zaleski pointed to the tough person-to-person defense that the Pointers applied as a key to their good showing.

Earning third place points for the Pointers were members of the 300 medley relay, Laura Adee, Jeannine Slauson, Steinbach, and Fink; Adee in the 200 individual medley, 2:23.1; and Adre in the 100 backstroke, 1:09.2.

Earning in sixth were Celichowski in the 100 freestyle, 56.7; and Frohberg in the 100 butterfly, 1:07.1.

Rounding out the Lady Pointers' top swimmers were Frohberg, seventh, 400 individual medley; Slauson, 200 backstroke, eighth; Marcia Jahn, 100 butterfly, eighth; and Murray, 100 backstroke, eighth.

Coach Carol Huettig saw this weekend's results as an extraordinary team effort highlighted by an awesome individual performance on Fink's part.

"This is by far the most cohesive team I've ever coached," said Huettig, "and this weekend simply reiterated what I already feel. Every member of this team contributes to our success here in Wheaton."

On Fink's performance Huettig said, "What Roxie did was simply incredible...I'd have to say it was the single best and extraordinary individual performance I've ever witnessed in a swimming meet."

"What makes what she did even more exciting was the fact she kept leading our younger team members all weekend. She's just a great all-around athlete."

The Lady Pointer swimmers will be back in action Saturday, Dec. 8, when they travel to La Crosse to compete in the NWIAC Relays.
Surviving this year's hunt, these deer will make up the future crop of whitetails in Wisconsin.

"They (River Falls) always have a good outfit, but our added experience and confidence will hopefully come through." The Pointers' next home game is against St. Norbert on Tuesday, Dec. 11 at the Willett Arena.

Record figures smash previous harvest by 25 percent

by Rick Kaufman
Senior Editor

The annual exodus of blaze orange-clad hunters to Wisconsin's woodlands is over, and although final counts will not be available for some time, preliminary figures from the state's six Department of Natural Resources (DNR) districts indicate a 25 percent increase in the deer harvest during the 1984 gun deer season. This year's estimated 253,000 whitetail harvest smashes last year's record number of 197,606, and exceeds the DNR's previous projection of 220,000 whitetails.

Frank Haberland, Wisconsin's big game manager, expressed positive sentiments following the nine day season which ended November 25. "I'm very pleased we are able to produce a possible link between hunting and the weather, it all contributed to an overall increase from figures a year ago. The largest statewide increase in deer harvests came in Fond du Lac County with a 25 percent increase in registered whitetails. Jim Raber, district wildlife manager, commented, "Our season was super. This was the best nine day season we've had in a long, long time. It's going to again topped the state's total figures in deer kills. The 48 percent increase over last year saw the 10,711 deer in 1983 jump to 15,813 whitetails in 1984. Other top producing counties, which allowed a hunter to kill two antlerless deer in some management zones for the newly instigated "bonus deer permit," were Iowa and Columbia Counties, both experiencing a 31 percent increase.

The district with the least available information on figures is the Southeast District, reporting a 32 percent increase, from 2,200 deer in 1983 to 3,400 in 1984.

Wisconsin's deer population will now hopefully be at a more reasonable and manageable level. The DNR has accomplished what they had intended, a herd reduction in the overpopulated agricultural areas and a stabilization of the herd in the northern districts. Ideally, game managers and officials would like to see a wintering deer herd of around 375,000 whitetails and an annual harvest of 150,000 deer. Hopefully Wisconsin will not experience the types of deer counts we've had in the state this past year.

For all those that were lucky, or skilled enough to bag a deer, we commend you. For all of those who were unfortunate to add a number to the record figures, we wish you better luck next time.

Icers, cont.

MORE ADVENTURE THAN A BLIND DATE.
Grapplers upend highly touted Blue Devils, 24-20

by Alan Lemke
Staff reporter

The UWSP wrestling team recently participated in two meets, one of which left them with a 14-0 dual meet record. The Pointers upset a highly acclaimed UW-Stout team in their conference opener by a score of 24-20.

