University of Wisconsin-Stevens Point

Renown literary talents nationwide to speak at UWSP's 11th annual Rites of Writing

University News Service

Mark Harris, biographer, screenplay writer, novelist and critic, will be one of the featured speakers at the 11th annual Rites of Writing Monday and Tuesday, April 14 and 15 at the University of Wisconsin-Stevens Point.

Coordinated by the UWSP Writing Laboratory, all of the sessions are open to the public without charge.

Participants are invited to spend an evening with Harris on Tuesday at 7:30 p.m. in Michelson Hall of the Fine Arts Center. Also on Tuesday, the author will discuss "Writing Screenplays and Plays" at 10 a.m. in the University Center Communication Room, "Writing Novels" at 11 a.m. in the UC

Wisconsin Room, and "Writing Biography and Non-fiction" at 1 p.m. in the UC Wright Lounge.

A professor of English at Arizona State University, Tempe, Ariz., Harris is the author of 11 novels, including the highly acclaimed "Bang the Drum Slowly." His most recent novel is "Lying in Bed," published by McGraw-Hill in 1984. His screenplays include "Boswell's London Journal" and "Boswell for the Defense," which aired on PBS last year, and the film adaptation of his novel, "Bang the Drum Slowly," starring Michael Moriarty, Robert DeNiro and Vincent Gardenia, released by Paramount Pictures in 1973. He has written reviews, essays and articles for the Los Angeles Times Book Review, New York Times Book Review, New York Times Magazine, TV Guide and

Chicago Tribune Book World, among others.

The Rites of Writing was founded at UWSP in 1976 by Emeritus Professor Mary Croft, retired founder and longtime director of the Writing Laboratory. Each spring since then writers, critics, teachers, editors and publishers from throughout the United States have come to UWSP to conduct workshops.

A reception, book sale and autograph session with the writers will be held from 3 to 4 p.m. on Tuesday in the UC Communication Room.

The rites will open with a poetry reading by X.J. Kennedy, winner of the 1985 Los Angeles Times Book Award for "Cross Ties: Selected Poems," a volume of his verse from the past 30 years, published by the University of Georgia Press.

The reading will be at 7:30 p.m. Monday in Michelson Hall.

A prominent poet, critic and teacher, Kennedy is a former professor of English at Tufts University. His poems have appeared in The Atlantic, New Yorker, Poetry and many other magazines. He has written several children's books and has authored college textbooks, including "An Introduction to Poetry" and "Literature," both published by Little, Brown.

On Tuesday, Kennedy will discuss "The Little Magazine," with Dorothy Kennedy, at 9 a.m. in the UC Wright Lounge; "Writing Poetry" at 10 a.m. in the Wright Lounge; "Writing for Children" at 1 p.m. in the UC Wisconsin Room; and "The Practical Use of Literature" at 4 p.m. in the Wisconsin Room.

Other presenters and the

schedule of workshops on Tuesday are as follows:

—Roger Axtell, former vice president of the Parker Pen Company and author of "Do's and Taboos Around the World," a guide to international behavior. He has been profiled in The New Yorker Magazine, has appeared on NBC's "Today" show and other network talk shows and has been featured in scores of syndicated press and television stories. He is a member of the Wisconsin Professional Speakers' Association and is a frequent after-dinner speaker and seminar leader.

Axtell will lead "Communication Do's and Taboos Around the World" at 9 a.m. in UC Room 125 A/B and at 11 a.m. in the same room; and "Writing in

UWSP to host regional campus activities convention

by Amy L. Schroeder Senior Editor

On April 4-6, UWSP will be hosting the Wisconsin Regional Convention of the National Association of Campus Activities (NACA). "Stevens Point has always had a good reputation for campus activities," commented Lisa Thiel, NACA student chairperson. "We're

something special and we'll have a reputation to uphold at this convention."

Thiel and the rest of the NACA committee are expecting upwards of 500 participants from around the state. They will include 440 students affiliated with campus activities at other universities along with several associate members. Associate members include mostly entertainers and their

managers who will vie for bookings.

While seeking out top-name entertainers is a major part of the conference, education and exhibits make up a great deal of the total program. There will be several sessions for students to attend dealing with putting together a top-notch campus activities office.

Most of the activities will be held in the University Center,

however, Allen Center and SENTRY Theatre will be used for conference activities as well. The UC-PBR will be the site of a large exhibit showcase where entertainers who did not receive main stage time to sell their acts can present albums, demonstrations and mini-concerts for students.

The conference and its related activities will not be open to the public or to UWSP students not

affiliated with the NACA organization. All participants were required to register in advance and pay a fee to attend.

Thiel commented that NACA is a "good tool for students in campus activities to work together to get better programs." After four months of planning by both UWSP faculty/staff and students, the 1986 NACA Regional Spring Conference is expected to be a success.

Melman speaks on America's military economy

by Donna M. Brauer Staff Reporter

On March 19, Seymour Melman appeared as a guest speaker for the Small Cities Conference at UWSP. Appearing in the Frank Lloyd Wright Lounge before more than 80 people, Melman's topic concerned America's military economy and foreign policy. He set forth to raise questions that need answers from our government.

Melman likened the number of accountants increasing to the rise in the number of government employees. Only here they are decision makers. He said that in government profits are not the ultimate goal, power is. It is prestigious to have people working under you. People work hard to strive for importance; competition is the norm and to deviate is taboo.

In the federal government,

the President is the chairman with the Secretary of Defense close behind. The varied senators and representatives are also involved in the hierarchy. They each wish to wield more power than the next. An example that Melman gave was the involvement of US troops in Vietnam. He said that the US had very little invested monetarily in the country, but the State management wished to utilize its control over the armed forces to exert control over Vietnam. Melman said, "It looked like big business; all show for more power. Managerial control is the extension of control even without economic interest."

Presently the United States, especially President Reagan, is in the midst of the Nicaragua conflict. Melman stated that the US has no firms that have in-

Hiring discrimination

Surprise—employers favor work study students

There are two types of people when it comes to student employment: Those who have work study and those who don't. For those who don't have work study, the view of the campus employment scene is often bleak. On the flip-side, students fortunate enough to have work study are often an employer's dream.

The reason most campus employers prefer to hire work study students rather than regular pay students is simple. When a student has work study, the employer has only to pay 20 percent of the student's salaries and the government pays the remaining 80 percent. In other words, an employer can hire five work study students for the same cost of one regular pay student.

The problem often created by this fact is that employers often hire a person solely on the basis of work study — not the most qualified person for the job.

"This is very discriminatory," said Helen Van Prooyen of the Student Employment Office. Many students who are unable to find campus jobs are fed-up with fruitless job hunts and Help Wanted ads that read, "Must have work study." These students have a legitimate gripe, but to this point, there doesn't seem to be much that can be done to rectify the situation.

"The people landing the regular pay jobs on campus often know the person doing the hiring," said Van Prooyen. This only worsens an already dismal situation for many regular pay students.

Moreover, UWSP has one of the largest work study programs in the state. In fact, of the 1,647 students on the payroll, 802 of them receive work study. After work study students gobble-up half of the jobs, the remaining 845 jobs are left for the rest of the students to compete for. "We normally have a shortage of jobs for regular pay students," said Van Prooyen. One way to improve the situation, says Van Prooyen, is for more campus employers to list their job openings with the Student Employment Office. Even this, admits Van Prooyen, won't solve the job shortage problem. It's difficult to pinpoint

any one source of the problem. It's the overall system that needs changing. Work study students are simply playing by rules set by the Feds. Similarly, as employers continue to walk the budget tight rope, ways of cost cutting — such as hiring work study students before regular pay students — become even more appealing.

The fact still remains, however, that the most qualified students aren't always being hired. This can be critically important when trying to obtain experience for an increasingly competitive job market. "Ideally," said Van Prooyen, "all jobs would be publicized and the students most qualified for the position would get the job — not simply the ones with work study." Until enough students are willing to push for changes in the current system, discrimination will likely remain the status quo.

L. Graham to succeed M. Kocurek's paper science/engineer Department Chair position at Stevens Point

University News Service

For the first time since it was founded about 16 years ago, the University of Wisconsin-Stevens Point's paper science and engineering department will undergo a change of leadership.

Larry L. Graham, 45, will be elevated to chairman June 1 to succeed Michael J. Kocurek, 43, who will assume duties as executive director of the Herty Foundation in Savannah, Ga.

"Mike has certainly done an outstanding job which has resulted in this university having the largest and certainly one of the best paper science programs in the entire nation. Of course, the entire staff deserves the credit, including Larry who is a fine teacher and knows the workings of the department very well. I am confident that under his leadership the same

high quality will continue," said Daniel Trainer, dean of the College of Natural Resources in announcing the changes.

Kocurek's new position involves the administration of a 56-year-old nonprofit organization that provides contractual research and development assistance to the paper and allied industry throughout the world. The foundation operates three pilot paper machines, pulping and stock preparation equipment and technical laboratories which together duplicates an entire pulp and paper mill in miniature.

The foundation's director has a 40-member staff and reports to a board appointed by the governor of Georgia. In addition to his duties in administering the foundation, Kocurek will have a central role in developing technical manpower and re-

search programs involving Georgia's universities and pulp and paper firms in the state.

A longtime member of the Technical Association of the Pulp and Paper Industry (TAPPI), Kocurek has served as chairman of many of its committees and recently finished a stint on its board of directors. He currently heads its Technical Operations Council which oversees activities of the organization's 11 technical divisions. In 1985, he became one of the youngest persons ever to be included as a TAPPI Fellow.

Kocurek, a native of New York State, holds three degrees including his Ph.D. from the State University of New York College of Environmental Science and Forestry in Syracuse. He served there one year before coming to UWSP in 1970 to organize the paper science department.

The university's paper science and engineering department has grown to 220 majors who, upon receiving their degrees, are some of the most sought after graduates of UWSP. They each receive several job offers and starting salaries averaging near \$30,000. A foundation has been in operation more than 10 years to support the program and it now takes in more than \$100,000 in annual contributions from 70 member companies. The university administration has authorized the faculty to be expanded by one more position to five and the state has approved a nearly \$2.2 million addition to the UWSP Science Building which will be used almost exclusively for paper science offerings. An endowment from private donors will be in place this fall to augment the state's financial support for the program.

Graham, a native of Nebraska

who grew up in the Pacific Northwest, holds degrees in chemical engineering from Northwestern University and the University of Toledo. He also has master's and Ph.D. degrees from the Institute of Paper Chemistry in Appleton.

He has served 12 years on the faculty at UWSP and has been granted the rank of professor. In 1982, he received an excellence in teaching award from the institution. His industry experience has been in process engineering with Du Pont's Chicago Finishes Plant and in corporate chemical engineering with the Owens-Illinois Technical Center of Toledo.

Graham has held offices for 11 years in the Lake States Section of TAPPI and will be installed as the next vice president.

New Glarus Bike Trek June 14-15 to cover 95 miles in Wisconsin

Up to 250 state bicyclists will be able to ride in the American Lung Association of Wisconsin's New Glarus Bike Trek June 14-15.

The annual 95-mile weekend ride south of Madison will begin and end in Verona with an overnight stay Saturday in New Glarus, "America's Little Switzerland." The route will include sections of the Military Ridge and Sugar River state bike trails with optional loops for veteran riders.

