Trivia Comet enters Pointby Joanne Davis
News Editor

Trivia — not spring fever — is back at Point. The world's largest trivia contest will officially get underway at 6 p.m. tomorrow and continue through midnight, Sunday, April 13.

Approximately 300 teams with around 7,800 players will converge in apartments and hotels in the Stevens Point area. Partaking in the traditional craziness will be local players as well as players coming from all parts of the country.

Endurance, fun, and fairness are the names of the game in the 54-hour marathon trivia game begun by WWSP, the UWSP student run radio station. The station started the contest in 1969 to boost its listening audience. Sixteen teams and 45 players participated in that first contest.

A team with the most points wins by answering questions ranging in value from five points (the easiest) to 500 points. Jim Oliva, a co-writer of this year's questions said, "Remember, this is a game. If you think about staying up that long, you'll get much minded."

Oliva, more affectionately known as "Oz" has been writing Trivia's questions since 1974 when he first came to Stevens Point to teach at Ben Franklin Junior High. Oliva chose Mark

Polzin, a UWSP student, to help him write this year's questions. Oliva stated that Mark and he hit it off well and the choice was not difficult. "I just didn't feel comfortable with the other choices," Oliva said. Polzin, a former student of Oliva's from Ben Franklin Jr. High, replaced David Shmookler. Shmookler, also a former UWSP student, now lives in Allentown, Pennsylvania.

Writing the trivia questions is a year-round job for Oliva. He

stated the actual writing of the questions took around 70 hours to complete. Polzin had to be broken in on the "correct" way to ask questions. For example, questions should never be dated. "Instead of asking who holds a world record, you have to ask who set the world record in a particular year," Oliva said.

Since 1974, Trivia has traditionally opened with the song, "Born to be Wild" by Steppenwolf. Oliva asserts that people need to break loose once in a while, and Trivia gives them the perfect chance to do so.

The staff at WWSP (90 FM) and Jim Oliva are quick, however, to emphasize sportsmanship. In past years, vandalism, cheating, and high speed driving during the Trivia Stone, and crude team names have all been a problem. Commenting on the Trivia Stone, Oliva said, "It is a test of endurance; you will not have to break any laws to solve them." Oliva added, "This year, though, make sure you start off with a full tank of gas. If you enjoyed watching 'Out of Africa'..."

The Trivia Stone refers to clues given throughout the weekend which lead teams ultimately to a stone (brought there by staff). The clues are used as incentive to track down

Gramm-Rudman's affect on financial aid still up in the airby Christopher Dorsey
Pointner Editor

More information concerning the controversial Gramm-Rudman-Hollings budget balancing law has been released by the National Education Association. NEA has been lobbying to ensure that the new law doesn't make the lion's share of cuts out of the education budget. GRH has created a sense of uncertainty among the members of Congress and their staff people who work directly with the law. "The rules have changed in a fundamental way, but no one is quite sure how," said NEA lobbyist Gary Timmons. Timmons is finding it difficult to plan for the future when no one seems to know what the future of education will be. "The question is, do we continue with business as usual, or do we change somehow?" said Timmons.

As of yet, the Supreme Court hasn't changed the status of the new law, but many congressmen, under pressure from their constituents, are pressing for the abolishment of the law. Many people, upon hearing the

effects of GRH, are also voicing their opposition to the bill. Some of the reasons for the discontentment rest with this news recently released by NEA:

- The March 1 cuts under GRH could mean that \$154 million in Pell Grants could remove 91,000 students from eligibility.
- The cut of \$17.7 million in Supplemental Educational Opportunity Grants could mean 31,000 fewer awards.
- The cut of \$25.4 million in Work Study awards could mean 33,000 fewer awards.
- The cut of \$1.3 million in international studies could eliminate 65 Fulbright/Hays scholarships.
- The cut of \$7.5 million in support for disadvantaged post-secondary students could eliminate services to 250,000 students.
- The cut of \$33.6 million in grants to states could result in the loss of vocational and adult education programs serving 150,000 students.

Dynamic Health Club handling problems on individual basisby Linda Butkus
Staff Reporter

In an updated story regarding the closing of the northside Dynamic Health Club, Bob Hill, manager of the Dynamic Health Clubs in Wisconsin, commented on the reason why the club closed down.

"The northside Dynamic Health Club closed in December 1985 due to heating problems that were too costly to fix. 'A company already looked at it (furnace) and they said they wouldn't touch it, but they did say that they would replace it. It's an air-heat combination on the roof and it cost approximately \$13,000," said Hill.

"The club closed down from December to February and tried to negotiate with its landlord and corporate officers to see if it could work things out to reopen. 'It took two months to finally get the bottom line that we weren't going to reopen, we would just use the Plover (southside) location. We felt good that we had another club 4.4 miles away,'" said Hill.

Hill said he feels much better having one club close down rather than potentially causing both to close down. "In other words, we made one move that was costing us and it's going to make the other one much stronger," he said.

The club put a blanket two-month extension on all the memberships of the northside club for the time period that they were closed. Subsequently, the majority of the northside members seem to be happy with the transfer to the Plover club. "The overall feeling is that they're happy we closed it. They're enjoying the Plover club. It's the minority of people who are having a problem," Hill maintained.

The problem that the club is faced with now is the transferring of its members. "The bottom line is that we're trying to work out to the best of our ability taking care of the problems some of our members are having with transferring," Hill said. Approximately 90 percent of the people having problems are students without cars, according to Hill. Hill has personally talked with 60 of the club's members by phone in the attempt to deal with each individual case. "I feel this company will be fair with the treatment of each individual case," Hill concluded.

Rites of Writing

Who said there is no free lunch?

Some 11 years ago, UWSP English professor Mary Croft first assembled a corps of literary experts including editors, poets and writers to speak at the inaugural Rites of Writing. Croft initiated the conference as a response to the nationwide discontent people were expressing toward the ineffectiveness of education. "Why can't Johnny read or write?" many were asking. The first Rites was open to the public and was provided at no cost to participants.

Today, that tradition still holds true. Even though Croft has retired from the English Department, the popularity of the Rites has prospered and participation in the conference continues to grow.

Enthusiasm abounds in the corridors of the Writing Lab, too, where current organizer Dr. Richard Behm and others have been working steadily to prepare the script for this year's Rites.

This year looks to be one of the best for the Rites, says Dr. Dan Dieterich of the English Department, as some of the nation's finest laureates will converge in Stevens Point next Monday and Tuesday.

It's an opportunity students shouldn't miss. Many people, however, are apprehensive about writing. "You're very vulnerable when you write because writing is permanent and leaves a lasting impression of yourself," said Dieterich. "Many people," says Dieterich, "have problems and concerns about writing, but the Rites is a perfect way to overcome those fears and approach writing positively."

Why, you ask, is it so important to possess good writing skills? One reason might be the results of one poll which indicates that most executives feel that effective writing and speaking abilities are the two most important qualities for those seeking professional advancement.

Moreover, in a recent survey of deans of business schools and personnel directors of Fortune 500 companies, poor writing skills were clearly identified as the most frequently mentioned weakness of young executives.

"A person who can't speak and write well can be a definite liability to any profession," says Dieterich. "I don't

care what their profession is, if they can't communicate their skills, they're in deep trouble."

Aside from the personal enrichment reasons to attend the Rites, Vice-Chancellor Irving Buchen has declared the Rites an alternative educational experience. Translated, that means students wishing to attend the Rites need only get prior approval from instructors and it won't count as an absence.

In the same light, Dieterich was quick to quote an old adage which reads: "You shouldn't let classes interfere with your education." I think that's a wise saying said Dieterich. "You're here to learn something—not merely go to class," says Dieterich, "... if you can learn something in another avenue, perhaps learn more than you would in a specific class, it makes sense to take the other avenue." Many professors, however, have simply cancelled their classes so that students may attend the Rites unfettered by classwork.

If you think the World Trade Towers are examples of parallel construction, or that a split infinitive is a new math formula, the Rites has something for you.

Perhaps best of all reasons to attend the Rites, though, is the fact that the entire conference is free. And at that price, who can afford not to go?

"Are we really willing to risk the achievements of millions of years for the ideologies of a few men?"

— Richard Ringler

by Joanne Davis
News Editor

"What art, music, and literature can teach us about war and nuclear war" was Richard Ringler's topic of discussion during his presentation Monday night at UWSP.

Ringler, the Executive Director for the Wisconsin Institute for the Study of War, Peace and Global Cooperation cited numerous examples of literature, music, and art to exemplify the savagery and uselessness of war. "Are we really willing to risk the achievements of millions of years the ideologies of a few men?" Ringler quoted. He supports the feeling that to increase peace, the public must

support peace in the arts.

Ringler cited Beowulf, Tolstoy's War and Peace, and William Shakespeare as examples of literature that has dealt di-

Euripedes has been called the 'Poet of the World's Grief'.

Since 1945, nuclear war has been a popular theme in literature, music and art.

We must never relax our efforts to arouse in the people of the world, and especially in their governments, an awareness of the unprecedented disaster which they are absolutely certain to bring on themselves unless there is a fundamental change in their attitudes toward one another as well as in their concept of the future. The unleashed power of the atom has changed everything except our ways of thinking. Thus we are drifting toward a catastrophe beyond comparison. We shall require a substantially new manner of thinking if mankind is to survive.

Albert Einstein

rectly with war and its gamut of ideas. Ringler supports Euripedes' play "The Trojan Women" as the greatest piece of anti-war material in history.

Ringler presented slides, music pieces, and short films to exemplify his points. One particularly poignant narrated musical piece by Arnold Schoen-

berg entitled A Survivor from Warsaw, Opus 46 quoted a survivor's report of how under physical abuse and terror, a group of prisoners spontaneously burst in a prayer-song.

Ringler commented that Western artists often portray death as peaceful. The greatest misconception of peace is that it is dull in comparison to war. The true opposite of war has to be "something as dynamic as war. The opposite of war is not peace, but fertility," Ringler said.

Ringler presented many, many more examples of pieces of art and literature — many with the theme "Why?" Ringler

and other Educators for Social Responsibility (ESR) believe, in this nuclear age, we face a threat to all life on this planet and that people can share responsibility for both the problem and its solution.

Ringler, also a professor of English and Scandinavian Studies at UW-Madison, said, "I think often of Bertran Russell's remark, 'Teachers are more than any other class the guardians of civilization.' ESR has given me the chance to work closely — on both a local and national level — with the community of thoughtful and responsible educators who are seeking solutions to the urgent problems facing civilization at the present time."

