University of Wisconsin-Stevens Point

Women's X-country team participating in tests

by Jeanne Davis

News Editor

Dr. Jim McKee, a pediatrician from the Marshfield Clinic, is testing the UWSP's women's X-country team for iron deficiencies that result from training.

Dr. Nickerson has previously studied and tested three different high school teams, UWSP is the first collegiate team to participate in his tests.

"Dr. Nickerson is primarily trying to determine why, in female distance runners, there are so many anemic, iron deficient runners," Len Hill, the women's cross country coach, said.

Four percent of females are anemic and eight percent are iron deficient in the normal female population. In distance runners, the percentage becomes much higher.

In the first stage of the testing, the runners' hands were cleaned and covered with a plastic bag and special stocking of 3B2/400 compartment Corporation.

Administrative will run the study on behalf of the male population. In distance material.

Burroughs tent. The distance benefits that result from running-"each in the testing." -each in the testing. The team's captain, Sheila Ricklefs, said, "I think the overall team involvement has been very positive. The doctor is very kind and the atmosphere is very informal.

Although some of the runners "reluctantly" participated in the next stage, everyone did give the required blood samples before and after the October 5 St. Olaf race.

Urine and stool samples were also taken before and after the race at St. Olaf to check for any blood loss in the samples, possible place for iron to be lost.

"We don't have results of all the studies yet. We did discover a runner who was anemic and is now taking iron supplements," Hill said.

Half of the runners are now taking iron pills and the other half are taking placebos. Neither Dr. Nickerson nor the runners know who is taking which, he has a lab technician keeping tabs on that aspect, so as not to bias the results.

"After the conference meet, he'll take another blood sample. He's predicting that the iron stores will be depleted by then in the runners not taking the supplement," Hill said.

Cross country runner Kathy Seidell said, "It's a way, taking the pills does affect you-the thinking that maybe it will help you in some way. We really have nothing to lose."

"If there is an effect, we will know immediately after the conference meet," Hill said. Dr. Nickerson plans to take another blood sample at that time to determine if any of the participants are anemic or iron deficient.

Hill indicated there will be enough time to put the others on the iron supplement "if there is an effect," before the regional and national meets. It takes only two weeks to turn the depletion around, according to Dr. Nickerson.

Dr. Nickerson will also be counseling the runners on how to eat right to obtain three times as much iron from their diets as they could obtain from the iron pills.

"The girls overall have reacted very well to the tests. I was a bit concerned about the blood samples before the St. Olaf race, but they ran well," Hill said. "The final results can only help us."

Mainframe computer on the way out

by Jenny Blum

Staff reporter

The Academic Computing Department has purchased two new micro-computers the AT&T 382/400 UNIX and the MicroVAX II by Digital Equipment Corporation. These computers will take the place of the Burroughs. Burroughs' mainframe computer which was previously shared by Academic and Administrative Computing.

Administrative Computing is in the process of "decentralizing"-each department within the administration will have its own computer system, and the Burroughs will become nonexistent. The systems that Academic Computing has chosen to replace the Burroughs will offer benefits that were not available to UWSP's students and faculty.

Tom Neuhauer, applications software specialist with Academic Computing, will now be responsible for helping faculty and graduate students to use the UNIX and MicroVAX. According to Neuhauer, both computer systems will be extremely beneficial to students by giving them practical experiences with machines that many businesses use. The MicroVAX II is also used on many campuses across the country; having one at UWSP will allow students and faculty on-line access to research and educational information from these other campuses.

"Students don't really need to know much of what I do day to day. I'll be happy, however, if they know who I am, and how that relates to the nature of the operation of the university," Marshall said.

Chancellor's Awareness Day October 24

by Joanne Davis

News Editor

Chancellor Philip Marshall will appear on SETV's "The Show," 7 p.m., October 24, on Cable Channel 3, to support Chancellor's Awareness Day at UWSP. Marshall will discuss his job duties and how it feels to be in a position that is misunderstood by many students.

"Students don't really need to know much of what I do day to day. I'll be happy, however, if they know who I am, and how that relates to the nature of the operation of the university," Marshall said.

Chancellor's Awareness Day, the branch of SETV's John Dunn and Kirk Strong, was designed to make students aware of what the chancellor is all about.

A booth in the UC Concourse, sponsored by WFMF, SETV, SGA, and The Pointer, October 17 and 24 will help promote Chancellor's Awareness Day with surprises, give-aways and guest appearances. Questions for the chancellor can be dropped off at the booth.

Radio interviews with Chris Dorsey, The Pointer, November 1; Nancy Mayek, SGA; Bob Flenskebrick, SETV, and Kevin Hansen from 90FM will air at 90FM's "Two Way Radio" at 5:30 p.m., October 23.

The interview will cover how the media effectively promotes events such as Chancellor's Awareness Day.

"We don't have results of all the studies yet. We did discover a runner who was anemic and is now taking iron supplements," Hill said.

Half of the runners are now taking iron pills and the other half are taking placebos. Neither Dr. Nickerson nor the runners know who is taking which, he has a lab technician keeping tabs on that aspect, so as not to bias the results.

"After the conference meet, he'll take another blood sample. He's predicting that the iron stores will be depleted by then in the runners not taking the supplement," Hill said.

Cross country runner Kathy Seidell said, "It's a way, taking the pills does affect you—the thinking that maybe it will help you in some way. We really have nothing to lose."

Hunting season never closes at UWSP

Mention hunting on the UWSP campus and most people will conjure up visions of pursuing wild animals through the woodlands of Wisconsin. However, right here on the Stevens Point campus, there is a hunt that hundreds of people are engaged in daily that is, for most practical purposes, the most important hunt they will ever be involved in. What I am speaking of is the job hunt.

