The jackhammers are silent, the dust is gone

by Joanne Davis
News Editor

Construction on the James H. Albertson Learning Resources Center at UWSP has reached near completion. Since the original floor square feet were added to the existing 153,706 square feet, the usable space is comprised of new study areas, stack space, and seating. Four hundred new seats were added.

Keith F. Lea, Director of Technical Services, felt that even with the addition of 10,000 square feet per floor on the second through the fifth floors and the entire new sixth floor, they were still compromised on the needed space. The standing room width is 40 inches. The LRC's aisles are 36 inches wide. On the main floor, the Museum of Natural History was enlarged, moving nine feet into the lobby and into the reserve reading room.

With the additional space, additional security measures are being taken. An after-hours study-security position was established to help close up and secure the building at night. UWSP Protective Services is being called upon for additional coverage in the evenings as well. A security committee is being established to solve additional problems that may or may not arise. By the end of August, all departments and furniture should be in place. Lea assured. New furniture for the building was purchased from Badger Industries, formerly known as the Wisconsin Correctional Institute.

The LRC under construction.

The state Legislature allocated the LRC an additional $80,000 to build the library's collection. These funds were new journals, books, and general collection material. The addition already been allocated their share of the additional funds. It is speculated that no additional space will ever be added to the building. Lea asserted that "information keeps growing, therefore, it's not viable that it will not ever be added to until it is sold. New information is always needed to support the old information.

Future plans do hold another public elevator in store for the library. The average 100,000 to 300,000 entrants each year seem to justify this.

New phone system in operation at UWSP

by Joanne Davis
News Editor

UWSP has now and operates the new campus phone system installed this summer.

The new system worked independently of Wisconsin Bell. Billing, maintenance, and operation of the system will be controlled through the Telephone Communications Department.

The increasing costs of the previous system in August 1983, Wisconsin Bell was named as the primary reason for the switch.

Kathy Wachowiak, Manager of Switch Administration, explained that the communications and transportation, is acting as Switch Administrator. Wachowiak commented, "We're the first campus in the state to include the faculty, staff, and students" in a system such as this.

Currently four other UW campuses have this system: Stout, ILLlve, and phone systems at Madison. Wachowiak attributes this progress to following our footsteps to the cost-effectiveness of the system. "It will pay for itself in two years," she said.

Lot X converted

by Joanne Davis
News Editor

University parking lots X and B have been converted into one large visitor lot.

The new lot called just X is open to visitors and students alike. The gate-operated lot requires only seven-five cent fees per day upon initial entry. The plans call for this to be part of a $300,000 project.

The plans call for this to be part of a $300,000 project.

The State of the Art

LRC...Page 3

Anderson's bustling News Service...Page 6

Palmer attacks SENTRY World Golf Course...Page 14

The phones installed in the residence halls did not affect students' rooms and board charges in any way. Wachowiak felt that "long line, distance and toll charges are the students' responsibility.

If you have any questions regarding the telephone agreements, contact Kathy Wachowiak in the George Stein Building.

Largest enrollment ever

University News Service

The University of Wisconsin-Stevens Point is on its way to the largest fall enrollment in its history.

Registrar David Eckholm estimated anywhere from 3,800 to 5,500 would be in classes when the semester began Monday morning.

At 8 p.m., the record count of 9,304 logged in 1981 had already been surpassed in the registration/records office. Last fall's enrollment was 9,907.

Increases are being experienced without additional housing problems; however, there are vacancies in the West residence halls.

Lorraine Odell, a 25-year veteran of maintaining information about rooming houses and apartments available to students off campus, says there are still quite a few vacancies. Considerable building of larger apartment buildings was done in the community since the early 1970s when the university was having problems helping students find places to live as they left residence halls. Idler reported that the on-campus hall occupancy is running about 100 per cent of last year, with lounges being used on a temporary basis in some buildings. The estimated total occupancy will level off at about 2,700 by early September. Graduates of high schools in the immediate area plus more adult (nontraditional) students account for a significant share of the enrollment increase.
In this corner . . .

As yet another year unfolds on the UWSP campus, it’s once again time to introduce The Pointer starting lineup. And what a lineup it is!

Moving from the sports desk to the number two position as Senior Editor is Alan Lemke. Alan recently finished an internship with The Tomahawk Leader where he pounded the typewriter weekly to produce his popular column, “Delbert’s Domain.” Alan will split time with me in the “Viewpoints” section by sharing his thoughts and insights on select topics of interest to the UWSP community.

Stepping into perhaps the most challenging Pointer position is Joanne Davis. Joanne will bring journalism experience to the job of News Editor from her previous University of Minnesota-Duluth. Joanne, however, wasted no time establishing herself here at UWSP. She is a member of Public Relations Student Society of America and edits the newsletter for that organization. Most recently, though, Joanne has provided her skills to the Student Employment Office where she served as a peer counselor and administrative assistant.

Equally well qualified is Richard Krupnow, who will step in as Features Editor. He brings a wealth of experience with a diverse background that ranges from writing lab tutor to freelance writer. Richard plans on a busy semester. Besides his editorial duties, he will be taking over as the new chief of the University Writers. He, understandably, hopes to tap some of the talent within that organization to bring Pointer readers fresh and entertaining stories on a weekly basis.

Returning to The Pointer editorial staff after a year-long sabbatical is Andy Savaghan. Andy served as The Pointer Environmental Editor during the 1983-84 semesters. His wildlife major and environmental communication minor combine nicely to give him special understanding in bringing readers current news in the world of the outdoors. His experience as a Writing Lab tutor also gives him the ability to identify potential writers who will share their knowledge of the outdoors. That makes Andy, in a word, qualified.

Here come the Pointers . . . After serving as Pointer Copy Editor and sports reporter, Kent Walstrom will bring you the play-by-play in the pages of the sports section. His hard work and enthusiasm will be a handy asset when trying to keep pace with the many athletic events held on the UWSP campus. Kent and his team of writers will also combine to bring current sporting reports as well as in-depth news coverage of the entire Pointer athletic scene.

Overseeing the work of our experienced staff will be Amy Zelhen at the post of Copy Editor. Her experience at the Appleton Post Crescent will help her to keep copy errors to a minimum and readability to a maximum.

Adding a light touch to the pages of The Pointer will be Cyndi Strack as she sketches her caricatures and cartoons: throughout. Cyndi will couple satirical humor along with a dash of ingenuity to add flavor to the pages of The Pointer.

Anchoring our lineup is Pete Schanoek, who will serve as Pointer Photo Editor. He spent much of last year taking photos for The Pointer, making his new position a snap as he captures the themes and moods of the UWSP campus on film.