Creative problem solving competition seeks student judges

by Melissa Hardin
Staff Reporter

Olympics of the Mind, a creative problem-solving program's state competition, will be held on the UWSP campus April 19.

Olympics of the Mind (OM) is an extracurricular school program that rewards students, kindergarten through high school seniors, for their creativity and their imagination in problem solving.

Begun in New Jersey in 1978 with 28 members, OM has grown to over 4,000 members worldwide in 1986. A member is categorized in elementary, junior high or high school sections.

In the fall, each school picks a team of seven students and an adult coach. The team then picks one of five long-term problems, written by Dr. Samuel Micklus, professor at Glassboro State College, New Jersey, to prepare for competition in the spring.

This year's long-term problems are Bridging the Gap; History—The Way It Was; Classics—Great Art Lives; and Technocrats. These are open to all age groups. Treasure Hunters, another problem, is open to only junior or senior high students. In addition, Happy Birthday is a non-competition problem for kindergarten through second grade.

In Bridging the Gap, the problem is to design two structures made of balsa wood and glue and weighing less than 25 grams. The structures that hold the most weight without breaking wins.

In History—The Way It Was, the team selects one historical

event from a given list and presents a humorous interpretation of how "it really happened."

In Classics—Great Art Lives, the problem is to duplicate two works from an art master listed, then prepare an original piece in the "style" of the art master.

In Technocrats, the team must design, develop and mass produce a product.

The team cannot get any help from any adult. The coach is there only to counsel. All work must be done only by the students on the team.

In competition, teams compete in divisions. Division I is kindergarten through fifth, Division II consists of grades six through eight, Division III comprises grades nine through 12. In 1986-87, a college division will be offered. Each team is judged on their solution to their long-term problem, a given spontaneous problem, and the style and finesse they incorporate into their presentations and solutions. A time limit is in effect for each problem.

Judges, timekeepers, and people to help set up are needed. Any UWSP student, faculty or staff interested can show up at the judge's training session. The first is April 10 from 7 to 9 p.m. in the UC-PBR. The second is April 16 from 1-3 p.m. in the UC-Turner Room. If you are interested and cannot make it to either session, contact Pat Schoonover, 103 Old Main, x-3717.

Judges will be provided with breakfast and lunch. Most of the judging will be completed by noon on April 19.

by Shane L. Totten
Special to the Editor

The Smith Hall fire which occurred on the morning of Friday, Feb. 21, 1986, left more than several residence hall rooms damaged. It also left several students short-changed of their space and their belongings. According to Smith Hall Director, Steve Erwin, several thousands of dollars were tallied in losses by students without insurance. These losses came mostly in the form of

smoke damage, with some rooms more serious than others.

Smith Hall has set up a special fire account to help these students. The account's purpose is to reimburse those students who received uninsured losses, and will be funded solely by donations. With current emphasis on raising money, administration of funds has not yet been determined.

Efforts to raise money are already underway. Smith Hall Council is selling t-shirts and thus far, the response has been good. Another fund-raiser will

occur next week, April 16, at Mr. Lucky's in the evening. Mr. Lucky's will donate 10 percent of its profits gained by sponsoring the male dance revue, NAUGHTY "BUTT" NICE. Smith Hall residents are excited by this unique form of community cooperation.

The Smith Hall fire was a misfortune its residents will long remember. The loss, however, will be lessened through support for this special fire account. Please contact Steve Erwin at Smith Hall for further information.

Bulk mailing service available

by Donna M. Brauer
Staff Reporter

Does applying a gummed label to yet another letter have your organization begging you to end the torture? Has getting your mail ready to be sent out become more costly than it's worth? The University Center has recently created the service you've been waiting for: The Bulk Mailing Service. Now there's a place on campus where you can take your letters and have the gummed label applied to the item, have the materials sorted and then sent to the mailroom.

Recently, Jim Sell, student manager of the service, cited reasons for bringing about the BMS. Sell said, "Basically, there are two reasons: 1) an audit by a representative of Ball State University proved to be critical of each office on campus doing their own mailings. The manual application of each individual label by one or more people for a day or two was inefficient.

"In the future, the US Post Office will require that labels have a code on them similar to the UPC symbol that will denote the zip code. With this process, a machine will read the label and will require that each label be very straight and centered on the item."

According to Sell, any organization that has an account through the university is eligible to use the service. The cost is minimal, covering only the expenses needed to run the program.

To have labels printed and the labels applied costs \$0.015 per item. There is a \$25 minimum which applies up to 1,007 items. After that, the price of a penny and a half each begins. The machine used to apply the labels can do up to 10,000 applications per hour. That means approximately one-day service when you bring in the pre-printed letters.

Currently, Sell and his supervisors, Bob Busch and Jerry Leinberger (Director and Assistant Director of the University Center, respectively), are working to get a stuffing machine for letter-size envelopes.

Ultimately, Sell projected that an office or organization can bring in their ideas for a mailing to the Print Shop to get it designed and printed, after which they will give it to the BMS to apply the labels, sort and send out the letters to the mailroom.

To use the BMS, order single-wide labels from Records and Registration or provide your own and then bring in the material or envelopes that are ready for labeling. Please note that the labels acquired from Computing Services are double-wide and will not work in the machine. Once the request for label application has been completed and dropped off, your troubles are over.

The BMS office is located in the University Print Shop. Please call 342-3422 and ask for Jim Sell if you have any further questions.

MAIL

Thanks to NACA contributors

To The Editor and Staff:
Apathy here, apathy there,
apathy is NOT everywhere.

With all the recent talk and articles about apathetic students, I felt the Pointer readers would enjoy an example to the contrary. This past weekend UWSP successfully hosted the National Association for Campus Activities (NACA) Spring Regional Conference. A success because over 50 unapathetic, excited and dedicated students put in some of their valuable time and effort for the last four months to ensure a smoothly run conference.

Why? Well, it wasn't always a party for these volunteers, but it was worth it. Worth it when volunteers heard a UW-Eau Claire student say, "I wish we had the facilities and the motivated students for programming that you do. It seems like you have fun here at UWSP." Many other good comments were heard about our campus and friendly students.

The compliments from other four- and two-year Wisconsin

schools' students and staff and college circuit performers cited the volunteers' tasks from developing 500 registration packets to missing popcorn at Partner's on Mondays to attend weekly meetings worth it.

You see, the NACA volunteers, like many other caring and active students on campus, found the answer to the question: "Why get involved?" It's the reward of a job well done. The rewards of learning new things, meeting new friends and being able to proudly say, "I'm not contributing to apathy, I'm doing something about it."

Hey UWSP, although it may seem like things here are mundane and that there are an abundance of things to complain about, once you talk to other UW students—we've got it good.

Sincerely,
Lisa Thiel

NACA Student Chair

P.S. Thanks to everyone involved in the conference planning. You all did an excellent job.

Student Apathy

Here's a secret about acid rain

Secret: Environmental release of sulfur dioxide -- an air pollutant -- has fallen 25% in the U.S. since 1970. Yet we're burning more coal today than in 1970. And that's important if you care about acid rain.

Because sulfur dioxide is a gas which promotes acid rain. In the eastern U.S., most sulfur dioxide comes from coal burning.

Locally, Wisconsin Public Service has done even better. Since 1970, we've cut sulfur dioxide releases by 40 percent at the coal-burning plants we operate.

Remember Spring Break, Cheeto-breath, and fun

by Jodi Rymer
Copy Editor

With my gluteus maximus muscles completely numb from the 30-hour bus ride, our bus finally pulled up in front of the South Padre Towers Condo at 9:30 Saturday night.

We were there! Spring Break '86 had come true. . . well, at least the part about getting there safely without serious complications—except for the slight gut rot we were experiencing from an excess of Big Macs, Cheetos, and warm Millers.

The other minor complication that we faced was the fact that the majority of our luggage was on the other bus coming from Point that was predicted to arrive some four to six hours later that night.

Great, huh? Oh well, it was our first break, and we were gonna make the best of it. . . after all, we had the beach, the sand, and the moonlight—not to mention the bed-head, Cheeto-breath, and the baggy sweats that three people could've fit into.

As we made our way to our room on the second floor (damn, not high enough to know what would really happen if I ever got the notion that I could fly), we wondered. . . now what?

Well, a run on the beach was the consensus of my pals. Pushing up our sweats as best as humanly possible, we bolted to the beach.

OK, granted, my friends and I have never been to Texas before, but upon seeing the Gulf, we acted like spastic, rambunctious two-year-olds high on a sugar fix.

We ran laps up and down the coast without a care in the world (sounds like a great open-

ing shot for a Hawaii Five-O episode, huh?). Little did we know that a "glob" of lurking Mexicans were eyeing us the whole time. . . but I don't want to get started on that subject—those foreigners are worth a whole other story in the Opinion section.

This definitely was the life. Now being the true college party animals—or as they say in Texas, "Padre animals"—that we are, our next thoughts obviously were focused on our parched throats.

Where was that alcohol we packed to put us in the "spring breakin' mood?" Oh yeah, that's right. It was somewhere in that desolate, massive state of over-cocky cowboys, flatlands, and longhorns in our long-lost suitcases.

Anyway, since we actually were in Texas, we had to see if it was everything last year's Padres had pumped us up about. Funny thing, though, they didn't mention the soft fine-grained sand that squished between our toes, the roar of the waves that beat on the shore, the squacking seagulls that swirled deliriously overhead refueling for their next bombing, or the moon's glow on the Gulf; they told us not to miss the bars, the bods, and the cheap price of tequila in Mexico.

Now, don't get me wrong, we did experience all of those things and much, much, much more that I couldn't possibly write about (my mom reads this paper), but those were not the first things that impressed me about Padre.

When someone asks me about my break, sure I tell 'em all about the sunshine, the gorgeous gods, the pushy Mexicans, the fresh shrimp, and the week-long partying, but that's not even half of it.

Waking up at the break of day—or coming in during those wee morning hours, as in some

cases—and seeing the sun rise over the Gulf, or taking a walk along the shore late at night

breathing in that clean, refreshing air really made the trip.

The t-shirts, postcards, and the pictures of my drunken, obnoxious friends were neat to bring home and show everyone,

but I know that those few materials didn't summarize my spring break at Padre.

It meant more to me than that, but I guess I'll just have to wait 346 more days to experience it again!

The Glass Menagerie sells out

Cast of *The Glass Menagerie* include (left to right) Greg Yaeger, Holly Mengsol, Sean Hughes, Ann Hearden.

by Mary Ringstad
Staff Reporter

Tickets are selling fast for the University Theatre's production of the Tennessee Williams' classic *THE GLASS MENAGERIE*. The show opened last night to a sold-out house in the Studio

Theatre of the College of Fine Arts. Performances are scheduled for tonight through Saturday, April 12, at 8 p.m. and Sunday, April 13, at 2 p.m. The drawing for the University Players raffle follows Sunday's matinee.