Surprisingly, this hunt is strikingly similar to the other type of hunting that people are familiar with. To begin with, like any good hunter, you must do a great deal of preparation before embarking on the hunt. Any hunter with the least bit of self-respect will scout out the area he is going to hunt well in advance. Likewise, you should research the field you are planning to go into so you know just what jobs may be available, and where these jobs can be found.

Also, you must know yourself. It is going to be pretty hard to find a job if you're not even sure what you are qualified to do and what it is you would like to do. But, say you're not sure what it is you want to do. Well, not to worry. There are some outside sources that can be of aid to you at this time.

First of all, the Career Services and Placement Center on campus is designed specifically to help job hunters with any problems they may encounter during this trying time. Another outlet you should seriously consider is the book, “What Color Is Your Parachute?” by Richard Nelson Bolles. The book serves as a manual for job hunters. It takes an in-depth look at every step of the job hunt, and gives job hunters a more realistic view of the work world. This view is sometimes less than optimistic, but, in the end, it is noted that it is still possible to come out on the winning end of the job hunt.

The next thing to consider for the actual hunt, remember there are a number of different ways of going about it. The most important thing to remember is to try every possible avenue that is open to you. After all, a dichard hunter would try anything that he could to take home his trophy. The one cut you don't want to fall into is that of simply sending out resumes and answering want ads. These may prove successful, but more times than not, they will not provide positive results. Don't be afraid to meet employers face-to-face and ask them for interviews. The most important thing to remember is, be aggressive.

Almost as important to remember when gearing up for the job hunt is to start early. If you are a first semester freshman reading this, it may just slip right past you. But, now is the time to start your preparations. Get involved in activities and jobs that will give you practical experience in your field, because one day you will be standing in line at registration when you look down on your classification card only to find out you are now a senior. Getting involved early will pay off when this time rolls around.

The mistake too many people make is assuming that simply going to class each day and passing all their classes will be enough to get that job when they finish college. Believe me, this is not the case. There are hundreds, if not thousands, of job hunters who have "had the classes." What employers are looking for are the people who have taken the initiative to apply some of the things they have learned in practical situations.

By the way, if I'm going to use the hunting analogy for job hunting, I should include all parts of it. Just like the
classroom, after registration is over, the hunt begins. It is getting ready for its cover-up. In other words, you must be prepared, because your employers may surface at any time.

The Pointer is a second class publication (USPS-895289) published weekly on Thursday by the University of Wisconsin-Stevens Point and the UW System Board of Regents, 117 Communication Arts Center, Stevens Point, WI 54481.

POSTMASTER: Send address change to Pointer, 117 Communication Arts Center, Stevens Point, WI 54481. Pointer is written and edited by the Pointer staff, composed of UWSP students, and they are solely responsible for its editorial content and policy.

Career Services offers gamut of opportunities

by Karen Hettich
Staff reporter
Career Services is an office on campus where you will find people who care; people who want to help you find the job that suits you best. Located in Old Main, Room 134, you may have heard of it. You may also have used the wide range of services the office provides. If you haven't, you may be missing out on one of the better ways to successfully job hunt.

You have to do the work and get the job yourself, but the Career Services staff knows where and how to look, and the requirements most employers look for. "We encourage your frugality and early contact with us, as today's job market demands thorough preparation and timely application in order to be successful in your job search," says Larry Walters, Assistant Director.

Judy Chesbro schedules appointments for assistant directors: Mike Pagel, who works with natural resources and science-related majors; and Larry T. Walters, who works with business and liberal arts majors.

Laurn Ann schedules appointments for career advisors: John Zach, who works with education, psychology and sociology majors; Mary Moster, who works with liberal arts and education majors; and Agnes Jones, who works with all school of finance Economics majors. The Executive Director of Student Services is Dennis Tierney.

There are many services available, and whatever your needs, stop at the center desk and check in. The office is open from 8:30-12 and 1-4:30-5:45 daily. Set up in a help-yourself manner, the office:

- contains a large library where current vocational information concerning hundreds of businesses, industries, government agencies, and professional level systems is cataloged;

- distributes special career-related literature to all students;
- publishes weekly job vacancy listings, available to all students, both for teaching and non-teaching positions. Each Friday they are available in the Career Services Office or through the resume file each week by supplying your office with 15-18 business cards, self-addressed, stamped envelopes with a note indicating your major, date of graduation and which job you wish to receive;
- distributes the College Placement Annual to all seniors (available on a first-come, first-served basis beginning in October).

If you really aren't sure what you want to do after graduation, career counseling is open to all students, as well as providing career interest and aptitude testing upon referral to the Counseling and Human Development Center. This testing is available on supply and demand, and students may request information concerning future employment opportunities.

Throughout the semester, members of the staff host various workshops. Each to come this semester:

Resume Writing Workshop, October 22 and November 4, 11-12 a.m. in the CNR, Room 312 (both sessions are identical, so you need to attend only one);

Interviewing, November 5, 3-5:30 p.m. in the UC, Room 135.

Resume Writing Workshop, although aimed for science majors, is open to all students; all are most welcome to attend. Each session is identical, so you need to attend only one. October 17 and 24 and November 7 and 14, 7-8:30 p.m. in the CNR, Room 312.

As a senior, you are able to participate in on-campus employment interview day for government, business and educational positions. You may also use the "Dial-A-Job" telephone line, whereby you can call employers who are listing jobs anywhere within the continental U.S. regarding employment positions; all you need are the employers' phone numbers and your major.

The Career Services Office has the responsibility for the university Cooperative Education Program which provides job experience to students before graduation.