Behind the scenes, there are many staff members and contributors who work long hours to bring readers a quality product. We have assembled here at The Pointer what I think is the finest staff this university can produce—I hope you think so, too. We’re looking forward to serving the UWSP community and if you have any comments, we’d like to hear them. On behalf of the entire staff, here’s wishing you the best on a new year in Point. Cheers!

Number of undeclared majors rising on campus

University News Service When academic officials at the University of Wisconsin-Stevens Point saw the most appeal to this fall's class of entering freshmen at the University of Wisconsin-Stevens Point? And, from which communities are the new students coming? A computer has been keeping tabs on answers to these questions for John Larsen, UWSP's director of admissions.

Leading far ahead of all other groups of entering students are those who have declared themselves "undeclared." They numbered 556 as of Aug. 1, and comprised 35 percent of all those accepted for admission at UWSP. That percentage is an increase from 33 in 1984 and from 14 in 1983.

Do university officials approve of so many people uncertain about which major to pursue?

The promotional materials point out that many who did declare early about a major changed their minds, anyway. And, the prospective students are advised that the university has numerous programs to help students make wise career choices.

Though business administration is the most sought after program among freshmen declaring their preferences, the number is down this year even though the total number of new freshmen applicants is up. There are 271 students or 10 percent of the class in business administration compared to 300 or 12 percent last year.

Other majors ranking among the top five this year are: wildlife, 171 students, up 18 from 1984; elementary education, 146, down 11; communication 119, down 9; resource management 133, up 36; forestry, 98, down 10; paper science, 90, up 14; psychology, 79, down 3; fashion merchandising, 79, down 1; managerial accounting, 41, up 26; biology, 39, down 12; physical education 46, down 5; mathematics, 35, up.

New COPS dean

University News Service Joan DeGuire North, who says her major accomplishments as an educator have been in program development and services to adult learners, is the new dean of the College of Professional Studies at the University of Wisconsin-Stevens Point.

She will succeed Arthur Fritsch who retired in May after heading the college since its establishment in the early 1970s.

For the past year, Ms. North, 43, has been vice president in charge of marketing and new product development for the Links Group in Davenport, Iowa, a software company serving colleges and universities.

She was chosen for the UWSP position following a nationwide search for candidates.

Joan North

Throughout its history, several women have held the title of dean at UWSP, but none of them ever headed an academic college. Programs in home economics, education, creative disorders, health-physical education-recreation-athletics, medical technology and military science are under the College of Professional Studies.

SOME COLLEGE COURSES ARE MORE EXCITING THAN OTHERS.

How many college courses teach you how to shoot the rapids? Or rappel a cliff? Or find your way out of a forest with nothing but a map and compass to guide you? At least one does—Army ROTC. And you could find yourself doing just one of a number of exciting adventure training activities like these in the Army ROTC program.

Activities that develop your stamina. And your self-confidence. And adventure training isn't the only way you develop. You'll also learn the basics of leadership and management by attending ROTC classes, along with the subjects in your major.

And you'll be excited. About two other benefits Army ROTC offers. Financial assistance. Up to $1,000 a year for your last two years of Army ROTC. And the opportunity to graduate with both a degree and a commission in today's Army—including the Army Reserve and Army National Guard.

ARMY ROTC, BE ALL YOU CAN BE.

Freshmen: Reflections of a Senior

by R. Lionel Krumnow

Features Editor

You've seen them. They walk down the corridors of CNS, Col­
line, and COSCP clenching their books like a baby bear, search­
ing for that evasive classroom. They remind me of Beaver Cleaver after his father has accosted him for trampling the shrubbery.

They inch their way into a classroom, five minutes later they slip into a seat, and try to melt into the wall when all eyes are on them as the professor asks their names.

They wander about aimlessly at Checkpoint, flailing their legs, trying to find their direction. They can barely be seen as they try to fathom test rent­al. It's a right night.

Still, I couldn't help but smirk and chuckle at one man's trans­

Cont. p. 7
Anderson, cont.

The News Service employs three student writers: two in the Work/Study program and the other through a writing internship with the English Department.

July Hase, a senior majoring in history at UWSP, has been employed since January of 1981. Asked if she liked her job, Hase quipped, "Yes, I get to watch 'All My Children' everyday from 12 to 13:30."

Turning serious, Hase continued, "I like it because I can work unsupervised. I'm given an assignment and then I can choose my own hours. I like the freedom to do different things. And I like the people I work with."

The second Work/Study student is Trudy Stewart. "I really enjoy it. And I work full-time, which is nice too, since I have a family." She has been employed since June of 1980. Asked what her job consists of, Stewart said, "I work with the graphics for the UWSP Catalogue."

Spiridou is a communication major at UWSP, graduating in May with honors. A wife and the mother of two young children, she feels her job at News Service is ideal because of her interest in the publications field and because she doesn't want to work full-time at present.

Characterizing the office as "total chaos," Spiridou said, "I like it because there is so much variety. Things are always fresh. We have an open-door policy, so we're constantly interrupted—never a dull moment."

If you stop at the News Service to check on getting a pamphlet printed or to seek publicity for an upcoming event, chances are the person to greet you will be Elisabeth Schwerbel. Her official job description is to "provide clerical and administrative support to the director of News and Publications and other professional staff. Responsible for producing the weekly campus newsletter and disseminating all news/sports releases."

Her version of it is "coping with chaos. I have to produce finished copy and see that it's printed and distributed. My major duty is to keep track of John and a variety of files." Schwerbel came to the News Service from the Financial Aids Office in October of 1984. She is a 1973 graduate of UWSP with a major in communicative disorders.

She likes the change from the relentless grind of working with numbers. "There is a variety, an on-going never-ending pressure. Everyone thinks their stuff is most important—they are enthusiastic; it gets you excited, too. It's a high energy, creative staff, effective and efficient."

The office also employs four Work/Study students as clerks to prepare the releases for mailing.

Paranormal, cont.

Although the standards are tough, claimants have not been scarce. In three years, Bush's group has received hundreds of calls and letters without awarding the $20,000 prize.

One woman claimed she could read minds through mental telepathy. A Texas man said he could make dogs talk. A doctor said he could strengthen or weaken muscles by lines of force. Another claimed he had magnetic waves that could sexually arouse women while giving men headaches.

Buch's committee is not the only group of debunkers. It is part of the international Committee for the Scientific Investigation of Claims of the Paranormal which was founded in 1959 in Buffalo, N.Y., and has more than 300 members, including astronaut Carl Sagan. It publishes "The Skeptical Inquirer." Worldwide, there is about $200,000 being offered by separate groups investigating paranormal, none of which has been awarded to-date.

Some members of the public view these debunkers as cynics who are out to spoil simple, harmless fun. But the debunkers don't see that way. In an Associated Press interview with Bob Dorough, Paul Kurtz of the Buffalo-based group said: "We're disturbed about the growth of irrationality and pseudo-sciences. Paranormal is the new folk religion. We believe we have an obligation to the public to separate the wheat from the chaff."

