"21" drinking age

Task Force takes educational approach

by Debbie Kellom
Editor

An Alcohol Task Force at UWSP is trying to educate students about the new drinking laws, whether they be municipal ordinances or state statutes.

Stuart Whipple, alcohol educator at UWSP's Counseling services said, "The Alcohol Task Force wants to take a strong educational approach. If we approach the new law in an educational way, I think we can foster a cooperative relationship with students, rather than an adversarial one."

Whipple added that he feels education encourages people to take on the responsibilities of their freedoms and to think for themselves. "Then, of course it's up to them to decide what they're going to do."

Beer and other alcoholic beverages are available at the University Center and at many school functions. Whipple said the policies for handling alcohol in the centers will remain essentially the same since few problems currently exist there. "Primarily our problems generate from two areas: behind-door drinking and off-campus drinking and returning students to campus when they are intoxicated."

Designating 12 of the 14 residence halls as 'dry dorms' is a consideration, Whipple said.

"That would be when the age is 21 and there would be almost no students in the halls who would legally be able to drink." Completely banning alcohol from the halls is another consideration, although a decision to do that would have to be made by the Chancellor.

Residence hall alcohol policies will essentially remain the same for this year. Whipple said he anticipates more changes in the future as "21" becomes fully implemented under the grandfather clause.

Whipple acknowledged that the new drinking age is a complicated issue. "It's not a simple thing, such as thinking that '21' is going to be the solution to our problems. In fact, in some ways it may cause greater problems."

The Task Force is trying to approach the situation in a positive manner. Whipple feels we need to change our social attitudes about drinking before any real changes in drinking behavior can occur.

"Most people come to the university already having begun to consume alcohol. Habits and attitudes are strengthened here because there is a certain amount of freedom from supervision. I ask that students also take a look at the responsibilities of that freedom."

Bob Van Heule

Student dies in auto crash

by Debbie Kellom
Editor

Bob Van Heule died Thursday, August 14 from head injuries sustained when a refrigeration truck hit and overturned on the car he was driving.

The accident occurred in Van Heule's hometown of Wilmette, Illinois.

Van Heule remained in critical condition at Lutheran Hospital in Wilmette from August 6, the day of the accident, until his death.

Bob's heart was donated to a 51-year-old man with heart complications. He also gave his corneas, kidneys, pancreas and liver.

Bob was the youngest of three children and is survived by a sister, Holly and a brother Tom, Jr. He was the son of Tom and Nancy Van Heule. A senior majoring in Water Chemistry, Bob was 22 at the time of his death.

Funeral services were held at St. Francis Church in Wilmette. Over 200 people attended the funeral, including many friends from Stevens Point.

Funds from a memorial started for Van Heule will be used for a plaque, bench and trees which will be planted in a park near his home.

Contributions can be sent to his parents at 100 Woodbine Street, Wilmette, Illinois, 60091.

EDITOR'S DESK

Hints on letters to the editor

In the real world, it's not always easy to get letters printed in a newspaper. It takes the right mixture of pathos, politics and humor to get a letter in.

Here at the *Pointer*, we pride ourselves on being a stepping stone for journalists to eventually get professional jobs in a paying job market (ha ha). I figure that the same should hold true for student editorial page letter writers.

After all, the same people who are bubbling over with praise or complaining about a recent article, will probably continue to do so in the future. Unfortunately, the competition will be fierce. The *Pointer* has a few letter writers, and learning from and using their combined experience and form, anybody can write a negative letter to a newspaper.

For the sample letter, pretend I've written a column that's really insulted a viewpoint you consider personally and morally important.

Go on. Think Hard. Stretch your imagination.

I can't help you write an intelligent or exceptional letter objecting to an article, you have to reach within yourself to do that. However, if you are content to write an average letter of complaint, follow the example inserting the necessary words or catch phrases in the brackets, and then send the letter to the *Pointer*.

To the *Pointer*, (always address it to the paper since I have a responsibility to care about your opinion as much as you care about mine, and I might chuck your letter in the circular file).

I would like to comment on (name of writer)'s column (headline accompanying column.) Although I never read the *Pointer*, a copy of it was Crazy Glued to my face, and it just happened to be on the very page of (name of writer)'s article.

What if (name of writer) was (topic of article?)

I didn't want to read it, I was physically forced to by the (any group you despise like the CIA or the contras.)

I have to tell you, (name of writer) (occasionally refer to the writer as "Mr." or "Ms." so as to sound like a mother lecturing him), that all your views are (one of many words for "incorrect"). Why? Because I said so.

(In this paragraph, include a boring, elongated, graphic description of the writer's errors. Try to take the article way too seriously.)

What if (name of writer) was (topic of article?)

What if (cheap, below the belt shot at writer's mother.)

How about if (rude comments about writer's dog.) Would her views be the same? (Consider yourself clever and witty, chuckle under your breath).

I'd like to point out that (a personal experience, irrelevant to the most of general public, but something you rely on as a crutch and feel people should pity you for, even though others have had the same experience).

I'd like to talk to (name of writer) and educate her on the issue so she could write an intelligent article with my viewpoint.

In conclusion, I would suggest *Pointer* readers (a detrimental action to the paper you feel will be sufficient to quell opposition to your views) until they (do something cruel and sadistic which you would protest were it ever done to a rhesus monkey.)

Sincerely,
(your name)

For easy reference, clip this column out and tape it to your typewriter.

NEWS

New drinking age affects downtown bar scene

by Debbie Kellom
Editor

When Wisconsin legislators raised the drinking age from 19 to 21, the beer capital was sent into a state of shock. Among the

hardest hit were tavern owners. In Stevens Point, the campus bars will, without a doubt, suffer the most.

Many downtown tavern owners are justly concerned about their ability to turn a profit when the 21 drinking age goes into effect on September 1.

The grandfather clause, allowing those who are 19 before September to drink, will delay this income loss somewhat, and thus make the change-over more gradual. Because the grandfather clause gives the bars an extra year-and-a-half, most taverns will adjust slowly, changing their style to attract older customers to the downtown area.

James Mozuch, owner of Buffy's Lampoon, expects that there will be a drop in business after the grandfather clause runs out. But as of yet, he has planned no changes at the bar.

Mozuch said that he would have to "determine what percentage of the clientele is under 21, and

then go from there." Tom Meyer of Grin and Beer It agreed, saying, "You don't know how the law is going to affect you. You have to wait at least a year-and-a-half."

Bob Drenberg, owner of the Unique Bar, said that he is thankful for the grandfather clause. The Unique plans to put more emphasis on its food operation. At this point, Drenberg was unsure of the effect "21" would have on business.

"21" is going to have an impact on everyone's business—especially the bars with Happy Hours," said Pete Marsh, owner of the Big Moon Saloon.

Marsh said he expects a 10 to 20 percent drop in night business, but he anticipates no effect on the daytime income of the saloon. "I have a lot of regular customers from town. They're already old enough, so I won't have to change my style for them at all."

What's in the law . . .

The new 21 drinking rule contains the following provisions:

—The legal drinking age in Wisconsin is raised from 19 to 21 years of age, effective Sept. 1, 1986.

—A grandfather clause is in effect, allowing people who have turned 19 before Sept. 1 to continue drinking legally.

—Absolute sobriety is required by law for persons under the age of 18. No trace of alcohol can be found in their system. Minimum penalty is the loss of driver's license.

—Legal adults cannot sell or give alcohol to an underage person not accompanied by his or her parent, guardian or spouse who has attained legal drinking age. This does not apply to alcoholic beverages used exclusively as part of a religious service.

—Stiffer drunk driving penalties, resulting in larger fines and jail sentences, will be in effect.

—The establishment of a responsible drinker program, based on a 10-hour instruction course providing instruction in responsible alcohol use.

—Minors attempting to purchase alcohol with fake identification can be prosecuted. Sellers cannot be prosecuted if the purchaser is falsely represented.

—Persons applying for a Wisconsin identification card must provide their birth or baptismal certificate, or other documents required by the issuing officer.

"If the issuing officer is satisfied in circumstances where the applicant appears to be over the age of 60 that good reason exists for the inability of the applicant to submit a birth or baptismal certificate, the officer may accept other sufficient evidence of age."

Little action taken to remove toxic, hazardous material from UWSP.

by Dan Dietrich
Features Editor

Little action has been taken to dispose of the 5,680 pounds of toxic and hazardous material being stored on the UWSP campus since the State Building Commission approved \$501,100 to dispose of it.

The Commission approved the money on June 26 after a June 22 *Milwaukee Journal* article published findings submitted to UW system administrators in January 1986. The findings were part of a memo submitted by Michael Schmoldt, hazardous substances management officer for the UW system. Schmoldt was hired to coordinate means to dispose of the toxic waste at all UW campuses and centers.

According to Alan Kursevski of the UWSP Risk Management office, the only progress that has been made here is a memo he received which will appear in timetables to inform employees working in areas where the material is stored that they "are voluntarily exposing themselves to hazardous chemicals," Kursevski said Monday.

"None of this money (the \$501,100 approved by the Commission) has been seen on this campus," Kursevski said.

The money was approved to "begin collecting, storing and disposing of the waste" on the University of Wisconsin System campuses and two-year centers.

Kursevski said UWSP is classified as a "small generator" of toxic waste and that the majority of the chemicals on this campus are approximately five to six years old.

"About five to six years ago, the Environmental Protection Agency didn't have any big program to deal with it (toxic and hazardous material in state and federal buildings)," said Kursevski. "Then it began to require people to start storing and collecting it. It was at that time when we began to store hazardous waste material."