The Lung Association provides meals, entertainment, lodging, t-shirts, maps, mechanics and support vehicles to transport gear.

The trek includes a tour of the Cave of the Mounds in Dane County and a "Swiss night" in New Glarus, a picturesque Old World village in Green County settled in 1845 by immigrants from Glarus Canton in Switzerland. The town's attractions include authentic Swiss restaurants, musicians and shops, a glockenspiel tower, an historic village, and Swiss cheese and lace factories.

The trek is open to riders 16 years or older who are in good physical condition and have a bike in safe operating condition. Younger teens may participate if accompanied by an adult.

The New Glarus Bike Trek is one of several outdoor adventures sponsored annually by the state Lung Association to promote physical fitness and raise funds to prevent and control

lung diseases such as emphysema, lung cancer, chronic bronchitis and asthma. Over \$46,000 was raised on three treks in 1985.

Other 1986 Lung Association treks include the Door County Bicycle Trek Sept. 4-7 and the Porcupine Mountains Backpacking Trek in Upper Michigan Oct. 1-5.

For more information or a trek application form, call 463-3232 in the Milwaukee area or toll-free 1 (800) 242-5160.

Incentive prizes for trekkers who raise pledges above the minimum include solar cycle computers, cycle clothing, padded seat covers and panniers. Top fund raisers will be awarded a weekend getaway package for two or a handbuilt TREK bicycle.

SB 312, a bill granting students the right to serve on the Higher Educational Aids Board (HEAB), was passed overwhelmingly recently by the State Assembly by a vote of 84-15.

"At a time when tuition is increasing and financial aid is

being drastically cut back, it is crucial that students be involved in making the most of limited aid resources," said JoAnna Richard, President of United Council of the University of Wisconsin Student Governments, a major proponent of the bill.

University News Service

The team from the University of Wisconsin-Stevens Point first whipped the Boiler-makers of Purdue, then overpowered the University of Minnesota and finally gained a regional championship by downing Iowa State University.

No, it wasn't a series of athletic events but a contest of

mindpower. The Pointers were competing in the college bowl at the 18th annual Midwest Student Wildlife Conclave and took top honors for the fifth time since 1974.

The four-member team was comprised of Rick Bruesewitz of Appleton, Jerry King of Cottage Grove, Minn., Jim Heffelfinger of Horicon, and Dan Eklund of Peshtigo. Heffelfinger

served as captain.

College bowl contestants put their knowledge of wildlife subjects on the line, attempting to answer more questions than members of their opposing team in a 15-minute period.

In addition to undergoing oral questioning, the students are asked to identify such things as dried skulls of tiny mammals, wings of birds, tails of creatures and the like.

In this year's competition at the W. K. Kellogg Biological Station in Hickory Corners, Mich., the Pointers scored 90 to 35 against Purdue, 50 to 35 against the University of Minnesota and 95 to 70 against Iowa State.

In runoff competition, teams were eliminated from Kansas State, Michigan, North Dakota State, Nebraska, Missouri and Wayne State Universities.

The Pointers said they believed they had an advantage because the curriculum in the UWSP College of Natural Resources, regardless of major, is geared to giving students a broad background in the interrelationships of soil, water, wildlife and forestry.

Members of the quiz bowl at the Midwest Student Wildlife Conclave are, from left: Rick Bruesewitz, Appleton; Jerry

King, Cottage Grove, Minn.; Captain Jim Heffelfinger, Horicon; and Dan Eklund, Peshtigo.

Student numbers rise on Higher Education Aids Board

SB 312, a bill granting students the right to serve on the Higher Educational Aids Board (HEAB), was passed overwhelmingly recently by the State Assembly by a vote of 84-15.

"At a time when tuition is increasing and financial aid is

being drastically cut back, it is crucial that students be involved in making the most of limited aid resources," said JoAnna Richard, President of United Council of the University of Wisconsin Student Governments, a major proponent of the bill.

SB 312 was proposed by Governor Earl with Senators Joe Czarnecki and James Harsdorf along with Representative David Clarenbach serving as its co-sponsors. The bill provides for three students as additional members of the Higher Educational Aids Board, one each

from the University of Wisconsin System, the Vocational Technical and Adult Education System and the Private Colleges and Universities.

Currently, a UW student is serving in one of the five citizen positions on the Board.

NEWS

Chancellor predicts 10,000 enrolled by the year 2000

University News Service

By the year 2000, the University of Wisconsin-Stevens Point will have about 10,000 students (500 more than it does today) and a higher teacher-student ratio. Area communities will be relying more on assistance from the faculty and the university will be seeking more private funding to stay afloat.

Those are predictions of UWSP Chancellor Philip Marshall who recently participated in a forecasting exercise requested by the UW System Board of Regents.

Each chancellor in the system was asked to project a picture of his or her campus 14 years from now.

A fundamental assumption expressed by most of the officials is that the state will be continuing struggling to rebuild its economy and tax base following the loss of highly skilled and highly paid industrial jobs to foreign competition, automation, industries' flight to the Sun

Belt and other factors.

Marshall wrote that "it is highly improbable" that political leaders will improve higher education funding by raising taxes, shifting money from other programs, closing campuses or limiting access. "It is more likely the level of funding will decrease while the emphasis on access will remain as a top priority."

The chancellor predicted that quality of the instruction throughout the system will "decline markedly" without a reversal of the shrinking financial support. "The decline will become evident early in the 1990s and increasingly so as the decade progresses."

UWSP will cope with the situation by increasing the faculty-student ratio from the present 1 to 21 to at least 1 to 25 by 2000. This increase in class size will enable the university to raise its appropriations for equipment and supplies "and other areas which have been starved in recent years," Marshall wrote.

With reduced state support, it will be necessary for the university to "explore all possible avenues for increasing funding and improving the effectiveness of its expenditures," the chancellor said. Fund raising will be more important, consequently, more administrators and faculty from across the campus will be involved.

In the curriculum, he predicted some majors will be dropped and others will be added including an undergraduate program in wellness that will become large and widely acclaimed in the nation. The College of Natural Resources will continue to be the largest of its kind in the country. Programs in home economics, communicative disorders and communication "will remain about the same." The major in computer information systems will grow somewhat and then level off while the use of computers by all students will increase significantly. "The enrollment in business will de-

Plan now for homecoming

To The Editor:

You may have noticed some ads in the Daily and in the Pointer announcing meetings for the Homecoming planning committee. PLANNING HOME-COMING? ALREADY?

I'd like to take this opportunity to explain why Homecoming is being planned so early this year. In past years, the Homecoming Coordinator has been hired in April and did the majority of the planning in the fall. As there's not much time between the start of school and Homecoming, this spells chaos for the coordinator!

In the rush of trying to plan Homecoming on time, sometimes events weren't as well organized as they could have been. This year, UAB tried to eliminate this problem by hiring the Homecoming Coordinator in November with the responsibilities of the position beginning in January, at the start of the second semester.

With this system, ample time can be given to planning the Homecoming events carefully, with as much creativity and student input as possible. For example, the Homecoming committee has formulated a survey which has been handed out to students in the UC, and in the Allen and Debot Centers.

These surveys presented several different theme ideas from which the students could

choose. The most popular choice of the students was accepted as the 1986 Homecoming theme. That choice was "The Heat is On." Now the planning committee has been trying to plan events for Homecoming Week that are centered around that theme.

I would really appreciate any student input and assistance. Planning Homecoming is a big job, but with the students' help, Homecoming '86 will be the best Homecoming ever!!

Julie Trzinski
UAB Homecoming Coordinator

UAB Monopoly

To The Editor:
IS THIS AMERICA OR WHAT?!

This is in regard to the front page lead story in the Pointer (March 20, 1986) concerning the "publicity violations" by Mike Van Hefty and John Leszczynski. To me, this sounds like a violation of the 1st Amendment of the Constitution — Freedom of Expression — remember? UAB's monopoly on the Florida spring break trips is appalling! Van Hefty summed it all up when he questioned the free enterprise system on this campus. I've been to the UWM campus and believe me, freedom of expression is not stomped on over there. It's actually encouraged! O.K., if I don't like it why not go there, right? Well, this being a CNR-type school,

and that being my major and all, I'll stay here. But as long as I'm here, I see no reason to get a "University Approved" stamp on only those posters you people believe should be seen by others. Are you so sure that only what you approve is worth anyone's attention? Are you afraid someone might publicly disagree with you? Afraid no one would want to pay more for the UAB trip when another was offered at a more reasonable price? What's the problem?

I know there are others out there that would also like an explanation of the importance of the "University Approved" stamp. I think we deserve one.

By the way, Sneakers-n-Shades is coming, or can't I say that without a stamp?

Mysterious Tales of UWSP

Portage House serves community

by Peggy Kuschel
Special to The Pointer

"I believe a community ought to be responsible for the offenders it produces," says Mike Houlihan, director of Portage House, a half-way house located on Arlington Place in Stevens Point.

Portage House serves two purposes for Portage County. This half-way house for men is an alternative to jail or prison, and acts as "a buffer zone" or transition place between jail or prison and the community.

The people of Stevens Point, since 1973 when the program began, have put up very few objections about having a half-way house in their community. At first, Portage House was located in a wing of Dezell Hall on the UWSP campus, the only half-way house ever on a college campus in Wisconsin. Since 1974, the program has been relocated a couple of times to its current location. There have been few community relations problems.

Houlihan believes "Portage House is a lot quieter than a dorm." If loud music is an objection, residents are required to turn down the volume. Alcohol and drugs also pose few problems because they are not allowed at Portage House. Many residents are recovering from drug dependency and must abstain from using drugs while at Portage House. There has never been a crime committed in the neighborhood from the men living at the house.

The success rate of readjusting young men to the community is six out of 10. This means that after an average stay at Portage House of about 120 days, six out of 10 men who live at the house are ready to make the full transition back into society. They have a new direction to their life, whether school or work, and have developed independent living skills such as cooking, saving money and clothing care. It is also important for residents to develop interpersonal skills so that the transition back into society is made easier.

Houlihan says, "The opportunities a person has in the community are five times that in prisons." He is an advocate of Community Corrections and finds the cost per person for living one day in Portage House at \$39 a good deal compared to what it costs to incarcerate inmates at Waupun which is \$40.67, Dodge is \$61.30, and the Wisconsin Resource Center is \$136.61. "You get more bang for your buck," says Houlihan.

The State Division of Correction funds Portage House approximately \$138,000 annually. Part of this money goes to pay salaries for the five full-time staff people who are county employees, and the part-time help and interns. Costs have been kept down by not having someone live at the house as a supervisor. Instead, the employees take shifts staying at the house. Having no cook also saves money.

Houlihan says, "Let clients cook, it is an independent living skill they need to learn." Portage House also receives community backing in the workplace. There are businesses who are willing to hire Portage House residents on their own merits, and use Portage House only as a pipeline in case of trouble.

Most of the men who live at the house are between 18 and 23. This, incidentally, is the average age of students attending UWSP. The residents are much like the students at UWSP. In fact, two of the men living at Portage House currently attend classes at UWSP. The men are much like everyone else in the community with one major exception—they made a mistake and are now receiving help to overcome their problems.