THE GLASS MENAGERIE,

directed by Theatre Arts Chair Arthur Hopper, is probably familiar to most UWSP students; high schools generally require students to read it at some time during their secondary school careers. The play, set in St.

Mysterious Tales of UWSP

Battle of the Majors

by Brian McCombie
Staff Reporter

Everyone thinks that they have the best major. It only makes sense that people feel this way, because, why would a person not pick the most important, the most beneficial, the — well, the "best" major?

Of course, this way of thinking is the cause of all sorts of rivalries, insults, jokes and all around bad feelings between the various majors. Business majors laugh at Humanities majors. Business majors think that they're going to make a pile of money and they know that Humanities majors aren't. Science majors feel superior to all other majors because they got A's and B's in the "hard" courses like math and lab sciences. The rest of us were ecstatic with our C's. English majors can only smile at these Science majors, secure in the belief that the Science majors can't write their names much less a clear sentence or two. And on and on.

So, is there a "best" major? The problem, of course, is the word "best." What does it mean? If it means making the most money after school, then those headed for law schools and medical schools have the "best" majors. If "best" means the major that makes people the happiest, well, I guess no major really wins. (Until, of course, they offer a Wellness major.) If "best" means the major will bring a person the most fame and recognition — forget it. College won't do it. Save your money for a bus ticket to Hollywood.

A definition is not going to help because the definition is different for each person and each major. But there has to be a way to prove that there is, in fact, a "best" major.

A test isn't going to do it because there isn't a test that all majors would ever agree to take. And really, all a test proves is that you are either a good test-taker or a poor test-taker. Too many of us have gotten good grades on tests that we should've failed, to take testing too seriously.

Maybe the thing to do is to appoint a government committee to study the problem and present its findings and conclusions to Congress. But then a bunch of lawyers and Poly Sci majors are going to be involved, and I, for one, don't trust those people.

An average of all gradepoints within a major is a possibility. But, knowing what we do of testing, gradepoints aren't going to help us.

It seems to all come back to money. The only problem is that although law and medical students will, as a major, have the highest incomes, they aren't going to be the wealthiest. The wealthiest college graduates will be those who inherit their millions, usually from people who never went to college. So there is a real problem using money as the standard to decide on the "best" major.

But there is an answer, and history will provide it. Any History major can tell you how things of import are decided. The answer is war.

I suggest that each department from each college in the country pick five people in their program. These five people will be given firearms and ammunition and fight it out against all other majors. This would require a large open area such as Utah or maybe the Louisiana Superdome. The networks could film it — maybe call it "Battle of the College Majors" — and award the proceeds to the winner.

Whichever major — or whichever individual from a major — survives would decide which is the best college major. I think that's reasonable.

Journalist panel for Rites

by Christopher Dorsey
Pointer Editor

A panel of four former Pointer editors will be speaking in room 125 of the University Center at 4 p.m. on Tuesday, April 15. All four of the speakers are currently working for newspapers and they will discuss their transition from college to professional life as journalists. The panel will be moderated by current Pointer advisor Dan Houlihan who has served as advisor to the Pointer for the past 20 years.

Panel speakers will include last year's editor Melissa Gross, who is currently a reporter for the Wisconsin Rapids Tribune. Last year's senior editor Tamas Houlihan, who is the sports editor for the Rhinelander Daily News, will also be a panel member. Rick Kaufman, also a

Please tell me — who, what, where are They

by R. Lionel Krupnow
Features Idiot

They is responsible for more human action than any individual has the right to be accredited for but, nonetheless, They is always there. One is 'he example that all of us are supposed to follow. And together, these two pronouns make up the two extremes of the writing world.

They should do this: They should do that. They did, in fact, do that but I told them to do this.

The infamous "they." It appears everywhere but most frequently in Freshman English papers. For example, it often starts an essay: "They should make it against the law to..."

Who is They? where did They come from? why should They make IT against the law?

Now, I'm not that worried about it. It can handle itself. I mean, an antecedent for It usually appears somewhere in the essay. But what remains a puzzle for me is the identity of They. I have lived in the four corners of the United states, and a few places in between, but I have never met They. And yet, invariably, They turns up in some English paper taking responsibility for having influenced the mechanics of the world: politics, religion, love, sex, and fast-food preparation. They is petitioned more than God to correct injustices; find a solution for hunger; equitable divorce laws; and a way to open potato chip bags without spilling the contents.

But They is not the only mysterious creature in Freshman English papers. A close relative of They's, or so They tells me, is We. We has done everything from hang-gliding to scrubbing toilets—which makes suspect that We is a Homemaker. Who is We? where does We... Well, we've been through that before,

of us have done those things. So, I'll excuse We for living.

But One I cannot excuse anything. One doesn't do this and One doesn't do that. Oh, but One always does the other thing! Well, excuse Me for living! I don't have the right to do anything that I want to do, because One doesn't think it ap-

consensus. But One doesn't care what We thinks and I is completely out of the picture.

One doesn't eat crackers in bed. One doesn't pick One's nose in public. One doesn't pick One's... One doesn't say disrespectful things to One's elders. One doesn't...

They should do something

met Him but Him is the master of all things. Him appears in almost all Freshman English papers, usually in the last paragraph. Believe Me, Him has tremendous powers. And I knows that One is frightened of the Big It in the sky because One never knows what Him is thinking; because One cannot know the ways of Him. So, One does One's best to avoid anything that might get Him upset.

But Me can't relax. One's days are limited. I has written a petition to They and They is taking it quite seriously. All They require to take definite action is for We to write a petition, also. This is a democracy. And They can't kick One out of writing without just provocation.

Granted Him can do anything for any reason and One knows that but One also knows that Him won't act unless They asks Him to so One is hoping that We won't do anything because They won't act unless We gets mad enough to demand that something be done.

And, of course, We knows that Him won't act unless They ask Him. But One can't know what We is going to do until it is already done. And it's that way because God says that it should be.

haven't we?

Still, I can see some justification for We's existence. After all, I'm sure that someone can relate to We even if I can't. I've never scrubbed toilets and I know I've never gone hang-gliding—I would have remembered scrubbing the spots out of my pants—but I'm sure that some

appropriate for One to do that. I doesn't have a say. Me doesn't have a say. And They are so busy deciding what color to make the Styrofoam burger-containers that They doesn't care.

Sure, We doesn't do some of those things but that is the result of a general, if arbitrary,

about One. In fact, if I and We united They would probably have to do something about One.

And if They, I and We couldn't figure out something to do about One then They could always turn to Him—you know, the Big It in the sky.

I, We and They have never

OUTDOOR

There's no substitute for a good musky story

by Mike Thimmesch
Outdoor Contributor

It was a typical late July evening; hot and muggy with a slight breeze blowing across the lake. We launched the boat around 8 p.m. on a crude, makeshift boat landing that only the most dedicated musky angler would care to venture on. The hour before the launch was spent in a ritual Northwood's "bull" session, reminiscing about past fishing experiences and psyching ourselves up for the night to come.

I was fishing with one of my good friends, Jeff Boulden, on a deep, productive, but highly overlooked lake near my hometown in northern Wisconsin's Vilas County. After checking all of our gear, we quickly headed off to our first and only spot of the evening. It was a deep "saddle" area, bordered on each side by shallow rock reefs that topped off in about five feet of water. The edges of the reefs sharply dropped into 40-50 feet of water, and this area was a prime location for congregating schools of suspended baitfish. On past occasions this spot has pro-

duced some nice muskies for us, and we have also seen a few "haws" in the area.

As we motored up to this so-called "honey-hole," the breeze on the lake sent shivers up my spine as I thought of a truly huge fish we had lost on this spot only a week before. I could feel my adrenalin start to flow as Jeff, ever so gently, slid the 14-foot Alumacraft into position about 50 yards off one of the reef's edges.

A quick glance at my Humminbird LCR displayed exactly what we were looking for. A large school of ciscoes had moved in off the deep saddle area. Past experiences told me these ciscoes were preparing for their evening feeding foray into the lake's upper waters. I also knew the large muskies Jeff and I so eagerly sought would not be far behind.

Suddenly, a large dorsal fin broke the surface and raced through the water off the right side of the boat. Ciscoes flew out of the water everywhere trying to flee the wrath of the four-foot-long predator. Soon another large musky was sighted, and Jeff and I knew we had a good shot at taking a 20-pound-plus fish tonight.

About an hour had passed since we started casting large crankbaits into the deep saddle area. We hadn't seen so much as a following fish. We weren't discouraged though, as often we have gone days without seeing a musky. Soon another hour had passed; still nothing.

By now the sun had long since set and the full moon cast an eerie sheen on the water's surface, the boat, and on us. I was almost mesmerized by the constant vibration the oversized crankbait transmitted to my body as I reeled it in towards the boat.

About 10:30 p.m. the trance was broken when I heard a distinct "UGHG!" as Jeff slammed home the hooks into a musky. No explanation was necessary as I watched the 27-pound Dacron line, as tight as a bow string, cut through the water with amazing velocity. The musky peeled perhaps 40 yards of line off Jeff's reel on his initial run. From the strain on his face and the bend in the rod, I sensed Jeff had hooked into a good-sized fish.

With an arch in his back and biceps tensed, Jeff gradually was able to pump the fish closer to the boat where it surfaced. The moonlight illuminated its back, and for the first time we got a good look at the size of the enraged musky. Then, as suddenly as it surfaced, "swushi," it went on two or three line-burning runs underneath the boat. Our immediate concern was trying to keep the fish from becoming tangled around the boat's motor, and this was no easy task.

After about 15 minutes, Jeff

coaxed the fish into landing range, and I netted a fat 44-inch musky. A quick lift on the scale showed 24.5 pounds, a very re-

of how our trophy was caught, and the next morning brought it into a local taxidermist to get mounted.

M. Thimmesch photo

spectable fish!

A mild celebration followed as we snapped photos from every conceivable angle, hooped and hollered, and exchanged a frenzy of handshakes. We quickly headed for home to tell the tale

While the fish just mentioned was the largest we caught last summer, Jeff and I each hooked and lost a few that were larger. An exciting experience that

UWSP team finds record cub litter

University News Service

Wildlife record books may need updating since a black bear sow in Oneida County gave birth to five cubs earlier this year, according to a University of Wisconsin-Stevens Point professor.