Creative Problem Solving program October 23

by Joanne Davis
News Editor
Dr. William Davison, UWSP communication professor, will present a Creative Problem Solving program on Wednesday, October 23, at 11 a.m. in the Red River Room.

The free program, open to students and the community, will differ from structured approaches to creative problem solving.

Davison feels the two-hour program will be long enough to provide a sense of the historical development of creative problem solving, to see where it has been successfully employed.

He cited NASA and KLEENEX as two companies successfully using this approach.

The program will look at problems faced in the corporate set-

Dean North challenges deans to meet or beat COPS

by Joanne Davis
Editor
Dr. Joan North, Dean of the College of Professional Studies, has given the UWSP deans the majors' contributions to the United Way campaign.

Dr. North challenged the deans of COFA, Paul Palombo; the Dean of the CNS, Daniel Taran; and the Dean of the CLS, Howard Thoyer, to surpass last year's dollar sum COPS goal and staff have given in the United Way.

"We're going to bring a chart

ting decision making and problems which require in-

novative ideas.

The structured processes to be covered are: brainstorming, nominal group technique, synectics and future stages. "These processes are a way of structur-

ing communication within a group so people can successfully communicate to a problem," Davi-

son said.

University News Service

All the student employees of the Print Shop at the University of Wisconsin-Stevens Point received awards in the "Dial-A-Job" telephone line, which they are available on a first-come, first-served basis beginning in October.

If you really aren't sure what you want to do after graduation, career counseling is open to all students, as well as providing career interest and aptitude testing upon referral to the Counseling and Human Development Center. This testing is available on supply and demand, and students may request information concerning future employment opportunities.

The UWSP group competed with students from 21 campuses in Illinois and Wisconsin. The art media contest was held at the Joint Session of the Association of College Unions International, held last weekend in UW-Eau Claire and UW-Rochester.

In addition, the UWSP students received individual awards for their designs, including:

- Best of Show to Mercer for the "UWSP" cover, a publication listing campus positions during summer and fall.
- First Prize to Ayers for a brochure for the Faculty Bloodmobile for the race, which publicizes an eating area in the University Center.
- "Honorable Mention for a design which publicizes an eating area in the University Center."

Halloween Fun Run October 19

by Joanne Davis

The second annual Halloween Fun Run, Saturday, October 19, will start at 10 a.m. at the Ruth Minnich Administration Building. All students registers run, are open to the community and UWSP students.

The event, sponsored by the Stevens Point Area Wellness Council, will feature a 5K race and a one-mile prediction race. Saturday, October 19. Price is Right announcer and Price is Right announcer will be among the participants. Prizes will be awarded for the best costumes in each category. The event is sponsored by the Stevens Point Area Wellness Council.

Halloween Fun Run October 19

Price is Right announcer

Helen Van Voorhies, who heads the office, said the photo created good will for the operation through early participation and endorsements of it to potential users.

During the last year, a total of 400 students were placed in jobs off campus, either in businesses or households. Earnings totaled $509,300. In 1984, the first full year of operation, the number of students recruited was 291 and the income reported was $182,000.

Mrs. Van Voorhies said her office is a good example of the high level of competence that students possess. Except for herself, the entire staff is made up of students. Two of them assisted in explaining the operation for the University Associates as part of their observance of National Student Employment Week.

Her office accepts calls from people seeking help of all kinds, from doing typing in an office on a part-time basis to putting on storm windows and shoveling snow.

Employers like the fact that the office can screen candidates for jobs. Mrs. Van Voorhies explained. That's a time-saver for businesses, she added.

With a new computer system in which students enter information about themselves, the kind of skills they possess and the kind of jobs they seek, Mrs. Van Voorhies and staff are able to locate candidates for the employer within a short time.

Grief support

To The Editor:

A grief support group has been organized to assist those who are recovering from the death of a relative or friend. Sponsored by the Division of Higher Education and the Newman Student Community, the group will meet Thursdays for six weeks from 4:00-5:30 p.m., beginning October 17 and November 21. Sessions will be held in the Dodge Room of the University Center. There will be no charge to students and faculty as well as the public are invited to attend. General information and resources such as films and books will be provided, and there will be opportunities to share feelings and concerns with one another.

Nancy Maffett, United Ministers in Higher Education

The Lion Dance is a Chinese tradition, occurring every New Year's Day. The nien, as the word goes, was a creature that would appear at the end of each year and eat farmers' crops. The people lived in fear of the nien until it was scared away one year by the sound of a young boy's firecrackers. The Lion Dance was spawned from that accidental discovery. Now, each year, the Chinese bring in the new year by performing the dance and setting off fireworks. On October 25 and 26, the Lion Dance will be just one of the many cultural traditions you will be able to experience during the delectable two-day festival here at UWSIP.

The International Festival is a joint effort of the International Club and the Foreign Student Office, and is being coordinated by Mui Sin and Dr. Marcus Feng. The event will include an international cafe, exhibitions, entertainment, films, demonstrations, the sale of arts and crafts, and will conclude with a concert by the internationally known Chinese pianist, Ying-Cheng Zong. The event will begin at 11 a.m. on Thursday with the presentation of a host of foreign films in the Encore Room. The films and their countries are as follows:

**Chinese Films**
- *Fishermen of Taiwan, R.O.C.*
- *Report on Acupuncture*
- *Canada, a holiday in pictures*
- *Athenscope*

**Other Oriental dance only part of festivities.**

- *Pekingopse*
- *Japanese Dance*
- *Invitation to Tea Ceremony*
- *Education in Japan*

**New Year's Day**

- *New Year's Day*
- *South Africa*
- *Chinese New Year, or Seven*  

The baby blue age of the auto  

by Crystal Gustafson  

Currently, a lot is being said about the 100-year anniversary of the automobile. Actually, the car was invented and is popular for a lot longer than that. But in 1900, some important inventions (like the water-cooled engine and electronic ignition) modernized and revolutionized the automobile. Seeing the anniversary articles in the newspapers, and the "history of the automobile" books in the bookstores, has made me think about the importance of cars in my own life.