If you get that 'A' the Tarot deck forecasted, you might consider counting.

by R. Lionel Krippow

Feature Editor

It's no secret that college costs are up. All you had to do was look at the invoice sent to you by UWSP's accounts receivable office. But you needn't feel isolated. Education costs are up across the nation by an average of 7 percent. It is a fifteen year straight that such increases were higher than the rate of inflation.

Wisconsin tuition increases were above the national average, the Wisconsin University System noted that increases averaged 9.4 percent overall. UW Madison and Milwaukee went 9.1 percent.

While college costs are increasing, so are the benefits that can be reaped from investing in higher education.

John W. Wright, author of "The American Almanac of Jobs and Salaries," feels that the market value of a bachelor degree has increased over the last 10 years.

A 1984 report by the U.S. Census Bureau tends to support Wright's notion. The Bureau found a 40 percent difference in lifetime earning power between a college graduate and a non-graduate. Men with a college degree earn between $12,2 million and $17.7 million during their lives, compared to $9,000 to $18.8 million for men who did not go beyond high school. For women, college graduates earned an average of $18,1 million compared to $33,100 to $69,000 for non-graduates.

According to Wright, engineer ing will offer the most jobs over the next 10 years. Accounting is another area that shows promise for future job seekers.

"The Word Is Getting Around"
Environmental station celebrates tenth year

by Andy Savagian

The Central Wisconsin Environmental Station is one of three state's finest centers. As Secretary of the DNR, I first visited the station in 1971. During the time I have been familiar with the station, it has not only expanded its own quality programs but its staff has helped professionals of many other centers improve their programs. Wisconsin is fortunate to have facilities and programs like those offered at the Environmental Station. Congratulations on your fine work during the past ten years and good luck in the years ahead. 

So said Governor Tony Earl in this, the anniversary year of Wisconsin's outstanding teaching facilities. 1985 marks the 10th year that the Environmental Station has been presenting exceptional programs to a wide variety of people.

The station, which is operated by UWSP's College of Natural Resources and the UWSP Foundation, offers programs to area school children, serves as a teaching facility for UWSP students involved in environmental education, and is a versatile as well as an economic asset for the community.

Located on the Sunset Lake near Nelsonville, the station is frequented by several hundred persons each year. In the last decade, some 150,000 visitors and over 200 interns, graduate assistants, and students practicing have been involved in the many programs as both listeners and teachers.

UWSP interns Connie Leggs shows beaver signs to students.

Boy Scouts were first to lease the land for outdoor study when the organization acquired the land from a local farmer in 1981. For the next ten years, Camp Chickagami was a permanent section of the Sunset Lake area. In 1975, after most of the Scouts' activities were moved near a camp in Rhinelander, the UWSP Foundation obtained a lease to the camp and the Central Wisconsin Environmental Station was born.

Annual funds for operating the CWES total around $75,000, with about 40 percent of that revenue coming from state, federal and private grants. Most of the remaining money is accumulated through station fees and rentals.

The station has access to 600 acres of woods and sleeping quarters are available for 124 men and women. Four full-time and four part-time employees make up the core staff, while 30-40 others are either temporarily employed or involved in educational projects.

A celebration for the facility's 10th anniversary, "A celebration for education," was held this summer. On July 25, the station presented an open house to alumni and the general public. Governor Earl and former Chancellor and Governor Lee S. Dryfus spoke at the open house, highlighting the station's many achievements. Some of the special honors of the CWES include: U.S. Park Service designation of the facility as the first national environmental study area in the state; the National Science Teachers Association recognition of the station as having the outstanding in-school science program in the state; selection of CWES Director Rick Wilke and other staff members for positions of leadership on state and national environmental education committees; and an invitation from the United Nations to have Wilke compile materials for use by professionals in underdeveloped countries.

Director Wilke stated that even with facilities like the CWES, the last decade has seen a greater need for environmental education, particularly for those in need of educational literacy. Fortunately, the ability of the Environmental Station and its staff to meet the needs has also grown.

The next 10 years? Wilke sees changes in upgrading facilities and developing five and 10-year plans for the station as two of the most important goals. New budget provisions requiring public school curriculum to include environmental education and the broadening of UWSP's resource management major to include options in youth camp management bring expectations to a high for the station's supporters.

"We will continue to serve the audience we had, the traditional students, help train those in the environmental education field, and expand into youth programs around the state," said Wilke. 

Wilke expects the CWES to work on implementing environmental programs in youth groups such as the YMCA, 4H and the Boy Scouts, as well as training teachers not only in Central Wisconsin but from around the state.

Cindy Sanford helps a student with an insect study.

Charles McReynolds named Treehaven director

Charles McReynolds, who in 1983 was named Environmental Educator of the Year in Michigan, has been appointed director of the University of Wisconsin-Stevens Point's new natural resources field station near Tomahawk.

He will assume his duties Sept. 1.

The station, named Treehaven, opened in May with 100 students enrolled in a six-week summer program.

Major aspects of McReynolds' job will be recruitment of groups to use the facilities at times throughout the year when the summer camps are not in operation.

For many of the users, McReynolds is expected to develop activities in some phase owned by the DNR.

UWSP College of Natural Resources will have ongoing activities at the station, and students and faculty in all disciplines on campus and throughout the UW System will be invited to book the facilities. Public agencies such as the Wisconsin Department of Natural Resources and organizations devoted to environmental matters will be invited to hold events there, too.

McReynolds has spent the past 30 years as director of the Howard Christensen Nature Center serving the public school district in Grand Rapids, Mich. He is a native of Alton, Ill., and holds a B.S. degree in environmental studies from Grand Valley State College in Allendale, Mich., and an M.S. in environmental education from Michigan State University in East Lansing.

For the past three years, he has been serving as an adjunct faculty member for Michigan State as well as fulfilling his nature center responsibilities. He has been active in numerous professional organizations including the Michigan Environmental Education Association of which he has been president the past two years. He received his award as state environmental educator of the year from that association.

McReynolds has been a consultant for nature centers, and a frequent conference and workshop presenter/planner.

He and his wife, who is a social worker for Bethany International Adoptions, have a 3-year-old daughter. The family will live in Rhinelander, about 13 miles from Treehaven.

Treehaven covers approximately 1,000 acres of undeveloped land which was donated to the UWSP Foundation by Jacques and Dorothy Vallier of Tomahawk and suburban Milwauk ee.

The major construction has been for a main lodge, a classroom building, two dormitories and a house for the caretaker of the facilities. Private contributions and appropriations from the state totaling $1.5 million have been expended on the buildings, utilities and site preparation.