The Pointers came out hard, grabbing a 24-18 lead through the efforts of Shane Bohnen at 150 pounds and Bob Calnin at 142 pounds, who both pinned their opponents. Other winners for the Pointers were Scott Klein, 126; Jeff Wingert, 134; Mike Gorman, 187; and Rich Harding, 177.

Although he could see room for improvement, Pointer coach John Munson was very pleased with the performance of his squad. "Shane Bohnen showed that he is a team leader as he provided us with another big lift, and Bob Calnin continues to impress us with his high level of performance."

Munson felt that the overall quality and attitude of his team will play a big part in their chase for the conference title. "This is probably the best team I have ever had. Right now, we're down to 30 guys that are really willing to work hard. They seem to like each other real well and there aren't any so-called 'bad actors.' This is just what we're looking for."

Munson still feels that one place his team may need strengthening in is the upper weight classes. "167 has been a key weight class where we have had trouble. 177 and 190 are also tough right now because we actually have two 177's. One is wrestling 177 and the other is wrestling 190 right now."

Munson noted that the Pointers will lose their only heavyweight, Mike Krumm, next semester. "It looks like we're going to solve that problem though. Mark Rietvedt is going to be wrestling with us, which is good, because Mark was a state champion heavyweight. He's also big and strong and that's just what we're going to need."

After wrestling a few meets, Munson looks at the season in a very optimistic manner. "We've got a chance to do real well, I think. Stout was picked to finish high in the conference so by beating them it has done a great deal for the confidence of our team."

The Pointers took to the mat again on Saturday when they attended the Parkside Invitational at Kenoia. They placed sixth as a team, but Shane Bohnen at 150 and Duane Keip at 190 were able to grab third place finishes to help the Pointer effort.

Assistant coach Duane Groshek, who accompanied the team to Parkside, said he felt the Pointers achieved the goal they set for this tournament. "We said right at the start of the tournament that our number one goal was to see some improvement. The guys that wrestled varsity we wanted to improve from Wednesday and the others we wanted to see improvement since the Point Open. And we did see that improvement. We had some guys that had been hurt for a couple weeks and they still wrestled their way up to where they were only a match or two away from the third place match."

When pointing to specifics of improvement, Groshek said the most prominent area was that of technique. "We're doing things a lot more crisply, our set-ups are better, overall we're just looking better than we did three weeks ago. So we were pretty happy with the way things turned out."

Groshek did see that the team still needed a lot of work on conditioning. "You kind of hate to admit it, but our biggest thing right now is conditioning. We've got a lot of young people so we've stressed the technique probably more than some of the other teams have. We've done a lot more drilling on moves and haven't spent that much time on just conditioning. It showed a little bit this weekend."

Groshek did note that conditioning is not as important during the first half of the season as it is when the team comes back from the Christmas break. He says many times you have to start conditioning all over when you get back because it is hard to stay in shape over that period of time.

The Pointers will be in action again Saturday at the Warhawk Invitational in Whitewater.

Skaters lose to Mankato State

by Ken Walstrom
Staff Reporter

The Pointers took a step backward in their quest to achieve a winning season when they entertained Mankato State University here last weekend at the Pettit Arena.

MSU, a contending power in the Northern Collegiate Hockey Conference, easily defeated the Pointers 9-1 to open the series Friday night, then returned Saturday with an added dose of firepower to blast UWSP 14-0.

Friday, the Mavericks held a slim, 1-0 edge after the first period before a power play goal by UWSP's Bob Engelhart knotted the score at 1-1. The goal, which came just 12 seconds into the second period, was the only goal the Pointers scored all weekend en route to dropping their record to 2-4-0. Scott Kuberra and Jeff Stankof were credited with assists on the play.

MSU rolled off four goals before the end of the second period, then added four more in the third for a decisive, 9-1 victory.

"Mankato is the first college team we will face this year," said UWSP Coach Lindon Carlson. "The tough competition is good for us."

