Asbestos in South Hall troubles residents

The proposal, officially introduced to the Faculty Senate last spring, was sent to Academic Affairs for further input and information about a proposal which would eventually require all UWSP students to purchase a package of computer software. The software addresses all academic issues. Academic Computing Services has been assigned to work closely with Academic Affairs, providing detailed information as to the purpose, use and support of the software.

Two hundred and fifty copies of the Smart Software System, manufactured by Innovative Software, have already purchased the University for a six-month trial. Eleven copies of Smart are currently being used in computing labs.

A positive decision on the comprehensive software plan has been made by the time the six-month trial expires on December 31. All incoming freshmen will be required to purchase the software with opportunities to pay for it in installments during at least four semesters. Such a massive purchase of software would result a cost of $100 per student. Ordinarily, the student package sells for $895 if purchased individually.

The software would have the advantages of compatibility, database and graphics capabilities.
Advice to Ethiopians

Remember when starving people were "in"? Remember when every church this side of Salt Lake City held food drives and sent thousands of cans of cling peaches (in syrup no less) to the starving nations of the world?

Does anybody at all remember Ethiopia?

What happened to all the news coverage? The catchy songs? The charity concerts and all the public outrage over the millions of people starving in a world of plenty? Why the cold shoulder now?

Basically, it's those starving people's fault that we don't pay attention to them any longer. They just weren't exciting enough. Let's face it, watch Lake City hold food drives and send thousands of dollars to Ethiopia, and watch the interest start to wane, just increase your troubles. The charity concerts and all the public outrage over the millions of starving Ethiopians, and that translates well to a Muzak version. A song might work.

And that's why the song worked. We get tired of watching them lying dead in the public eye. They became lazy and irresponsible, wrapped up in their own troubles. The public was tired of watching them lying dead on dirt floors. They've got to come up with something new to regain interest. An earthquake or an outbreak of AIDS will be good for about a week of network coverage, but for long-term media attention, something unique will be needed.

Secondly, another song and/or video couldn't hurt. Possibly something that folks can dance to and that translates well to a Muzak version. A dance number could work miracles. Possibly something that folks can dance to and that will serve the needs well. A few well-placed ads during the World Series or Super Bowl could work miracles.

I think it's clear why the starving Ethiopians are no longer in the public eye. They became lazy and irresponsible, wrapped up in their own troubles. The people of this country have fresher, more recent tragedies with which to contend and they can't be begged down with one thing for too long. Too bad our attention span isn't as long as our hypocrisy.

Besides, there's still plenty of corn at Hal's, so what's all the fuss?

Right now, this country appears to be heading into an anti-drug-fad. The networks are bleeding the issue to death, the Reagans came on the tube to tell us something (what, I'm not sure), we're learning more about the effects of cocaine on rats and Congress is going to muzzle drug dealers. All the ingredients for a great trend.

How long will it last, though, is anybody's guess. The average life expectancy of a moral outrage fad/cause appears to be anywhere from 6 months to one year.

So what can Ethiopians do to get back in the limelight? First off, they have to change their image. The public was tired of watching them lying near death on dirt floors. They've got to come up with something new to regain interest. An earthquake or an outbreak of AIDS will be good for about a week of network coverage, but for long-term media attention, something unique will be needed.

Third, in this era of competing tragedies they will need to be more aggressive in the recruitment of sympathy, as there is a limited supply. A top-notch advertising campaign or public relations agency would serve the needs well. A few well-placed ads during the World Series or Super Bowl could work miracles.

I think it's clear why the starving Ethiopians are no longer in the public eye. They became lazy and irresponsible, wrapped up in their own troubles. The people of this country have fresher, more recent tragedies with which to contend and they can't be begged down with one thing for too long. Too bad our attention span isn't as long as our hypocrisy.

New International House offers more

by Greg Pederson
News Editor

A convent at St. Stanislaus Parish has become the new International House for UWSP. The house has been leased to UWSP for these years, subject to renewal, at an annual rate of $15,000, plus utilities.

The funding for this project has come mainly from the fees paid by those students enrolled in the English Language Institute but is also partially supported by Student Life.

The Foreign Student Office, which plans to hold its open house on Friday, October 3, from 3:30 to 5 p.m., moved to the convent specifically because of lack of space at its previous location in Detwell Hall. "Here students can come in freely; there they had no room," stated Marc Fang, director of counseling and tutoring services for foreign students.

Fang, who came to UWSP in 1968 after graduating from Madison with a Ph.D. in counseling psychology, spent his first eight years working in the UWSP counseling center. He did not directly begin working with foreign students until 1974.

Even though Fang did not begin his work with foreign students until 1974, he had experience with other cultures.

New convenience store to serve

by Kathy Phillips
Staff Reporter

A convenience store in the basement of DeBot Center is scheduled to open October 15. Similar to the Allen Center Convenience Store, the DeBot store will also feature a variety of microwave sandwiches, beverages, and a variety of snack foods. Produce items, including salads, will also be among the many items to be sold.