The community of Stevens Point is one major reason Portage House is a success. People like Mike Houlihan, who "...like to give everyone a shot..." are providing a big service to those people on parole or probation, who took a wrong turn in life. If everyone assumes like Houlihan that "...people are going to be responsible when they come to Portage House," it will make a good environment for these men to fix up their lives and make a clean start.

SETV to cover Trivia Contest

by John T. Dunn
Special to the Pointer

SETV's Trivia spokesman, Kirk Strong, says this year's coverage of Trivia will be the most fun you can have with your clothes on. SETV, Student Experimental Television, in cooperation with Cable Access Channel 3 will be covering 90FM's Trivia '86, the world's largest trivia contest. The contest begins at 6 p.m. on April 11 and runs continuously through midnight on Sunday, April 13. SETV provides coverage for 56 hours, beginning one hour before the actual start of the contest until its completion with the awards ceremony for the winning trivia team.

This year SETV will be airing nine video Trivia Foci. A Trivia Focus takes the viewing audience into the headquarters of a trivia team. These short spotlights reveal some of the interesting and sometimes strange behavior of Trivia participants.

teresting and sometimes strange behavior of Trivia participants.

This year coverage will be more formatted than in years past. Along with the traditional "free-form" hosting, there will be three regular teams of "VJ's" keeping the viewers informed of contest events and upcoming programming. Trivia players will be happy to see a complete computer listing of team standings every four hours.

In addition to the Trivia-related material, SETV will also offer many hours of other great programming. The best in student-produced television can be seen in programs such as SETV's The Show and The Feud. The Cable Access Library will provide classic films, and for those early mornings Looney Tune Cartoons. SETV has also acquired new programming from Eau Claire's public access channel. Due to a new

affiliation with NCTV, National College Television, Spike Jones, a great vintage television program, New Grooves, a new music video show, and UNCENSORED, an informative documentary series, will be shown during the weekend.

SETV VJ's will also be playing NCTV concerts including U-2 at Redrock, David Bowie: Serious Moonlight and Elvis: One Night With You. SETV will also be airing its own concerts live from the Cable Access Studio.

Cable Channel 3 will have 56 hours of the hottest video on the tube. SETV's coverage is a must for the Trivia player, but the television connoisseur will also enjoy the programming.

Complete program guides for the weekend are available at SETV and 90FM in the Communication Building on campus. Watch for the complete listings in the Pointer and in the Stevens Point Journal.

- 3 semesters remaining
- Full time student (at least 6 credits)
- Good academic standing (cumulative GPA of at least 2.00)
- Thorough campus awareness
- Telephone and cash register experience preferred but not necessary
- Good communication skills

Applications available at the Campus Information Center. Applications are due by 11:30 P.M. April 9.

College Days coming

About 450 sixth graders from 21 schools will be "enrolled" in classes this spring at the University of Wisconsin-Stevens Point.

The College Days program, a two-day enrichment experience for gifted and talented students, is scheduled at UWSP on four Fridays in April and May. The first group will be on campus April 11 and May 2 and a second contingent will attend UWSP on April 25 and May 9.

According to Janet Boyle, member of the UWSP education faculty and director of the program, its purpose is to expose students to the offerings and resources of a university.

Now in its second year, the College Days program offers four courses appropriate for sixth graders during each of the

two days. All of the students attend two large classes and select two other options from a list of 10 "choice" classes. According to Boyle, the elective classes are limited to 15 participants so the students will receive more individual attention.

The sessions will be taught by UWSP faculty, staff and members of the international student organization.

This year's large group topics are "Jazz" and "International Students." The other offerings include civil rights, dance, psychology, poetry, sports writing, medical technology, chemistry, personal development, theatre and make-up, photography, parapsychology, native Americans, television production, whales, natural history museum, futurism, visualization and computers.

'Band of the Hand' is a film about beating the odds

Press Release

Judged incorrigible by the juvenile courts, five young men, all tough products of the Miami streets, are sent to a special detention project in the Florida Everglades. Warring among themselves and forced to survive on their own, they meet the man who's determined to turn these social rejects around—Joe Tiger, a tough Vietnam vet.

After passing a rigorous series of survival tests, the boys and Joe move to a rundown house in a decadent Miami district, determined to clean up the neighborhood and make it on their own. Their battle against a vicious drug czar who attacks them forms the core of the film as five young men learn to band together and fight.

Tri-Star Pictures presents **BAND OF THE HAND**, produced by Michael Glaser and directed by Paul Michael Glaser from an original screenplay by Leo Garen and Jack Baran. The film stars Stephen Lang, Michael Carmine, Lauren Holly, John Cameron Mitchell, Daniele Quinn, Leon Robinson, Al Shannon and James Remar. Michael Mann is the executive producer of **BAND OF THE HAND** and Reynaldo Villalobos is director of photography, with music by Michel Rubini. **BAND OF THE HAND** was shot entirely on location in and around Miami Beach, Florida, from September 30 through December 13, 1985.

When Michael Mann, executive producer of "Miami Vice," was first presented with the concept for **BAND OF THE HAND**, he found it so exciting that he instantly agreed to become its executive producer. Without even seeing a first draft. Within three months of his initial meeting with Tri-Star Pictures, Mann had worked so successfully with screenwriters and first-time collaborators Leo Garen and Jack Baran, that **BAND OF THE HAND** was ready to roll in Miami Beach. Principal photography actually began on September 30, 1985, just four months after Mann's first meeting.

What appealed to the writer-director-producer of films and television were "the surprises," Mann says. "And the strangeness of it. Here you have five

basically criminal sub-culture juveniles coming together and healing themselves.

"What was interesting to me is how they respond when they're thrown into a really hostile environment—first the Everglades, then inner-city Miami—where the conflict is so pronounced. They have to learn to survive by ultimately finding some kind of bond with each other...or die."

First-time feature film director, Paul Michael Glaser (who has directed several episodes of "Miami Vice") adds, "**BAND OF THE HAND** vibrates with the energy of these ghetto kids fighting with the elements. Ultimately, we have the synthesizing of the city in the jungle, the jungle in the city."

BAND OF THE HAND is the chronicle of five young men who are forced into a unique experimental program when, as chronic juvenile offenders, they have exhausted all standard rehabilitation projects. The Band—from totally disparate ethnic and economic backgrounds—cohere through the efforts of Joe Tiger (STEPHEN LANG), the Miccosukee Indian social worker whose Vietnam War experiences left him among "the walking wounded," Mann comments. "He's missing something, too."

There is Carlos (DANIELE QUINN), who at 17, is the major delivery boy for cocaine king, Nestor (JAMES REMAR, who has been seen in guest

appearances on "Miami Vice"). Carlos' girlfriend, Nikki (LAUREN HOLLY), at 16, has the veneer of a world-class sophisticate but is a frightened, rebellious Palm Beach girl underneath. Sixteen-year-old Ruben (MICHAEL CARMINE, seen previously in "Miami Vice") heads up a murderous Puerto Rican gang. His chief rival is Moss (LEON ROBINSON), head honcho for a Black gang. J.L. (JOHN CAMERON MITCHELL), who seems to be the most vulnerable member of the Band, has moved from armed robbery to cold-blooded murder. Dorsey (AL SHANNON, who starred in the "Milk Run" episode of "Miami Vice") has spent most of his 17 years alternately on the lam or incarcerated.

Once the Band has 'graduated' from the hostile conditions of the Everglades, they find themselves in "the seamy, walk-on-the-wild-side part of Miami" as Mann describes it. "Very low-rent Miami" is where conflict festers with local drug dealer, Cream (LARRY FISHBURNE) and his cohorts, ever-protective of their lucrative clientele and drug business.

"The cocaine dealers are anything but small-time," explains Mann, "but our heroes, the kids, and their life is what **BAND OF THE HAND** is about...their life on the skids. It's flamboyant and full of color but it's not \$4 million estates on islands in the Bay. That's not

their life. The milieu of **BAND OF THE HAND**," Mann continues, "is a sub-strata of the street life, what's happening underneath the rock, below the pavement."

For those scenes, which represent close to half the shooting schedule of **BAND OF THE HAND**, locations in South Miami Beach were chosen. Right in the heart of Art Deco decay is a boarded-up and rotting building, the halfway house where Joe and the Band go to live after surviving the hammock, where drug addicts and squatting Haitian immigrants live.

The exterior at famed Collins Avenue at 2nd Street at the south end of the Beach is now restored and totally rehabilitated.

The producers of **BAND OF THE HAND** worked out a unique deal with officials of Miami Beach ensuring that when shooting was completed, the

production would leave the area—the repainted and refurbished exteriors of Deco homes, the park and various other structures—in infinitely better condition than when the film crew first began to work there. As a result, there is a new playground that has been fully landscaped at 2nd and Collins.

Nestor's state-of-the-art cocaine processing factory built amid the ripening avocado trees in a Florida City grove was the setting for the last five days of shooting on **BAND OF THE HAND**. It is with the destruction of the factory by the Band—requiring, of course, three contingents of firemen, hundreds of extras, eight Doberman pinschers and their assorted trainers, dozens of stuntmen and the invention and precision of a team of special effects personnel—that they become the heroes that Mann describes. It is the catharsis for the Band, the coming of age and their entry into responsibility.

Try Oscar trivia

Press Release

His show is the greatest show on earth, as far as the entertainment industry is concerned, because it is the climax of Hollywood's favorite guessing game—"Who will win the Oscar?"

This year more than 500 million saw it via TV and satellite, and when the delayed broadcast tapes air in foreign countries, approximately 750 million know who won the golden Oscar.

Oscar is 58 years old this year. Oscar nuts, we thought you'd like to quiz yourself and your friends about Oscar and the Academy Awards.

QUESTIONS

- 1) Four actors have won Oscars for screenwriting. Name them, the year and the films.
- 2) Who was the first performer to win consecutive Oscars?
- 3) Who was the first black performer to win an Oscar? Name the film and the date.
- 4) Of the 57 films named Best Picture only one was a western. Which one?
- 5) What Oscar-winning John Ford film appears on the television in "E.T."?
- 6) What was the first film in color to win the Best Picture Oscar?
- 7) What was the last black and white film to win a Best Picture Oscar?
- 8) Meryl Streep won a Best

LYW has two new exhibitions

Press Release

Two exhibitions opening April 5 mark the arrival of spring at the Leigh Yawkey Woodson Art Museum, Wausau, and should cause visitors' spirits to soar.

"Panoramic Photographs by Gus Foster" is comprised of 28 works by this Wausau native. Now a resident of Taos, New Mexico, Foster specializes in large-scale photographs of the American landscape. He has driven over 300,000 miles since 1976 photographing in all 48 of the contiguous states.

Foster works with three different types of panoramic cameras: a 1902 No. 10 Century Cirkut camera, a 1981 Globuscope camera, and a 1985 Globus-Holway panoramic scanning camera. Since 1976, he has been photographing the open panoramic spaces and full-circle vistas of America's diverse horizons. Foster is one of very few contemporary pioneers using this technology.

Local audiences will get a chance to meet Gus Foster on Sunday, April 6, at 2 p.m. when he conducts a gallery walk through the exhibition. This free public program will be followed by a reception for the artist during which he'll be available to discuss his subjects and techniques.