Raymond Anderson believes the litter he and student assistants examined in a den west of Rhinelander is the largest of its kind ever found in the Lake States Region of Minnesota, Wisconsin and Michigan.

The national record is held by a sow in Pennsylvania that produced six cubs.

A deer hunter found the

Rhinelander den late last year, and on Jan. 14, Anderson, a faculty member in the UWSP College of Natural Resources, located the sow which, by that time, had delivered the cubs. Anderson didn't see them but heard their squealing. When he returned March 8, he sedated the sow and found the rare litter.

Research done previously indicates an average black bear litter in this region numbers 2.4 cubs; however, the average count is three among the families Anderson and his students have studied since 1981. The professor reports that it has not been uncommon to find four cubs in a litter throughout northern Wisconsin during his research fieldwork. By contrast, the average size of a litter in Montana is less than two cubs.

Food supply available to sows has a major effect on litter size, numerous scientists have reported.

While black bear productivity is good in the state, so is the survival rate of cubs, according to Anderson's preliminary information. It appears to be in the 90 percent range, which is significantly higher than in some parts of southeastern United States and Canada. Predators, particularly bobcats and coyotes, are believed to be responsible for many of the deaths.

Cubs in the five-member litter near Rhinelander were unusually robust, each weighing four to six pounds which is above average for their age, the professor

Chimps Uncover New Drug
Chimpanzees have led the way to a new antibiotic. Years ago, researchers observed that chimps in Tanzania sometimes consume leaves of the Asplasia shrub. Now a University of California scientist says a chemical in the leaves kills some infectious bacteria, fungi, and worms. It isn't known whether the antibiotic is safe and effective, but Asplasia roots and leaves are part of traditional African treatments for wounds and stomachaches.

Lavish Livestock

Farmers in Papua New Guinea are being encouraged by their government to supplement their usual crops with some livestock - butterflies. The government believes that farmers can help satisfy the world's

Environment

Birds of a feather are not flocking together

by Lorelle Knuth
Outdoor Writer

"There's been a precipitous decline since the early 1960s," says John Serrao, "in the breeding populations of warblers, vireos, flycatchers, and thrushes in the eastern half of the United States." Serrao might well know. He directs Greenbrook Sanctuary, a 165-acre woodland in New Jersey, where the evidence surrounds him—or more precisely, does not.

At Greenbrook, entire species of birds have disappeared from former nesting areas within the last 25 years. Through the early '60s, annual census data commonly included 5-10 breeding pairs each of the yellow-throated vireo, blue-winged warbler, black-throated green warbler, Louisiana waterthrush, and common yellowthroat. Ten to thirty breeding pairs annually of the chestnut-sided warbler, hooded warbler, ovenbird, American redstart, eastern phoebe, eastern wood pewee, veery, red-eyed vireo, and black and white warbler commonly nested at Greenbrook until 25 years ago as well. Then, a slow crisis began. By 1983, all but the latter five species had vanished. Those five lived on at Greenbrook in numbers 80-90 percent below 1957 levels.

In an article in *American Forests* (April 1985), Serrao cites numerous other studies which reported similar avian losses. In New York, New Jersey, the District of Columbia, Wisconsin, and other states from the Great Lakes to the Great Smokey Mountains, the same story surfaced: warblers, vireos, flycatchers, and thrushes—all tropical migrants—had vanished or sharply declined over the last quarter century.

Simultaneous increases in other avian species footnote every study cited by Serrao. Black-capped and Carolina chickadees, the tufted titmouse, white-breasted nuthatch, blue jay, crow, brown thrasher, gray catbird, red-winged blackbird, American robin, northern cardinal, European starling, and most woodpeckers either maintained or increased their breeding populations. None of these

species migrates any farther south than Florida. Could migratory habits be the key?

Serrao thinks so. Because of the widespread nature of the losses, site, local, or regional problems most likely are not responsible. Forest fragmentation, resulting from the inroads of shopping malls, housing developments, roads and industrial parks, might shoulder part of the blame.

Chandler Robbins, of the Patuxent Wildlife Research Center in Maryland, states that tropical migrants especially suffer from the ramifications of forest fragmentation. Increased forest edge provides ideal habitat for predators, allows for increased human intrusion, increases the instances of nest parasitism by the brown-headed cowbird, and generally increases the mortality rate of breeding tropical migrants through predation and nest failures. Without immediately adjacent populations to replace these losses, a species eventually disappears.

But forest fragmentation does not fully account for the losses. Serrao cites studies in unbroken expanses of eastern forests which show the same decline in warblers, vireos, flycatchers, and thrushes. The common denominator to which we must return is that the vanishing and declining species are, almost without exception, tropical migrants. Species able to maintain or increase their numbers, on the other hand, migrate only short distances to the southern US or migrate not at all.

Census data suggest that the decline in breeding populations of tropical migrants in the eastern US began in the early '60s. Serrao, after reviewing studies funded by the Smithsonian Institute, the US Fish & Wildlife Service, and the World Wildlife Fund, draws a "defin-

ite, very neat correlation" between the rate of tropical deforestation and that decline.

Consider that more than one-third of the avian species which breed in the United States winter in the tropical forests of Central and South America and the Caribbean Islands. Year in and year out they return to the same territorial wintering grounds, just as they return each spring to the same territorial breeding grounds. When wintering grounds fall to tropical deforestation, the "evicted" birds wander, homeless and unable to establish new territo-

ries. With limited options and under such conditions, these wanderers suffer increased mortality due to predation and starvation.

Next consider that, by estimates of the World Wildlife Fund, 18-35 million acres of tropical deforestation occurs annually worldwide. The National Audubon Society translates this into 300 acres per hour. According to estimates of the United Nations, 10 million acres of tropical forests are cleared each year in Latin America. In the last 25 years—

the same period in which our songbird losses have occurred—half of Central and South America's natural vegetation has been converted to cropland and pasture to accommodate the burgeoning population and the Western appetite for timber and beef.

Serrao thinks the conclusion is inescapable, that "the well-documented, inexorable destruction of the Latin American forests is the main reason for the gradual decline of 'our' warblers, vireos, flycatchers,

deforestation. Allied in an international consortium, the World Resources Institute, the World Bank, and the UN Development Programme have proposed an \$8 billion investment in 56 countries over the next five years. The objective: to reduce world poverty, which leads to forest destruction. The consortium seeks funds from international aid donors and from the developing countries. The funding, of course, is the key uncertainty.

In some countries, for some species, the commitment might come too late: for the Bachman's warbler in Cuba, for the Swainson's warbler in the Greater Antilles, for the Kentucky and hooded warblers and for the yellow-throated vireo in Central America. Each spring they fail to return to more and more of their former breeding areas in the eastern United States.

A personal footnote, for what it's worth. My parents just returned from a February trip to the Caribbean. Innocently, I asked them how the bird life was down there. "Funny," they replied, "we didn't see or hear many birds." Truth.

Prairie chicken correction

In last week's issue, the CNR Calendar incorrectly stated the sponsor and registration location for this year's prairie chicken census. Below is the article stating the correct information. Apologies for the inconveniences caused by the oversight. Andy Savagian

observe prairie chicken mating behavior from April 1 to May 4. Transportation will be provided from the CNR, leaving at approximately 3:30 a.m. and returning around 8:30 a.m.

For more information and to sign up, stop in Room 302 CNR between 9 a.m. and 3 p.m. Monday through Friday.

Note: A \$3 deposit is required to reserve an observation position. The deposit will be REFUNDED at a debriefing session when the observer returns from the field.

Prairie Chicken Enthusiasts
The sign-up for observing the prairie chickens on their booming grounds has begun. Students will have an opportunity to

thrushes, and other woodland birds that migrate there each year."

The solution too is inescapable, but vastly complex. To stop the decline will require the cooperation of countries which are miles, cultures, and needs apart. The refuges set apart in the US for breeding populations of these tropical migrants will accomplish nothing without a concomitant commitment from our southern neighbors to preserve large forested areas from

Ecofact

In a report issued by the EPA in 1979, from 1972 to 1977 sulfur dioxide levels in the air dropped 17 percent, carbon monoxide 20 percent, and particulates 8 percent, resulting in 18 million fewer people being exposed to unhealthy pollution standards.

Leopold

Prairies fought with oaks in a natural war

From A Sand County Almanac, by Aldo Leopold. Copyright 1949, 1977 by Oxford University Press, Inc. Reprinted by permission.

appears at a certain level in all peat bogs of the region. But the average battle line between prairie and forests was about where it is now, and the net outcome of the battle was a draw. One reason for this was that

When school children vote on a state bird, flower or tree, they are not making a decision; they are merely ratifying history. This history made bur oak the characteristic tree of southern Wisconsin when the prairie grasses first gained possession of the region. Bur oak is the only tree that can stand up to a prairie fire and live.

Have you ever wondered why a thick crust of corky bark covers the whole tree, even to the smallest twig? This cork is armor. Bur oaks were the shock troops sent by the invading forest to storm the prairie; fire is what they had to fight. Each April, before the new grasses had covered the prairie with unburnable greenery, fires ran at will over the land, sparing only such old oaks as had grown bark too thick to scorch. Most of these groves of scattered veterans, known to the pioneers as 'oak openings,' consisted of bur oaks.

Engineers did not discover insulation; they copied it from these old soldiers of the prairie war. Botanists can read the story of that war for 20,000 years. The record consists partly of pollen grains embedded in peats, partly of relic plants interred in the rear of the battle, and there forgotten. The record shows that the forest front at times retreated almost to Lake Superior; at times it advanced far southward that spruce and other 'rear guard' species grew to and beyond the southern border of Wisconsin; spruce pollen

there were allies that threw their support first to one side, then to the other. Thus rabbits and mice mowed down the prairie herbs in summer, and in winter girdled any oak seedlings that survived the fires. Squirrels planted acorns in fall, and ate them all the rest of the year.

June beetles undermined the prairie sod in their grub stage, but defoliated the oaks in their adult stage. But for this heaving and hawing of allies, and hence of the victory, we should not have today that rich mosaic of prairie and forest soils which looks so decorative on a map.

Jonathan Carver has left us a vivid word picture of the prairie border in pre-settlement days.

On 10 October 1763, he visited Blue Mounds, a group of high hills (now wooded) near the southwestern corner of Dane County. He says:

I ascended one of the highest of these, and had an extensive view of the country.

For many miles nothing was to be seen but lesser mountains, which appeared at a distance like haycocks, they being free from trees. Only a few groves of hickory, and stunted oaks, covered some of the valleys.