I bought my first car after learning how to drive on my mother's car. She wouldn't let me drive hers anymore because I had destroyed two mufflers, one transmission and one front quarter panel. Mom said that...

Baby blue, cont.

...was a little extreme for only having my license two months. Picky, Picky.

I bought a beautiful, powder blue (with a racing stripe), nine-year-old Gran Torino. The previous owner had covered all the rust spots with heavy blue tape. My current boyfriend ventured the comment that the car was more tape than metal, but I would listen to no criticism about my pride and joy. My VAROOM because it was my baby, and because it seldom had more knowledge about cars, and would listen to no criticism, I would've been with it, I would have asked for two more things. Number one—more money than I was earning.

My current boyfriend ventured well set. I had plates. Furry pink dice for the rearview mirror. Soon, however, I realized how expensive it was to drive it all over Dane County. At that time, gas cost around 40 cents a gallon. But, BABY VAROOM had an 8-gallon tank. I bet you didn't think you could have an 8-gallon tank, but I must've let BABY VAROOM die. Every payday I'd take my entire check and put gas into the car; I never once saw the gas gauge on FULL.

The fact that I ran out of gas several times really amused my friends; but when the full extent of my car ignorance became known, I endured a lot more teasing. When winter came, I decided I needed snow tires for my car. One day when the gang was discussing cars, I quietly posed my question to a friend. "WHAT did you ask me?" she shrieked. The gang stopped talking to listen in. I said, "Do the snow tires go on the front or the back?" If you think my friends let that one go easily, read my junior year. There are no less than 15 references to dumb blunders who don't know where to put snow tires. When everyone else was being voted "Most Popular" or "Most Likely to Succeed," I was voted "Most Likely Never to be an Auto Mechanic."

My friends weren't the only ones who were critical of my new car and my new driving skills. In order to understand, you have to picture the size of a other car owners) that perhaps I should learn before I parked next to their cars. These problems faded into the back of my mother's mind after I had the BIG accident.

Gran Torino. They are very, very, very, very, very, very, very, very, very, very hard to park. Cowardice is not part of my nature, and I tried to park BABY VAROOM everywhere. Tried is the key word here, because BABY VAROOM didn't fit everywhere. Tiny little tender benders, I told my mother, were nothing to worry about. After all, I explained, everyone has to learn. She thought (along with a lot of other car owners) that perhaps I should learn before I parked next to their cars. These problems faded into the back of my mother's mind after I had the BIG accident.

It wasn't that big really. It was a mistake anyone could've made. I was cruising during noon hour with my friends. In the town I went to high school in, we used to drive back and forth on Main Street with the radio blaring. We were approaching a stop sign, and I had my foot on the brake. There was a car in front of me, and a very cute boy walking down the sidewalk. I was braking and ogling at the same time. Unfortunately, I ogled more than I braked. Nice. Given its size, BABY VAROOM was fine. It was the little Mercedes already stopped at the stop light that didn't do so well.

Because of that accident, and my previous record, the insurance company raised my premiums. At the same time, BABY VAROOM's battery wore out. For Christmas that year, when my friends received clothes or albums, I got a brand new Sears car battery.

You'd think all those experiences would've scared me toward cars in general. They didn't. I'm currently driving a 1976 Chevy Impala. It's about the same size as BABY VAROOM and I call it BEAST. Given its size, BABY VAROOM was fine. It was the little Mercedes already stopped at the stop light that didn't do so well.

I'm almost forget. BABY VAROOM didn't last very long, and I sold it before I left for college. The new owner totaled it before the check cleared the bank. My mom never said that it wasn't appropriate to have a memorial service for a car.

There will be six Wisconsin artists displaying their work, and three are our own faculty and staff members. There will be a nice variety in the art work to be shown, from the paintings of Virg Beck and colored pencil drawings of Wayne Anderson to the wood carvings of Bob Miller, James Schurett and David Per- senius and the photography of Stanley Szczytko.

Now I think it's nice to relate B.J. from our own College of Natural Resources. He has been a designer for Walt Disney Produc- tions and has had his work published in Flins and feathers, Wisconsin Sportsman, and Fis- hing to name just a few. His work has been in such shows as the Game Conservation Inter- national Art Show, Great Lakes Wildlife Art Festival and the...
David Personius has been carving and painting birds for six years, three of those years professionally. He was influenced in his informative years with wildlife and the world of birds on the edge of the Horicon National Wildlife Refuge, where his father was a manager. He considers himself a folk artist, developing his own style falling between the realistic and folk art form.

Ed Marks, the museum director, has informed me that various items will be for sale, so come early; join the collection tour of the museum, enjoy the art work and have refreshments. What a pleasant way to spend a Sunday afternoon.

Harlequin, cont.

little more substance. However, I always return to a Silhouette Desire, a Candlelight Ecstasy, or a Harlequin Romance.

Maybe it's the happy endings, or maybe it's the mindlessness of the reading, but I really think it's an hour well spent in a complicated world. For that moment, I'm the gorgeous, slender heroine in love with the handsome, perfect hero. We eat gourmet meals, live in exotic places with maidls, and never have to worry about mundane reality. It's great.

Art, cont.
Leigh Yawkey Woodson Bird Art Show. He is at present a full-time, free-lance wildlife artist.