In a June 23 *Stevens Point Journal* article, Kursevski stated that the toxic waste at UWSP is stored in the chemistry stock room, and will continue to be stored there until system officials decide how to dispose of it.

Kursevski disagrees with the amount of toxic and hazardous waste cited in the *Milwaukee Journal*. (See adjacent story.)

Kursevski stated that a probable mode of disposal would initially involve analyzing the chemicals to a degree so that the contents could be determined.

The next step would be to package the material, and then ship it to a disposal spot, Kursevski said.

According to Kursevski, one possible place for disposal is the Madison incinerator which is specifically designed for such things.

Madison disposes of approximately 90 percent of their waste that way.

But currently, Madison will not allow UWSP to use it, said Kursevski. "I'm not sure why," he said, "because we offered to pay for the picking up of the material, the transportation; we even volunteered to pay for the operator's wages, but they say 'No way.'"

"An incinerator will take care of the waste, so long as it meets EPA regulations and the Department of Natural Resources' blessings, which the Madison one does," said Kursevski.

If UWSP cannot use the Madison incinerator, it will turn to a private contractor, "which of course will cost more money," said Kursevski.

Recounting the Events:

-October 1985: Michael Schmoldt, hired by the UW system to coordinate ways to dispose of the toxic waste at all UW campuses and centers calls for an inventory of all toxic and hazardous material in UW buildings.

-October 1985: Alan Kursevski of the UWSP Risk Management office submits a "35 pound report" on the location and amount of toxic and hazardous waste and chemicals at UWSP.

-January 1986: Schmoldt submits memo to system administrators; in it he presents his findings.

-January through June 22, 1986: apparently little action is taken on the memo by Schmoldt.

-June 22, 1986: The *Milwaukee Journal* publishes findings listed in the memo. Included are such things as:

1. More than 137 tons of toxic chemical waste is currently stored in the UW system; UWSP is reported to have 5,680 pounds.

2. The system's 26 campuses and two-year centers could each face state and federal fines of up to \$3 million per day.

3. The system's hazardous waste procedures are outdated. "Generally, the (UW system) is still using practices toward hazardous substances which, while acceptable 10 to 20 years ago, are below current standards established by law. Those obsolete practices endanger students, faculty and staff, as well as the general public. These practices are clear violations of federal and state regulations," the *Milwaukee Journal* reported the memo as stating.

4. Aggressive federal or state inspection of current storage practices could result in hundreds of violations in the system.

-June 26 1986: The State Building Commission approves \$501,100 to be used by UW to collect and dispose of the toxic and hazardous waste.

-August 1986: UWSP Risk Management office receives memo from Bill Hustedt, head of Payroll Risk Management

and Staff Benefits in Madison, notifying them to inform workers in areas where hazardous waste is stored that they are "voluntarily exposing them-

selves to hazardous chemicals."

-August 28: None of the approved money is available to UWSP for disposing of the toxic and hazardous material.

5,680 pounds of toxic and hazardous material is being stored at UWSP.

Kursevski questions UWSP figures

by Dan Dietrich
Features Editor

Al Kursevski of the UWSP Risk Management office stated that the amount of toxic, hazardous waste at UWSP is actually 600 rather than the 5,680 pound figure cited in a June 22 *Milwaukee Journal* article.

The numbers in the *Journal* article represent both waste and material that could be considered hazardous, but has not necessarily been declared as waste, said Kursevski.

Some of the stuff that they (the *Milwaukee Journal*) cited as being "waste" has not even been used yet. We have some of it in stock, said Kursevski.

He should know, Kursevski stated in a June 23 *Stevens Point Daily Journal* article, because he was the one who conducted the search for the waste last October.

He also authored the UWSP report to system officials, it was reported.

Nothing is a waste unless it has been declared as such, Kursevski said.

Michael Schmoldt, UW system hazardous substance management official stated that his (Schmoldt's) inspection showed a large volume of unused hazardous substances that should be identified as waste, the *Chippewa Herald-Telegram* reported.

Schmoldt's January memo to UW system administrators stated that Once we look into all the nooks and crannies, inside all the cabinets, and look atop all the shelves, we're going to find a lot more. He admitted that the problem could be ten times as big.

We did that, stated Kursevski referring to Schmoldt's comments about looking into every nook and cranny. Believe me, we accounted for every room. When we sent in the report, it weighted 35 pounds, stated Kursevski in the *Stevens Point Daily Journal* article.

Under current regulations, UWSP can store up to one ton of waste before having a 90 day limit within which to properly dispose of it, Kursevski said.

Even if (Schmoldt) was using the figures of all material, even if he was wrong, he got publicity, said Kursevski.

Asked whether that publicity was beneficial or not, Kursevski said that it was beneficial, because it can cause action.

The Environmental Protection Agency has announced that it will increase inspections of federal and state facilities for compliance with current hazardous waste laws.

Federal and state hazardous waste laws become stricter on September 22.

Stevens Point Police Chief relays annual message to students

by Joseph Fandre
Chief of Police

With the start of another school year and with many first-time students on campus, this communication is offered as a familiarization and reminder of City regulations and general information.

SHOPLIFTING/ RETAIL THEFT

The Shoplifting/Retail Theft law is strictly enforced in Stevens Point. Presently, convicted violators face a penalty of between \$130.00 and \$245.00 (depending on the value stolen) for the first offense.

Shoplifting is stealing; shoplifters take everybody's money. Convicted shoplifters retain a police and court record, which becomes a "Public Record".

INTOXICANTS

With Wisconsin joining most other states in becoming a "21 year old" state for the legal drinking age, there will be significant effects on the 18-20 year old age group, and also on those who have attained the legal drinking age and who might socialize with underage persons.

Underage violators face higher monetary and drivers license suspension/revocation penalties.

A relatively new traffic law prohibits any person under age 19 from operating a motor vehicle with even one drop of alcohol

in his/her blood, regardless of how the alcohol was consumed.

Adults face strict provisions which prohibit adults from contributing alcohol violations by "underage persons".

If alcohol is present, all persons involved in get-togethers (such as house parties) must be very careful not to violate alcohol laws.

Examples: possession/consumption of an alcoholic beverage by and underage person; adult intentionally encouraging/contributing to, knowingly permitting or failing to take action to prevent an alcohol violation by an underage person; "selling" an alcoholic beverage without a license (the definition of the word "sell" includes a scheme or transaction made for purposes of evading the law relating to the sale of alcohol beverages).

The City does issue licenses to bona fide organizations to sell beer at a particular picnic or similar gathering, however, restrictions apply.

Anyone interested should contact our Department or the City Clerk's office well in advance of the planned gathering.

Stevens Point has an ordinance prohibiting persons of any age from possessing or drinking from any open can, bottle, or other container of beer or liquor on any public

street, public way, sidewalk, boulevard, parkway, safety zone, alley, or public parking lot, or on or in any motor vehicle parked in any of these places. The penalty is a stiff \$130.00.

Possession is prohibited, open or unopened, at Goerke Park (where football and other sporting events are held) between August 31st and May 1st.

DISORDERLY CONDUCT

The City has an ordinance which is similar to Wisconsin State Law regarding disorderly conduct in general.

Persons are subject to arrest who, in a public or private place, engage in violent, abusive, indecent, profane, boisterous, unreasonably loud or otherwise disorderly conduct under circumstances in which such conduct tends to cause or become unreasonably loud or boisterous, and annoy neighbors in the area, particularly during nighttime hours.

Another City Ordinance subjects an occupant who permits a loud party or excessive noise to a \$61.00 citation.

When licensed rooming houses are involved, a report is forwarded to the City's Inspection Department, which can affect the particular landlord's rooming house license.

The following acts are prohibited under the City's "Disorderly Conduct with a Motor Vehicle"

ordinance (including motorcycles, snowmobiles, and mini-bikes) on public or private property: Unnecessary loudness, unnecessary or intentional spinning or squealing of tires, revving or backfiring the engine, and/or circumstances which annoy any person. The penalty is \$61.00.

PARKING

Parking is a constant source of irritation for motorists and residents alike.

Various City and University bodies have toiled with the problem for a number of years. On-street parking space is limited; demand exceeds supply. Much of it is prohibited as a safety factor for both motorists and pedestrians because of heavy use, narrow streets, and complaints from persons unable to get in and out of their driveways or unable to safely see around corners.

The City Police enforces all ON-STREET parking ordinances, including streets in the University area.

Parking tickets are divided into three classes, \$1.00, \$3.00, and \$7.00 tickets, depending on the violation. If not paid within seven days, they increase to \$4.00, \$6.00, and \$14.00 respectively. There are further increases after that. For persons who fail to pay or appear in court on tickets, the Police Department does proceed with further action, including Arrest Warrants and official notice to the Department of Transportation which results in suspension and denial of vehicle registration.

Tickets are issued for violations, such as expired meter, too close to driveway or crosswalk, too far from curb, overtime zoned parking, overnight parking, against traffic, no parking zone, no parking-stopping-standing zone, blocking driveway or crosswalk, on sidewalk, by fire hydrant, double-parked, parked on boulevard, violation of "handicapped parking only" zone, and others.

It should be especially noted that UWSP's parking regulation which allows temporary parking with parking lights or emergency flashers on applies to certain zones OFF-STREET on University property; it does not apply to ON-STREET parking. All "No Parking" zones are enforced.