Foster received his college education at Yale University. He has had numerous one-man exhibitions in New York and California. Foster is represented in the collections of many museums and public corporate art holdings including the Detroit Institute of Art; the University of Michigan Art Museum, Ann Arbor; The Art Institute of Chicago; Chase Manhattan Bank, New York City; General Electric Corporation, Fairfield, Connecticut; and Hospital Corporation of America, Atlanta, Georgia. In Wisconsin, his photographs are held by Wausau Hospital Center, North Central Technical Institute, and many private collectors.

The second new exhibition, "Art on a String," features approximately 100 traditional and contemporary kites from over a dozen Oriental cultures. Many of the kites were made by kite-makers whose ancestors created a particular kite design and taught the craft to his family, who in turn then passed the tradition to successive generations. Historical rulers as well as legendary characters are depicted on several of the kites. Also part of the exhibition are ceremonial kites that are still used today in annual events held to commemorate ancient rites.

The kites vary in size and design. Among the largest is a centipede with whirling eyes crafted by Li Shang-Pei, grand kitemaster of Taiwan. The Edo mini-kites by Tetsutaro Noguchi and the Nogoya insect kites by Kozo Kato, both of Japan, are

typical of the smaller kites. Many colorful designs associated with particular cultures are represented and include Korean and Hawaiian fighter kites, Thai cobras, a Vietnamese sun kite, a Malaysian kite from Penang Island, and Sri Lankan animal kites.

Kites were flown in China and India as early as the 7th and 8th centuries. Historical records indicate the first kites were used as religious tokens. Later kites served utilitarian purposes when military leaders used them to transport supplies and even soldiers across rivers during battles.

The Gus Foster panoramic photographs and the Oriental kites can be seen at the Leigh Yawkey Woodson Art Museum from April 5 through May 11. Public viewing hours at the museum are Tuesday through Friday, 9 a.m. to 4 p.m.; and Saturday and Sunday, 1 to 5 p.m.

OUTDOOR

Wisconsin River has walleyes on the run

by Tony Dowiat
Outdoor Writer

The warm sunshine feels good as you shed your jacket and wade out into knee-deep water below one of the spillways of a dam located along the Wisconsin River. For two weeks, your buddies and you have kept an ear open at local baitshops, school, and with fellow anglers on whether the fish are moving or not.

The past few days, however, the weather is cooperative and limited reports of success have been heard. As you continue to fish, your casting becomes smooth and almost automatic as your ultralight spinning rod tosses a feathered jig toward a break in the current. Soon your mind begins to wander as you relax and enjoy the setting.

Then it happens; a fish

smacks your lure with such force that you're snapped back to reality. Following a few minutes of hard fighting, you slowly head the fish toward shore. As you slip "ol' marble eyes" on the stringer, you glance to your right and notice that one of your buddies has hooked a similar fish. Yes, there's no doubt about it, the spring walleye run is on.

There is a special charm about the spring walleye run. For many anglers it is a family tradition as much as deer hunting is to the fall season of the year. Whether it's with family or friends, many of these anglers from around the Midwest dot the banks of the Wisconsin when "ol' marble eyes" is biting.

There are certain environmental elements one must take into consideration when fishing during the spring walleye run. For example, the pre-spawn and post-spawn period of the

walleye run. This is about the middle of the spring. This aspect is very important in locating active walleyes (feeding fish). In the pre-spawn period, walleyes will go on a short feeding spree in order to obtain enough energy to spawn. So many of these fish will try to structure habitat close to the current.

Current is one of the most important aspects of fishing knowledge. Walleyes thrive in current. The quick-flowing water brings vast amounts of food to the fish, allowing them to feed with little movement or effort which conserves energy for spawning. Although walleyes will not be found in extremely turbulent water, one must look for breaks in the water current. These breaks can range from great big rocks, wing dams, log jams to my personal favorite, eddies.

Eddies are currents that head back against downstream current. There are those that are found below many dams along the river and those where the currents collide or intersect. For example, tributaries that

empty into a river. Special note: This causes undertow so fishermen who like to wade should take precautions when venturing into turbulent water.

Eddie fishing has two basic rules: First, remember to find the eddies and cast upstream into downstream current. Jig the lure into downstream current after it is caught in the small whirlpool created by the intermixing of currents. Second, when the water is high, fish closer to shore. The temperature here is warmer and preferred by the pre-spawn walleyes.

During the walleye spawn period, many of the fish become inactive and sluggish. Due to loss of energy caused by spawning, the fish are unable to feed constantly. With a week of rest the fish are quite active again. In fishing the post-spawn period, anglers should follow basic steps similar to the pre-spawn period but with a few exceptions. At this time many of these fish will be on the move, so if you're not catching fish, move to another spot. Another important aspect of this period is the walleye's vulnerability.

At no other time of the year is the walleye more aggressive, so it's a good idea to keep your ears open on active fish movements along the river.

As far as lure or bait presentation goes, the jig and minnow are hard to beat. Due to its versatility, depth control and action it is the most common rig along the river. The Lindy rig with a minnow is another excellent choice; however, it has a tendency to get snagged often. This problem can be alleviated when one substitutes a floating-type jighead.

If you are an angler who enjoys walleye fishing or one who is just getting started, there is no better walleye fishing in Wisconsin than the river of the same name.

So give it a try. The spring walleye fishing gives thousands of fishermen from around the world many hours of enjoyment with countless numbers of fish. This just might be the ticket to getting your limit.

OUTDOOR NOTES

by Jim Burns
Staff Reporter

Nature's Balance Questioned
Western man's beliefs about life on Earth are wrong, charges Daniel Botkin, a professor of biology and environmental studies at the University of California, Santa Barbara. That nature is in equilibrium when undisturbed by man is a popular illusion that forms the basis of modern ecological theory. In fact, says Botkin, ecosystems are "characterized by change rather than constancy."

Mechanical models of living

systems are also outdated, he told an international environmental conference in Italy, which was devoted to developing "a new science of the biosphere" with the assistance of modern technology. Botkin

says, "We must undergo several major changes in the fundamental perspective that we have about life on Earth."

Wayward Wanderer

An albatross that was released 5,150 km. from its nest on Midway Island flew back in just over 10 days.

Key Molecule Synthesized

A chemist at the Argonne National Laboratory has synthesized a complex organic molecule that mimics a key process of photosynthesis and may lead to future means of producing both food and energy. The compound consists of one molecule each of porphyrin, quinone and dimethylaniline. The new molecule converts about 70 percent of the energy in sunlight into chemical energy, and stores it briefly, says Michael Wasielewski.

"The molecule makes it possible to use normal sunlight to drive simple chemical reactions. In the long run, this work could lead to a variety of energy-efficient methods to produce the chemicals that are the basis of a large part of the US economy."

EPA Takes Action

The Environmental Protection Agency will take action against Advanced Genetic Sciences, a California company that it has

Superfund in superlimbo

by Lorette Knott
Outdoor Writer

While both the House and Senate passed Superfund reauthorization bills late in 1985, their differences, budget wrangling, and executive opposition kept a bill from reaching President Reagan's desk. A House-Senate conference committee is trying to forge a compromise bill, but in the meantime, Superfund is in limbo. Superfund authorization expired in September 1985. Said an EPA spokesman, if money doesn't come soon, "in many places we will have to put up a chain link fence and walk away" from cleanup sites.

Efforts at reauthorization began as early as 1984, one full year before Superfund's expiration.

But they faltered. First, EPA killed a proposal on the Senate floor, saying it was too early to act. A weak proposal made by EPA in February 1985 was dead on arrival in the Senate. In September, Superfund was up against the wall, but EPA blocked a proposed 45-day extension of the Superfund tax. Now, OMB poses the biggest threat with Gramm-Rudman.

But critics charge that EPA itself continues to threaten Superfund. An EPA proposal, calling for a one-year infusion of money into Superfund without any changes in the law, diminishes the chances of Congress completing the five-year Superfund compromise bill. Says Leslie Dach, National Audubon Society, "EPA's one-year extension hurts, but doesn't help communities poisoned by leaking dumps. It lets polluters off the hook and extends EPA's current slipshod cleanup program."

Both the Senate and House Superfund measures proposed changes in the program, but most environmental groups believe that the House version is stronger. It raises more money than the Senate bill. It tries to prevent Superfund wastes from simply being buried elsewhere. It gives citizens the right to go to court to stop dangerous dumps, and it gives EPA clear goals and timeframes.

While the House-Senate conference committee tries to iron out differences between the two bills, Superfund cleanup swings into low gear. Various research reports cite between 5,000 and 10,000 industrial waste dumps in the US desperately seeking Superfund decontamination, but long-term cleanup progresses at only 23 dumps. More than 300 sites "are being studied," but even EPA admits real cleanup at only five sites.

D. Bode photo

Starving ignorance in the midst of plenty

by Andy Savaglin
Outdoor Editor

With the warmth of spring finally in the air, and Earthweek just down the road, April has been declared Environmental Awareness Month.

In the next three issues before Earthweek the Outdoor Section will be focusing on the environmental problems and issues our earth faces.

The story below appeared in the Pointer on World Hunger Day, 1983. Although it is over two years old, it is a timeless piece addressing a timely problem.

World hunger! So what! I mean, we're talking about the WORLD here, not little ol' Stevens Point—why should I care?

Not all of us are as ignorant as that dialogue suggests; most people still remember listening to those ancient dinner table horror stories of starving children in India, as we silently tried to stuff the broccoli down Rover's throat. We know there are people, many people, dying everyday from lack of food.

So why is this joker from the Outdoor Section drumming the same old song into our heads? Well, it might be the same song, it's just in a different key. There'll be no lecture given, no pinpoint statistics on hunger among the masses—just a story.

ry. However, this story does deal with the environment—yours and mine.

Oh boy. Here I am in my dorm room — it's 10 o'clock. I've been trying for three hours to read about 200 pages for History. As I turn to page 26, I suddenly realize I'm HUNGRY. This is no ordinary craving now, I mean, I'm FAMISHED — STARVING, in fact. This is terrible!

What am I going to do?? Where will I go? Wait, don't panic now, remember to keep calm, just like Dad did back in the war. O.K., I think there's some food in my bolster, I'm really not sure. This could be tough, though. I've got to learn back in my chair and pull hard to open that baby. Well, what do you know! Filled to the brim with food! I forgot I brought up three carloads of groceries in our Toyota this Thanksgiving break! Even so, none of this stuff is very good and I want something original because I'm DYING OF HUNGER.

Wait a minute, maybe the candy machines have something exciting! Wow, am I resourceful. Dad would be proud! However, now I've got to walk down two grueling flights of stairs to the basement to feed my face. So I trudge downstairs and guess what I find — an empty machine! This is frustrating. I guess life just doesn't let you have any breaks.

Hey, I know — a pizza! Nah, that's too much trouble. I'll

have to decide on which place is going to personally deliver my pizzas to my doorstep, and then my roommate will try to get a piece out of all five of them. Forget the pizza.

Now I'm really in trouble. My mind, weakened by hunger, struggles to think of a way out. I had no idea college life was filled with these life and death situations! Amazingly, I seem to remember a phrase about food once said by someone very wise: "If you don't have it, go out and get it."