Wayne Anderson, a resident artist from Stevens Point, has also exhibited his work in the Leigh Yawkey Woodson Bird Art Show.

Bob Miller works with many kinds of wood producing a variety of shorebirds, songbirds and occasional waterfowl. He likes to enhance the natural texture, color, and grain in his carvings. He is also a faculty member in the N.R.C.

James Schurter of the L.R.C. staff will have his shore bird carvings on display.

Festival, cont.
Saturday in Michelsen Hall, Fine Arts Center. Zong has been informed that UWSP has the opportunity to host such an internationally renowned figure. Tickets for the Zong concert are available through the Arts and Lectures Box Office. Prices are $4 for the public and $1.75 for UWSP students.

Perkins Review

by R. Lionel Krupnow
Features Editor

I had just finished taking a 6½ hour exam for graduate school and my mind desperately needed some protein in the neurons in my brain before I could start barking again. Eggs are high in protein, so I decided on an omelet. I could taste it. An omelet stuffed with turkey, cheese, and covered with hollandaise sauce. And I knew just where to go for such an omelet—Perkins.

I've eaten at several Perkins Restaurants before and have always found the food satisfying. So I hopped into my not-alternative 1978 Honda Civic and sped to the new Perkins in Point.

For those who have not, as yet, visited the Perkins in Point, the decor is elegant: rich wood dominates the atmosphere, accented by brass-colored railings around the booths and etched glass between the railings. But viewing the decor is the richest experience I had at this Perkins.

I found no rich blend of flavors in the omelet I tried patiently to eat. It was smothered with gruel and the hollandaise sauce was as tasteless as half-satisfied Knox gelatin. The eggs themselves might have had some redeeming flavor if they had not been wholly assaulted by a mass of amylase chalk.

Abandoning the eggs, I turned to the stack of usually nutty buttermilk pancakes that I had been served. I peeled down a few bites then gave up hope—these tasted like "weightless flip-jacks" that had been left in the last few too long.

Indeed, the only favorable aspect to my entire experience at Perkins was the waitresses. If it weren't for the fast, polite, courteous servers that I received, I would be forced to rate this Perkins meal a complete zero. Still, I wouldn't recommend taking the time to walk to Perkins, between classes, for a friendly smile. I find most students will afford you the same courtesy and you won't get stuck with a six or seven dollar bill.

Schmeeckle reserve more than just trees

By Helen Hermus

There is probably no other area in Stevens Point that has the diversity of plant environments that the Schmeeckle Reserve has. In the 266 acres that make up the Schmeeckle Reserve, seven plant environments exist.

The deciduous forest contains broadleaf species such as maple, oak, hickory and aspen. The broadleaf forest reached its peak of beauty in the autumn colors of red, yellow and orange and grew to its greatest height. A signal of the coming of winter. The coniferous forest contains the evergreen trees of white pine, red pine and jack pine. Since they don't lose their needles in winter, they provide year-round shelter for the deer and other animals that live there.

The third forest environment found at Schmeeckle Reserve is the mixed forest. The greens of the pine trees mix with the browns of the deciduous trees in fall to add a pleasant color to the Reserve visitor's eye.

Schmeeckle Reserve is host to unique prairie areas. Open grassland areas are predominately near the north and west of the lake between the lake and Michigan Avenue. In spring, vigorous wildflowers like the spiderwort and butterfly milkweed grow and bloom for only a few weeks in fall, tall grasses dominate the prairie.

There is an area similar to prairies near the Visitor Center, parking lot on North Point Drive. Scattered stands, high sisk and aspen trees grow on the open prairie. A new trail is being constructed through the savanna to take nature enthusiasts from the lake to the Visitor Center.

A map of the Reserve is on p. 12.

The Curtis Tension Zone brings variety to Schmeeckle by mixing the deciduous forests of the South with the coniferous forests of the North. The tension zone is a band of vegetation that passes through Wisconsin, dividing the state in half, according to the vegetation that grows in the Northern and Southern environments.

Consolidated requests new limit

by Andy Savagian

Outdoor Editor

Sulfur dioxide emissions may be on the rise for the Stevens Point-Wisconsin Rapids area.

That's what Consolidated Papers Incorporated is planning if the DNR approves CPI's request for an alternative sulfur dioxide (SO2) limit for its Biron Division near Wisconsin Rapids.

Consolidated's request was made according to guidelines established under the statewide SO2 rule.

This rule, according to CNN air pollution engineer Joe Ancell, was implemented to achieve and maintain ambient SO2 air quality standards in all areas of Wisconsin to protect the health and welfare of the citizens of the state.

He added that the rule was not designed to control acid rain, but was separate from this controversy issue.

Other objectives of the rule include taking into account the cost of the rule on the affected industry and to provide the public an opportunity to determine the future air quality of their area by setting aside a portion of the air resource to be available for allocation to existing or new units.

This rule provides that if the industry demonstrates to the DNR that the differential cost associated with the general emissions limit is substantial, then the industry may obtain an alternative emission limit, provided the alternate limit satisfies the maintenance and attainment of the ambient air quality standards for SO2 and that other criteria are met.

Ancell stated that a substantial differential cost means a cost over 10 percent. Consolidated maintains that the differential cost to limit the emissions on their Biron plant is approximately 13 percent. The Biron Division contains one new and four older boilers, including a coal-fired burning cycle boiler. CPI claims that the cost to convert the high sulfur burning cycle boiler to burn low sulfur coal would be too substantial.

Sulfur dioxide ratios in air, according to a study by the Wisconsin Department of Health, is not a health hazard, but it is a factor that may be regulated in the future.

An area east of Michigan Avenue.