A variety of surveys and questionnaires answered by students indicated a desire for a convenience store located in the DeBot area. Individual questionnaires requested information pertaining to age, sex, year in school, and residence center. The questionnaire left residents room for comments and requests. Surveys were also taken to determine the number of students from each residence hall and off-campus students who were shopping at the Allen Center store. The DeBot store is expected to attract students and faculty in the DeBot Center area.

The construction of the DeBot Convenience Store involves minimal cost. A partition will be used to divide the area (formerly Amigo's) into two parts. Freezers and ovens for the store will be supplied by the companies whose products are sold there.

One problem encountered in the establishment of the DeBot Convenience Store involved its infringement on space, formerly used for programming purposes, primarily RHA programs. This problem was solved by design. One-third of the area will be established as the convenience store. The remainder of the area will be used for programming purposes, including RHA movies and wing dinners.

The DeBot store will employ regular and work study students. Students can use cash, points, and personal points to make purchases at the store.

Debot Center

The DeBot convenience store hopes to be as successful.

New International House hopes to better serve foreign students

The United Council passed in 1986-87 platform recently with sweeping statements against tuition reform legislation. U.S. aid to control and a major agenda on how to fight tuition increases was discussed in the UISW system.

The UISW student body lobby group also reaffirmed its stand for bringing the student contribution to education down to 25 percent, called on American companies doing business in South Africa, to divest; their holdings and strengthened its support for the Army ROTC policy which discriminates against gay and lesbian by not allowing them to participate in the program.

Notably absent from this year's platform was any statement on collective bargaining for UW system faculty and academic staff.

UC President Arye Tellevste said it was apparent "the court did not see any need to comment on that issue at this time."

Tellevste said he felt the platform encompassed the "essential issues that concern students in the university, especially concerning higher education."

The yearly platform meeting is held to set the lobby agenda for the year.

A major portion of the platform was devoted to considerations for what the UISW System Board of Regents will be recommend-

Lobby group to attack tuition, regent plan

The United Council passed in 1986-87 platform recently with sweeping statements against tuition reform legislation. U.S. aid to control and a major agenda on how to fight tuition increases was discussed in the UISW system.

The UISW student body lobby group also reaffirmed its stand for bringing the student contribution to education down to 25 percent, called on American companies doing business in South Africa, to divest; their holdings and strengthened its support for the Army ROTC policy which discriminates against gay and lesbian by not allowing them to participate in the program.

Notably absent from this year's platform was any statement on collective bargaining for UW system faculty and academic staff.

UC President Arye Tellevste said it was apparent "the court did not see any need to comment on that issue at this time."

Tellevste said he felt the platform encompassed the "essential issues that concern students in the university, especially concerning higher education."

The yearly platform meeting is held to set the lobby agenda for the year.

A major portion of the platform was devoted to considerations for what the UISW System Board of Regents will be recommend-

ing in its paper on the future of the UISW system. The regents' paper includes recommendations of goals to meet the demands into the 21st century, including major tuition increases, equivalent caps, standardized enrollment and other academic changes which the UISW opposed. The resolution on equivalent caps stated that, "UC begins to develop strategies that will allow the system to approach its goals by looking into areas that will ensure access to higher education for all citizens who are ready and willing to benefit."

Another resolution on enrollment caps and another regent recommendation for standardized enrollment testing stated that the plan could unfairly discriminate against minority students.

On tax reform, the resolution stated that if the state does not increase the illegal tax: all students aid which exceeds the cost of tuition as personal income and eliminate the tax exemption on the interest on GSEs as well as eliminate tax incentives for low-income housing investments which would in direct harm students through rent increases. The UC also renewed its call to end tax cuts to cut taxes on the 25 percent of the total cost of a college education. The figure remains at 25 percent of the cost as recently as 1981.

On social issues, the platform should be considered liberal.

**McDonald's sponsors United Way Day**

**by Greg Pederson**

The McDonald's in Stevens Point held a United Way Day, October 1. On that day, all monies taken in, excluding sales tax, were donated to the United Way of Portage County. The idea was that of Terry Raus, owner of the Stevens Point McDonald's when, after approached for a fund raising contribution. The idea was well received by the local McDonald's. Ed Christopher, manager, felt the contribution went to a good cause. "I think the United Way is an excellent facility in Portage County. In our donating to the United Way we are supporting the community that supports us," Christopher said.

The support that McDonalds gives is quite substantial according to Dan Dieterich, UWSP campaign drive chairman. McDonalds donated over $4,000 last year. This is only a small portion of the total $33,000 target. It is however, one of the largest single donations.

The McDonalds in Stevens Point is the largest single restaurant contributor in the nation. "The McDonalds in Stevens Point donated about $46,000 per employee. That compares to approximately seven dollars per employee that any other restaurant in the country," Dietrich stated.

This is an annual event for the Stevens Point McDonald's. They are the only business in town that donates to the United Way in this fashion. The money raised for the United Way raised almost entirely in Portage County. "Of all the money, one percent goes to the national United Way. The remaining 99 percent stays in Portage County," Dietrich explained.