So, with no regard to my own personal health, I decide to risk getting my fingers icy cold and walk, yes, walk almost an entire two blocks to get to hamburger heaven, or Hardee's, as most people call it. I grab coat, hat and gloves and set out on my trek. It's slow going as my malnourished body surmounts each burdening obstacle — stairs, sidewalks, even curbs. I gradually make my way southward in search of food, trying to locate a marker pointing out my destination, but all I can see are the faint glimmer of golden arches and the Big Boy sign far off in the distance. Soon I'm blinded by the lights of Happy Joe's, Red Owl, Togo's, Kentucky Fried Chicken, Ponderosa, Pizza Hut and — wait, there it is, the orange glow and the smell of mass quantities of food cooking — Hardee's at last!

I pass by the huge garbage bin loaded with wasted food and stumble in. Somehow I've made it, and pat myself on the back for my endurance. I order and finally, I eat. My body welcomes all that food after my long, arduous journey. As I'm gorging myself, I see that my roommate has come down here, too. Somehow, he sees me waving over the heaps of hamburgers, french fries and Pepsi's that surround me, and he comes over.

"When did you get down here?" he asks.

"About five minutes ago. I got bored in the room and I was

New farm bill gives wildlife some 'breathing' space

by Christopher Dorsey
Pointer Editor

"This is the best program for wildlife to come along since the Soil Bank of the late 1960s," said DNR farmland wildlife specialist Ed Frank as he surmised what the 1985 Farm Bill will mean for Wisconsin wildlife. The recently approved farm bill has made many conservationists more optimistic about the future of our nation's wildlife, and the signing of the bill couldn't have come at a more critical time, as populations of many farmland species have reached record lows.

Three features of the new bill that will directly affect wildlife include what are being termed the "sod buster" and "swamp buster" clauses and the "conservation reserve." Sod buster and swamp buster features simply ensure that wetlands and uplands currently not being plowed will remain that way. They must remain uncultivated, that is, for a farmer to receive any benefits under the new law.

The conservation reserve component of the farm bill is what is primarily responsible

for the optimism among wildlife officials. The conservation reserve calls for lands to be retired from cultivation for 10 consecutive years. Although the primary purpose for the conservation reserve feature is saving soil, the benefits of new habitat that will be created for wildlife is obvious.

Don Wachter, an agriculture conservation specialist who has been with the ASCS for nearly 30 years, said, "The impact to Wisconsin wildlife because of the new program could be extremely beneficial, especially considering that we will be looking at wildlife needs and making decisions in order to meet those needs."

How many acres will be affected in Wisconsin? According to preliminary estimates, Wisconsin will qualify for nearly one and a half million acres of set-aside lands. In comparison, the US Department of Agriculture's PIK (Payment In Kind) program of 1983 set aside roughly three million acres in Wisconsin. The big difference to wildlife, however, is that the new set-aside program will be a 10-year program and is considered far more beneficial to wildlife than the one-year set-aside under the PIK program.

Multi-year land retirements are considered a greater benefit to wildlife than one-year set-asides, which don't allow wildlife populations the benefit of

the same time, it provides excellent cover for wildlife."

Farmers, through a cost-sharing program administered by the USDA, will receive partial

for the diversity of its cover. The new program, however, will create many smaller patches of cover, which makes for increased amounts of

Among others, pheasants are expected to benefit from the new farm bill.

stable, long-term habitat.

The majority of land affected in Wisconsin will be in the intensive agricultural regions of southern Wisconsin. In order for farmers to be eligible for price supports, commodity loans, and target prices offered under the conservation features of the new bill, these two criteria, in most cases, must be met: (A) The land must have been tilled two out of the last five years, and (B) half of the eligible land must be eroding at a rate of at least two tons of top soil per acre each year.

Conservation features of the farm bill will be implemented over a five-year period lasting from 1986 through 1990. On a national scale, five million acres are expected to be enrolled in the program in 1986. In the Badger State alone, it is expected that about 125,000 acres of Wisconsin's 11½ million tillable acres will be put into retirement the first year. During the three-year period from 1987 to 1989, there will be an additional 30 million acres set aside nationally.

In 1990, the last year to enroll in the program, another five million acres is expected to be added to the conservation reserve, bringing the national total to 40 million acres. In comparison, the peak enrollment for the widely heralded Soil Bank Program of the late 1960s (incidentally, the program largely credited with producing the highest populations of farm game in American history) was roughly 30 million acres.

All lands taken out of production and enrolled in the conservation reserve must either be planted to perennial grasses and legumes or planted to trees. The primary purpose of these cover plantings is to protect soil from erosion. Brome grass, alfalfa and timothy will be a likely seed mix recommended for cover plantings.

"This type of cover planting is realistic," said Frank, "because farmers are used to handling this type of seed, while, at

compensation for the costs of planting these cover grasses and trees.

PIK, another program which was initially praised as a boon for wildlife, turned out to be a disaster, and game managers soon learned the problems associated with single year land set-asides. The Soil Bank, however, proved a far greater benefit to wildlife. Multi-year set-asides allowed farm species such as pheasants and quail to flourish with the new expansion of nesting cover.

Although enthusiasm over the 1985 Farm Bill can be felt in conservation offices across the country, there is still guarded optimism. Other, similar wildlife programs have gone the way of the dinosaur. For example, it is still too early to tell the effect Gramm-Rudman (a bill designed to balance the budget by 1991) will have on the Farm Bill proposals.

"It is still possible," said Frank, "that severe federal budget cuts... will be called for to achieve that goal of a balanced budget." Such budget cuts, he fears, might essentially eliminate the incentives in the program.

If the farm bill is implemented as expected, however, hunters can look for improved hunting, according to Frank. As an example, "Wisconsin has experienced a very serious decline in wild pheasant populations," said Frank, "and I view the new farm bill as perhaps being able to halt that decline. I cannot promise full restoration of the wild pheasant, but this is the best thing to happen to the pheasant in a very long time, and it gives us a cause for optimism about the future of the ringneck."

Farm game species such as the pheasant are expected to fare much better under the latest farm program, largely because of the way set-aside lands will be determined. Under the old Soil Bank Program, large tracts of land were often set aside with little consideration

"edge" between cover plantings and crop fields. This newly created cover often leads to an increase in wildlife populations because of what biologists term the "edge effect." This edge effect simply means that wildlife can find food and cover in close proximity to one another, and it makes their living that much easier.

As another possible benefit of the soil conservation features of the bill, water quality is expected to improve in lakes and streams adjacent to conservation reserve lands as siltation and fertilizer runoff are reduced by the increased plant cover on the soil. Fish species that require clean water and food sources uncovered by silt, such as trout and smallmouth bass, are likely to benefit most from

Biologist receives high honors

University News Service

A Stevens Point biologist is one of five men who will receive the Meritorious Achievement Award, highest honor bestowed by Pittsburg State University to members of its alumni ranks.

Professor Charles Long of the University of Wisconsin-Stevens Point's Department of Biology will be cited at several events at his alma mater in Pittsburg, KS., the weekend of May 16 and 17.

Pittsburg State has an enrollment of about 5,000 and prepares a high percentage of its graduates for advanced study or professional programs. It specializes in pre-medicine, business, engineering, nursing and education.

The institution awarded Long his B.S. degree in 1957 and his M.S. degree in 1958. As an undergraduate, he participated in the Army ROTC program and

Charles Long

was commissioned an Army infantry officer upon his graduation. As a graduate student he was the holder of a fellowship. He later earned a Ph.D. at the

University of Kansas.

Among UWSP faculty members, Long has one of the longest lists of publications in scholarly journals. He has penned nearly 150 articles, most of them about mammals, and has authored three books including "Badgers of the World."

After joining the UWSP faculty 20 years ago, Long became one of the founders and longtime director of the school's Museum of Natural History. During the campus, he has been instrumental in the formation of the museum and culture center for the Chippewa Indians in Lac du Flambeau. He received a commendation for that work from the Indian band.

About two years ago, he was given the university's annual award to an outstanding research scholar.

Long currently is doing extensive study of the evolution theory.

Notes, cont.

accused of violating policies on the release of genetically altered farm chemicals into the environment, agency spokesman Dave Cohen said.

The company has confirmed reports that in 1985 technicians injected a genetically altered chemical into fruit trees growing outside the company's greenhouse on the roof of an Oakland, California, building.

Park Service Meets Resistance

The National Park Service's attempts to secure the 600 miles of the 2,100-mile Appalachian Trail that cross private lands, and to relocate sections that have been shunted to highways, have met resistance from Massachusetts, New York and Connecticut residents who resent the agency's power to acquire private land by condemnation.

Norwegian Wave Power
Norway recently installed a wave power station at Toftstalen, near Bergen, Norway—the first such project in that country. Built by Kvaerner Brug A/S and Norwage A/S, the device represents the culmination of more than 10 years of research and development. Its basic operating principle is simple: Crashing waves at the base

of the cylinder compress air and force it into the vertical tower, where the air spins a specially designed turbine. The turbine is expected to generate 1.8 gigawatt-hours of energy per year.

New Findings

Accelerate Evolution

Recent discoveries on the Galapagos Islands, where Charles Darwin conceived his theory of evolution, provide the first strong fossil evidence that the startling diversity among animals he observed there actually evolved over a relatively short period of time.

University of California scientists' fossil research on marine clams and snails and recent geological work places the age of most of the Galapagos Islands at less than 2 million years. Earlier fossil studies, in the 1960s, had placed the islands' origin 10 million years earlier. So animals must have migrated to various islands and diverged from one another in less than 2 million years in response to different island conditions. This view contrasts with the traditional view of slower paced, more gradual evolutionary divergence but does not contradict Darwin's theory.

Got those spring break-ups

by Andy Savagian
Outdoor Editor

Where am I? Ah, I know now, I can feel the sand between my toes. The beach. It sure feels nice to be able to lie down here in the morning and look at the ocean and—oh, man, does my head hurt! I've got to quit drinking all those "Tequila Fanny Bangers." I'll just roll over, fall asleep and...

"Drew, wake up!"
Great, I wasn't at the beach. I just fell asleep in my Genetics class! I have got to get Spring Break out of my mind. I can't concentrate. No problem, I just won't fall asleep in class.

Class is over; good, I can get out of here. I've got this baby licked. Wait—why is that girl looking at me with her finger touching her nose? Oh no—

Spring Break inside jokes. "Hey Drew, wanna play 'I Never'?" I think I'm in trouble. How am I supposed to study with this going on?

I know, I know; I won't always see those people any way, so I think I can handle it. I'll go in the library and find solace.

What was that? I know that guy. Why is he giving me such a weird look? "Boy, were you funny that night we partied down at the beach!" I was? Did I party with him? That's it—Tequila is off my list for good.

This is going to be more difficult than I thought. I've got two quizzes, a test, and a project due this week. I hope this post-Break party lag doesn't last long.

Farm Bill, cont.

the improved water quality.

Besides improved water quality, Frank predicts that, "Wisconsin hunters can expect improved hunting: Firstly, because landowners are often more tolerant to letting hunters onto land that isn't planted in crops. Secondly, because an overall increase in the game supply is likely, and finally, because conservation reserve lands will provide good hunting in the fall when pheasants and other upland birds such as quail and Hungarian partridge will use cover plantings as roosting sites."

How were these conservation features able to materialize in the new farm bill? Because, said Frank, "Many good people with foresight worked hard at passing conservation features beneficial to wildlife."