Another quarter of a million dollars raised by the UWSP Foundation will be spent in the next year to complete the facility. Three dormitories for faculty/staff, each housing eight people, are on the drawing boards. A $120,000 storage structure also is proposed.

Lyle Nauman, a wildlife specialist who directs the camp program, said Treehaven "is working out beautifully." There have been a few inconveniences in moving the summer activities from Clam Lake, where it was headquartered for about 15 years on property owned by the U.S. Forest Service, he reported. But most of them have been worked out.

Treehaven offers more diversity and opportunity than the Clam Lake site in most areas of natural resources study. However, forest areas are less diverse and younger than in Clam Lake, near the Michigan border. But that limitation can be overcome by field trips to properties, Nauman said.

A primary purpose of the campground is to give students who are preparing to begin specialized study in some phase of natural resources a place to observe in the field how soil, water, forest and wildlife resources are interdependent.

Treehaven is the largest of state-owned.
Nontoxic shot rules declared

The Interior Department's U.S. Fish and Wildlife Service has issued 15 guidelines to determine areas where lead poisoning of waterfowl is a significant problem and where hunters should be required to use nontoxic shot.

Up to this point, there have been no uniform criteria to identify areas where nontoxic shot should be used. Nontoxic (steel) shot is required in certain areas to prevent waterfowl from being poisoned by eating spent lead shot.

The final guidelines, published in the July 30, 1985, Federal Register, reflect comments received during the public comment period. By going through this process, with full public input, the Fish and Wildlife Service believes that the criteria represent a general consensus of the states, conservation organizations, waterfowl hunters and other interested groups.

The guidelines include triggering criteria for initial identification of areas where lead poisoning may be a problem, and decision criteria for determining whether or not a problem actually exists.

Conservationists expect waterfowl habitat areas will initially be identified under the triggering criteria if there is a harvest of 30 or more waterfowl (ducks, geese, swans, and coots) per square mile or three dead waterfowl reported as having died from lead poisoning.

The service will implement a "phase-in" approach based on harvest levels as reflected below:

Harvest Level Hunting Season (birds per square mile) is to Begin 30 or more 1985-86 25 or more 1986-87 10 or more 1987-88 5 or more 1988-89

Areas identified will then be monitored to determine if there is a lead poisoning problem, as defined by the following "decision" criteria:

• One or more ingested shot in five percent or more of the birds examined, and either:
  • Two parts per million (ppm) lead in five percent or more of the liver tissues sampled; or
  • 4.2 ppm lead in five percent or more of the blood samples drawn or a protoporphyrin level in five percent of the blood samples. (Protoporphyrin is required for the manufacture of hemoglobin in the red blood cells. Lead in the blood inhibits the use of protoporphyrin in the manufacture of hemoglobin, resulting in a buildup of protoporphyrin in the red blood cells. By measuring the amount of protoporphyrin in the red blood cells, lead poisoning can be determined.)

• A sample size of 100 birds is required.

If results of monitoring studies are positive for the diagnosed criteria plus either the liver, blood or protoporphyrin criteria, the monitored area will be proposed as a phase-in area. If the results are negative, the area may be considered to have lead poisoning problems unless three or more dead waterfowl confirmed as lead poisoned and later reported from the area. In that event, monitoring would be reinstated.

Because of the time required for completing monitoring studies and proposing areas for nontoxic zones, implementation of nontoxic shot requirements in areas identified for monitoring could occur no earlier than two years after the monitoring study was initiated. For example, an area monitored in 1986-87 could be proposed for nontoxic shot in 1988-89, and a nontoxic shot requirement implemented in 1989.

It is expected that some of the monitored areas will not meet the criteria for proposing nontoxic shot. Only those areas meeting the "decision criteria" listed above will be proposed for nontoxic shot requirements.

These criteria also allow states to use existing monitoring data, provided the data are recent. Many states have already completed extensive monitoring for some areas. The 15 guidelines do not prevent states from designating management areas where lead levels have not reached the level of the "decision criteria." Individual states may determine for their own management purposes to require the use of nontoxic shot. The Service will continue to honor state requests to establish nontoxic zones, where lead levels are below minimum federal criteria established requiring the use of nontoxic shot.

New field guide

The Audubon Wildlife Report 1986, a 160-page field guide to government natural resource areas, is available first in a series of annual publications. The Wildlife Report shines a light into the complex inner-workings of the federal agencies responsible for stewardship of America's land and wildlife. Fish and Wildlife Service is the ideal federal agency to perform this task, it receives special attention.

The report explores programs as well as agencies, with comprehensive accounts of the endangered species program, inland fisheries management, federal land management, and fire damage control, and others.

Certain species, selected to represent a cross-section of management challenges and opportunities, are also treated in depth. Raapings: California condor, grizzly bear, striped bass, green pitcher plant, and bald eagle.

The book was written by a team of researchers and field biologists under the direction of Arno Eeo, National Fish and Wildlife Service's legislative director for wildlife. It is apolitical, unbiased, exhaustively researched, and checked for accuracy by officials in the agencies covered. Roger Di Silvestro, the project editor, said that much of the information is pulled together in one place for the first time.

The Audubon Wildlife Report is intended to aid serious conservationists, researchers, natural resource agency personnel, wildlife biologists, and undergraduate students.

We expect the report to become a standard reference, Eeo said. "Somebody, conserva­tionists, should have something like this - a way they ever survived without it!"

Each year, a new edition will be published, with complete updates of programs and regulations. In a few years, Eeo said, the report will comprise an encyclopedia of wildlife management in America."

Di Silvestro already are working on the 1986 edition, and plans to produce at least one more as federal wildlife programs.

EVA jobs

The sight of bald eagles soaring over Eagle Valley Nature Reserve in southwestern Wisconsin has excited people for years. Now, the Eagle Valley Nature Reserve is working to bring that excitement to the public with a program to breed bald eagles in captivity at Eagle Valley.

Through this challenging project, the organization hopes to "back up" the North American population of our national symbol.

"But we need help," says Bob Kaspar, manager of Eagle Valley Nature Reserve. "We've started the construction of the facilities. Funds have come in from W.D. Board and Sons Cam­per Company and a grant we obtained at Eagle Valley into a captive breeding and research center, and we're building large pens where the eagles will live.

"We need volunteer construction help - people to hammer and nail - and we also need some people to help fill the pens, put feeding and water stations into the pens, put on roof shingles - things like that," he said, nothing that is too difficult."

"We're looking for people who have some time to devote to a worthwhile project - people who are interested in developing this dream come true - people who are interested in helping the eagles being raised and released to the wild right here in the tri­"
Hunting, fishing fees set FWS record

American hunters and fishermen spent over a half billion dollars in license and permit fees — a new record — to pursue their sports in 1984, the Interior Department’s Fish and Wildlife Service announced today.