On streets in the dormitory area, motorists may stop and park for a very short duration while actually engaged in loading or unloading provided the vehicle is attended by a licensed operator.

Overnight parking (2:00 A.M. to 6:00 A.M.) on streets is prohibited year-round to allow for sweeping, snow removal, identification of abandoned vehicles, and other reasons. State Law does not require posting overnight parking signs on every street in the City.

Permission for one night overnight parking may be given by the Police Department for certain valid reasons. Requests should be made in advance by phoning the Police Department. There are times when requests will be denied, such as during actual or anticipated snow storms. Permission is never granted to park overnight in a regular posted "No Parking" zone.

The Police Department commonly receives complaints regarding "trespass parking". This is when a vehicle is parked on business or other private property without permission from the property owner.

For example, a non-customer parks at a business parking lot which has a sign "Customer Parking Only". Such a violator faces a \$7.00 parking ticket, and often a towing bill too. The Housing Code (enforced by Housing Officials) prohibits parking between the street and buildings.

In general, parking must be in an established driveway or parking space. Violators face a citation with a \$32.25 penalty.

BICYCLES

All bicyclists must obey traffic regulations. Both motorists and bicyclists alike must respect each other's traffic rights and privileges.

All bicycles owned by Stevens Point residents must have Stevens Point registration. Non-residents may display registration from their home jurisdiction.

Students get rare chance at research

University News Service

In an unusual move, four psychology students from UWSP who have developed a personality adjustment test for children have been invited to give a presentation about their project during a national conference in Washington, D.C.

The student researchers are Derek Carlson, Stevens Point; Kelly Evans, Sheboygan; Jeffrey Kaphengst, Fond du Lac; and Tina Tullberg, Wittenburg. They will be accompanied by their faculty advisor, Douglas Henderson, and five other students at the annual meeting of the American Psychological Association's honorary society, Psi Chi.

The students submitted papers to the society, and all were chosen for presentation at the meeting. Henderson says it is "highly unusual" for undergraduate research results to be presented at the national rather than the regional level.

The students have been involved in the development of a personality adjustment test for children, which Henderson says is a modification of a testing

At the national meeting, the four will discuss the history, scoring, comparisons and international data they have obtained. One of the authors of the original adult test will critique and discuss the students' research.

Since that time, several UWSP students have contributed to the project, and student researchers have expanded the data to include results from groups of children in this country and abroad. Contacts have been made with students and psychologists overseas through UWSP's International Programs and faculty exchange programs.

The test has been administered to children in Great Britain and India, and psychologists in Poland, Italy and Australia are making arrangements for testing in their countries.

procedure, using incomplete sentences, originally designed for use with adults. It was first administered to local children through the Big Brother/Big Sisters program in 1982 when Henderson was president of its board of directors.

Fandre, cont.

Having a Stevens Point license is beneficial in that identifying data is on record here in Stevens Point, should the bicycle become separated from its owner.

University students are urged to register their bikes in Stevens Point. Licenses may be purchased at the Police Department, City Hall, 1515 Strongs Avenue, 7:00 A.M. to 5:00 P.M. Monday through Friday. The

fee is \$3.00 for a registration sticker which remains valid in Stevens Point for as long as the

bicycle's ownership does not change. Bike Licenses no longer automatically expire every two years.

Citations for violations of bicycle regulations are \$26.50 or \$38.00, depending on the violation. Citations are issued for running stop signs and red lights, wrong way on one-way street, no light on bike at night, and other traffic violations.

HITCHHIKING

Hitchhiking is illegal when a person is on the roadway. Hitchhiking at any place or time is discouraged for several reasons. In the past, we have had incidents of hitchhikers who were assaulted, robbed, or raped.

The Police Department strives to serve you, the public, in a professional manner, reasonably, using good sound judgment and common sense.

Pointer Page 7

Should you become the victim of a crime, whether it's theft, assault, vandalism, or other, please report it to the proper

authorities. While we are unable to solve every crime report, perhaps we can help prevent other persons from becoming future victims. Perpetrators may become braver in the future because of the silence of previous victims.

If we can be of any assistance to you, please feel free to contact us. We want you to feel at home, away from home.

At times, we receive requests from students on many matters, such as, supplying data, giving presentations, etc. We are almost always willing to assist, but we do ask that we be given sufficient lead time to allow for aligning duty assignments so we are able to respond in a meaningful way, considering our other duty assignments.

Major construction changes in store for campus

University News Service

While officials at UWSP await the start of construction of a \$2.1 million-paper science facility, workmen are paving two parking lots and preparing to replace the flooring in the Quandt Gym.

Mary Williams, coordinator of facilities planning for UWSP, said bidding for the addition to the Science Hall to house paper science programs "should begin very soon." Construction is expected to get underway in the fall and be completed within a year.

The facility will be on two floors covering about 14,000 square feet and consist of paper testing, paper defect, simulation, paper machine, paper process, pilot and waste management laboratories plus a process control station, mechanical supports spaces, handicapped access entry with an elevator and a display area.

More than half a million dollars of the state's appropriation to the project will be used for laboratory and movable equipment. In addition, another million dollars worth of new and existing equipment will be installed as the result of direct financial support to UWSP from paper producing companies.

Meanwhile, more than \$100,000 is being expended to pave two previously gravel-covered parking lots with by-commuting students and campus visitors.

Visitors' Lot X, which has a toll gate and is bounded by Reserve, Stanley and Fremont

Streets and Fourth Avenue, has 190 stalls. Lot T, beside Pray-Sims Residence Hall off the corner of Reserve Street and Fourth Avenue, has been expanded by several stalls to accommodate 150 vehicles. The entrance to that facility has been moved to Illinois Avenue.

The paving is being done by American Asphalt of Wausau. The costs will be paid out of a fund generated by revenues from parking fees. A Milwaukee firm was the low bidder for the Connor maple floor that will be installed in Quandt Gym.

Mrs. Williams said the contract has not been finalized; however, the apparent winner of the job submitted a low bid that was about \$45,000 under the budget of \$187,000.

The present floor of synthetic composition was considered hazardous for basketball players because it "is no longer resilient, lacks proper slide, is separating at the seams and bubbling. It's basically worn out," Mrs. Williams reported. Installation of the new floor will be done sometime between now and Oct. 1.

Though there appears to be considerable savings on the gymnasium project, the extra money cannot be used to offset larger than expected bids on renovations in the Communication Arts Building. The state has approved \$243,000 for plumbing, heating, ventilating, air condi-

tioning and electrical projects plus sound treatment and various finishing touches which were not done about a decade ago when the building was converted from the Campus Laboratory School. However, the bids came in about 50 percent above budget. Mrs. Williams said a study will be made in conjunction with the KLLM Architects of Waupaca to find ways to reduce the project so a new round of bidding will result in offers to do the work within budget constraints.

Three projects have been approved and are in design. They are the landscaping and parking lot development in the area extending from the back of Old Main Building to the University Center; ventilating in the Science Building; and ventilating and lighting in the Fine Arts Center. About \$200,000, part of which will be defrayed by revenues from the sale of parking permits, is budgeted for the parking lot and pedestrian mall behind Old Main. The work will begin next May.

There will be 92 stalls in the parking section, about 20 fewer than are currently in the lot. However, there will be new green areas with shrubs, flowers, trees and grassy plots. Sidewalks will connect Old Main, the University Center, Park Student Services Building and Communication Arts Center; bike racks will be installed; picnic tables and benches will be added. Landfill will be brought in to create variations in levels.

Mrs. Williams said plans are being made to add a few new stalls in nearby lots to compensate for the loss of parking spaces that will result from the landscaping.

The ventilating project in the Science Hall carries a \$189,000 budget, to be done primarily in the chemistry department.

The Fine Arts Center lighting and ventilating will be done in the art department.

TV courses offered to statewide audiences this fall

University News Service

Two television courses in education and political science, a radio course about school law and a teleconference class in child development will be offered to statewide audiences this fall by the University of Wisconsin-Stevens Point.

Education 570, Teaching Students with Special Needs, a three-credit, split-level class, will be taught by Thomas Gaukel, a UWSP faculty member,

who will augment television lectures by Gilbert Schiffman of Johns Hopkins University. It will be broadcast by the Wisconsin Public Television Networks and the Educational Teleconferencing Network (ETN).

The course is designed to assist educators in identifying and assessing the needs of secondary-level students who have learning problems. The format will include a variety of instructional techniques and strategies.

Students may view the television segments on Thursdays at 3:30 p.m. and participate in the teleconferences at their nearest ETN site (usually county courthouses) on Mondays from 5:30 to 6:50 p.m.

Political Science 490/690, Congress: We the People, a three-credit split-level course, also will be offered over public television and ETN. The television programs will be hosted by former NBC News correspondent

Edwin Newman and congressional scholar Norman Ornstein. The 13 one-hour segments will range from "A Freshman Comes to Washington" to an examination of congressional ethics and power.

Among the themes to be addressed are congressional elections, committees, parties, leaderships, budgeting, law-making and lobbying.

Home Economics 160, Special Topics in Child Development Associate Competencies, will be offered in three one-credit modules over the ETN system. Coordinator of the series is Kathleen T. Buss of the UWSP home economics faculty.

Module I, Developing a Safe Environment, will be taught by Robert Bowen, professor of health and physical education, on four Wednesdays from 4 to 6:20 p.m.

Module II, Developing a Healthy Environment, will be led by Diane Libby, assistant professor of home economics, on four Wednesdays from 5:30 to 7:50 p.m.