And conservation organizations combined their efforts for the purpose of lobbying for some of the legislation's benefits. Some of those organizations include: The International Association of Fish and Wildlife

I've got to take these shoes off, they've been hurting all day. Great, no wonder I daydreamed in Genetics—I just poured sand out of my shoes and all over my bed! This is nuts! I jump over all the new t-shirts I bought over break, run past my camera with Spring Break blackmail film waiting to be developed, and bolt out the door.

Finally! Outside, nothing here to jog my memory. Boy is it warm out. Must be about 80 degrees, almost as warm as—nope, I won't say it. I've got to study. Maybe, though, if I grab some shorts and go down to Schmeckle, there's sand there, and water, and...

Agencies, the Wildlife Management Institute, the Sierra Club, the Audubon Society, the Izaak Walton League, the National Wildlife Federation, and others.

"The fact that our country is faced with huge crop surpluses," said Frank, "probably made the timing perfect for farmland to be taken out of production. Overall, for wildlife, the farm bill turned out to be a nice marriage between wildlife groups and circumstances." This marriage, Wisconsin sportsmen hope, will last.

"Farmers interested in further information concerning the farm bill and set-aside programs should contact their agriculture stabilization conservation service office located in each county seat.

Set-aside acreage estimates for some Midwestern states:

Iowa	5,227,000 acres
Illinois	2,558,000 acres
Wisconsin	1,492,000 acres
Minnesota	684,000 acres
Michigan	217,000 acres

Some say "no nukes" Others say "know nukes"

Did you know that for more than ten years, you've been playing your stereo, lighting your hallway and toasting your bread using electricity from the Kewaunee nuclear power plant?

That's good news because the Kewaunee plant doesn't burn fossil fuels like coal.

In fact, instead of burning nearly 20 million tons of coal, in its first eleven years the Kewaunee plant used only a small amount of uranium -- which is easy to obtain from rocks and not useful for much else besides energy. That's conservation. Because coal can be used in the future for lots of other things. Like pharmaceuticals, dyes, fertilizers, and things we haven't thought of yet.

Kent Walstrom

SPORTS

Point softball team ready to start season

by Kent Walstrom
Sports Editor

The Lady Pointer softball team faces a season viewed chiefly as a rebuilding year, but Coach Nancy Page insists that her 1986 outfit is on the rise.

"I look forward to a good season," said Page, now in her sixth year at the helm. "This team plays well together in practice, and they've shown a good deal of desire and talent."

What Page's nine may gain in enthusiasm, however, they lack in experience. The Pointers have lost several key veterans who contributed heavily last year including '85 first team all-conference selections Colleen Kelley from the outfield, Lisa Bouche from third base, shortstop Amy Gradecki, outfielder Dina Rasmussen and catcher Dee Christofferson.

At present, the Pointers must

be considered a question mark because they return only four letterwinners from last year's 6-19 squad.

Heading the list is sophomore pitcher Kelly Bertz, who hurled 17 complete games in 21 appearances last year. (In women's softball, there is no restriction on the number of innings or games a pitcher may appear in during a season.)

Sheila Downing is expected to provide some much-needed leadership while covering second base. The senior played in 20 games last year but hit only .212.

Leftfielder Stephanie Spoehr also batted .212 last year, but is a long ball threat and a capable outfielder.

Amy Holak returns to center field, where she played 18 games last season. Both Holak and Spoehr are sophomores.

Page expects transfer Jolene Hussong to add depth to the

Nancy Page

pitching rotation and also see some action in the outfield. The junior from Green Bay has shown good control and appears capable of sharing starting duty along with Bertz.

Rookie Wendy Krueger should get the nod as the starting first baseman. The senior has demonstrated solid defensive talent.

Donna Parsons will start at third base. A senior rookie like Krueger, Parsons has a strong arm and performs well at the plate.

Freshman Gail Meton has impressed Page with her strong

arm and leadership and will fill the catching position.

Cathy Dengel should start at shortstop, and Nancy Mastrocola is the leading candidate for right field. Dengel and Meton are freshmen and Mastrocola is a junior.

The Pointers' main concern will be hitting. Along with an overall lack of power, the Pointers batted just .219 as a team last year.

With the exception of Bertz, the pitching staff is equally suspect. Freshmen Schawn Bartlett and Tammy Radtke, along with Hussong, will have to give Bertz

some support.

The Pointers' greatest assets lie in the strong arm of Bertz and the team's defensive talents.

Despite the unproven capability of the Pointers, Page looks to finish competitively in the Eastern Division of the WWIAC, which includes Platteville, Whitewater, Oshkosh, Green Bay and Stevens Point.

The Pointers, whose season opener is April 4 at Oshkosh, will need added power at the plate and consistent teamwork to improve upon last season's finish.

1986 SOFTBALL SCHEDULE				
DATE	DAY	OPPONENT	LOCATION	TIME
April 4	Friday	Oshkosh	Oshkosh	2:30

The Lady Pointers will feature several new faces in the lineup for 1986.

Roeker awarded

by UWSP Sports
Information Office

The 1985-86 UW-Stevens Point men's basketball yearbook, designed by sports information director Scott Roeker, was cited as one of the nation's best at the National Association of Intercollegiate Athletics national conventional held March 12-18 in Kansas City.

Roeker's publication was awarded sixth place out of a

possible 500-plus entries in the NAIA. Each year the Sports Information Director's Association recognizes the top 10 publications.

Roeker is in his first year as the Pointer SID, having graduated with honors from UWSP in 1985.

A 1981 graduate of Homestead High School, he is the son of Bernard and Grace Roeker, 503 Rosedale Dr., Thiensville.

Women's Athletics:

A growing trend continues

by Julie Thayer
Staff Reporter

Nancy Page, a woman inspired by athletics, has been a part of the growing trend toward women's sports at UWSP.

Page began her career at Stevens Point in 1973 when she was hired to assume the coaching responsibilities for the women's field hockey team. A teaching position became available the following year in the physical education department and she was asked to fill the position. Her opportunities continued to grow as softball was added to the program in 1981 as she found herself coaching two conference sports. In the fall of 1984, Nancy Page accepted a golden opportunity as she was hired as the Associate Athletic Director at UWSP.

A time frame of 13 years has elapsed since Nancy Page began in 1973 and much has changed to shape women's athletics at Stevens Point. The implementation of the WWIAC happened a year prior to her coming to UWSP but she has aided in its growth and watched the women's athletic program struggle to become equitable with the men's. She is pleased with what she has seen and anticipates the development of some championship teams in the near future. "We're making progress every year," said

Page. "Of our four fall sports this year, three teams went on to national competition."

Under the direction of coach Dr. Carol Huetting, the swim team sent 12 swimmers to nationals. That is the highest number of women ever to qualify. The team also placed second in the conference meet for the second consecutive year.

Head coach Linda Wunder led the women's basketball team to a 12-4 second place conference finish this year. This is an outstanding achievement for Wunder in her first year at UWSP and the projection for next year is favorable.

Dr. Len Hill brought the women's cross country team to a sixth place finish nationally earlier this year. Nancy Schoen was hired in 1978 as head coach for the volleyball team which has remained a solid contender over the years, participating in four regional and two national tournaments.

The women at UWSP have had media coverage in the Stevens Point Journal as well as both the Milwaukee Sentinel and Journal. "There is not as much coverage of women's athletics in the media as people would like to see but they have no idea what it was like before. They used to have to beg to get anything into the papers," said Page.

Why is the women's program continually becoming more suc-

cessful and gaining support at UWSP? There are several reasons, beginning with the athletes themselves. "I think our athletes are very dedicated," said Page. "I see them running to keep in shape or working out on the weekends. The women who are competitors are year-long competitors. They want to win just as badly as the men do."

Page also feels the women deserve good coaching. She says that the department has worked very hard to develop a staff that cares and are knowledgeable.

The number of female coaches in general has declined tremendously over the years. Page cited the advantages of having female coaches for women's sports. She feels that women understand each other better emotionally. In addition, male coaches are unable to go into the locker rooms, and she also feels that women need to be able to identify with other females as good role models.

But she went on to express an even greater consideration. "A lot of what good coaching is all about is understanding. I think the two men we have on our staff coaching women's sports do a nice job."

Coach Page takes pride in how the department has strived to make things equitable be-

Thinclads earn second at WWIAC Indoor Meet

Reprinted courtesy of
Stevens Point Journal

LA CROSSE — The UW-Stevens Point women's track and field team pulled off a remarkable feat here placing second in the WWIAC Indoor Track and Field Championships with only 13 members.

UW-La Crosse ran away with the meet title, amassing an impressive 233 points. UWSP captured second with 98 points, followed by Oshkosh, 73; Eau Claire, 69; Stout, 57; Whitewater, 36; Platteville, 19; and River Falls, 7.

Due to injuries and spring break, the Lady Pointers were forced to compete with limited numbers.

"We knew coming in that we did not have a chance to win the meet, but that second place was a challenge these women could reach," said Coach Rick Witt. "They really sacrificed individual finishes for the team finish."

Heading the baker's dozen was Carlene Wilkom who dominated the pentathlon. She scored 3,141 points to outdistance Heidi Tourtillott of La Crosse, who compiled 2,936. Tourtillott placed third in the pentathlon competition at the national meet last year.

In winning the event, Wilkom took first place in the 60 yard hurdles, the 800 run and long jump. She finished third in the shot put and high jump.

Wilkom then came back in the open competition and won the 60 hurdles in 8.77.

To no one's surprise Michelle Riedi, who won the national indoor high jump last weekend, took top honors in the event, clearing 5'7". She also placed third in the long jump with a leap of 16' 4", took fifth in the 60 hurdles and anchored the 880 relay which finished fourth in 1:55.44.

Cathy Ausloos was also an individual winner, with a 1:28.51 clocking in the 600 run. Within 15 minutes she also came up

with a fifth place finish in the 440 dash, 1:02.95. This is known as completing the "suicide double," a rare feat in the track world.

Stevens Point freshman Carrie Enger ran to a third place finish in both the 440 dash (1:01.32) and the 300 dash (38.86). To top it off she ran a strong leg in the mile relay which placed second in 4:13.96.

Kris Hoel, although slowed by an ankle injury, anchored the distance medley relay which finished third in 12:52.6. She also was sixth in the 1500 (4:56.25).

Senior Jane Brilowski ran a strong leg in all three Pointer relays (880, mile and distance medley).

Kay Wallander scored third place points for UWSP with a strong 2:49.29 finish in the 1,000 run. Barb Knuese was sixth in the 600 (1:32.55) in only her second try in the event. She was also a member of the runner-up mile relay.

Tammy Stowers had a personal best in the shot, finishing

fifth with a heave of 11.43 meters. Cheryl Cynor, Sue Laude and Nancy Peasley ran relay legs.

Witt and his fellow coaches were more than pleased with the team's efforts.

"To say that we were proud of this group would be the understatement of the century," said Witt. "We were really outnumbered, but the women pulled together and gave their best."

"I could go on and on about each of the women's perfor-

mances. Wilkom was a dominant force in the meet, and Riedi, Ausloos and Enger were just plain tough competitors.

"For Hoel to compete with an awfully sore ankle shows her nature and Brilowski gave a gutsy effort in all three relays."

"As coaches, we hope to get our athletes to perform up to their potential. I can truly say that these young women gave us all they had and can be extremely proud of their second place finish."