According to data from state fish and wildlife agencies, $503 million was spent in 1984 for the purchase of hunting and fishing licenses, tags, permits, and stamps. The total number of license holders, however, dropped slightly from 42,360,467 in 1983 to 40,034,188 in 1984.

Minor fluctuations in the number of hunters and anglers for year to year are not unusual. Weather changes in state hunting and fishing regulations, economic conditions, and other factors can all affect the number of people who participate in hunting and fishing in any given year.

Statistics show most of their fish and wildlife management programs with the revenues from the sale of hunting and fishing licenses and from federal aid programs administered by the U.S. Fish and Wildlife Service. Under the Federal Aid in Fish and Wildlife Restoration Act, the amount of funding each state, commonwealth, and territory receives is determined in part by the number of license holders. They are reimbursed for up to 75 percent of the cost of approved projects undertaken to benefit their fish and wildlife resources. The source of federal funds are excise taxes collected by manufacturers on various types of hunting and fishing equipment. For the current fiscal year, which ends September 30, 1985, approximately $141 million was appropriated in federal aid funds for fish and wildlife conservation.

The wildlife portion of the Service’s Federal Aid program, popularly known as the “Pittman-Robertson” program, will mark its 50th anniversary in 1987. Under this federal-state partnership, more than $4.1 billion in sportmen’s excise taxes have been channeled into wildlife management, research, and land acquisition projects. The FWS and Wildlife Service has scheduled a series of commemorative events throughout 1986-87 to honor the contributions that sportmen and other conservationists have made to restoring the nation’s fish and wildlife resources.

Under the “Pittman-Robertson” wildlife program, an equally diverse series of state projects was supported, Illinois developed nesting cover for ring-necked pheasants and other ground-nesting wildlife. The Commonwealth of Puerto Rico managed a number of capital developments and habitat improvements in its public lands, while New Jersey undertook various wildlife investigations and surveys. Maine gathered data necessary for management of grassy, black bear, and deer herds.

Toxic waste found in Northern WI

by Andy Serogian

This summer the Department of Natural Resources discovered barrels of hazardous waste and other unidentified materials at three locations in Northern Wisconsin.

The first site where hazardous materials were found was a shallow pit behind the Conner Forest Products Industries plant in Laona. Twenty-nine barrels were unsecured by company employees in early June. After the discovery, an inspection was made by DNR solid waste specialists and a private consultant. On July 2, a report issued by the State Lab of Hygiene stated that the barrels contained hazardous waste. The barrels were apparently buried in violation of Wisconsin state law and have since been moved inside a mill company grounds for securitv reasons.

The other two sites were found August 9 when DNR investigators, acting on a tip, uncovered an unknown amount of barrels on land owned by the Wisconsin Timber Association. The investigators, working with a private consulting firm, took necessary samples for analysis and made no other efforts to excavate the area.

DNR District Information Officer David Daniels stated that the location of the two sites offers no threats to the public or the environment.

“There are no wells, no rivers or streams in the area,” said Daniels. Daniels added that the DNR and other parties involved must first identify the materials in the barrels before they proceed any further.

“What you’re talking about here is that the process of discovery and analysis isn’t just a few days. It takes some weeks to figure out what’s in there.”

Daniels said that though the first site was evidently buried illegally, the DNR could not be sure whether the other two sites were in violation of the law.

“Each case (of discovering hazardous waste) is unique unto itself. To have this thing solved by this fall or spring just isn’t going to happen.”

Treehaven

four field laboratories of the UWSP College of Natural Resources. The Central Wisconsin Environmental Station is used as a training ground for students preparing for careers as environmental educators. The Schmeeckle Reserve on campus provides an outdoor classroom for a variety of courses and is used for recreation and public service offerings.

Answer

The Brule River State Forest in northern Wisconsin.

Eco-Briefs

nosing, volleyball or nature hikes, for example, at Eagle River, overlooking the Mississippi River, can be spectacular. People who wish to stay overnight will be able to camp at the preserve.

If you are interested in participating, contact Kip Kaspar at Eagle Valley Nature Preserve, Glen Haven, Wisconsin. The telephone number is (606) 796-0273.

SCA jobs

The Student Conservation Association is seeking approximately 500 volunteers to participate in educational work experiences this winter and spring at more than 75 national parks, national forests, and other conservation areas throughout the United States.

Volunteers 18 years of age and older are needed to serve for 12 weeks in professional resource management positions at such locations as Denali National Park in Alaska; the Bob Marshall Wilderness Area in the Flathead National Forest, Montana; the San Juan Resource Area of the Bureau of Land Management near Moab, Utah; the Blue Ridge Parkway near Asheville, North Carolina; and the Shenendoah National Park in Virginia.

Selected volunteers will assist conservationists with such tasks as wildlife surveys, natural history interpretive programs, back-country patrol, and archaeological research. In return for their efforts, volunteers will develop skills and gain experience that can translate into future paid employment with resource conservation agencies.

Past participants also have found their volunteer service to be personally rewarding, whether or not they are considering a conservation career.
SCHEDULE OF EVENTS

Fall Semester

Activity | Open To | Entry Deadline | Play Begins
--- | --- | --- | ---
Touch Football (pt, Ma) | M, W | Men Off-C Sept. 5 | Sept. 9
Beach Volleyball | C | Sept. 3 | Sept. 9
Softball (pt, Mi) | W | Sept. 3 | Sept. 9

INTRAMURAL DESK: 103 BERG GYM
PHONE X 4441

INTRAMURAL DESK HOURS

The UWSP Intramural Desk will be open during the following times:

Monday-Thursday: 3-11 p.m.
Friday: 3-11 a.m.
Saturday & Sunday: 10 a.m.-10 p.m.

During these times, equipment can be checked out for use in the facilities. There are many facilities available for your use. These include 5 gymnasiums, exercise room, meeting pool, training room, gymnastics room, and archery range. More information can be obtained on these facilities by checking with the Intramural Desk during these hours.

THE INTRAMURAL DESK WILL NOT OPEN
FRRDAY, AUGUST 30TH - MONDAY, SEPT. 2

HEALTH ENHANCEMENT CENTER (WEIGHT ROOM)
The Health Enhancement Center will be supplied in the near future with new equipment which will provide for a total of 32 work stations. When that occurs, a membership fee will be implemented for facility use. Check with the Intramural Desk for further information.

Open Hours: Monday-Friday 8 a.m. & 3-11 p.m.
Saturday & Sunday 10 a.m.-10 p.m.

GELWICKS MEMORIAL POOL
All swimmers are required to have appropriate swimwear (swim caps are provided) and to have answered these before entering the pool.

Open Hours: Monday-Friday 9-10 a.m. & 3-8 p.m.
Monday & Wednesday 12-1 p.m.
Tuesday & Thursday 1-2 p.m.
Friday 11-12 noon
Saturday & Sunday 2-4 p.m.