In the 1840s, a new animal, the settler, intervened in the prairie battle. He didn't mean to, he just plowed enough fields to deprive the prairie of its immortal ally—fire. Seeding oaks forthwith romped over the grasslands in legions, and what had been the prairie region became a region of woodland farms. If you doubt this story, go count the rings on any set of stumps on any 'ridge' woodland in southwest Wisconsin. All the trees except the oldest veterans date back to the 1850s and the 1860s, and this was when fires ceased on the prairie.

John Muir grew up in Marquette County during this period when new woods overrode the old prairies and engulfed the oak openings in thickets of saplings. In his Boyhood and Youth, he recalls that:

The uniformly rich soil of the Illinois and Wisconsin prairies produced so close and tall a growth of grasses for fires that no tree could live on it. Had there been no fires, these fine prairies, so marked a feature of the country, would have been

covered by the heaviest forest. As soon as the oak openings were settled, and the farmers had prevented running grass-fires, the grubs (roots) grew up into trees and formed tall thickets so dense that it was difficult to walk through them, and every trace of the sunny (oak) 'openings' vanished.

Thus, he who owns a veteran bur oak owns more than a tree. He owns a historical library, and a reserved seat in the theater of evolution. To the discerning eye, his farm is labeled with the badge and symbol of the prairie war.

CNR CALENDAR

SAF General Meeting. On Thursday, April 17, the Society of American Foresters is holding a general meeting in the Founders Room in Old Main. The speaker will be Syd Horde; the topic: DNR roles in private woodlands management in Central Wisconsin.

XI Sigma Pi. There will be a general meeting for Sigma Pi's on April 15 at 7 p.m. in the Communications Room of the UC.

WPRA Banquet. The WPRA annual banquet will be held on April 18 at 6 p.m. at the House of Prime. Tickets are available in room 105 of the CNR, or grab a Rec. person and ask for one!

TWS Shrub Plant. The Wildlife Society is sponsoring a shrub planting and maintenance around the CNR Building on April 19. Find out more in room 319A of the CNR.

The SSA Arbor Day 5K Fun Run is coming up on April 19! Get your registration forms in room 105 of the CNR.

Have an EARTH Experience. Earthweek '86—April 22-26. Don't miss it.

TWS General Meeting. The Wildlife Society meeting is on April 17 at 6:30 p.m. in room 112 of the CNR. The speaker will be Tony Schwartz; the topic: Northwoods Wildlife Rehabilitation. Elections will be held.

SAF Site Prep. The Society of American Foresters is planting 5,000 trees and they need your help. Stop by in room 321A of the CNR for more info.

RMT General Meeting. Resource Management International has a general meeting to be held at 7:30 p.m. on April 15 in the Garland Room of the UC. Special speaker will be Dr. Carl

Lee who will talk about the natural resources and culture of Japan. Elections will be held at this meeting.

Tri-Beta Event. Tri-Beta Society presents "Blue Water, Black Water: Fragile Fauna of the Open Ocean." The speaker will be Professor John Janssen from the University of Loyola. The talk will be on April 17 at 6:30 p.m. in room 112 of the CNR.

LA POSITION OPENINGS

An opportunity for students majoring in a health related field to gain practical experience.

Must be a junior or senior, have a GPA of 2.5, and be willing to commit a year to the program.

Position descriptions and applications available at the health service reception window.

Application Deadline - April 16

One test where only you know the score.

(Check One)

Yes No

Do you want to be the only one who knows when you use an early pregnancy test?

Would you prefer a test that's totally private to perform and totally private to read?

Would you like a test that's portable, so you can carry it with you and read it in private?

And how about a simple, one-step test with a dramatic color change that's easy to read and is 98% accurate?

If you checked "Yes" to the above, EPT PLUS is for you. Use it, and only you will know your test score.

Schmeeckle Notes

Cubs cont.

April 17 and May 8, Thursdays*

Song of the Wetlands—As water gives life to frogs, so the frogs give life to song! Schmeeckle Reserve's ponds and wetlands are home to virtually all

of Wisconsin's species of frogs and toads; so come walk the boardwalks and trails and try your hand at amphibian ID.

April 19, 26, and May 3, 7 a.m.

Saturday Birding—An early morning bird walk. The Reserve contains a wide variety of habitat which makes excellent opportunities for avian observation. Open to the beginner as well as the expert.

April 24 and May 1, Thursdays*

Sky Dance of the Woodcock—Come witness the aerial acrobatics of the woodcock's courtship flight. You'll learn the many adaptations that the woodcock possesses for survival in its habitat.

*Times to be arranged; watch the Stevens Point Journal or call the Schmeeckle Reserve Visitor Center at 346-4992.

observed. By the time they are one year old, they'll probably be tilting the scales at about 65 pounds.

In the past, Anderson and his students have conducted studies on the home range of black bear and the homing tendencies of nuisance bears that have been moved from residential and camp site areas where they were causing problems.

Recently, his quest for data about cub survival rates has taken him to a dozen dens throughout north central Wisconsin.

In the immediate future, his bear research will center on dispersal of yearling bears once they are evicted by their mothers. He would like, for instance, to confirm the suspicion that female yearlings remain in their mothers' home ranges while

males leave for more distant places.

Radio tags placed on yearlings this spring will help answer that question during monitoring planned for this summer.

Incidentally, many of the dens checked out recently by the Anderson crew were in holes created by toppled trees. Hollow trees are popular wintering spots among bears elsewhere, but not in Wisconsin. Those were the sites of the tagging which was done after the animals had been tamed (drugged) with the use of a hypodermic needle secured to a long jab stick.

Anderson's research is funded by the university with grants from the Wisconsin Bear Hunters' Association, Safari Club International and the Wisconsin Sport Dog Association.

Conservation hearings to be held

University News Service

North Central Wisconsin residents are encouraged to attend the annual conservation rule hearings to be conducted by the Department of Natural Resources this year at 7:30 p.m., Monday, April 28, in each of the District's 10 counties. The remaining 62 Wisconsin county conservation hearings will be held the same evening.

The hearings give the public an opportunity to discuss and vote on fishing and hunting rule changes being considered by the Department. In addition, advisory questions from the Department and the Conservation Congress will be discussed and voted on. Persons attending the hearings may also submit proposals for consideration relating to fishing and hunting regulations and natural resources management. DNR personnel will be on hand to answer questions.

At the April 28 hearings, a 10-minute slide presentation will explain deer management used in Wisconsin and the process used by the DNR in establishing populations goals for each unit and how they relate to the number of Hunter's Choice permits issued.

The hearings will also provide a forum for the election of delegates from each county to the Wisconsin Conservation Con-

University FOOD SERVICE

Notes Cont.

ing giant sloths and mammoths, the Dade County researchers found evidence of a cooking hearth. Further analysis may help settle the question of whether the extinct species died off naturally or were slaughtered by Ice Age hunters.

Puffins Return

A century after their extirpation from Maine, puffins are making a comeback. The population has reached 45, with 20 breeding pairs nesting on seven-acre Eastern Egg Rock Island. The return of the penguin-like birds is the result of a 1973 effort to transplant new born birds from Newfoundland.

Vietnam's Vanishing Forests
After 30 years of war, Viet-

nam has half the forests it once had. As a result of herbicide spraying, bombing, and clearing, less than 23 percent of the country is covered with jungle, compared to 44 percent in 1943. All this has left a third of the nation capable of little or no productivity.

Oldest Primate Found

Remains of the oldest true primate in North America have been found in Wyoming. Paleontologist Philip Gingerich reports in Nature that the fossilized jaw fragments and teeth belong to a small mammal, dubbed *Cantius torresi*, that lived about 53 million years ago. The dental evidence links *Cantius* with both lemurs and tarsiers, primitive

primates that at that time had just differentiated in Africa or Asia, Gingerich says.

Endangered List Grows

Last year 58 species of this country's animals and plants were added to the Fish and Wildlife Service list of endangered and threatened species. The list now totals 883 species, of which 390 occur in the United States. Recent additions include the piping plover, interior least tern, and the Carolina and Virginia northern flying squirrels. According to the FWS, nearly one-quarter of all listed US species were added in the past two years.

Oregon Newcomer

The Oregon Fish and Wildlife

Department is raising red-legged partridges for spring release in the hill country. The birds, native to France and Spain, are similar to the chukar, another introduced partridge. The department hopes that the red-legs will make their homes in habitat not fully utilized by chukars, native quail, and ring-necked pheasants.

Oil Spills

Create Problems

Analyzing the stomach contents of seabirds exposed to oil spills, scientists have found that many birds had ingested sublethal doses of fossil fuel hydrocarbons.

Musky cont.

comes to mind is the huge musky I mentioned earlier that we lost only a week before the 24-pounder was caught. I'll set the scene.

It was a hot July morning with a mile-high bluebird sky. Jeff and I were casting for muskies suspended off the same two rock reefs mentioned in the previous story. This time large cisco imitating jerkbaits were in order, something that produced a lot of motion and flash. When retrieved properly, these lures would flutter and dart from side to side, resembling a crippled baitfish.

We casted for about five minutes when the first fish appeared. A large shadow emerged from the gloom 10 feet below the surface as I intently watched my lure approach the boat. I stared as the body of a 25-pound musky materialized and followed the jerkbait to boatside. The fish came so close that we could see its shifting eyes analyze the 14-foot Alumacraft that was so out of place in its subsurface realm.

I drove the rod tip deep into the water doing a few figure-eight maneuvers, trying to get the musky to hit. It became disinterested and finally finned back into the depths. Within the next half-hour, Jeff and I had five such "follows," with three fish exceeding 40 inches in length.

Around 11:30 a.m., a huge musky announced its presence with an eruption of whitewater as it inhaled my shallow running jerkbait. It quickly bore down for deep water, and in the process almost pulled me over the side of the boat. I'll never forget how the rod tip stopped abruptly when I set the hook. WHUMMP! "Set the hook!" Jeff screamed. Again I reeled as hard as I could; WHUMMP!

Then all hell broke loose as the musky started to fight back. I had only 10-15 feet of line out when the fish hit, leaving me with no room for error. The musky thrashed violently at boatside, twisting and turning, trying to throw the imbedded hooks. The fish was in complete control, torquing my shoulders and arms in every direction. All I could do was hang on and take the punishment.

Suddenly the hooks let go and three ounces of hardwood came screaming toward my face. I couldn't react fast enough, and the jerkbait caromed off my sunglasses, sending me crashing to the floor of the boat. With one sweep of its mighty tail, the fish of a lifetime was gone.

Jeff just stood there laughing and snapped a few pictures of me sprawled out in the bottom of the boat. We can't say exactly how big that fish was, except that it was much bigger than the 24-pounder we caught.