The UWSP instructor is Edward J. Miller, professor of political science and co-director of the Center for the Small City. Television viewings will be from 9 to 10 a.m. on Sundays, and ETN times are from 5:30 to 6:50 p.m. on Mondays.

Education 752, School Law, a three-credit graduate class, will be taught by Arthur Fritschel, retired dean of UWSP's College of Professional Studies, long-time school board member and Department of Public Instruction consultant.

The Wisconsin Public Radio Network programs will feature short lectures by the instructor, followed by a "call-in" period from the students. Fritschel will emphasize practical applications of legal principles, including landmark and recent cases which have established the current state of the art in School Law. The radio programs will be broadcast from 9 to 10 p.m. on Mondays and Wednesdays.

Participants may register for any or all of the credit modules. The classes are designed for early childhood, Head Start and day care personnel who desire training in the CDA competency areas for both center and home-based programs.

Further information and pre-registration for all the media courses are available through the Office of Continuing Education and Outreach, 103 Old Main, UWSP. The fees are \$47.50 per undergraduate credit and \$243 for three graduate credits.

Bulimia: Sufferers often unwilling to talk may be reason for differing statistics

A new study suggests bulimia—the disorder in which victims go on eating binges and then purge themselves of what they've eaten—may not be as common on campus as first thought. But a book released in late May by a recent Southern California graduate contends that bulimia victims don't talk

about their affliction enough to make it seem common.

While virtually all campus health officials agree more students are complaining about bulimia symptoms, University of Michigan professor Adam Drewnowski thinks everyone—doctors and students alike—are too quick to call odd eating hab-

its bulimia. "Some studies ask if you have ever had a binge," Drewnowski says, adding that many people overeat from time to time. But "that's not bulimia," he points out.

In his survey of 1,700 college freshmen, Drewnowski defined bulimia as having private food binges at least once a week. By

his criteria, Drewnowski estimates that four-to-six percent of the women in college suffer with the disorder.

Students, however, may not be willing to tell the truth when telling researchers about their eating habits, suggests Lisa Messinger, whose new book, *Biting the Hand That Feeds Me*, chronicles her seven-year fight through high school and college to overcome her own binge-and-purge eating problems. "So many people won't talk about bulimia," Messinger says.

Previous scientific reports showed the problem was epidemic on campus, whether or

would relax her for an hour or so before she was overwhelmed by seizures of guilt. Messinger, who graduated from the University of Southern California in 1984, asserts bizarre food habits are only a symptom of a much deeper problem. Messinger discovered her feelings of inadequacy in trying to please her father and boyfriends while seeing Francine Snyder, a noted psychologist in treating bulimic patients.

A bulimia victim often has a tremendous drive for approval by parents and peers, punctuated by frequent doubts about whether he or she is doing

"Bulimia victims tend to be high achievers who are always striving to do better."

—Lisa Messinger

not students discussed it. The Michael Reese Med Center in Chicago, for example, estimated that 15 to 20 percent of the women in college suffered from the disorder in 1981.

Iowa State and Ohio State researchers have estimated bulimia afflicts up to 30 percent of their female populations.

Victims often consume up to 20,000 calories in a single sitting, and then endure some combination of starving, exercising, and vomiting to purge themselves of the calories and their guilt.

Messinger's book, essentially her high school and college diary, describes how food binges

enough to please them, Messinger explains. "I had the perception people would not love me if I did not get straight As and look beautiful," she says. Bulimia victims tend to be high achievers who are always striving to do better.

Additionally, Messinger maintains society puts excessive pressures on women to be attractive, especially during the last decade's exercise craze.

While bulimia primarily strikes young women in their teens and early 20s, men are becoming increasingly vulnerable because of their rising concern about appearance, Messinger observes.

Information Center to increase check cashing charge

84-85 loss nearly \$5,000

The Campus Information Center has increased the check cashing service charge to 25 cents effective July 1, 1986. The ten cent increase was decided on as a result of a profit and loss analysis conducted over the 1984-85 fiscal year. The analysis showed an annual deficit of almost \$5,000 for the year for check cashing alone. The check cashing service accounts for about 30 percent of the organi-

zation's activities.

Bob Busch, director of the University Centers, comments that although the increase is unfortunate, it is necessary to cover operation costs. He also suggested alternatives for students concerned with the amount of service charges incurred in having a checking account, one of them being a TYME card.

A national trend?

Non-traditional students go back to school

by Judy Rogala
Staff Reporter

The 2000 non-traditional students at UWSP are part of a national trend. In fact, by 1990 experts predict that 50 percent of the college population will consist of students who have experienced a break in their education or are beginning an education and are over 25 years of age.

Martha St. Germaine, Coordinator of the Non-traditional Student Services Office, has seen the population of non-traditional students nearly double in the three years since she came to UWSP. She said, "It used to be that people stayed in the same job for their entire lifetime. Now it is common to have three or four career changes. There are three main reasons why adults choose to go back to school. First is because of a career change. Adults are dissatisfied with their present position and are looking for something better. Second, they are hoping to climb further up the ladder in their present field. And others go back to school simply for the love of learning."

A good example of the love of learning is Bill Harford who at the age of 62 is working toward his degree in Political Science and Public Administration. Harford took an early retirement from his job as a stockbroker and moved to Stevens Point to complete a degree which he started 44 years earlier.

"I never did get my degree when I was younger because I goofed around and played around too much," Harford said. "My biggest reason for coming back to school was for the personal satisfaction of getting a degree. I've really enjoyed it."

"The most common problem that non-trad students face is fear. They are afraid they can't do it. They fear that traditional students and instructors will treat them differently. They fear math," Jean Gerhard, a peer advisor, said. "But they usually become adjusted to campus life within one semester and they find they like it."

The Non-traditional Student Services Office offers assistance with any question or concern a non-traditional student may have. St. Germaine calls the office a "referral resource".

"Our office is a good place to start. If we can't help you, we'll try to find someone who can," said St. Germaine. With the help of five peer advisors who are themselves non-traditional students, The Non-traditional Student Services Office provides information on placement exams, entrance requirements, and answers to many other questions.

Non-traditional students with questions are encouraged to contact the Non-traditional Student Services Office by calling 346-2045 or visiting their office at 206 Student Services Center.

Balancing academics with extracurricular activities

In spite of the importance of academics, learning to balance academics with extracurricular activities is not a skill taught at most universities. Colorado State University is trying to teach students how to find that balance by carrying their education beyond the classroom and into the residence halls.

The CSU Office of Housing and Residence Education has created the Academic Committee for Excellence (ACE) in an effort to help students living in the residence halls perform better in class. According to Hedy

reading, note taking, and study and test-taking skills.

"The recently published and distributed Grade Booster, an academic resource booklet, contains study tips and a short narrative about each agency on campus that offers academic help," Berman says. "And another program, the Faculty Fellows Program, is designed to increase faculty involvement with students outside the classroom setting through such activities as dining with residents, attending hall meetings, social programs or other hall events, and participating in recognition ceremonies or informal small group activities."

So far, the program is considered a success: "Colorado State has recognized the benefits of balancing academics and residence hall living," Says Berman, "and ACE is working for the students to help them gain more from their college experience."

Berman, a CSU administrator, ACE coordinates programs with staff members in each hall to promote quiet hours, study groups, test files, class rosters and honorary and recognition clubs. ACE also offers workshops in the halls on such topics as time management, textbook

University accepts award for improving campus communications

by Jacquie Riggles
 Staff Reporter

John Sundstrom, Director of General Services, accepted an award of \$1000 on behalf of UWSP based on the success in reducing costs and at the same time improving telephone and data communications throughout the campus.

This citation was awarded at the National Association of College and University Business Officers (NACUBO) Conference

held in Seattle in mid-July. This project ranked fifth out of 55 monetary and 11 honorable mentions.

In 1985 UWSP installed an advanced, low-cost, voice and data communications system, using a voice and data needs integrations technique and cost/benefit analysis to find a least-cost solution. The system resulted in annual savings for the institution of over \$367,200. Of this, about \$120,000 is actual cash savings available for other projects. The remainder is

"cost avoidance."

Both students and faculty benefit from this new network system. Students in the residence halls no longer pay the nearly \$20.00/month equipment charge formerly paid for a phone in their room since introduction of the AT&T phone system made residence hall wing phones obsolete. Now there are both phone and data communication capabilities in each of the 1,350 residence hall rooms plus all the campus offices.

On an experimental basis, housing has been installing the \$500 dollar ISN card needed to connect personal computers to the network from dorm rooms free. This allows communications with campus computers (See campus map showing computers and the network.) Faculty no longer share phone lines

and enjoy easier dialing plus other telephone features. More significantly, faculty and staff have access to the computer network.

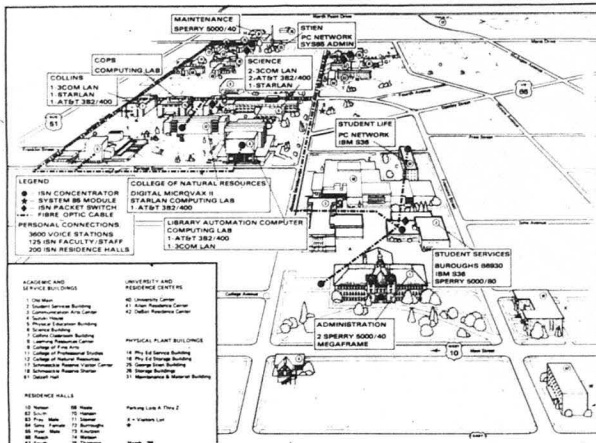

The system consists of at least 3,200 voice stations and 250 data links. Approximately 30 new stations are added to the

network per month. If you are interested in knowing more about the data system, contact Stephen Patrick, Administrative Services, at Extension 2957. Kathy Wachowiak of General Services implemented and now handles voice operations.