Swimmmings sessions will be held M-W-Th from 7-8 p.m. Sign-up at the Intramural Desk.

TEAM CAPTAIN'S MEETING
On Monday, September 5 at 9:15 a.m., a meeting for captains of teams participating in the Intramural Program will be held in Berg Gym. On-Campus team captains are encouraged to attend, as well as off-campus people interested in forming a team. The Intramural Program will be discussed and questions will be answered.

These off-campus people interested in forming teams can pick up a folder with entry forms and rules for the year's events at the meeting or at the Intramural Desk.

ALL SPORTS CHAMPIONSHIPS & AWARDS
This year, the all Sports Championships for both men and women will be run on a semester basis. This means that champions will be crowned at the end of each semester. All Sports Champions will receive T-shirts.

Awards in the form of T-shirts or trophies will be given in all events offered.

ALL SPORTS CHAMPIONSHIP KEY TO SUCCESS
Get as many people on your team as you can, involved so that you can enter the maximum number of events offered. For more information, contact Bill Des, or see your Intramural Handbook.

ON CAMPUS FOOTBALL LEAGUES FOR MEN
These leagues start September 3, Tuesday. All men's teams are scheduled to play already. Schedules are located in the wing folders that are handed out or on the Intramural Bulletin Boards. (Phy. Ed. Building Hallway)

AEROBIC EXERCISE AND DANCE SESSIONS
The Intramural Department and Health Center co-sponsor Aerobic Exercise-Dance sessions for allstudents who are interested. Groups will be scheduled Monday thru Thursday, in the fieldhouse with a variety of times available. Sign up at the Intramural Desk.

Group leaders are needed for this seminar. Training sessions start Tuesday, Sept. 3. Registration forms are available for leading a group throughout the semester. For anyone interested, contact the Intramural Desk by August 30th.
Palmer is still a crowd pleaser

by Kent Walstrom

STANFORD—One of the SentryWorld Golf Course prac­tice tees, Arnold Palmer let loose with a three-word blast, his drive clearing a distant green and landing, finally, well beyond eyeshot of the respectful crowd surrounding him.

The roar of a plane overhead shattered the silence of the awestruck crowd and even caused Palmer to look skyward.

WITNESSING a blast, the searing sun, the jet­ting plane, and beaming, said simply, "Jesus Christ. He's n_ying on." Farterveld, gathered on hand for a clinic before the start of the Sentry Challenge Cup tournament, may have been the only one to enjoy the blast, did too.

A glorious moment Pal­mer's fan—a usual bunch with a stern concentration that belies the train of thought—ended with the king as the one he'd rather have seen out on the links Tuesday than the king himself. Indeed, he remains true to himself. He is still the master.

Palmer offers instruction at the clinic.

Three of the last five games will be at home as UWSP hosts Stout on Oct. 19, travels for con­secutive road battles with Super­ior on Oct. 30, and Platteville on Nov. 2, and completes the regular season with home games versus Eau Claire on Nov. 4, and River Falls on Nov. 18.

The latter will be at home as UWSP hosts Stout on Oct. 19, travels for con­secutive road battles with Super­ior on Oct. 30, and Platteville on Nov. 2, and completes the regular season with home games versus Eau Claire on Nov. 4, and River Falls on Nov. 18.

Head Coach D.J. LeRoy said, "The schedule is tough because we play three of our first four games on the road, but we have the luxury of playing three of our final five games at home.

"The schedule is favorable in that we play the top finishers in the conference, with the excep­tion of La Crosse, at home," he added.

"Our opener against St. Thom­mas will be a stiff challenge for us. They will be out to avenge last year's loss and will definitely be well prepared for us. La Crosse and Minnesota-Morris are also top-notch opponents," commented LeRoy. "It will be very important for us to be play­ing well early in the year."

Orders are now being accept­ed for Pointer season football tickets. Information may be obtained by calling 348-3257 or by stopping at Room 122 in the athletic department of the Grand Hall.

1985 Pointer Schedule

Sept. 7 — Sat. — COLLEGE OF ST. THOMAS, 1:00
Sept. 14 — Sat. — at Augustana College (South Dakota), 1:30
Sept. 21 — at — at UW-La Crosse, 7:30
Sept. 28 — Sat. — at Minnesota-Morris, 1:30
Oct. 5 — Sat. — at UW-White­water (Homecoming), 1:30
Oct. 11 — Sat. — at UW-Oshkosh, 7:30
Oct. 19 — Sat. — at UW-Stout (Parents Day), 1:00
Oct. 26 — Sat. — at UW-Super­ior, 1:00
Nov. 2 — at — at UW-Platte­ville, 1:00
Nov. 9 — Sat. — at UW-Eau Claire, 1:00
Nov. 16 — Sat. — at UW-River Falls, 1:00

Head FOOTBALL COACH, D.J. LeRoy.

After graduation, Giordana had a free agent tryout with the Green Bay Packers. He participated in the mini-camp and was invited back to the Packers’ reg­ular camp. After Green Bay picked up Neil Graff from Pitts­burg, Giordana was released.

In 1981, Giordana was offered a tryout with the Saskatchewan Roughriders of the Canadian Football League, but chose not to attend. For the past four years he has been an assistant coach for the Kaukauna youth football program.

Johnston, a graduate of Apple­ton East High School, enrolled at UWSP in 1934. During his four years as a Pointer, he lettered in basketball three times, foot­ball and track twice, and golf once. A first-team all-conference selection in 1935, 36 and 37, he led his team to three, successive conference championships. Dur­ing his last three years the Pointers were 19-6.

After graduating with a bache­lor of science degree in 1938, Johnston made the basketball squad of the Sheboygan Red­skins in the original National Basketball Association. After playing two games, however, he decided to direct his energy to­ward teaching and coaching.

He was the coach and basketball mathematics in Stevens Point, and Janesville before returning to Plover.

He also coached football and basketball for three years at Berlin, in the Little Ten Confer­ence. After spending more than three years in the Navy during World War II, he returned a successful commander in the Gene Tunney program, he returned to the Wisconsin area as a sales­man for the paper division of the American Can Company, he is now retired and living west of Pho­enix.

McDonald played guard on the basketball team at UWSP in 1929-30 and fullback on the football team from 1929-32. Though he has not been able to trace back his participation in either sport, he is still very proud of his time here.

He was the captain of the 1929- 30 basketball team, and earned three letters in both basketball and football. McDonald was a member of Stevens Point High’s 1929 state championship team, and his career accomplishments are evident in the Stevens Point Journal as "one of the most spectacular in local annals."

McDonald had a long career in teaching by completing thisure in high school mathematics in Stevens Point and Janesville before returning to Plover.

Joke, did too.