I will never forget last summer's fishing experiences. While not all of our excursions ended in success, each was exciting and rewarding in its own way. With the advent of this warm, spring-like weather, I am getting geared up for the 1986 fishing season. There is no doubt that Jeff and I will be putting time on the water in quest of *Esox masquinongy*.

SPORTS

UWSP runners second at WSUC championships

by UWSP Sports
Information Office

OSHKOSH — Propelled by four individual titlists and two conference champion relay teams, the UW-Stevens Point men's track and field team ran to a second place finish at the 18th Annual WSUC Track and Field Championships held here this weekend.

As expected, UW-La Crosse won the team title with 230 points. UWSP was second with 103 points, followed by UW-Stout, 74; UW-Oshkosh, 58; UW-Whitewater, 54; UW-Eau Claire, 42; UW-Platteville, 24; UW-River Falls, 4 and UW-Superior, 0.

Arnie Schraeder was a double champion for the Pointers. The Port Edwards native won the mile and two mile events. He outdistanced Todd Fox on the two mile in 9:00.22 and ran away with the mile crown in 4:14.00. He led both races from wire to wire.

Head coach Rick Witt termed Schraeder's performances as dominant. "Arnie really was a force as he won both races easily," Witt said. "He is becoming more confident in his abilities and he is able to run well in any type of race," concluded Witt.

Ric Perona followed Schraeder's lead and took the title in the 220 yard intermediate hurdles (25.11). This marked the third year in four tries that Perona has won the event, having been edged his sophomore year by teammate Mike Christman.

"Ric did all that was expected of him and more," said Witt. "He had a personal record in the 440 and just missed the conference record in the 220 IH. He also ran a super leg in the mile relay."

Christman also was a champion. His time of 1:12.62 in the 600 yard run was just one-tenth of a second off the conference record.

"Mike sacrificed himself in individual events in favor of the relays by not running any of his best events," noted Witt. "Yet he still got three wins. He proved he is a factor to be reckoned with in any event he competes in."

The Pointer relay teams put UWSP in a strong second place position with two wins. The group of Kevin Knuese, Ted Bianco, Pete Larson and Christman sprinted to a 1:32.79 finish in the 880 yard relay and the mile relay of Rob Rotar, Jim Watry, Perona and Christman won in a breeze in 3:25.98.

"Our relay teams were exceptional," said Witt. "Everyone ran to their potential and it was a just reward for the hard work they have put into their training."

Pointers bringing home second place points were Perona in the 440 yard dash, 50.74; and Ben Baumgart, 6'8" in the high jump.

Third place finishes were registered by Mike Nelson in the 1,000 yard run (2:16.72) and Scott Laurent (45% in the triple jump).

Scott Patza added a fourth place finish in the high jump with a leap of 6'6" and Laurent became the third Pointer to place in the event with a leap of 6'6".

"Our high jumpers really put us into second place as we got three places and our best jumper did not compete due to an ankle injury," said Witt. "This is a real tribute to Len Hill who does a super job with them. Laurent placed in the high jump with a personal record while also garnering a third place finish in the triple jump."

Other fifth place finishers in-

cluded John Zastrow in the pentathlon (2,807), Jim Watry in the 880 yard run (2:00.24) and Larsen in the 300 yard dash (33.18).

Blanco (33.49 in the 300 yd. dash), Rotar (52.36 in the 440 yd. dash) and Don Reiter (14:27.78 in the three mile run) rounded out the scoring with sixth place points.

Witt commented on the group of athletes that accumulated valuable points with third through sixth place finishes.

"We really had lots of people do the job and earn valuable places for us," he said. "Zas-

trow got a solid fifth in the pentathlon in his first time ever in the event. Rotar did a great job in the 400 and mile relay and Nelson really came of age in the middle distances.

"Larsen and Blanco ran extremely well in the 800 relay and then ran well in the 300. It is tough on our sprinters due to a lack of a good training facility, but they showed that they are true winners.

"Reiter gave a courageous effort in the three mile as he competed with an injured leg.

Cont. p. 20

Softball team struggling

by Kent Walstrom
Sports Editor

The UW-Stevens Point women's softball team began their season on a losing note by dropping a pair of doubleheaders in WWIAC action this past week.

Defending conference champion UW-Oshkosh ripped UWSP 8-0 and 10-2 last Friday, and UW-Green Bay claimed both ends of a doubleheader Tuesday to keep the Pointers winless.

Freshman Karl Miller hurled a no-hitter for UW-O in game one. The Titans, assisted by four hits and two key errors, pushed across four runs in the bottom half of the fourth for the win.

UW-O added two runs in each of the next two innings off losing pitcher Kelly Bertz to make the final score 8-0.

"We played well for three innings, but became rattled after committing several errors late in the game," remarked Coach Nancy Page.

The Titans reached starter Jolene Hussong for three runs in the second inning of game two while holding UWSP scoreless until the sixth. Singles by Wendy Krueger and Steph Spoehr spurred a Pointer attack that narrowed the score to 3-2. Jill Lehman's sacrifice fly drove in Spoehr, and Amy Holak followed with an RBI single to score Domoracki, who reached first on a fielder's choice.

The Titans responded for seven runs in their half of the sixth inning, including a grand slam home run by DH Laurie Bures, to nail down the victory.

"Overall, this was not a good outing for us," said Page. "We did have some good moments. Oshkosh is a super team with good hitters and strong pitching."

UWSP opened the home portion of their schedule against Eastern Division rival Green Bay on Tuesday, losing both ends of a doubleheader, 8-3 and 15-5.

The Pointers, again plagued

by weak hitting and costly errors, slipped to 0-4 on the season.

"It was just another case of inexperience," said Page. "We did have timely hits, but gave up some crucial errors in the final innings."

Green Bay rallied for three runs in the fifth inning off starter Kelly Bertz to snap a 3-3 tie, then added a pair of insurance runs in the sixth to seal the victory.

The Phoenix greeted UWSP with eight runs in the first two innings to chase starter Schawn Bartlett in the nightcap. Junior Jolene Hussong came on in relief but surrendered six runs in the third for a 14-0 Green Bay advantage.

UWGB pitcher Beth Hanson held the Pointers scoreless until

the fifth, when UWSP mounted a comeback with five runs off six walks and one hit. The Pointers, however, could not surpass the designated 10-run rule.

"Green Bay just hit the cover off the ball," quipped Page. "I'll just have to keep experimenting with some of our newer pitchers and see who can do the job. This is a spirited club. We'll keep coming back."

The Pointers face St. Norbert at home for a 2 p.m. doubleheader this afternoon.

Women's athletics: prominence noted

by Julie Thayer
Staff Reporter

A sign of changing times is apparent as two of the university's top female athletes, Karla Miller and Amy Gradecki, discuss similar views regarding women's athletics at UWSP.

Miller, a senior from Kaukauna, has been an active participant in both the volleyball and basketball programs, and has left a trail of accomplishments that thicken the school's record books.

Miller was a WWIAC All-Conference Team pick for three consecutive years in volleyball and named an honorable mention All-American in 1985. In basketball, Miller was a WWIAC All-Conference choice in the 1983-84 season, but missed the following year due to an injury. Karla returned this year to again finish the 1985-86 season as a WWIAC All-Conference selection.

The recognition Miller has received for her abilities actually

began in high school. Kaukauna is part of the Fox Valley conference, which Miller describes as a good area for athletics. In turn, the community has played a major role in the success of the women's programs in her hometown. "The community always looked upon women's sports as something special and something good, not as something a girl shouldn't be doing," said Miller.

Karla chose Stevens Point over the possibility of playing Division I volleyball at Madison. "I wanted to go somewhere that offered a good Home Economics program," said Miller. "They laugh and think I'm kidding when I tell them I'm in Home Economics Education because I'm involved in athletics."

To be a member of two team sports takes up a large portion of an athlete's time. Traveling different places to compete can become tiresome after four

Pointer Donna Parsons takes a swing during batting practice. UWSP will host St. Norbert this afternoon in a doubleheader.

For one brave soul, summer has arrived

by Shane Peters
Staff Reporter

I began to doubt my own sanity the instant I slipped over the side of the Glastron ski boat into the frigid shallows of Lake Nepco. After all, it was only the first weekend of April. The snow had been gone for weeks, but the ice had left the lake only days before. This was really no time to be thinking of the first water ski run of the "summer," yet there I was, standing up to my knees in 40-degree water in nothing more than a pair of shorts and a wet suit top. I knew I was crazy.

Ever since water skiing became one of my favorite summer sports, I have waited impatiently for the weather to warm and the ice to melt. By the time April comes, I am not only extremely bored with winter, but it has been five months since my last pull behind the boat. Cold weather or not, when the ice is gone, it's time to start skiing.

The numbness in my legs (and my brain) was slowly moving to the rest of my body as I slipped into my O'Brien ski. The boot was as comfortable as an old tennis shoe. A cold, wet tennis shoe, of course.

With the turn of a key, 115 horses of Mercury power roared to life. I laid four neat coils of rope in front of me as the boat eased gently into the deeper water, taking slack with it. When only four coils were left, the order was given. The engine roared, water churned, and the Glastron rocketed forward. The coils were taut in an instant as I stepped up onto the water. I was skiing; it was summer in April.

I did not even notice the cold spray of water as the boat accelerated to my skiing speed of 32 mph. Although my muscles and techniques were a little rusty, I still felt great. I snapped through each corner expertly and smoothly as I leaned into the corners and left a massive rooster-tail of spray behind me. The wake of the boat was little more than a bump as I blasted from one side of the boat to the other. Except for the temperature, it felt like August.

Marathon scheduled

News Release

The eighth annual Whitewater Half Marathon and Four Mile Run will be held this year on Sunday, May 4. The Half Marathon will begin at 10 a.m. at the intersection of Prairie Street and Starin Road on the UW-Whitewater Campus and the Four Mile Run in the vicinity of Starin Park and Fairhaven Home for Senior Citizens.

The annual event attracts 400-600 runners depending on the weather. For the first time this year a team division will be included in the Four Mile Run. Additional improvements this year include: placing age categories in the Four Mile Run; consolidating the Half Marathon

The long winter had taken its toll on my endurance though. As suddenly as I was snapped out of the shallows minutes ago, my energy was snapped up just as quickly. Through my years of skiing, I have always lived by the ethic that if you don't fall while skiing, you're not really trying very hard. And now that my tired muscles were screaming at me, I knew the inevitable would happen. After leaning into my next corner, my arms decided they weren't going to pull me back up. I disappeared in a great spray.