INTRAMURALS

Welcome back everyone! The Intramural post break schedule includes the start of men's and women's basketball playoffs. The men's playoffs started Wednesday and the women's playoffs will start Monday. Check the Intramural bulletin boards for dates and times and come watch your favorite team. Also, men's Directors League Basketball playoffs will start Sunday.

In addition to the conclusion of the basketball season, several other events have gotten under way. Floor Hockey, Indoor Soccer, and Innertube Water

Polo all started this week. Floor Hockey is on Tuesdays and Indoor Soccer is on Thursdays in Quandt Gym. Innertube Water Polo is Mon-Thurs. from 7 to 9 p.m. in the pool.

All-Campus championship point totals are posted on the IM bulletin boards. Check and see where your team stands.

Upcoming events: Horseshoe and Beach Volleyball entry forms are due Thursday, April 10. A team captains meeting for Beach Volleyball is scheduled for Sunday, April 13, at 5:30 in Rm 101 Berg.

Sorenson on All-District team

by UWSP Sports
Information Office

Sonja Sorenson, who led the UW-Stevens Point Lady Pointers to their best record in six years, was named to the five-person All Great Lakes Region All-District team by the Kodak Corporation.

Joining Sorenson on the honor squad are Amy Proctor of St. Norbert College, Kristi Gunder-

son of UW-La Crosse, Karen Gingras-Hoekstra of Hope College, and Mary Johnson of UW-River Falls.

Sorenson, a 6-0 sophomore from Manawa, averaged 20.3 points and 11.6 rebounds as the Lady Pointers finished 15-7 overall and 12-4 in the WWIAC.

During the 1985-86 campaign, she set 12 school marks, including: most points in a game (36), most points in a season (447).

highest single season scoring average (20.3), most field goals in a game (16), most field goals in a season (167), most field goal attempts in a season (328), most made free throws in a game (12), most made free throws in a season (113), most free throws attempted in a game (19), most free throws attempted in a season (177), most rebounds in a season (256), and highest rebounding average in a season (11.6).

Mazzoleni Coach of the Year

UWSP ickers honored

by Karen Kulinski
Staff Reporter

Four members of co-champion Stevens Point and River Falls head the 1985-86 all-Wisconsin State University Conference hockey team.

In addition, first year Pointer mentor Mark Mazzoleni was

Bob Engelhart, and freshman defenseman Tim Coghlin.

Kuberra, a native of Duluth, MN, finished second in the league scoring race with 21 points on nine goals and 12 assists. Kuberra also appeared on the first team last season.

Basill, who hails from Edina, MN, was 9-3 in the nets (12-10 overall) had a goals-against average of just 3.06. Engelhart, who played his high school hockey at Fond du Lac Springs High School, ranked sixth in the league scoring race with eight goals and nine assists for 17 points. Coghlin, a defensive mainstay who prepped in Penitction, BC, scored three goals and handed out eight assists for 11 points.

Receiving honorable mention in the voting by league coaches was Tim Comeau, a freshman winger from St. Albert, Alta.

Mazzoleni was cited for directing the Pointers to a share of their first league title in the school's history. UWSP and UW-River Falls both finished at 9-3.

Mark Mazzoleni

voted the WSUC Coach of the Year.

The four Pointers named to the first team included freshman goalie John Basill, senior forwards Scott Kuberra and

Mark Mazzoleni — UW-Stevens Point.

UWSP harriers run well at La Crosse

by UWSP Sports
Information Office

LA CROSSE — The UW-Stevens Point men's track team put forth several fine efforts at the La Crosse track meet held Wednesday before spring break. The Pointers fielded a team dominated by first and second

year athletes.

No team scores were kept at the meet, which included host UW-La Crosse, UW-Platteville, UW-River Falls, UWSP and Luther College. The Pointers did, however, earn eight top four finishes.

Pointer ace Arnie Schraeder ran to a first place in the 880 yard run in 1:58.5 to lead

UWSP. Freshman Randy Gleason placed second in the 300 yard run in 34.4, while Eric Fossum was third in the three mile run (15:21.8). Sophomore Mike Nelson captured the other Pointer third place finish with a 2:01 clocking in the 880 yard run.

Senior Don Reiter led a host of Pointers that finished fourth

in four events. Reiter's time of 4:27.3 in the mile was good for fourth. Freshman Kevin Ewert showed promise with a heave of 46'6" in the shot, while sophomores Joe Bastian, 15:29 in the

three mile, and Steve Wollmer, 2:01.5 in the 880 also brought home fourth place finishes.

Head coach Rick Witt was

Contaminant problems are affecting wildlife refugees

Notes from
National Audubon Society,
April 1986

A US Fish & Wildlife survey reports that 84 of the nation's 431 wildlife refuges have or are suspected of developing serious contaminant problems. The report describes contaminants believed to adversely affect refuge habitat, animals, or human health and safety. Most of the contaminants, including pesticides, PCB's, and selenium, result from agricultural or industrial use outside the refuge borders. Environmental groups fear that these findings are only the tip of the iceberg.

In January, EPA proposed a partial ban on the use of diazinon, linked to 60 cases of waterfowl poisonings in at least 18 states. A pile-up of 700 dead brant geese on one golf course in New York prompted EPA's review of the pesticide. According to a major producer of diazinon, golf courses and turf farms account for only eight percent of diazinon use in the

Naegeli an honorable mention

by UWSP Sports
Information Office

UW-Stevens Point forward Tim Naegeli, a 6-7 junior from Racine, has been named to the honorable mention All-American team selected by the NAIA.

Naegeli led the Pointers to a fifth straight conference championship this past season, averaging 18.9 points and 5.3 rebounds per contest. The junior

Tim Naegeli

sharpshooter connected on 58.1 percent of his field goals and 81.6 percent of his free throws.

Naegeli, the Player of the Year in District 14, was the only player chosen from the perennially tough district.

US. The ban would not affect the pesticide's use in agriculture, its major application.

"The federal government cannot be allowed to ignore the environmental damage and economic losses caused by acid rain," says New York Gov. Mario Cuomo. And so, New York has implemented regulations to reduce emissions that cause acid rain. The regulations are part of the New York State Acid Deposition Control Act, signed by Gov. Cuomo in 1984. This, the nation's first state law to reduce emissions implicated in acid deposition, requires that

sulfur dioxide emissions be cut back 37 percent by the 1990s, with an interim goal of a 146,000-ton reduction by 1988. Sulfur-in-fuel limitations will be the principal means of reducing emissions from smokestacks.

"Forever Wild," an hour-long documentary on New York State's three-million-acre forest preserve, airs April 27 at 10 p.m. EST, on PBS stations nationwide. The film explores the history and current status of the century-old preserve through the thoughts and experiences of sportsmen, authors and naturalists.

Women's athletics, cont.

tween the men's and women's programs. The coaches sit down together and schedule times in which the equipment and facilities can be shared. Although various support groups may be more generous with the men's, both programs are funded equally by the university. When asked if such controversial issues as budgeting or coaching were a problem at UWSP she replied, "Absolutely not. Don Amiot (Athletic Director) works very hard to make things equal for both the men's and women's

programs."

Nancy Page recognizes the importance for women to participate in athletics today. The opportunities were not available for women years ago like they are now. The dreams women had of competing could not be fulfilled. Despite the struggles and roadblocks, it has been those women, like Nancy Page, who care enough to dedicate their time and effort, that have paved the way for women's athletics today.

CNR CALENDAR

EENA Meeting. Tonight at 7 p.m. there will be an EENA meeting with featured speaker Rob Nurre. The topic will be "The Surly Surveyor"—a look at presettlement vegetation.

TWS Prairie Chickens. The Wildlife Society will be holding registration to partake in the spring prairie chicken census, which will run from March 24 to May 4. Help with research at local booming grounds. Sign up in room 319A in the CNR.

WPRA General Meeting. The Wisconsin Parks and Recrea-

tion Association is holding a general meeting tonight at 7 in the Communications Room of the UC. The speaker will be Jefferson Davis and the topic is "Liability and Vandalism."

SSA Fun Run. The Society of Student Arboriculturists' Arbor Day 5K Fun Run will be held Saturday, April 19! Pick up an entrance form from the SSA desk in room 105 CNR. Deadline for registration is April 15.

AWRA General Meeting. The American Waters Resource Association is holding a general meeting April 7 at 7 p.m. in the

Communications Room of the UC. Bob Masnado will be speaking on Wisconsin's fish contamination monitoring program. Elections will be held also!

Storing tanks face state deadline

Owners of underground tanks now used or once used to store gasoline or other hazardous liquids or chemicals have less than 10 weeks left to notify the state of each tank's location, a state agency said today.

The deadline for notification is May 8, as set by state law, the State Department of Industry, Labor and Human Relations said.

Those who miss the deadline are liable for penalties of up to \$1,000 under state law and up to \$10,000 under the Federal Resource Conservation and Recovery act for each tank not re-

ported.

Edward McClain, safety and buildings division administrator in the state agency, said there could be as many as 75,000 underground tanks in the state which have to be registered.

No one knows the number for sure, since no attempt has been made in the past to establish a centralized inventory, McClain said.

The notification requirement was imposed by the State Legislature as part of a broader state effort to prevent or contain contamination of the state's groundwater from leaking underground tanks.

Among the most popular places for underground tanks are gas stations, businesses with trucking operations, and homes where natural gas or electricity isn't used for heating.

Dennis Strey, head of the division's petroleum products inspection bureau which will maintain the centralized inventory, said storage tanks which must be reported are those used to store flammable, hazardous or combustible liquids and where 10 percent or more of the tank is beneath the ground. Hazardous waste storage tanks which are licensed by the State Department of Natural Resources are exempt.

It makes no difference whether the tanks currently are or are not being used to store liquid petroleum products, industrial solvents and other types of chemicals, or any other substance defined as hazardous under the US Comprehensive Environmental Response, Compensation and Liability Act of 1980, Strey said. "The notification requirements apply to tanks that are in use, tanks taken out of operation but not out of the ground, and to locations where tanks have been removed," he said.

Strey said his agency has distributed tank inventory forms in response to tank owners' requests, and more forms are available. Forms have also been distributed to trade associations representing persons who sell or distribute petroleum products. Owners are to complete the forms and return them to the state, he said. Others may obtain the forms by calling (608)267-5280 or by writing to the Petroleum Inspection Bureau at P.O. Box 7969, Madison, Wisconsin 53707.

The division held public hearings around the state late last year on a comprehensive set of state rules overhauling the state's flammable and combustible liquids code and establishing new requirements for the safe use or abandonment of underground tanks. The agency expects to take final action on those rules in the near future, he said.

Harriers, cont.

pleased with his team's performance and stated that winning was not really the goal.

"This was a good meet because it gave some of our men who do not get to compete all the time a chance to do so," he said. "The other teams all used a full squad, so overall I was very pleased with not only the efforts put forth, but also with the results."

If You Are A Connoisseur of Great Pizza

You'll go to great lengths & travel long distances to satisfy your craving. Before you decide where you get your next pizza from, we here at Rocky's would like to tell you about our pizza slices & whole pizza.

Only the freshest mushrooms are used, picked in the morning and on your slice that same afternoon.

2 layers of award winning real Wisconsin mozzarella cheese.

Our dough is made from scratch every day.

Our zesty sauce is prepared just right by Jason Oliver to please the pallet.

You will love our pizza!