The Pointers played at 5:30 on Oct. 5 to host Whitewater and then return to the road the follow­ing week traveling to Oshkosh. The latter will be Point's only other night game, with a scheduled starting time of 7:30.

Oshkosh. The latter will be Point's only other night game, with a scheduled starting time of 7:30.

Football coaching staff increased at UWSP

UWSP Sports Information Office

Seven staff assistants will join the University of Wisconsin-Stevens Point's head football coach, D.J. Lehoy for the 1986 football season.

John Mieh, Russ Nelson, Fred Hebert and Rick Wietzen will work with the defense, and Pete Steimlacher, Ron Seiner and Jim Fisher will assist the offense.

Mieh begins his first year as defensive coordinator and defensive line coach at the university. He is also a full-time member of the physical education faculty. Mieh began his coaching career in 1975 as an assistant football coach at UWSP. While at Point, the team led the nation in passing his first year and finished runnerup in his second term. In 1977, he was the head coach of the freshman team.

In 1978 he joined the staff at Stephen F. Austin University where he worked with left ends and tackles. There he coordinated the weight training program.

In 1979 he returned to Wisconsin where he was the head football coach for three years at Whitnall High School and three years at Jefferson High School. His 3-year coaching record was 64-36-1. Nelson is returning for his second season as linebackers coach.

A head coach for 19 years, Fisher is the head football coach at West St. Paul, Minn., his teams competed in the St. Paul Suburban Conference. He also spent one year as an assistant at Macalester College in Minnesota.

Hebert is in his first year as the defensive backfield coach and member of the physical education faculty at UWSP. For eight seasons he directed the varsity squad at Whitehall High School, posting a 52-35 record. His team won two Dairyland Conference Championships.

Westmeyer played defensive back for the Pointers for the past four seasons. As a student assistant, he will be an aid to Hebert in working with the defensive backs.

A three-year starter at corner, Wietzen had no career interceptions. As the return specialist, he had a 9.1 average in past returns.

Steimlacher returns for his second season as the line coach at UWSP. A native of Wisconsin Rapids, he was the offensive line coach at Stevens Point Pacelli High School from 1971 through 1982. During his tenure with the Cardinals, the team was 99-8-1 and won six Central Wisconsin Catholic Conference championships.

Steiner returns to assist Leho after serving as Pointer head coach from 1977 through 1982. In his five years in the coaching job, Steiner had a record of 56-56-1. That mark included a first year 8-2-1 season with the school's first WSCC championship since 1981 and its first ever post-season playoff berth. At the conclusion of that season, Steiner was named "Coach of the Year" in the WSCC, NALA District 15 and NALA Area IV.

Fisher returns to his alma mater to begin his first year as a mentor of the offensive ends. He was a varsity assistant coach at Wisconsin Rapids Lincoln High School from 1972 to 1984.

For the past three seasons, Fisher guided the sophomore team at Lincoln. In 1985, his team turned in the first undefeated season in the history of the school.

Though the staff was brought together late due to university hiring procedures, Lehoy said he was pleased with the makeup.

"The work ethic of these people is fantastic. They're hard workers who have a great deal of self-pride," states Leho. "You can tell that it means a lot to them for our team to be as good as it can be." Lehoy said he is also pleased with the balance of the coaches.

"It is a nice luxury to have four coaches on offense and four on defense. It allows for more teaching and supervision of all players."

"The coaches are all able to work in their areas of expertise," said Lehoy. "The knowledge that these gentlemen bring to our football program can do nothing but make our football team better."

Hall of Fame

Mazzoleni posts hours for UWSP hockey practice

By Kent Waldron

Sports Editor

Mark Mazzoleni, the new head coach of UWSP's ice hockey program, has announced his starting times for hockey practice this fall.

Off-ice practice, which is the beginning of the fall practice sessions, will begin on Tuesday, Oct. 1, from 12:15 p.m. to 1:15 p.m.

The on-ice portion of practice, slated to begin on Monday, Oct. 21, will also be held from 12:15 p.m. to 1:15 p.m. Anyone interested is urged to adjust their schedules as early as possible to allow for free time during the practice times posted.

For further information concerning the hockey program, players may reach Mazzoleni either by stopping in room 117 of the Physical Education Bldg., or by calling him at No. 3897.

To the hockey edge of the world: A three-yr starter on Wisconsin Rapids Lincoln High School's 1984-85 team, Mazzoleni was a running back and first team in the Wisconsin Valley Conference. He has been a member of the Packers first String team.

He later played seven years with the Madison Mustangs, a semi-pro team.

The induction of the five members brings the membership in the UWSP Hall of Fame to 33.

SentryWorld course is a hit with pros

by Kent Walstrom
Sports Editor

The SentryWorld Golf Course, staging its bid for a possible future entry into the PGA (Professional Golfers Association) tour, did much to increase its notoriety by hosting the Sentry Challenge Cup Tournament earlier this week.

The tournament, which featured four top performers from the Men's Seniors Tour and two of the top female money winners from the LPGA in recent years, was the first of its kind held at Sentry.

Hailed as "the best new public golf course in America" by Golf Digest, SentryWorld displayed the talents of the legendary Arnold Palmer, who has four Masters titles, two British Opens and one U.S. Open. Open to his credit, world-renowned golf instructor and professional Bob Toski; Miller Barber, the incomparable "Mr. X" who won at least one major tournament each year from 1967 through 1974, Dave Marr, winner of the PGA Tourney and player of the year honors in 1964 and recently voted the top golf announcer in a poll covering the three major television networks (ABC, NBC, CBS); Betty King, whose 21 top ten finishes and earnings of more than $250,000 led the LPGA in 1974; and Jan Stephenson, a native of Australia who has topped the $1 million mark in career earnings and was named LPGA rookie of the year in 1974.

A short clinic taught by the players themselves led off the day's events and was the initial convention that helped showcase the SentryWorld Golf Course and promote its facilities.

Following the clinic, sides were selected for the actual tournament, with Stephenson, Barber and Toski making up the first team and King, Marr and Palmer combining to form the second team.

Stephenson and King assumed the role of captains.

On the front nine, Stephenson rallied to a two under par 34 with Toski adding a 38 and Barber a 39. However, Betty King's 35, along with Palmer's 37 and Marr's 39 were enough to knot the score at 111 at the finish of the first round.

To add excitement to the tournament and allow either team the opportunity to earn extra money, a "press" figured in the scoring. (A press occurs when a team is two holes down in a match. Along with the regular prize money, an extra bet is started from the next hole throughout the remainder of the nine holes. In effect, the two teams would start a new, additional game from that point.)

The team of King, Marr and Palmer won a separate press match on the ninth hole of the first round to claim the victory.