The money from the award will be used to send an individual to a seminar of communications. Sundstrom also published an article in the April issue of *Telephone Engineering and Management* titled "Educators Learn How To Pick System." The article describes the approach used to implement the voice and data system used at UWSP.

Sundstrom said UWSP was faced with an expensive, obsolete phone system. After 3 years of research, he and his colleagues used a request for proposal rather than the usual

bid process to purchase the AT&T system. The system was purchased by the university for \$1.3 million dollars.

Comparable worth encounters stumbling block:

Women must be persuaded first

Comparable worth—the concept that people in equally demanding jobs should receive equivalent wages—has been a tough sell.

Advocates argue that wages in occupations dominated by women have been kept artificially low because, historically, women's labor has been undervalued.

But their efforts to gain equity for women could founder, suggests a recent report, unless women themselves begin believing they are worth as much as men.

Psychologist Brenda Major and research associate Blythe Forcey recruited 51 undergraduate men and women for brief part-time work, telling them that each would be assigned to one of three equally demanding jobs: one traditionally performed by men, one traditionally dominated by women or one held equally often by both sexes. Their pay, the students were told, would depend on which job they got and how well they did it.

In fact, all the students

worked at the same task, using information such as Scholastic Aptitude Test scores, high school grades and activities to predict other students' success in college. After completing the work the students were asked how well they did and how much pay they expected.

Regardless of which job they were supposedly assigned to, women thought they should have earned only \$1.93 for the 15 minutes of work, compared with an average of \$2.31 expected by men. And prior to com-

pleting the work, those students assigned the "female" job expected less pay than those working the "male" job (\$2.36 versus \$2.70). Pay expectations of those assigned to the "sex-neutral" job fell in between.

When the students were given the opportunity to compare their earnings with other groups, men usually wanted to know the pay of other men doing the same work, and women generally wanted to know how much other women made. Using other women as their

reference point probably keeps women satisfied with lower wages, Major and Forcey say. "This occurs because women are generally paid less than those in male-dominated jobs."

Apparently, the students were well aware of this discrepancy: Not only did those assigned the "female" job expect less pay from the start, they also were happier with what they received.

The study appeared in the *Journal of Experimental Social Psychology* (Vol.21, No.4).

Foreign students: There's more than just an exchange of people and cash

College Press Service

In the 1984-85 academic year, 342,113 foreign students enrolled at more than 2,500 U.S. colleges and universities.

More foreign students are enrolling in American schools than ever before. Their numbers increased 52 percent between 1976 and 1983.

Today, some departments, especially graduate departments in engineering and science, depend on foreign students almost for their very existence. The largest proportion (46%) are in bachelor's degree programs.

International students come to the U.S. from all over the world, but generally speaking, what they seek is clear. An overwhelming proportion study engineering, business and management, or mathematics and computer sciences. They want

knowledge, especially technical knowledge.

The U. of Wisconsin's Institute of Environmental Studies recently signed an exchange agreement with two universities in the People's Republic of China. The IES director, Arthur

institutions. They are hungry to have their faculty updated on recent technological developments and scientific studies."

The effect of these students on campus isn't limited to numbers (they are, after all, only about 3% of the American stu-

Sacks, says: "They (the Chinese) were shut off from the West and from scientific developments for a long time, so they are hungry for information. They are hungry to educate their students at the best

dent body). They come from more than 180 countries, and the problems and possibilities they present are multiplied by this cultural diversity.

Foreign students aren't all the same. Elinor Barber, editor of *Foreign Student Flows*, says "Foreign students present American educators with a rather substantial challenge, and one which does not confront institutions in a uniform fashion."

Gary Althen, a foreign student adviser at Iowa State U., says using the term "foreign student" for students from other countries masks important distinctions—country of origin, age, sponsorship, field of study, personal goals, and so on. Because all these distinctions are important, understanding and serving the needs of foreign students—what they want from us—is a complex matter.

But what do we want from them? We do want something, after all. Our times are characterized by an increasingly global economic interdependence, by diminishing resources and environmental quality, and by heated political differences. At some point, the problems of setting policy and creating programming to deal with cultural diversity on campus must be balanced against what American schools seek from their foreign visitors.

Most educators agree that what we want, whether we always recognize it or not, is the opportunity to foster the rich international climate and perspective necessary for true higher education in this interdependent world.

Hugh Jenkins, of the National Association for Foreign Students: "Today, I think you will find a general agreement that the international element in education can no longer be treated as a supplement. Providing an internationally oriented education is now seen as

essential if we are to prepare our students adequately for the world of the 1990s."

Ivan Putnam, Jr., Director of the Central Office of International Programs at the State U. of New York, says, "It is the task of education the world over to provide the basic knowledge of peoples, their cultures and their inter-relationships, if mankind is to survive. While this may seem an overstatement, many of the world's leaders and thinkers are convinced that it is a basic reality, and the main reason for giving international education very high priority."

UW System offers program in China

A 20-day program in China is being offered to state residents Dec. 26 through Jan. 14 by the University of Wisconsin System. Registration is available through several UW campuses, including UWSP.

The UWSP coordinator is Jack Oster, member of the political science faculty.

Participants will be divided into groups of about 30 and will depart from Chicago, Milwaukee or Minneapolis. The itinerary will include visits to Beijing, Xian, Chengdu, Guilin, Guangzhou and Hong Kong. All applicants will be required to attend orientation sessions and register for one or two credits through their nearest campus.

The program's aim is to provide students and members of the Wisconsin public a firsthand view of the People's Republic of China—its history, culture and society. Participants will have opportunities to sightsee and visit communes, factories, clinics, schools, museums and housing projects as well as to meet Chinese officials and students.

The cost will be about \$2,825, plus course registration fees. Pre-registration is requested as soon as possible through UWSP's Office of Continuing Education and Outreach, 103 Old Main.

ONE-LINERS

Are Yuppies a dying breed? According to 80 percent of 400 students randomly surveyed by the Northwestern U. student newspaper, enjoying one's work is more important than making money. "Students are moving away from materialism," according to Bernie Beck, an NU sociology professor.

Looking back: A 1966 study by the Educational Testing Service of Princeton, found that college students were almost as willing to demonstrate over campus issues as over civil rights. The Vietnam War barely beat out dress regulations as one of the top three causes of student demonstrations.

If the draft were reinstated, male college students would be allowed to complete their current semester before induction into the armed forces, according to a Selective Service official. "Unlike the draft during the Vietnam War, there would be no student deferments, only postponements."

The "Me Generation" may be getting a bum rap. A report by The Carnegie Foundation for the Advancement of Teaching says the recent shift from liberal arts to more career-related majors is probably not a product of selfishness or materialism, but a recognition of changes in the job market and a reaction to a nearly 300 percent rise in the average student debt between 1975 and 1984.

In class

TWO SEX-RELATIONSHIP COURSES have been dropped by Cerritos College after a college board member questioned their appropriateness. The courses are offered at several other area colleges.

"PRINCIPLES AND PRACTICE OF PAGAN MAGICK": If the name of the course doesn't pique your curiosity, the instructor will -- he's a real-live witch. It may be a little offbeat, but Pomona College undergraduates and alumni alike are finding the class inventive and stimulating. "Witches get a lot of bad press," says the instructor.

IF THAT ISN'T YOUR CUP OF TEA, maybe you'd prefer the Kansas State U. entomology course in which the professor deep-fries caterpillars in egg batter and pancake mix for his students. He also bakes a batch of beetle-laced cookies and serves them to his classes twice a year. "The intent is to show people that they can eat insects and it won't hurt them," he says.

IT'S HARD TO SEE THE BLACKBOARD FROM HERE: Ohio State U. is offering foreign language classes to anyone in the country -- over the telephone. For \$200, OSU provides materials and tapes to students studying at their own pace, and calling a toll-free number once a week to practice with their professor. This summer only Russian and Polish are offered.

LETTERS

Variations on a Theme

To the Editor:

The Young Republicans are pleased to announce their independent study courses for the fall. The six options are listed below:

YR 01: Constructive Genocide: Big Business as Usual. Join a study group to discover the White House strategy to end apartheid in South Africa. Help name another "leader" for the African National Congress and attend two rallies supporting minority government rule in Africa and South America. 3 crs.

YR 02: Permanent Vacations from Reagan's Coven. Be with students who know the intrigue and pop of Ron's round house! This course will examine those Reagan appointees who, by some small foul, left their assignments early. 1 cr.

YR 03: Star Zone. George Lucas facilitates a real life Pentagon contract in political animation for interested students in Food Science. Help design and prototype a video game which will shoot down Russian ships if they fumble their payload on the one yard line! 2 crs.

YR 04: Dead Lakes, Higher Towers, and Other Elephant Stink. Acid rain research is menacing our higher priority work in mother raping in Nicaragua and Indian genocide in the west. Write another year's worth of speeches for the President as his environmental aid. 4 crs.

YR 05: Drunk Driving in Washington, D.C. Senator Kasten leads the first twelve to sign-up down to the square and then on a re-creation of his recent campaign stunt. Bob says that all ages are welcome. 1/2 cr.