The Mavericks, 6-1-0 on the year, continued their assault Saturday, scoring five goals in each period of play while holding the Pointers scoreless to register a 13-0 pounding and hand UWSP their first shutout of the season.

Carlson, in reflecting on the weekend series, showed great respect for Mankato and felt the games were a great experience for his young team.

"The tough competition we've faced will help us to sharpen up for the remainder of the season," said Carlson, noting that the Pointers return to conference action this weekend against UW-River Falls.

"We are putting this series behind us as we prepare for River Falls," Carlson continued.

Parking proposal alternatives, cont.

Another suggested alternative involved the residents living in the "pit" and "circle" halls parking their cars in Lot Q, while the students living near Allen Center would park in Lot L. This would leave Lots P and V normally filled with circle and pit residents' cars) open for commuting students, facility and faculty to campus.

This is the most inexpensive solution to the problem. No parking lots or fields would have to be built or torn up. There would be no aesthetic damage done to campus.

Of course, this would increase the walking distance between residents and their cars, but we are willing to have the expense and aesthetic loss of the athletic field turned parking lot and vice versa.

In conclusion, it was pointed out in a "Letter to the Editor" (this issue), page 4, that "It is really big of Miss Gross (whose address is listed as Hyer Hall) to say that better parking is not a necessity."

My address is Hyer Hall and I also drive a car which I park in Lot Q located right behind my hall. But while I can't say I keep and most of my belongings in my Hyer Hall cubicle, I spend most of my time in the Pointer Office located in the Communications building. Ninety-five percent of the times I use my car, I'm walking, not from Hyer Hall, but from the Pointer Office. The distance between Lot Q and the Communications building is just as far as the distance most commuting students have to walk, if not further.

With such an inconvenience, does not always thrill me, particularly late on a cold night, I'd rather walk the extra block or so than see the athletic field moved. I've got legs; it doesn't hurt me to use them.

I'm not denying that there is a parking problem on campus. If UWSP is buying a city parking ordinance, something must be done before we bury the athletic field under asphalt, let's consider our options.

Alternatives and views on the proposal can be expected at the ASA Open Forum to be held in the Wright Lounge at 6 p.m. this evening. Anyone in attendance wishing to express his views in three minutes or less will be heard.

Let's not destroy the beauty of our campus

Melissa A. Gross

Hunger, cont.

many with starving people. Maybe the situation is worse in Ethiopia because of their own policies.

By reading the daily newspapers I've discovered that Ethiopians are starving and they are having a difficult time making a living. The agricultural land has been wasted and ruined; government policies have discouraged agricultural production; a revolution is going on so that doesn't help them in or from "safer" areas; and the government spent millions celebrating the anniversary of their Communist Revolution who gets the blame at last? The United States, of course, because we didn't send help promptly enough!

Ethiopia is aligned with the Communist Bloc nations and has not been very friendly toward the U.S., except when asking for help.

In a Pointer interview, Rev. Simmons claims that the Reagan administration favors military rather than economic assistance.

S. Neale and Baldwin to the November 8 Regents' meeting.

Then the UW-Parkside students are being told their teaching is not as important as the education of the students at Madison. Students are being told that they are not able to do."

Chancellor Allan Gauskin of UW-Parkside told the Milwaukee Journal that his faculty has "been hurt" by the proposal.

"To be told that Madison—where they respect—is that much better, it hurts. They know that, except for a small percentage, they are no different from the faculty at Madison. And they say, if that's true, what's the meaning of the proposal."

Chancellor Philip Marshall said the proposal has had an impact on UWSP's faculty morale.

"Certainly it (the proposal) is very detrimental to morale in general. I think you'll find that some faculty don't do things that they used to do for students. I know a faculty member who has been asked to teach a class that he had been teaching for years as an overload. It's nothing that we can say, 'he isn't doing what he's supposed to be doing,' it was something he was doing as he was doing it. And it was a time basis that he is no longer willing to do.