Being dumped into 40-degree water is an electrifying experience in itself. Although the sensation can be beyond words, the feeling for me is like putting a finger in an electrical outlet and getting kicked in the groin... both at the same time. It's just another necessary evil to be dealt with when skiing in the spring.

Although skiing in springtime can be an exciting experience, certain precautions as a result of the cold must be observed. Hypothermia and floating ice are only two of the dangers present. Always take along warm dry clothes to change into after getting out of the water. A hat will not only keep hair from freezing, but will also insulate the area where most body heat is lost. A quick cruise around the lake will determine if floating ice is still present.

A wet suit can protect the skier from the cold if there is an unplanned entry into the lake, but how warm can you expect to be while splashing in 40-degree water?

Spring skiing is not for everyone. Aside from an intense desire to ski, a strong heart and a slightly weak mind are essential for those of us prone to dip in the arctic waters of spring. But for those of us who can't resist a glassy stretch of calm water, there is really no choice. Spring or summer, I'd ski through it in a second.

K. Hildebrandt photo

A skier braves the springtime temperatures to enjoy a pull around the lake.

Netters whip Green Bay 8-1

by UWSP Sports
Information Office

STEVENS-POINT — The UW-Stevens Point men's tennis team dominated UW-Green Bay from start to finish winning the match 8-1 here last Wednesday.

Bill Diehl (No. 1) led the Pointers, defeating Mark Banta 6-1, 6-2. Gary Polston (No. 2) followed Diehl's lead with a 6-3, 7-5 win. The match at the No. 3 singles position featured the Pointers' Doug Greenberg and the Phoenix' Andy Novak. Novak won the match 7-6, 7-5, but coach Dave Nass was extremely pleased with Greenberg's

play.

"Novak has been UWGB's No. 1 player for two years and currently is playing in the No. 3 slot," Nass said. "Doug (Greenberg) has never played higher than No. 4 for us until today and despite his loss to Novak, played a fine match."

In other singles action, Mike Briones (SP, No. 4) defeated Ron Collard 6-7, 6-1, 6-2; Peter Benedict (SP, No. 5) bettered Jerry Lake 6-4, 6-2; and Jon McElhaney (SP, No. 6) took a 5-7, 5-4 victory, aided by an injury to Green Bay's Khalid

Boubenider.

In doubles play, the duo of Polston and McElhaney defeated Banta and Schoenberger 6-2, 5-7, 6-3. Diehl-Greenberg handed Novak-Boubenider a 6-3, 7-5 setback and Benedict-Briones finished out the sweep with a 6-2, 6-0 win over Collard-Lake.

Nass was pleased with the overall play of his team. "Improved concentration was the key."

The Pointer netters returned to action Wednesday, April 9, at Stout.

Schwartz named as 1st Pointer recruit

by UWSP Sports
Information office

UW-Stevens Point head coach Jay Eck has announced his first recruit for the upcoming cage season. Boyd Schwartz, a 1986 graduate of Montello High School, will enroll at UWSP and join the Pointer basketball program.

Schwartz, a 6-8, 203 pound forward was a four-year letterman

earned all-conference honors in baseball and made the honor squad in football. He was selected the team's MVP in both sports.

In addition to excelling on the basketball court, Schwartz is also a fine student. He is a Badger Boy's Stater, a student council representative and an honor society applicant.

During the past season, he scored 426 points, pulled down 251 rebounds and blocked 81

Blair to enroll at UWSP

by UWSP Sports
Information Office

Tim Blair, a 6-0, 165-pound guard from Mayville High School has declared his intentions to enroll at UW-Stevens Point and join the basketball program.

Blair becomes the second recruit of the spring for UWSP head coach Jay Eck.

Blair was a second team All-

points and 6.1 assists per game.

In addition to his statewide recognition by UPI, he was also a third team All-State choice of the Associated Press, and the team's most valuable player and captain. This season he led Mayville, coached by his father Bob, to a share of the conference championship and to the sectional final. In 1983 Mayville captured the Class B State Championship.

A versatile athlete Blair also

and a member of the National Honor Society. He plans on working toward a business administration degree at UWSP.

Head coach Jay Eck expressed his delight with the addition of Blair to the Pointer "We are very pleased that Tim will join our program," said Eck. "He is not only a fine player but more importantly he is an outstanding person.

"We think Tim is one of the better guards in the state."

Schwartz named as 1st Pointer recruit

by UWSP Sports Information Office

UW-Stevens Point head coach Jay Eck has announced his first recruit for the upcoming cage season. Boyd Schwartz, a 1986 graduate of Montello High School, will enroll at UWSP and join the Pointer basketball program.

Schwartz, a 6-8, 203 pound forward was a four-year letterman and a three-time MVP for the Hilltoppers. An all-conference pick for three years, Schwartz was honored as an All-Area selection of the State Journal his junior season and also was an honorable mention pick on the All-State team that same year.

A versatile athlete, he was also a four year letterman in both baseball and football. He

earned all-conference honors in baseball and made the honor squad in football. He was selected the team's MVP in both sports.

In addition to excelling on the basketball court, Schwartz is also a fine student. He is a Badger Boy's Stater, a student council representative and an honor society applicant.

During the past season, he scored 426 points, pulled down 251 rebounds and blocked 81 shots. He hit 54 percent of his field goal attempts and 84 percent of his charity tosses. In sum, he scored 1,146 points in his career at Montello.

Schwartz will join a Pointer squad that compiled a 22-7 mark and won a fifth straight Wisconsin State University Conference title under the guidance of Eck.

Blair to enroll at UWSP

by UWSP Sports Information Office

Tim Blair, a 6-0, 165-pound guard from Mayville High School has declared his intentions to enroll at UW-Stevens Point and join the basketball program.

Blair becomes the second recruit of the spring for UWSP head coach Jay Eck.

Blair was a second team All-State pick of the United Press International this past season after being named the Wisconsin Flyway Player-of-the-Year. Twice he was a unanimous all-conference pick, and during the 1984-85 season averaged 20.1

points and 6.1 assists per game.

In addition to his statewide recognition by UPI, he was also a third team All-State choice of the Associated Press, and the team's most valuable player and captain. This season he led Mayville, coached by his father Bob, to a share of the conference championship and to the sectional final. In 1983 Mayville captured the Class B State Championship.

A versatile athlete, Blair also earned All-State first team honors as a defensive back in football, while as a track athlete, he was a state qualifier in the 200 meter dash.

Blair is also an honor student

and a member of the National Honor Society. He plans on working toward a business administration degree at UWSP.

Head coach Jay Eck expressed his delight with the addition of Blair to the Pointer.

"We are very pleased that Tim will join our program," said Eck. "He is not only a fine player but more importantly he is an outstanding person."

"We think Tim is one of the better guards in the state," added Eck. "We would now like to bring in one more quality freshman guard to join Tim in the backcourt."

Tim is the son of Bob and Sheila Blair, Mayville.

McLellan to join Dogfish

by UWSP Sports Information Office

UW-Stevens Point head coach Lynn "Red" Blair has announced that Michael McLellan, a 1986 graduate of Appleton West High School, will enroll at UWSP and join the men's swimming and diving team.

McLellan, a three year letter-winner, was named to the All-State team as a junior and was an all-conference selection in both his junior and senior year. He served as the team's captain

during the '85-86 season, after being named the most improved swimmer the previous year. McLellan is also a member of the 400 freestyle relay that holds the Appleton West school record.

He holds personal best times of 23.4 in the 50 freestyle, 51.8 in the 100 freestyle, 5:20 in the 500 freestyle, 1:00.7 in the 100 backstroke, and 2:19.7 in the 200 backstroke.

"Mike will be a fine freshman in our program," Blair said.

by UWSP Sports Information Office

UW-Stevens Point pivot man Kirby Kulas was named to the National Association of Intercollegiate Athletics (NAIA) All-Academic team.

Kulas, a 6-7, 207 pound senior, was one of 23 athletes who received this honor nationally. A business major, Kulas has maintained a 3.55 grade point average (on a 4.0 scale) while also leading his team to two straight conference championships and an overall record of 47-12.

During his two year stint as a Pointer, Kulas amassed impressive numbers. He played in 59 games, scoring 721 points (12.2 ave.), pulling down 378 rebounds (6.4 ave.) and dishing out 92 assists (1.6 ave.). The Medford native hit 50 percent (271-542) of his field goal attempts and 76.8 percent (179-233) of his free throws.

A two-time All-WSUC and All-District 14 selection, his name appears several times in the Pointer all-time record book. He is the school's leader for minutes played in a season (1,091:51) and for minutes averaged per game in a season

(38:04). His total of 26 blocked shots is also the school's top mark, and his 99 free throws this past season is the sixth highest total in school annals.

In addition to his court prowess, Kulas is also active in a number of organizations on campus and has been honored for his academic and campus leadership. He has appeared on the dean's list five semesters and has achieved high honors twice. He was the recipient of the Eddie Kotal Award, presented annually to the school's outstanding scholar-athlete, and has been nominated for the chancellor's leadership award.

SPRING FISHING CONTEST

Athletics, cont.

years involvement as well as juggling hours for study time. The commitment involved is a measure of how the athlete values athletics in her life.

For Karla Miller, there is no question the impact sports has made on herself and others. "It's been a great experience for me. Sometimes I feel like I'm running everywhere. I have to get so much done before practice, get ready for games and I begin to wonder where I'll find time to do everything. I begin to wonder if it's really worth it. But that feeling doesn't last long; there's no doubt that it's worth it. You meet so many friends and make lasting relationships and the things you learn from competition, it's all so worthwhile."

Amy Gradecki is in her junior year at UWSP majoring in English. She is a native of Milwaukee where she attended Hamilton High School. Gradecki was a member of the All-Conference Team her senior year in basketball, as well as voted Most Tri-Valuable. She was a Scholar Athlete All-Conference selection her sophomore, junior and senior years for grade-point average.

Gradecki came to Stevens Point and has participated on both the softball and basketball teams. She was selected as one of three co-captains for the basketball team this year and joins Karla as a WWIAC All-Conference choice.

Family and peer support have never been an obstacle for Amy. Her father coached men's basketball in Milwaukee and her family enjoys coming to watch the women's games.

She likes to compete, win, and stay in shape; three aspects which must derive from somewhere.

"It doesn't seem like dedication to me which is why I don't want to use that word. When I think of being dedicated, I think of really having to work at something. Athletics isn't something I think of having to work at; I've just always wanted to," said Amy.