YR 06: Bush-Marcos in 1988. With George's C.I.A. training and the Marcos bank roll, this promises to set the country ablaze! Work with the right people on the right ticket. Great for Advertising students! \$1000.00.

Signed, W. Paul

Over the airwaves:

Wisconsin Public Radio opens new bureau here

News Release

Managers of the Wisconsin Public Radio Network were in Stevens Point the first week of August to announce the opening of a new bureau which will originate local news and public affairs programming.

Erin Davison, most recently a reporter and news show anchor person for WSAW-TV, Channel 7 in Wausau, was introduced as the new bureau chief and local announcer/reporter.

The bureau is headquartered at UWSP in the Communication Arts Building on Reserve Street. Ms. Davison will have a studio within the UWSP student radio station.

She said she will be utilizing student interns from the university in gathering news from throughout Central Wisconsin.

Wisconsin Public Radio is, according to Associate Director Jack Mitchell, in the process of restructuring its operations and providing a new local news component with studios in Menomonie, Stevens Point, Appleton, Green Bay as well as in its Madison headquarters.

Announcers in each of those places will be hosting "Morning Edition" programs, adding their own segments to reports and features produced in Washington, D.C., by National Public Radio and in Madison by Wisconsin Public Radio.

Ms. Davison will be heard about 15 minutes each hour during "Morning Editions" on WLBL 93-AM which is a transmitting outlet in Auberndale as well as WHRM 90.9-FM transmitting from Wausau.

A change in the network's programming will result in separate programming on those stations, with WLBL focusing primarily on talk shows and

News Service Photo

Erin Davison is the new bureau chief of the Wisconsin Public Radio's Stevens Point bureau.

WHRM specializing in music. "Morning Edition" with Ms. Davison will be heard on WLBL from 5:30 a.m. to 9 a.m. and on WHRM from 5:30 a.m. to 7:40 a.m.

The new changes are currently being put into effect; however, Ms. Davison is not scheduled to open the bureau until September 2.

WHRM and WLBL reach into about 30 counties throughout central and northern Wisconsin.

Major population centers served are Wisconsin Rapids, Marshfield, Wausau, Stevens Point, Rhinelander and Antigo.

Ms. Davison, a native of Beloit, is a 1981 graduate of UWSP in English and Communication. She had been a radio reporter/announcer for WSPY-TV, a commercial station in Stevens Point for a year and one-half before joining the staff of the television station in Wausau in 1984.

by Chris Kelley
WWSP Program Director

It's a changing of the guard at WWSP-90 FM, UWSP's student-operated radio station.

A power increase from 300 to 3610 watts last year was the first in a series of changes to take place.

This year, 90 FM is sporting an entirely new management and staff, and a polished new sound may be in store for 90 FM listeners this year. Included on this year's agenda are various programming changes, the entrance of Wisconsin Public Radio and a computer network to be shared between 90 FM and the Pointer which will make cataloging and retrieving albums much easier.

WWSP-90 FM is staffed and managed by UWSP students, under the supervision of faculty advisor James Haney. Students working at 90 FM receive hands-on experience in broadcast management, programming, news reporting and editing, announcing, production, and public relations.

The hundreds of students who have worked at 90 FM have continued in many different directions. While some have gone into careers other than radio, many have become quite successful in broadcasting. Gary Westcott, former 90 FM news director, is now news director at WSPY radio in Stevens Point. Chris Shebel, a former 90 FM announcer, now works at WLS in Chicago. A good number of other 90 FM alumni have gone to work in such major markets as Los Angeles, Minneapolis, Milwaukee and Phoenix.

Now at 3610 watts, WWSP offers alternative programming to all of Central Wisconsin. Block-style programming, similar to television programming, allows

the listener to tune in at a specific time each day to hear ones favorite show. Using block programming, 90 hopes to provide its listeners with a wide variety of music, news, public affairs and special shows. Listeners can hear new rock releases on both major and independent record labels, traditional jazz and fusion, blues, funk, hard core, comedy, reggae, and heavy metal as well as several special public affairs programs.

During the summer, 90 FM has made some minor, yet significant changes that new program director, Chris Kelley hopes will make 90 more appealing to college students. One of these changes is the division of the afternoon format.

Afternoons will now feature new music on strictly independent record labels from noon until 3 p.m. The show is called "Sounds from the Underground," and will highlight artists on record labels such as Blue Collar Records, Alternative Tentacles and Homestead Records. From 3 to 6 p.m., listeners can hear "What's New?" which includes new releases on such major record labels as MCA, CBS and RCA. Kelley hopes this separation will add a greater sense of continuity to the afternoon format.

Some new programs have made their debuts over the summer and more are scheduled to start with the beginning of school. "For the Record," hosted by 90 FM's music director, Mark Polzin, is a countdown of the top 50 albums on college radio airplay charts nationwide as surveyed by the College Music Journal.

Newcomers to 90 FM's program guide this year include "Comedy Corner," a half hour

Guess what else is bad for you

College Press Service

CPS—With Nautilus machines in the school gym, salad bars in the cafeteria and smoke-free areas in every student lounge, it might seem college life has never been healthier.

But one enterprising professor has found a new health hazard on campus.

It's that book-laden backpack you've been hefting over one shoulder all these years, says Ron Sendre, a Central Michigan University professor of sports medicine.

"Knock-down shoulder" is only one of the maladies Sendre ascribes to the overuse and misuse of the popular book packs seen on every American campus.

How can the innocent backpack, symbol of outdoor lifestyles, wreak such devastation on unsuspecting college students?

"A heavy backpack changes your center of gravity," says Sendre. "Your abdominal area is thrust forward, and your shoulders are brought posterior." Then a kid will carry that backpack for six, eight minutes across campus to his next class. "In other words, he's got lousy posture while carrying a mega-load of textbooks, and according to Sendre, "there's bound to be lots of repercussions."

Besides knock-down shoulder—a drooping shoulder caused by

constantly wearing the pack slung over one shoulder—backpacks can cause swayback, shoulder tension, headaches, even nerve damage.

There is a simple remedy. "Lighten the load is the best advice I can give," the professor says. But if one's credit load demands carting 30 pounds of Organic Chemistry texts, the Unabridged Works of Shakespeare and a jumbo box of Crayolas for art class, Sendre suggests wearing the pack the way it was designed to be worn.

"I've never seen a backpack with just one strap," he says. Yet that's the way most students wear them.

"Rather than taking the time to throw both straps on, they just throw on one."

But even a properly balanced pack can be a problem for the out-of-shape student. So Sendre recommends a complete workout program with weight machines, adding that exercises for flexibility are equally important.

But if all this seems like more health consciousness than one can handle, another study offers a rationale for at least one "bad habit."

"Cigarette smoking may enhance students' ability to study," a group of British scientists says. The researchers found that nicotine, either from cigarettes or pills, increased concentration by eight percent and kept minds sharp for up to a half hour.

Who are today's top heroes and heroines?

College Press Service

What do Mother Teresa and Marilyn Monroe have in common? Both were chosen by students at the University of Wisconsin-Madison as their heroines.

But neither came close to winning the number-one hero spot, which went to mom and dad.

Psychologist Frank Farley asked 340 college students to rank their top five heroes and heroines and then compiled the most popular choices. The overwhelming winners were the students' parents.

Moms got six times as many first-place votes as did any other heroine, and dads got twice as many as any other

hero.

Some of the other top choices for hero were Jesus Christ, John F. Kennedy, Martin Luther King Jr. and Clint Eastwood.

Mother Teresa was a top contender for heroine, along with Jane Fonda, Amelia Earhart, Marilyn Monroe and Madonna.

The fact that so many people consider their parents heroes, Farley says, suggests that the family is in better shape than many people think.

Women were more likely than men were to name their parents as their heroes. In addition, women's choices for heroines were much more likely to include feminists such as Jane Fonda, Susan B. Anthony and Geraldine Ferraro, while men's choices tended to include glamour figures such as Christie Brinkley,

Madonna and Marilyn Monroe.

When Farley asked elementary school children who their heroes and heroines were, mom and dad again came out number one. But the children's other choices revealed a somewhat less sophisticated world view than that of their college counterparts.

Superman, Supergirl and Hulk Hogan were other top contenders.

Farley believes that heroes are not necessarily synonymous with role models. "A hero is someone who does something to make the world better, it's not necessarily someone you aspire to be."

Who are Farley's personal heroes? His parents, of course.

Farley is at the University of Wisconsin-Madison.

90FM

Cont. from p. 23

of uninterrupted comedy from 11:30 until noon every Monday through Friday, and "Sonic Assault," head-banging heavy metal from both well-known and unknown heavy metal artists.

WWSP also sponsors many events each year. By far the biggest is the annual trivia contest. Each year trivia enthusiasts from across the country come to Stevens Point to participate in the 54-hour marathon contest. The contest began in 1968 as a fundraiser for the station, then called WSUS. 13

teams participated in 1968.

17 years later, the contest included more than 300 teams, and the United States Trivia Association has recognized the event as the "World's Largest Trivia Contest."

Trivia '87 will take place April 4, 5 and 6.

Other on-air activities include Jazzfest, live concerts, and concert ticket and album giveaways.