"Another point to say that he thought faculty were "probably less willing to advise organizations" which he described as unfortunate, but that the faculty is "simply reacting to the proposal."

The unequal distribution of salary increases has caused a rift within the UW-Parkside faculties. Students on smaller campuses are being told their teaching is not as important as the education of the students at Madison. Students on smaller campuses are being told that they are not able to do."

Faculty salaries discussed

Faculty salaries are very detrimental to morale in general. I think you'll find that some faculty don't do things that they used to do for students. I know a faculty member who has been asked to teach a class that he had been teaching for years as an overload. It's nothing that we can say, 'he isn't doing what he's supposed to be doing,' it was something he was doing as he was doing it. And it was a time basis that he is no longer willing to do.

Another point to say that he thought faculty were "probably less willing to advise organizations" which he described as unfortunate, but that the faculty is "simply reacting to the proposal."

The unequal distribution of salary increases has caused a rift within the UW-Parkside faculties. Students on smaller campuses are being told their teaching is not as important as the education of the students at Madison. Students on smaller campuses are being told that they are not able to do."

You are unlikely to do things they never questioned before because they have collapsed now."

Low faculty salaries are a new issue of concern for Madison, where they are probably not as serious. Madison has a relatively small number of starvation problems. The nationwide situation is probably not as serious. Madison has a relatively small number of starvation problems. The nationwide situation is probably not as serious. Madison has a relatively small number of starvation problems. The nationwide situation is probably not as serious. Madison has a relatively small number of starvation problems. Arboriculture, cont.
campuses. The first trip will be to Michigan State University in East Lansing.
But there'll be other activities as well. A newsletter developed at UW-SP will be expanded to include a quarterly edition for national distribution to urban forestry students. In addition, a job referral service will be started and monthly announcements will be distributed. UW-SP students will continue holding an activity night at the society's international meetings each year. The next one will be in Milwaukee.
Five years ago, students of urban forestry formed their own organization at UW-SP. The state chapter of ISA recognized it in 1981 and the international body designated it as a special interest group in 1982.

Robert Miller of the College of Natural Resources faculty is the adviser to the student organization, and the new projects being undertaken will be led by three officers: Mike Vonck, Appleton, president; Pete Traas, West Bend, vice president; Scott Anderson, Platteville, treasurer; George Pozanski, Milwaukee, secretary.

So Come On Down!
Tonight and Friday, December 6 and 7
A Christmas Story—a nostalgia and witty remembrance of a time gone by, in a small town of the 1940s. Peter Billingsley (of "Messy Marvin" fame) stars as the young lad with an overwhelming desire to receive a Red Ryder BB gun for Christmas. The film, written by John Hughes and performed by Burr Tillstrom, is an entertaining period piece with a heartwarming message that can be enjoyed all year round. Don't miss A Christmas Story, showtimes at 6:30 and 9:15 both nights in the Program Banquet Room of the UC.

Saturday, December 8
Pointe basketball—returns to the Quadnt Fieldhouse, as the UWSP men's squad opens its loop play, hosting the UW-Stout Pioneers in a 7:30 tip-off game. Platteville, considered the darkhorse of the WSCU, is under the tutelage of first year coach and former UWSP assistant, Bob Ryan. UWSP captured its own tourney championship, co-runner up to Stevens Point and Luther College, for the first annual "Tip-Off Tourey" prestigious event. Help the Pointers to another trip to the Nationals.

Tuesday, December 11
TODAY! The University Band—under the direction of Robert Van Tuinen and his students, is planning a Christmas concert. The concert will feature Susan Swear, assistant conductor; John Stangel, guest conductor; and Kurt Hulse, tuba soloist.

Tuesday, December 11
"A Christmas in Jazz"—featuring The Mid-Americans under the direction of Gene Rehlic and The University Ensemble with director Mike Ihl. As of 12:30 pm, Rechef Hall of the Fine Arts Center. A truly fantastic evening of jazz entertainment.