One schedule. Business Administration majors (preferably with marketing emphasis) or Computer Information Systems majors. Positions in retail management/computer sales.

Rites, Cont. from p. 1

the Business World" at 2 p.m. in the UC Wisconsin Room.

—Suzanne Britt, freelance writer, columnist and textbook author. A part-time instructor at Duke University's Divinity School, she is completing work on a rhetoric/handbook for Harcourt Brace Jovanovich. She has been published in Newsweek, New York Times, Reader's Digest, Boston Globe and Miami Herald. She has written two books of essays, "Skinny People are Dull and Crunchy Like Carrots" and "Show and Tell."

Britt will talk about "Writing Essays" at 9 a.m. in the UC Wisconsin Room; "Publishing Books and Writing for Newspapers" at 10 a.m. in the Wisconsin Room; and "Writing a Textbook" with Dorothy Kennedy, at 2 p.m. in the UC Wright Lounge.

—Dorothy Kennedy, a freelance writer and author of college textbooks and a book for children. She is on the editorial board of The Cuyahoga Review, has been active in small press publishing and co-edited "Counter/Measures." She has colla-

borated with her husband, X.J. Kennedy, on several books, including "The Bedford Guide for Writers," a college text scheduled for publication next year.

Kennedy will lead "The Little Magazine," with X.J. Kennedy, at 9 a.m. in the UC Wright Lounge; and "Writing a Textbook," with Suzanne Britt, at 2 p.m. in the Wright Lounge.

—Chuck Petrie, staff editor for Great Lakes Sportsman Group magazines. A former conservation warden for the state DNR, he is the current president of the Wisconsin Outdoor Communicators' Association. In addition to having extensive freelance publishing credits, he is an in-house editor with Willow Creek Press sporting book publishers.

Petrie will discuss "The Outdoor Writer: Who (or What) is One?" at 9 a.m. in the UC Communications Room; "Shaping and Selling the Outdoor Writer's Product" at 11 a.m. in the UC Wright Lounge; and "The Outdoor Writer's Market: Where and How to Send the Product" at 1 p.m. in the UC Communication Room;

ently teaching at Columbia University. Some of his writings include "Our Depleted Society" (1965), "Conversion of Industries and Occupations to Civilian Needs" (1970) and "The Permanent War Economy: American Capitalism in De-

Seymour Melman

cline" (1974). Presently, he is working on another book, "Productions Without Managers."

A history with the US Army, Coast Artillery as a first lieutenant and his teaching background give Melman the credibility he needs.

Trivia Answers, Cont. from p. 8

ANSWERS

- 1) Orson Welles, for "Citizen Kane" (1941); John Huston, for "Treasure of Sierra Madre" (1948); Mel Brooks for "The Producers" (1968); and Woody Allen, for "Annie Hall" (1977).
- 2) Luise Rainer, named Best Actress of 1936 for "The Great Ziegfeld" and 1937 for "The Good Earth."
- 3) Hattie McDaniel, for her supporting performance in "Gone With the Wind" in 1939.
- 4) "Cimarron," in 1930/31.
- 5) "The Quiet Man," a 1951 film starring John Wayne and Maureen O'Hara.
- 6) "Gone With the Wind" in 1939. It received 13 nominations and won eight.
- 7) "The Apartment" in 1960. It received 10 nominations and won five.
- 8) The late Anne Baxter won

Best Supporting Actress for her role as Sophie in "The Razor's Edge" in 1946.

9) Christopher Walken. He appeared in "Annie Hall" in 1977 and won a Best Supporting Actor Award for his role in "The Deer Hunter" in 1978.

10) Marlon Brando as Vito Corleone in "The Godfather" and Robert De Niro as the young Vito Corleone in "The Godfather, Part II."

11) Laurence Olivier, who was named Best Actor in 1948 for "Hamlet," which he also directed.

12) Irving Berlin, when he opened the envelope in 1942 and read the winner of Best Song: his own "White Christmas."

13) No.

14) "Ben-Hur" holds the record for winning the most Oscars with a total of 11.

15) "Sluth" with Michael Caine and Laurence Olivier in 1972. Both were nominated for Best Actor. "Give 'em Hell, Harry" with James Whitmore in 1975.

16) "The Broadway Melody" in 1928/29.

17) Lina Wertmüller, who directed "Seven Beauties" in 1976.

18) The first were Claudette Colbert and Clark Gable for "It Happened One Night" in 1934, followed by Jack Nicholson and Louise Fletcher for "One Flew Over the Cuckoo's Nest" in 1975. In 1976, Peter Finch and Faye Dunaway won for "Network" and in 1978, Jon Voigt and Jane Fonda repeated for "Coming Home." In 1981, Henry Fonda and Katherine Hepburn received their Oscars for "On Golden Pond."

19) James Cagney won his Best Actor Oscar for "Yankee

Doodle Dandy" in 1942.

20) Jack Lemmon won his Best Actor Oscar in 1973 for "Save the Tiger" and his Supporting Actor Oscar was for "Mister Roberts" in 1955; Robert De Niro won his Best Actor Oscar in 1980 for "Raging Bull" and in 1974 was awarded Best Supporting Actor for "The Godfather Part II."

Ingrid Bergman was named Best Actress of 1944 for "Gaslight" and in 1956 for "Anastasia." Her Best Supporting Actress Oscar was for "Murder on the Orient Express" in 1974. Helen Hayes was named Best Actress in 1931/32 for "The Sin of Madelon Claudet" and Best Supporting Actress in 1970 for "Airport."

Maggie Smith was Best Actress in 1969 for "The Prime of Miss Jean Brodie" and Best Supporting Actress in 1978 for "California Suite." Meryl Streep was named Best Actress for "Sophie's Choice" in 1982 and her Best Supporting Actress was for "Kramer vs. Kramer" in 1979.

Jack Nicholson was Best Actor in 1975's "One Flew Over the Cuckoo's Nest" and was named Best Supporting Actor for his performance in 1983's "Terms of Endearment."

21) King Henry VIII. Those receiving Oscar nominations for King Henry roles are: Robert Shaw in 1966 for "A Man for All Seasons," Richard Burton in 1969 for "Anne of a Thousand Days," and Charles Laughton for "The Private Life of Henry VIII" in 1932/33. Laughton was the only one to receive the Best Actor Oscar.

22) "The Godfather Part II," whose predecessor was also a Best Picture winner.

Enrolled, Cont. from p. 4

cline while that in education will increase. The quality of programs in fine arts will continue to increase."

Continuing education programs and other outreach offerings will be in greater demand and the expertise of faculty members will be sought from various quarters of the area. The Small Business Develop-

ment Center will play an increasingly important role, Marshall predicted, as will individual faculty members as independent consultants.

UWSP will probably be more cosmopolitan with a larger contingent of foreign students by 2000, but attempts to increase enrollment of people in minority groups are likely to result in "only modest gains."

Like anyone else

To The Editor:

Have you seen that woman pushing a chair around to her classes? It sure is noisy. Why do you think she does that?

I am the woman with the chair. I have the chair because I have a bad back. When I was 12 years old, I was starting to sit down in school and another kid pulled my chair out from under me; I landed hard on my tailbone. That simple move left me with permanently damaged discs, aggravated by the curvature of the spine I already had. Would you like to know what life is like with a back like mine? I will tell you.

I am in some degree of pain every day, depending on what I do. I have a lot of trouble sitting. At home I mostly sit on the floor with a back pillow against the wall or couch. Standing for more than a few minutes—waiting in line at a grocery store—can give me a backache. Picking up a laundry

basket is hard on my back. Shoveling snow is terrible for my back. Even pushing my chair around can cause discomfort. Get the idea? Sitting in the classroom desks would leave me in continuous pain.

Movement, on the other hand, is good for my back. I can dance for hours, walk for miles, even cross country ski for short periods. Sometimes I pace back and forth in my classes because my back is tired of sitting.

I am making this lengthy public explanation because I am tired of people staring at me. If the people who stare know why I have the chair, maybe they'll stop staring. I expect a curious stare from someone who is seeing me for the first time, but a stare that makes me feel inhuman is hard to take.

One of my classmates brought her sister to class. The sister came into the room, saw me, and stopped in her tracks. She looked me up and down, then

stared at me for several minutes—even after she sat down—until I stared back at her. She seemed to be unaware I was a human being with feelings until I stared at her. Other people have pointed at me and made jokes to their friends, or just laughed. Even teachers have stared unreasonably. Don't these people have the intelligence to realize I push the chair around for a reason?

If you ask me about my chair, I will talk to you. If you ask me about a class or subject, I will talk to you. If you ask me about politics, I will talk to you. The point is, I am a person. I have feelings, opinions and hopes. I am going to school so that eventually I can get a good job. Sound familiar? The difference between me and most of you is a chair. Is your vision clear enough to see around it?

Paula Kramer

P.S. I am going to have quieter wheels put on the chair.

POINTER

PROGRAM

this week's highlight

April 7

UAB concerts is at it once again and is proud to present to the UWSP students a 17-year-old sensation from Austin, Texas. Charlie Sexton will be appearing in the U.C. Encore at 9 p.m. Come down and hear Sexton perform his current top 40 smash hit "Beat So Lonely," along with many other great songs. Tickets are now on sale at the U.S. Info. desk, Campus Records and Tapes, and Graham Lane Music.

April 8 & 9

"Tout Va Bien" — Directed by Jean Luc Godard and Jean Pierre Gorin. Starring Yves Montard and Jane Fonda.

The most accessible of Godard's political films, Godard and Gorin tell an acutely modern story of the breakdown in a relationship between a compromised TV director (Montard) and an American journalist (Fonda) who become radicalized through a factory strike she covers. Godard calls the film "a newsreel...we summed up the last two years in France in an hour and a half." Sponsored by University Film Society, it will be shown at 7 and 9:15 p.m. admission is \$1.50.

April 3

Come share in the hilarious antics of a group of high school students experiencing all the "gnarly" problems of puberty. RHA presents "Fast Times at Ridgemont High." Shown at 7 p.m. in Jeremiah's.

April 8-May 6

Thinking about quitting smoking? Stop smoking classes will be held on Tuesday nights from 7:30-8:30 in the U.C. South TV Lounge. Classes begin April 8 and continue through May 6. There is no charge, just bring your desire to quit. Sponsored by the Lifestyle Assistants.

April 3

Student Life presents Dr. Joe Benferado. Dr. Benferado will be talking on the subject of alcohol abuse and college students. This is an issue that concerns everyone so come learn more about it. The talk will be in rooms 125A&B of the UC from 10-11 a.m.

April 8

Taking charge of your health — a short course in self care is being co-sponsored by UAB Leisure time activities and Health Services. Tuesday's topic will

be "The activated patient — becoming a wise consumer." The session will be held from 6:30-8 p.m. in the Green Room of the U.C. Please register for the session at the Campus Activities Office.

SPORTS

April 6

It might not be the same as the beach — but Berg Gym will be just as exciting as the UWSP co-ed volleyball club battles it out from 1-4 p.m.

~Fine Arts~

April 6-27

The Edna Carlsen Gallery presents the Annual Juried UWSP student show. Browse through the finest works of UWSP's talented artists in the College of Fine Arts Building.

April 6

The annual UWSP Festival of the Arts. Enjoy an afternoon of art appreciation from 10 a.m.-5 p.m. in the College of Fine Arts Building.