The complete change in new executive staff includes: Darren Krammer, Station Manager; Chris Kelley, Program Director; Paul Heiling, Public Relations Director; Bill Salvin,

News Director; Mark Polzin, Music Director; Brian Posick, Sports Director; Cari Dick, Public Affairs Director; Hardy Garrison, Continuity Director; Rick Westenberg, Chief Engineer; and Dan Hoyer, Student Technician. Together they hope to make the station more professional sounding than it has been in the past.

Wisconsin Public Radio's new Central Wisconsin Bureau, scheduled to go on the air September 2, will give interested 90 FM staff additional experience. Wisconsin Public Radio will provide internships in gathering and reporting news.

The remake of a classic horror film:

"The Fly"

Rating: ***1/2

by Ed Torpy
Staff Reporter

Star System
0—bomb
*—poor
**—average
***—above average
****—really awesome

There are two things that a good horror film must have: a horrifying situation and sympathetic characters that the audience can identify with. *The Fly* has both.

The Fly, starring Jeff Goldblum and Genna Davis, is a remake of the 1958 classic of the same title. In the original, a scientist and a housefly are accidentally transported by a device similar to the transporter from *Star Trek*. The result is a man with the head of a fly and a fly with the head of a man.

The most memorable scene is when the fly with a human head is trapped in a spider web; as the spider approaches, the fly cries out "Help me, Help me." It is a scene that nightmares are made out of.

In the remake of *The Fly*, the scientist's and fly's genes are spliced together. As a result, Seth Brundle begins to change into Brundlefly. Given today's special effects, what we have here is an opportunity for some extremely gruesome scenes, and that's what we get.

The Fly was directed by Da-

vid Cronenberg who also directed *Scanners*, which had the legendary head explosions. *The Fly* is loaded with other scenes just as shocking. If you can't stomach bloody stumps and disfigurements, ripping skin and breaking bones, white-chocolate vomit and abortion nightmares, you may not want to see this movie.

But this film has more than just good special effects; it has well-developed characters. Jeff Goldblum (*The Big Chill* and *Into the Night*) gives one of the best performances of his career as Seth Brundle. Brundle starts out as an awkward, self-conscious scientist who knows more about micro-chips than women. He tries to pick up a beautiful journalist (Genna Davis) by getting her interested in the project he's working on. Brun-

dle's sexual awakening is paralleled by his mutation into Brundlefly. Brundle's love for Davis is possessive and manipulative. When she refuses to go through the telepods as Brundle has, he dumps her and looks for someone else.

The love that Davis has for Brundle, on the other hand, is nurturing and caring. Even though she comes back when Brundle needs her, she never compromises herself.

Jeff Goldblum succeeds at making the mutated mess of Brundlefly a likable character.

Towards the end of the film, he tries to explain to Genna Davis that there is no such thing as insect politics because insects don't compromise, they take what they want. We can see the maturity of the human half of Brundlefly, but we're also warned about the ruthlessness of the fly within him.

In a way, it's a shame that the special effects are so good; many people will walk out of the theater never knowing that *The Fly* is a movie about sexuality and love. But even as a horror film, it is still one of the best.

Rambo Beware: The Soviets' answer to Rambomania

by Dan Dietrich
Features Editor

Russians are evil people, surely extensions of Lucifer himself. They invade the United States and torture prisoners in Southeast Asia (or so the producers of such movies as *Red Dawn*, *Rambo* and *Missing in Action* Part whatever would have us believe).

The Wolverines, Sylvester Stallone, and Chuck Norris are our saviors, vehemently revenging those evil madmen of the Soviet Union in the name of the U.S.

But what, pray tell, do the people of the Soviet Union think of this portrayal?

Ah, good question. Tass, the official news agency of the Soviet Union has stated that such movies were inflammatory, simplistic and reflected a cult of violence in the United States, and that the makers of such movies were fostering violence and anti-Soviet hatred reported the *Stevens Point Daily Journal* in an AP story last month.

To respond to the movies, Mosfilm, a Soviet, state-run production center, has released *Solo Voyage*. It is a film which

echos or mirrors the *Rambo* theme, and has become a summer hit in Moscow.

Solo Voyage - the storyline: The movie begins with CIA agents and American businessmen meeting secretly on a Florida golf course.

Fearful that improved U.S.-Soviet relations might harm the profitability of various defense contracts, they plot ways of stirring up anti-Soviet public opinion.

Their decided mode is to sink an American cruise liner with 1,500 people on board, and then to place the blame on the Soviets.

But when U.S. mercenaries decide to take over the secret South Pacific missile base that they were sent to, the plan backfires. The mercenaries instead plan to launch a nuclear rocket - thus starting World War III.

Enter: Red Army Major Shatokin, the hero. Shatokin and his four young Soviet commandos stop the U.S. mercenaries with milliseconds to spare, saving the world from those evil madmen of the U.S. in the name of the Soviet Union. *Rambo beware.*

ALDO'S ITALIAN RESTAURANT WELCOMES BACK UWSP STUDENTS

THEY SAID IT . . .

"Nothing is worse than a daughter or son with a college degree still at home." -Bill Cosby

"Why should we subsidize intellectual curiosity?" -Ronald Reagan, then governor of California, questioning state funding for higher education.

"I find the three major administrative problems on a campus are sex for the students, athletics for the alumni, and parking for the faculty." -Clark Kerr

"The big difference (in student activism) between now and the '60s is that it was much more dangerous to do that sort of thing...There was a lot more violence...Now people seem to be a lot more passive about the whole thing. If you can do something, eat. Nobody's going to take any offense to it."

"Most students today are slime." -Hunter Thompson, gonzo journalist.

College students?

College students have gotten more conservative about casual sex in the past two decades, reports *Forbes* magazine. The students of 1966 were 2.5 times as likely as their 1986 counterparts to think an occasional one-night stand is OK—only 19 percent now approve. And just half as many (13.6 percent) as 20 years ago think extramarital sex is all right.

"With students currently taking on \$7000 to \$10,000 in loans...it is not surprising that the percentage of those who say they 'worry a great deal' about job prospects rose," the report says.

The median student loan holder is now 28 1/2 years old, has an income of \$18,000, and is repaying a \$5,000 loan at \$65 a month, according to a survey by the National Association of Student Financial Aid Administrators. But some 11 percent of borrowers are paying at least 10 percent of their income on loans, averaging \$12,000 in income, and paying \$120 a month.

RECORD SPOT-LITE -- *Queensryche*

these guys don't wear Spandex

by Jon R. Pike
Music Critic

QUEENSRYCHE
RAGE FOR ORDER
EMI-AMERICA

Hello, and welcome to another edition of Album Spot-Lite, a brief look at the newest and most exciting releases in the world of rock 'n roll. The views expressed in Album Spot-Lite are only the views of one (slightly) demented columnist. So please, have pity and humor him.

Look, I know what you're going to say: "Oh no, not another boring heavy metal band." But wait. This one's going to be different, I promise.

Queensryche stands head and shoulders above the recent invasion from California of spandex-coated-MTV-metal bands like, what's their name? Oh yeah, The Quiet Twisted Ratt Crue or something like that. These guys don't wear spandex, and don't do videos. Heck, they're not even from California. This Seattle-based band believes in doing heavy metal the old-fashioned way; they burn it.

Let me explain. Back in the mid seventies, during the reign of that great musical form-disco-heavy-metal was just about the only intelligent music that was available to the mass market. I should know, this is my childhood we're talking about here. It's sad to say, but the history of heavy metal has since been rather sorry.

Queensryche is helping to bring back the era of intelligent heavy metal. That's not to say that this band is on some kind

of nostalgia trip. No sirree Bob! This is a band for the 80's and beyond, and they're proud of it.

This album has very excellent production values. It combines keyboards and industrial noise effects with its searing metallic guitar effects. But while they do assault you with a guitar-heavy sound, the rhythm of the tracks makes the music move a little bit more than heavy metal usually does. And while the songs do have guitar solos, the band actually makes them sound like they're part of the song.

Rumor has it that lead singer, Geoff Tate was trained as an opera singer. Although Luciano Pavarotti probably has nothing to fear from him, this boy's training shows. Not only can he sing, but he can use his voice (and his voice alone) to create chilling sounds. He whispers. He screams. He makes you feel the music.

The lyrics in the majority of the songs on this album recall a gothic nightmare of love and sex. Brrr! It's enough to make the most die-hard head bangers

out there have heart palpitations. They even manage to slip in a couple of protest songs. "Chemical Youth" (subtitled "We are Rebellion") reminds us that we are all in danger of losing our humanity to technology. "Surgical Strike" paints a phantasmic vista of Armageddon (although it is a little hard to tell if they're in favor of it, or against it).

Now hold on. I do feel obligated to say a couple of things before you write out a check and make the record store owner nine bucks richer. If you don't like heavy metal, you aren't going to like this album, and this album won't make you like heavy metal. *Rage For Order* is chock-full of all the brazen posturing and obligatory guitar solos that, for better or worse, are hallmarks of all heavy metal. However, if you like heavy metal and want a welcome change to your usual auditory diet, this album is definitely money well spent.

Slip the needle to the groove and bang your head until you're blue in the face.

Even today, there are still a few students
who don't have an HP calculator.

Burning the midnight
oil may be necessary.
Burning the 2:00 or 3:00
or 4:00 AM oil is absurd.

Especially when an HP calculator can get the
answers you want—in time to get a good night's
sleep.

For instance, our HP-15C Professional Scientific Calculator
has more built-in advanced math and statistical power than any
other calculator. Our HP-41C Advanced Scientific Calculators have
even more potential.

That's because there are better than 2500 software packages
available for them—more than for any other calculator.