The star tandem of King (35), Marr (41), and Palmer (38) defeated Stephenson (40), Barber (37), and Toski (42) to take the back nine and complete a clean sweep of the tournament. No press was in effect during the final round.

All totaled, King, Marr and Palmer picked up a cash prize of $30,000-$50,000 for the sweep and an additional $3,000 for the first round press.

Although the gallery appeared at first to focus on Palmer, it was the gallery performance of Betty King, who ended with an impressive two under par 76, that drew the attention. The superb, two-woman effort was completed by none other than Jan Stephenson, who registered a 74, followed by Palmer with 75, Barber at 76, Toski at 80 and Marr finishing with an 81 stroke total.

The short press conference that followed proved that the competition had been fair and friendly.

"I've been in Wisconsin a lot of times, and I've enjoyed them all," said a relaxed Palmer. "I particularly enjoyed today. I think the entire complex here is certainly one of the most outstanding I've had the opportunity to see. I look forward to playing here again."
New dean

University News Service
James L. Schurter, a one-time physics professor who is a specialist in library, automation and computer systems, is the new dean of the University of Wisconsin-Stevens Point's new dean of Academic Support Programs.

He assumed his duties Aug. 1, succeeding Mary Croft who has been the acting dean since Bartlette Eagen's retirement about a year and one half ago.

Schurter has been an administrator at North Hennepin Community College in Minneapolis since 1980, first as associate dean of instructional support services and for the past two years as associate dean of instruction.

At UWSP he will oversee operations of the Albertson Learning Resources Center, academic computing, the Academic Achievement Center which includes the writing and reading and study skills labs, student orientation and academic advising.

He will be lending some of his expertise to the automation that is underway in the Learning Resources Center as part of a UW System library project. The conversion, which will replace the card catalog with computer terminals, is expected to be completed during the 1986-87 school year.

The new system will make thorough searches for information "much easier for the untrained user," Schurter says. There will be access to holdings in other libraries, too.

Schurter, G., is a native of Elgin, Ill., with three degrees in physics. He has a B.A. from MacMurray College in Jacksonville, Ill., an M.S. from Purdue University in West Lafayette, Ind., and a Ph.D. from Iowa State in Ames.

He began his career in college-level teaching at Vincennes University in Indiana in 1966 and later served two years at his alma mater, MacMurray. He returned there after graduate study in 1973 and became a tenured professor, chairman of the physics department, director of the computer center, director of financial aid and acting dean of students.

At North Hennepin, Schurter's numerous roles included establishing and directing the computer science program, microcomputer laboratories and the administrative computer system. He reorganized and directed the learning resource center and the competency based education program.

For Minnesota's Community College System, Schurter was one of the leaders in the development of library automation, computer systems, management information and long range planning for instructional services.

Schurter's community service has been largely related to cable television matters which he would like to continue here.

He and his wife and the youngest of their three children live at 1900 Arbor Villa in Plowe.

SIGI Plus

University News Service
Students at the University of Wisconsin-Stevens Point have a new computer program to help them plan their future careers.

The campus SIGI Plus program is based on SIGI (System of Interactive Guidance Information) which has been in operation on campus for about three years, will be available to students at UWSP this fall. Both programs are marketed by Educational Testing Services.

SIGI Plus is more comprehensive, more flexible and more appropriate for users of all ages, according to Patricia Doherty, associate director of counseling and personal development at UWSP.

It is currently being field tested by students and staff at the university and will be in full operation when classes start for the fall semester.

The program has nine parts - introduction, self-assessment, search, information, skills, preparing, coping, deciding and next steps. Each section deals with the following:

- Introduction - gives an overview of the system, its sections, details about each part, and a recommended pathway through the system.
- Self-Assessment - lets the user look at work-related values and decide what are the most important, choose main interest fields and explore various activities involved in these fields.
- Search - lists features wanted in a job, a firm, a school and a roster of possible occupations incorporating those features.
- Information - offers specifics about the occupations, including skills required, self-testing on those skills and how the skills are applied.
- Preparing - includes training or college education needed and an estimate of reaching completion.
- Coping - suggests how to obtain practical help in preparing for a career and how to handle worries such as time management and competition.
- Deciding - lists three occupations at a time including reasons, chances of employment and desirability.
- Needs - offers short-term strategies such as getting more training, developing new skills, proving yourself, building a network, writing a resume and overcoming obstacles.

A section can take anywhere from a few minutes to half an hour to complete, so users should plan to return for more than one session on the computer. Doherty says it is enjoyable to use and offers easy access to each part.

She says SIGI Plus has been successful on campus, both in the number of students using it and their responses to it. The new program is more flexible and offers more opportunities for self-exploration because it was originally developed for adult learners. Therefore it should prove to be more helpful to UWSP's older students and give them more chances for validating decisions, she predicts.

It is available to the campus counseling centers as tools - sources of advice that must be integrated into the overall career planning process. Students need to

7; and music, 31, up 11.

Last year, the number of new computer science systems majors almost doubled to 49 over the previous year, according to the most recent data.

Within major units of the university, the College of Rural Resources has made the greatest gains in enrollment, with an increase of 9 new freshmen of a total of 30. Peninsula County continues to send the most new freshmen to the university by its boundary line. There are 278, this year, an increase of 46 over last year, and 197 more than an even 100 in 1983. Washburn, 138, 13, more; Wood 137, 4; and Marquette, 115, 4, more; Brown, 110, 11; fewer; Marathon, 197, 9, fewer; and for the first time, Oshkosh, 56, more. By sex, 237 are graduates of Stevens Point Area Senior High School.

Paraphrased, cont.

"Meanders and Drainage Changes" focuses on the Tomahawk drainage basin. An excellent example of how rapid a drainage system can change is seen in the historical and modern physical features in the basin. The geographist describes how the Wisconsin county line. He begins to explain meanders and meander cutting. The Wisconsin county line is moved to the end of the meander cutting.

Dean, cont.

Ms. North, a native of St. Louis, will be a permanent member of the faculty. She received her B.A. and secondary education at Webster College in Missouri. She received her M.A. in English and Ph.D. in educational administration from the University of Alabama-Tuscaloosa. In her first position, which began in 1966 as an education staff member for the Governor's Council on Higher Education, she successfully made application to the Head Start Program in Baltimore, Md., and was the University of Alabama-Tuscaloosa as an assistant in the president in speech writing and publications and had specific responsibilities in fund raising in the United States, and as an administrator, she had been asked to make an appointment through the University of Arizona - Tucson.

Enrollment, cont.

of this year's enrollment increase in various disciplines. The fact that many of the new students will continue to live in their residence halls, a manageable housing situation, is another strength of the university. Vice Chancellor Irving Buchen says that there are enough rooms for the last group of students to want to give them classes appropriate for their level of study.

It may be necessary for some students to be in class during evening hours.