Where are women's athletics headed in the future? Title IX has strengthened the issue of equity between men's and women's programs. You can find television airing women's high school and collegiate basketball tournaments, and newspapers are slowly beginning to give women's sports coverage on a more extensive level.

"Athletics are usually considered by the public as entertainment. At Stevens Point, men's athletics realistically bring in more attention from the public, and if that's what the public wants to see, I think it's okay for the media to cover men's more than women's. It seems as though the women really have to do something spectacular to get covered, but I do think it's changing," said Gradecki.

So much can be experienced through participation in athletics by any athlete, male or female. Both Karla Miller and Amy Gradecki are products of the attitudes which surround women's athletics today. What they have learned and accomplished can never be taken away, but will be passed on to younger athletes striving toward those same goals.

Marathon, cont.

and Four Mile finish lines; increasing the amount and variety of refreshments provided at the finish, and more.

T-shirts will be awarded to all entrants. Trophies will go to the male and female winners of both races, the winners of the University of Wisconsin-Whitewater faculty and student divisions of the Half Marathon and the winners of the wheelchair division of the Four Mile race. Medals will be awarded to the first three finishers in the following age classes: Male — 18 and under, 19 to 24, 25 to 34, 35 to 39, 40 to 49, 50 and over, and UW-W students and faculty in the Half Marathon; Female — same as male except the last

age class is 40 and over.

The advance registration fee is \$5, team registration for a five (5) runner team is \$30. Team members will also automatically be eligible to participate in the individual race categories in accordance with their age grouping. On May 4, the registration fee will be \$6 and

registration must be completed between 7:30 a.m. and 9:30 a.m. Entry forms can be obtained by phoning the Department of Military Science at (414) 472-1541/1727/1563/1876, or by writing, The Department of Military Science (RUN), UW-Whitewater, Whitewater, Wisconsin 53190-1790.

Runners, cont.

He put the pain aside and really did well. Athletes with his attitude make coaching extremely fun and rewarding."

Witt knew going in that La Crosse was too deep to challenge for the title and thus was very pleased with the Pointers finish.

"We did as well as we could have done. We had a group of athletes that did not score but did a fine job. There is a strong track tradition at Point and the future looks very bright."

"As coaches we are extremely proud of our young men who really pulled together when the chips were down. We lost to a team that was second in the NCAA meet last year and is the favorite to win it this year," noted Witt. "I feel we proved that we have an excellent team."

FOOD SERVICE

Personals, cont.

PERSONAL: To Amy, Biz, Sue, Kristen, and (last but not least) Terry of 1919 McCulloch, you guys have just been super to me the last couple of months. Love you all, Joe.

PERSONAL: Think so I, good luck on Trivia and have a great weekend. Three strikes and we're out! Live at home, does he?

PERSONAL: Goobar Grape: One, one. One for your laughter. Two, two. Two for your hairdo. Three, three. Three 'cause you're smiling. And four—there's more... Love, Melvin.

PERSONAL: To my working boyfriend Joe: Congratulations to you, my love. Take care of yourself and have fun on your first real job (but not too much fun). All my love, Terry.

PERSONAL: Spam: Are your elbows working yet? Thanks so

much for the Sunday night shower scene. That was really big of you. Did you get the front of it sewn up yet? That's the breaks, huh?

PERSONAL: To all students and faculty who supported us during elections, especially you Milty; a great big Thanks! We won't let you down. Lisa and Steve.

PERSONAL: Meatball: What was it that you are this weekend that crawled? Buns and Span.

PERSONAL: The Limbo Queen lives! If you want her back, bring \$500 to the Yacht Club Friday night. Ask for Frank.

PERSONAL: Keith, you wonderful hula-hooper you! We love you!

PERSONAL: To the non-believers in two-tone trucks: I'll always be your hot honey! ?

PERSONAL: Congratulations

to the new brothers, Bernie Benson, Dave Jones and Joe Bray. The Brothers of Sigma Tau Gamma.

PERSONAL: Happy Birthday to you, Happy Birthday to you, Happy Birthday, dear Steve, Happy Birthday to you! Hope your "20th" is great! Love, MV. P.S. When are we going fishing?

PERSONAL: Cube and Lawyer: Daytona was the best time ever because of you guys. We're looking forward to many more oil parties and shall we say "slumber parties." We love you guys! The craziest girls ever.

PERSONAL: Attention 3-W Burroughs: Dear Guys, thank for being such good sports about our April Fool's surprise. The party Friday nite was a blast. We luv ya and are fired up for softball. The 6 of us.

PERSONAL: Here's to you, John B. Congrats on your time

trial victory—the highway dept. would appreciate the removal of your vomit from the four-mile marker. UBRAT.

PERSONAL: Karen S: Let's go fishing. I will clean and cook the fish if you bake another cake for dessert. Eldon.

PERSONAL: Grover: I would understand if you wanted me for other things than my looks. At least I make one of us laugh. Thanks for the fun. Love, Your Alien Boney.

PERSONAL: Hey Beth: You are a BABE and a salty one at that. From a fellow salt addict.

PERSONAL: Bubba: Happy 19th Birthday. You're finally legal so party it up. Sis.

PERSONAL: Sandy: April 28 is rapidly approaching. Eldon.

PERSONAL: Many thanks to the ladies who pushed my car in Lot P on the morning of 4-1-86. God Bless You! Diana.

PERSONAL: Buddy, Robert and Bill: Hey ya'll, we miss you guys a ton. Counting the heartbeats 'til you get here and we can have mac and cheese. Everytime we see a Jack-o-lowe, we think of ya'll. Your sweetest six from Wisconsin.

PERSONAL: To my Babe: Thanks for making my break the best. I wonder what John UAB and Karin Pom Pon are doing now. Let's go meet them in heaven. Love, your babe.

Panel, cont. from p. 7

former *Pointer* senior editor, will take time away from his post as the outdoor editor of the *Shawano Evening Leader* to speak on the panel. Former *Pointer* editor Gene Kemmeter, who is a reporter for the *Stevens Point Journal*, will round

out the list of panelists. There will be time for participants to ask questions of the panelists, an excellent educational opportunity for students thinking of entering the journalism field.

Trivia, cont. from page 1

tickets that will get the team trivia points. One ticket gets 50 points, two tickets gets 150 points, and three tickets get 300 points.

Paul Andres from WWSP commented on the team name choices, "We'd like to avoid censoring — by advising teams beforehand. We are a public relations arm of the university — we have community standards to uphold." Kevin Hamm, 90 FM station manager and Oliva will ultimately be the decision makers if a team name is questionable. They merely ask that names that could hurt someone or are blatantly vulgar be avoided.

Clever names are encouraged and add to the flavor of the weekend. Maynard's Mooners, Oz-Busters, Against all Oz are just a few of the many from

past years. Team sizes vary as well, ranging from a few people to over 50 people.

Each year the first question to the game is: "What is the answer to the first question of Trivia 19-? The answer is always "Robert Redford." This traditional question is about the only thing teams can predict about the Trivia questions. A diverse range of topics are addressed with a wide range of difficulty. The more difficult the question, the higher the point score.

Teams can also expect the usual running questions. The teams can get to the given location any way they wish. However, they must get the answers on foot — the use of any wheels will prevent teams from getting the points for that question. The meeting places are listed in the

official Trivia rules book. Players are advised to bring along a ladder, some measuring device, a pencil, and maybe some jogging clothes.

Trivia is sponsoring a parade today at 4 p.m. The parade will begin on Illinois Avenue near the Allen Center and will end at Goerke Park. Mayor Haberman plans to declare the start of the official Trivia weekend.

The city can anticipate quiet streets this weekend, but in exchange they can expect possible delays on their telephone dial tones. Last year, 760,000 phone calls were completed during Trivia weekend. Residents are asked to be patient and stay on the line until the dial tone is heard.

This year's \$7 team registration fee serves as WWSP's main fund raiser.

Congress, cont. from p. 14

gress. The Congress is comprised of three delegates and two alternates from each county and serves as a citizen advisory to the Natural Resources Board.

The following is a summary of the proposed rule changes to be voted on. Copies of the complete proposed rule questionnaire are available upon written request to: Bob Ellingson, DNR, Box 7921, Madison, Wisconsin 53707.

1. **Deer Management Unit Boundaries**—Boundaries for 37 deer management units are modified to more accurately reflect land use, soils, and vegetation cover.

2. **Overwintering Deer Population Goals**—Post-season deer population goals are modified or treated in 20 deer management units to obtain balance between hunter and agricultural objectives.

3. **Deer Season Type/Firearm Options**—The statewide season framework is simplified by reducing the number of zones from six to two. Uniform firearm restrictions are established in three deer management units.

4. **1986 Fisher Harvest Quotas**—A harvest quota of 300 and zones identical to 1985 are established for a December 1-11 season.

PERSONALS

PERSONAL: Hi Punkin Seed: I love you for, for more than your crow call, and I'll make green pudding for you anytime! I love you Lori Beth.

PERSONAL: To a special person: Sometimes I'm confused but then I think of what we have—a love that is undeniable. I love you JHD.

PERSONAL: Steph: Ohio is waiting for us. So is Darren.

PERSONAL: To Chained Heat & Co.: Congrats on the Southern Wis. Preliminary Championships. Blow Doors on the 18th, rock on. Vince N.

PERSONAL: Tam & Kath: Keep your hands off Kunta! Know you like his tree, but he's mine. Where's my man from Daytona? Couldn't fit him in your suitcase? I still love ya anyhow. Kayra.

PERSONAL: Bunny Bunny on the floor, come to Cindy by the door.

PERSONAL: To my Stinker: Congratulations on your Big Award. I'm so proud of you! I love you very much. You're special to me. With love, your honey. P.S. I can't wait to go dancing.

PERSONAL: Ter Bear Pumpkin Hair: Just think, only a few more weeks to go 'til summer. Can we do it? I hope so. Thanks so much for the support this semester. It's greatly appreciated. Tuna.

PERSONAL: Slammin: Have I told you lately how so very special you are? I'll always treasure our friendship—it's unique! I miss the walks along the beach, the sunrises, but especially the lifeguard chair. Love, me.

PERSONAL: Calling all dudes: John, Gre, Tim, and others. Dude-ettes Sarah, Laura, and Carrie think you're way hot!

PERSONAL: Hey Drew: How's that smurned tongue? That's what we get from partying all night and crashing on the beach with our mouths open. Only in Padre.

PERSONAL: He wasn't just fresh, he was M.B.F.H.K.A. ugly... so I punched him. Mexican Jaw Breaker.

PERSONAL: Todd Thorpe! Your little fingers are so cute. Be careful where you stick them. L.L.M.