The findings, reported recently in the Science journal, were used as further support for the mass extinction theory developed six years ago. The theory holds that an asteroid struck the earth, setting off a catastrophic chain of events, one of which was the fire. Huge clouds of dust and vapor circled the globe, blocking much of the earth's light and altering the climate. The Chicago researchers called the soot "an ancient analog of the smoke cloud predicted for the nuclear winter theory."

Earl Sigis Hunting-Limit Bill

On October 4, Governor Earl signed a law restricting the ability of privileged hunters to shoot firearms from vehicles and attempted to better relations with Chippewa tribal leaders who call the new law "discrimination."

The law, which has already taken effect, requires disabled hunters to park at least 30 feet from the centerline of a road before loading their rifles or shooting from their vehicles during the gun deer season. In addition, the bill will cut off the right of tribal members to hunt from unimproved roads alongside public land in the northern third of the state. Tribal leaders complained they had been guaranteed the bill would not take effect until November at the earliest and break all relations with the DNR. Governor Earl, in response to the Indians' rejection, replied saying, "I think Senate Bill 48 is an appropriate law as
Starting gate pheasants

From the sound of the first gun, pheasants are off and running, and picking a winning hunting tactic means playing the odds.

by Christopher T. Dorsey

Pointe Editor

Fall means two things to a ringneck—hunting and track season. When the first shots are fired, most pheasants go through a metamorphosis. It's sort of like Clark Kent entering a phone booth and moments later exiting as Superman. The only difference being that pheasants don't show any weakness to kryptonite.

The difficulty in hunting pheasants after they've been shot at comes when you try to predict their movements. Pheasants are, for the most part, predictably unpredictable. However, if you are planning a pheasant hunt, your best bet is still to play the law of averages. Just be ready to abandon those rules at any moment.

As with any newly opened hunting season, the hunting pressure is at its peak, and the pheasant season is no exception. Instead of following the proverbial crowd, I like to work the fringe or edge areas. Many hunters will hunt the middle of a large cover area and expect to find pheasants. Most often they don't, and there are two important reasons for this.

First of all, pheasants rarely stay in the middle of a large area of grass or woods. When they do, however, it's normally used only as a travel lane to get from one food patch to another, or they will, on occasion, rest in such areas. Too often hunters will choose into a pheasant in the middle of a grass field and taze it to mean pheasants can be found consistently in such an area.

The second reason for pheasants seldom being found in large grassy expanses is because there isn't much food in this type of cover. Pheasants like to be able to eat, drink and sleep without exposing themselves to avian or land predators. This means that the birds will likely hang out in the edge of the woods, just as many people would like to hang out in the edge of a wetland or pasture. Throughout most of the country, corn is to a pheasant what aspens is to a grouse, and hunters are best advised not to stray too far from the pheasant's food source.

"Edge effect," as biologists term it, also supports the idea that a hunter's best bet is to stick to the edge. Pheasants will remain near safe escape cover—the kind that will shield your brush pants. A good example of this is a roughly fenceline, or ravine. Experienced pheasants will scout down the opposite side of the fenceline you are working and take flight several hundred yards ahead of you. The only truly effective way to flush the post-season pheasants is to place a hunter at the end of the fenceline or ravine.

This "blocker" system does, however, have its limitations. The hunter on stand at the far end of the fenceline must use care or stealth when getting to his post. If a pheasant spots the hunter moving to or while standing at the end of the fenceline, it will likely either flush prematurely or fly perpendicular to the hunter, subsequently getting away from either the moving hunter or the hunter on stand. To catch these racing pheasants, the use of a dog who is wise to the ways of crafty pheasants will be your best weapon.

During the 1960s and '70s when ever fenceline harbored pheasants, the use of bird dogs was considered an added luxury. Today, however, bird dogs are no longer considered a must—"they're a necessity.

Much has been debated over what is the best breed of dog for the job, but it really tinges on what your style of hunting is. I have a slight bias toward pointing dogs, but I also have friends that get just as many birds with their liver walkers. What ever breed of bird dog you choose, the most important trait your dog must have for successful hunting around a keen nose and intelligence. I've seen dogs go down that, without their intelligence, would never produce a pheasant for the hunter. But by using drainage ditches, picked grain fields and a wetland or pasture a yellow dog can trap pheasants between himself and areas that pheasants can't escape through without exposing themselves. Dogs that don't have a good nose might just as well be left in the kennel. By the time they uncover the scent trail, a run of pheasant, the bird will have half a section behind it.

Once the early-season army of pheasant hunters tapers off, attention to boost instead of pheasant hunting, the remaining birds are left scattered over a wide area. This is the time to take your dog and hiking boots out in search of odd areas. Tiny patches of cover that are stuck in the middle of a plowed corn field can be just dynamite—especially if they're concealed from the road. Other productive odd areas include rock piles with brush streets about, drained farmsteads, ditch banks, mudflats, (if accessible) or any area that could possibly hide a pheasant. Just remember that the pheasants will likely stay wherever there is no hunting pressure, so don't pass up those out-of-the-way places.

As with any newly opened hunting season, the hunting pressure will also resort to using small woodlots and pine groves for cover areas that border feeding grounds. Limit, cont. public comments. Based on these comments, the CNR may waive the 75 percent figure and issue the proposed alternate emission limitation to CPI, if there is no significant opposition to the department’s action. This would result in the allocation of the major portion of the air resource to CPI.

Reserve, cont. vegetation that has been introduced to the lake. The lake supports some fish that have been planted there including bass and northern pike. Various other wildlife have been spotted near the lake including otters, great blue heron and osprey. A unique area by virtue of its diversity, the Schmeeckle Reserve is being preserved for your enjoyment.