There's even a special plug-in software package (we call it the
Advantage Module) that's designed to handle the specific problems
an engineering student has to solve in his, or her, course work.

No wonder professionals in engineering and the physical sciences
widely regard HP calculators as the best you can get.

So check one out. Then, when your mother calls to ask if you're
getting enough sleep, you won't have to lie.

By the way, if you want more information, just give us a call
at 800-FOR-HPHC. Ask for Dept. 658C.

AUTHOR, AUTHOR

Crazy Ladies

Is it all in their heads?

by Debbie Kellom
Editor

I've just finished reading a fascinating book about women and madness by Elaine Showalter called *The Female Malady* (Pantheon, 1986).

It's a history of sorts: an examination of women's mental disorders—what they were and how they were treated in society during the last 150 years. And if you think that's a pretty obscure topic, with not a whole lot of relation to your own life, think again. Showalter may be examining English culture, but she could just as easily be talking about our own.

What she's really writing about are men and women, and about what happens when one sex is empowered to control the other. Empowered even to determine whether members of that opposite sex are sane or mad. And then, if it's decided they are, empowered further to lock them up in places that would drive even a sane person to madness.)

This is a deeply troubling, enraging book—for the stories it tells, and the questions it raises. Because in the process of exploring madness, the author is also considering just what constitutes sanity: what is normal, in other words, and whether madness (traditionally believed to afflict far more women than men) results from women's innate emotional fragility, or whether it is simply a response to a society which has, over the years, denied women independence, choice and self-respect.

Partly, then, in Showalter's book is a feminist history of psychiatry, and as such, it stands as a catalog of atrocities: stories of women judged insane because they refused

marriage proposals, judged insane because they sought out a higher education, judged insane because they cared too little for their appearance or because somewhere along the line the endless requirements of docility and subservience became too much, and they cracked or exploded.

She quotes extensively here from a great number of writings from the period she's considering. There is Charlotte Bronte writing in *Jane Eyre* about Mr. Rochester's mad wife, locked in the attic of his house, with her "bloated features" and "shaggy locks"—a monster of sexual appetite, who stood, perhaps, for Jane Eyre's (and Bronte's) repressed sexuality. There is Sylvia Plath's heavily autobiographical novel *The Bell Jar*, of course, and a wonderful, painful-sounding novel—far less well known—called *The Ha Ha*, by Jennifer Dawson, documenting a woman's journey through a breakdown in the late 1950s.

Most revealing of all, perhaps, is a novel called *Cassandra*, written by Florence Nightingale and dramatizing Nightingale's own despair at a point in her life when she had been denied a medical education. In the novel, Cassandra, who had dreamed of Institutions to show women their work and to train them how to do it, dies at thirty, "withered, paralyzed, extinguished."

At the root of all this suppression was the commonly held view that women were formed by (and at the mercy of) their biology—a view that took hold during the Victorian era and shaped all thought on the subject for the next century. Women were more vulnerable to insanity than men, wrote one 19th-century theorist, because their reproductive systems interfered with their rational control. (The term hysterical comes from the Greek word for "womb.")

Adolescence, then, was for girls nothing less than "a miniature insanity" caused by the onset of menstruation, which, Showalter writes, "sharply marked the beginning of a different and more limited existence" for women. That outlook, she continues, determined not only medical practice, but social policy. An education for girls was seen as a dangerous drain of vital energies needed for the control of menstruation.

Too much schooling, let alone ambition, experts believed, would result in the loss of "pelvic power," atrophy of the breasts and sterility. "Girls and women are unfit to bear the continued labor of the mind because of the disqualifications existing in their physiological life," wrote one Victorian doctor, describing a condition he called "sprained brain."

Over the years, women have manifested their madness in a variety of ways, and at least in part, Showalter suggests, in response to the peculiar strictures of the day. During the Victorian era, fainting spells, blackouts and neurasthenia (fragile nerves) were the common disorders of a corseted leisure class virtually kept locked in the house. She writes that anorexia was common as early as the turn of the century, theorizing that "girls parade physical starvation as a way of drawing attention to the starvation of their mental and moral faculties."

But whatever the form of

madness, there was always a (male) doctor ready to take charge and "dispense reason."

What is most frightening about Showalter's book is the final section, citing views and treatments common in recent years. (These are not treatments used exclusively on women. But because of the greater number of women in institutions, these techniques have ruined far more female lives than male.)

There is insulin shock therapy, for instance, in which a patient is shot full of so much insulin she goes into a coma, and ECT—electroconvulsive therapy. And finally, most dreadfully, there is lobotomy—the practice of inserting an ice pick-like instrument under the eyelid and into the brain, severing a group of nerves there in order to render a portion of the mind functionally dead.

In one particularly horrifying section of her book, Showalter quotes a medical text, published in 1972, that recommends lobotomy for a depressed woman "who may owe her illness to a

psychopathic husband who cannot change and will not accept treatment."

Showalter's research is clearly exhaustive. But sometimes she does a disservice to her scholarship by allowing her indignation and feminist wrath to take over.

Surely somewhere, in those 150 years, there as a good, non-sexist psychiatrist. Somewhere there was a woman who genuinely required treatment, and got what she needed.

That doesn't alter the fact that Elaine Showalter has written a powerful and frequently moving book that raises very difficult issues. What, for instance, does it really mean to be mad?

It becomes clear, reading *The Female Malady*, that there is a long-standing tradition of holding in suspicion anything that appears to differ from "normal" behavior—and that normal behavior (normal female behavior) has too often been defined exclusively by men.

Field hockey's misfortune seen as a blessing for Lady Pointer tennis program

STEVENS POINT—Last spring UWSP was forced to drop field hockey, a sport that had been highly successful under the guidance of head coach

Nancy Page. In 13 years her squads posted a 169-75-5 record, won four WWIAC championships and made one trip to the NCAA to the lack of local competition, however, field hockey had to be dropped as an intercollegiate sport.

That sports misfortune was a blessing in disguise for the Lady Pointer tennis program.

With the resignation of Dave Nass, who had coached the team for seven years, Athletic Director Don Amiot was faced

with finding a tennis coach. He had to look no further than in his existing staff. Nancy Page was the logical choice.

Page, a competitive player herself, has taken over the reins for the Lady Netters. She looks forward to the challenge. "I am really excited about coaching the sport," she said. "Dave Nass has left the program in great shape and I want to continue what he has worked so hard to achieve."

"We have excellent players coming in and a good group of veterans to lead them. I see no reason why we can't finish in the upper half of the conference standings."

Amiot believes Page can continue to elevate the program. "I am happy that Nancy accepted the position," he said. "She has the ability to communicate well

with student-athletes. That skill and solid recruiting is what it takes to be successful at our level."

Page is known locally for her highly successful Pointer Tennis Clinics, which she has run for 12 years. During that span, hundreds of players of all ages have honed their skills.

She is a 1965 graduate of UW-Madison where she earned a bachelor of science degree. A native of Janesville, Page coached at Germantown Friends School in Philadelphia from 1965-68. She came to UWSP in 1973 where she began coaching field hockey, then later softball. She earned a master's degree in education in 1980 from UWSP and most recently, in 1984, Page was named the Associate Director of Athletics at UWSP.

Droste named new UWSP tennis coach

Several top players returning

STEVENS POINT—Dave Droste, 27, has been named the men's tennis coach at UWSP. He replaces Dave Nass, who led the Pointers for three seasons.

A two-time conference champion at Wisconsin Rapids Lincoln High School and now a competition player throughout the state, Droste looks forward to the challenge of coaching. "I am excited about the appointment," he said. "I have met with Dave (former coach Nass) and he has indicated that there are several top players returning for us."

Droste attended UWSP for 1 1/2 years before pursuing a career in fast food restaurant management. After six years in the food business, he is now operating 3D Chimney Sweep in Wisconsin Rapids. His service

includes chimney cleaning, chimney repair and accessory sales. He also hopes to break ground on a Pub and Eatery later this year.

Athletic Director Don Amiot believes Droste's management skills will benefit his players. "Dave has experience in working with young people," he said. "He is enthusiastic about our team and program, and has shown a willingness to recruit at the college level."

Coming off an 11-4 dual meet season and a fourth place finish in the WSUC, the Pointers will receive an additional boost as they will practice and play matches at the Sentry World Sports Complex in Stevens Point.

The Pointers will return their most valuable player, Wausau junior Bryan Zowin.

QUESTION #1.

WHAT IS THE RIGHT CHOICE FOR MOST COLLEGE STUDENTS?

- a) **AT&T — for everyday discounts of 40% to over 50% off weekday rates on out-of-state calls.**
- b) **Short bursts of intense study followed by hours of frantic partying.**
- c) **AT&T — for exceptional value and high quality service.**
- d) **AT&T — for collect, third-party and operator-assisted long distance calls.**
- e) **Any class that does not conflict with "The Love Connection."**

If you picked A, C and D, you're destined for great things. Like AT&T Long Distance Service. AT&T offers so many terrific values. Like a 40% to over 50% discount off our day rate on night, evening, and weekend out-of-state calls.

Imagine what you'll do with the money you could save. Imagine what your parents would do if they found out.

Of course, you can count on AT&T for clear long distance connections any place you call. And AT&T gives you immediate credit for wrong numbers.

To find out more about why you should choose AT&T, give us a call. And if you picked B and E, call anyway. You could probably use someone to talk to.

Call toll-free today, at
1 800 222-0300.