If you wish to comment on these proposed alternative sulfur dioxide limitations for CPI’s Biron Division, you will have an opportunity at the public hearing. Also, you may submit written comments to Ralph Patterson at the CNR’s Bureau of Air Management, P.O. Box 7821, Madison, Wisconsin 53705.

If you’ve ever dreamed of being behind the controls of an airplane, this is your chance to find out what it’s really like.

A Marine Corps pilot is coming to campus who can take you up for trial flights.

We’re looking for a few college students who have the brains and skill—as well as the desire—to become Marine pilots.

If you’re cut out for it, we’ll give you free civilian flight training, maybe even $100 a month while you’re in school. And someday you could be flying a Harrier, Cobra or F/A-18.

The 1985 women's tennis campaign was winding to a close, but the Lady Nettles have begun to regain a measure of respectability from an otherwise dismal season. Coach David Nast's Pointers dropped a major upset in a power match. Eau Claire last Wednesday, but struck back with two victories over Ripon College on Thursday and Oshkosh on Monday, lifting their season record to 6-4 and showing the presence of potential for next year's squad. Eau Claire rode four set match wins for an 8-1 victory in an interconference test on Wednesday. The final score did not reflect the competition of the matches.

"We did everything possible to stop them, and I know we couldn't have played any better in (doubles), so I came out of the match quite pleased," said Nast. "Even though we didn't win those doubles matches and didn't score well overall in the meet, the quality of our play was such that I felt much better about the situation. In my coaching experience, I've never seen all three doubles matches close."

Senior Lori O'Neill managed the only Pointer victory, claiming the No. 3 singles match, 6-2. The Pointers bounced back on Thursday to beat Ripon College 6-3. "Wendy Patch off a 6-1, 6-2 victory for us at No. 2 singles, which put us conference of Ripon 6-5 going into the doubles matches," Nast noted. Along with Patch, No. 2 helped rebound Robin Haseley (No. 3), No. 3 Amy Standiford (6-2, 6-2) and No. 2 and Grade 15-5, 6-3 notched victories for the Pointers in their singles tests.

The Pointers added two victories in the doubles matches to secure the victory over Ripon. "Kolleen Onsrud had a heartbreaker in her singles matches but rebounded impressively to help take a three set victory in her doubles match with partner Robin Haseley," Nast added.

Standiford and Grafe teamed for the other doubles victory against Ripon, winning a straight set 6-1, 6-3 decision. The Pointers traveled to Oshkosh for a rematch on Monday, and again Nast came away pleased with the effort of his team.

"In the past against Oshkosh, we've gotten close to winning and folded. Now, it's a whole different story. Our players are just concentrating more when they're on court, and the net result is that we're playing better matches," said Nast. The Pointers upset the Titans 6-3.

In their next two matches the Pointers dominated Bethel College, 15-1, 15-6 and UW-Big Green Bay 15-4, 15-6. Both schools have failed to defeat Pointers in these meetings this year.

In the semifinal match UWSS defeated Carol Lawson's five service aces and 34 assists to seamly lead Division I power Marquette University (Milwaukee), 14-2, 15-2.

A confident Pointer squad stormed into the final game to avenge an earlier loss to Augustsburg, winning 7-3, 15-4, 15-7, for the tournament title. Leading Point to victory was veteran Karla Miller, who accounted for 12 killed spikes. The women surprised by how the girls pulled themselves together," expressed Schoen. "They (the players) know everybody is gaeeing for us and we have to pull together as a team."

"If we can maintain a high level of concentration and control of our own games, we can maintain a high level of concentration and control of our own games, which will be crucial in the initial 3rd at WSUC tourney.

Lady spikeaters capture Clearwater Invitational

by Scott Haakenson

Staff reporter

Even before the first game of the current conference season began, there was trouble. Karla Miller, the Pointers' top singles player, suffered a major contact lens. A short search of the gym floor turned up the lens, but dominance of the visiting La Crosse Indians. Then more trouble. A mental lapse on behalf of the Pointer's enabled La Crosse to sneak back into the game and tie the score 12-12. The Lady Spikers had the serve and ended up scoring the game one but ended up on the short end of a 14-27 score. Coach Nancy Schoen was not pleased with the outcome. "After we went up 6-4 we had a mental lapse and made some unforced errors. We didn't maintain our intensity, and we paid for it."

A slow start in game two forced the Pointers to recover from an 8-4 deficit. Tied at 7-7, a fired-up Carol Lawson ignited the team with a dig and a 17-16 win. The Pointers regained a measure of control in the third set and scored the game 15-11.

A slow start in game two forced the Pointers to recover from an 8-4 deficit. Tied at 7-7, a fired-up Carol Lawson ignited the team with a dig and a 17-16 win. The Pointers regained a measure of control in the third set and scored the game 15-11.

Steven Pembrough the Indians in the next two games. Karla Miller took control midway through game three with two cruser-saving spikes and sent a La Crosse defender reeling on another. Miller finished the night with 16 spike kills. She, Schoen's final spike gave Point a 15-9 victory.

The Lady Spikers then edged La Crosse 25-13 in the final game to preserve their undefeated conference record.

"It was a real team effort and a very nice win for us," said Schoen, whose Pointers amassed a .750 percentage and a 21.4 percent team hitting average.

On Saturday the Pointer spikeaters captured the Eau Claire Invitational, winning four matches against the Clouds and losing only one.

The Pointers, ranked 11th in the nation, were defeated in their opening game against Augustsburg, 15-1, 15-3, 15-6. Ruth Donner was the lone bright spot with a 10-8 spike kill and a 21-6 percent attack average.

Coach Schoen felt her team was unprepared during the game. "We were still living off the La Crosse game, and our heads were in the clouds. We just weren't ready to play and fell into the type of game Augustsburg wanted us to play. The girls looked like a different team."

In their next two matches the Pointers dominated Bethel College, 15-1, 15-6 and UW-Green Bay 15-4, 15-6. Both schools have failed to defeat Pointers in these meetings this year.

If the events of last weekend's finale at Goerke Field caused you to question the talent of St. Stevens Point's football team, you can rest easy. The Pointers are indeed alive and well in the WEC.

UWSP reasserted their potent offensive attack in grand fashion Saturday, crushing conference rival UW-Oshkosh 62-6. While Oshkosh did little to improve their struggle for respectability within the conference, the Pointers gained a boost of confidence and found renewed momentum as they head into this Saturday's game against UW-Stout.

"There were some big plays, along with good field position, and we just did the things necessary to win the game," said coach D.J. LeRoy, whose Pointers recorded their first league win over the Titans by a 36-0 scoreless margin. "I think you'd have to say our ability within the conference, touchdown pass a play later, going."

Kickoff and drove 70 yards of offensive attack for the first time,rushing for 230 yards and five touchdowns to put together a 36-0 win. The Titans, with a 36 yard pass on their first possession, finally managed a touchdown that brought the score to 36-0.

The Pointers, playing their reserve unit, finished the game with a 36 point victory that resulted in the first win of the season. Led by senior defensive back Tom Christman, UW-Oshkosh capped their season with a 54-0 win.

"It was like a domino effect (on Oshkosh)," said LeRoy. "Once you get that many points on a team in the first half, it gets pretty hard for them to keep their defense up and continue to play hard football. I guess their first string offense and defense just fared out,"

Geisler, who failed to score during the second half of last week's game against Whitewater, threw for five touchdowns and 359 yards while halftime break.

The Titans, with a 36 yard pass on their first possession, finally managed a touchdown that brought the score to 36-0.

The Pointers, playing their reserve unit, finished the game with a 36 point victory that resulted in the first win of the season. Led by senior defensive back Tom Christman, UW-Oshkosh capped their season with a 54-0 win.

UWSP Sports Information Center
The UWSP women's field hockey team defeated the University of Chicago 3-4 and UW-Platteville 3-0 in the Pointe r Invitational held here on Saturday.

In their first contest on Saturday, the Lady Pointers and the University of Chicago were locked in a scoreless defensive battle in the rain and wet field conditions of Colman Field until Kristen Kemerling scored at the 4:20 mark of the second half. The Lady Pointers jumped out early versus UW-Platteville when Jan Mastowski scored with 1:38 gone in the game. The Lady Pointers added second-half goals by Sheila Downey and Tina Roesken to account for the final 3-0 score.

The Lady Pointers outshot UW-Platteville 34-4 and had 16 penalty corners while Platteville had just five. The Lady Pointers return to action next weekend when they travel to Platteville to play both UW-Platteville and Luther College.

Lady harriers finish third at Eau Claire

UWSP Sports Information Office
Eau Claire—With a strong performance from their top four runners, the UW-Stevens Point women's cross country team captured second place in the Eau Claire Invitational held here Saturday.

UW-Eau Claire, ranked first in the NAIA national poll, ran away with the team championship, scoring 22 points. The Lady Pointers, ranked fifth in the latest NCAA national poll, placed second with 75 points. Rounding out the field were UW-Oshkosh, 8; UW-La Crosse, 107; UW-Stout, 116; Winona State, 166; and UW-Duluth, 192, and UW-Superior, 252.

Sophomore Kris Hoel emerged to Kenosha Saturday, Oct. 19, to run the second fastest time in Stevens Point history in 18:42.9.

Volleyball, cont.

sistent play we should do fine," The Pointer volleyball squad will have a chance to showcase their 9-6 conference record this Friday and Saturday as they host the Stevens Point Invite in the Berg gym.

Football, cont.

can certainly move the ball," noted LeRoy. Game time is slated for 1 p.m.

"Amadeus"—UAB Visual Arts is proud to present this award-winning film. The film centers around the struggle between Antonio Salieri, the 18th century court composer for Emperor Joseph II of Austria, and his protégé Wolfgang Amadeus Mozart. Salieri is the only one who truly realizes the vast talent of the young Mozart, but he is also his greatest competitor. The film won eight Academy Awards including Best Picture. Come on over and see this great film in the UC-PAB at 7 or 9:15 on these nights.

Saturday, October 19

The Statlers. Over the $100/offer.

Friday, October 25

"The Statlers"—Student Activities and WXQY are proud to present one of country music's most award-winning vocal group, The Statlers. Over the years, The Statlers have gained a reputation for their fine vocal harmonies as well as their comic relief on stage. The Statlers will be in town to perform their special guest for this big concert event. The fun and music starts at 7:30 in the Quad Fieldhouse. Tickets are still available at the UC-Info Desk or all area Shopko stores.

If Elizabeth Barrett and Robert Browning had AT&T’s 60% and 40% discounts, it would have been a terrible loss for English literature.

And of course, she wouldn’t have had to restrict her feelings to a mere sonnet’s length, either.
After all, you can always think of one more way to tell someone you love them when you’re on the phone.
Let us count the ways you can save. Just call weekends till 5pm Sundays, or from 11pm to 8am, Sunday through Friday, and you’ll save 60% off AT&T’s Day Rate on your state-to-state calls.
Call between 5pm and 11pm, Sunday through Friday, and you’ll save 40% on your state-to-state calls.
So when you’re asked to choose a long distance company, choose AT&T. Because with AT&T’s 60% and 40% discounts, you can satisfy your heart’s desire without exhausting your means. Reach out and touch someone.

AT&T
The right choice.