**Concerns of city bus service expressed**

**by Sharon Hallett**

The Coordinating Committee of Bus Riders held a meeting on Sept. 29 to discuss ways of making the bus service more useful to students and ways to increase ridership.

The committee representatives, Jean McQueen, Estelle Kiel and Roland Thumaner, were very interested in the ideas that people had for them. The ideas dealt with having wall displays in the residence halls, academic buildings and Deib and Allen Centers. It was also suggested that the committee sent a "correspondent" to speak at the residence hall meetings which would create awareness to students that there is a bus service out there for them to use. A fact raised at the meeting was that many students may not be aware of a student bus pass available at the U.C. Information Desk at half the price. These passes are funded by student government subsidies.

One man came to the meeting to find out more about the bus service and to register a complaint. He said he was very happy with the bus service while the couch managed it, but when it changed hands, the bus route was changed without notification. Since then he has only rode the bus since because it no longer has convenient routes.

After the city took over the buses, they discontinued round trip travel, thus tripping travel time. For example if someone rode the bus in to work, they would have to walk a mile to the next nearest bus stop just to get home.

Thumaner pointed out that if students used the service they could not have to live in the "campus ghetto." "It's foolish to be paying for a service you don't use," said Thumaner.

$165,000 in scholarships awarded to students yearly

**Smart package, cont.**

ties so instructional programs could be offered in all academic areas.

Student Government Association President Lisa Theriault said that SGA has studied the proposal and current indications show student opposition to a mandatory purchase of software.

"I think we support the integrated software package and the idea of using the computer in classes," said John Bennett, student Government. "But do you go to the library and ask them what they think about the library? Students are 'I'm never going to use it.' We would like to know specifically what courses is this going to be used in. We do not see the reason why all students have to buy the package if they are not going to use it."

Dan Goeit, acting coordinator of Academic Computing, said there is no way package purchase could be made voluntary. The idea of having for everyone to is eliminate some of the problems arising and copyright; essentially to make our environment legal," Goeit said.

Although Academic Computing has numerous seminars on how to use, and has assigned one of its faculty members to each 1000 student introductory class, it has never been stated how students will be required to use the software if it is approved. A matter of concern is whether there will be enough hardware to support 9000 students using the same software package. The issue is phased in. Academic Computing does not feel that hardware access appears to be a problem. "Having each person with a copy of this software, low cost makes a lot of a computer that aren't in the computing labs available," said Bruce Stahl of Academic Computing. "Students have access to computers all over the place--in various offices at the college. The price goes down, more people will be able to buy their own computer."

Stating that he felt Stahl's assumption that students will buy computers was invalid, Bennett pointed out that since over 80% of the campus is on financial aid, a high population of students have enough money to buy a computer. Students aren't the only ones questioning the proposal; many faculty members have also directly expressed concern. Faculty of the student of Natural Resources have unanimously recommended ACADEMIC AFFAIRS that UWSP delay adoption of the proposal until all campus faculty have been provided with the opportunity to evaluate and become familiar with the advantages of using such a system.

Since the matter directly relates to them, SGA representatives encourage students to become informed on the issue and to stop by the SGA office to voice their opinions. The committee started a petition to enlist student support against adoption of the proposal.

Goeit and Stahl of Academic Computing, as well as Chancellor Marshall will be making a presentation for questioning on the issue at the October 15 SGA senate meeting.

Academic Affairs will not con- front the issue until the October 20 meeting.

Committee forms to develop sexual assault policy

by Karen Rivedal
Staff Reporter

UWSP presently has no set procedure to adequately deal with the special needs of a sexual assault victim. Methods now used by Protective Services, Women's Resource, and Student Conduct to investigate incidents of sexual assault have caused concern. To remedy these problems, a committee has been formed to draw up a set of formal procedures to follow in the event of a sexual assault. The committee includes representatives from Student Conduct, Protective Services, the Women's Resource Center, and the Portage County Sheriff's Department.

The Women's Resource Center has an obvious personal interest. Director Susan Casper has made her views clear and has been involved in these proceedings from the outset. A letter from Casper written last June to Bob Baruch, then Director of Student Conduct, raised the issue. Baruch replied that such a policy did not exist, and Casper made it a WRC objective to create one. She is now working with Bob Nicholas, the present Director of Student Conduct, to do just that.

On her reasons for initially seeking out the guidelines, Casper said, "I just wanted a copy to hang in the center and have available for women to use. Education of the student community on the issue of sexual assault is a primary goal of the Women's Resource Center.

Based on the belief that an informed public makes for a safer campus, it is hoped that the active distribution of the finished guidelines will inform all students of the university's policy, be a valuable tool for victims of the crime, and possibly deter potential offenders.

It is not only those who support new guidelines to exaggerate the extent of sexual assault on campus. With a total of six confirmed sexual assaults last semester, Stevens Point remains a relatively safe campus. But realistically, it is important to remember that the majority of cases are probably never reported, and that for at least six individuals last year, the campus environment was far from safe.

For this reason, specific guidelines are desirable to clarify the ambiguities in the system that now exist and replace them with an efficient, effective program of action.

The exact content of the guidelines has yet to be determined by the committee. Although all members recognize the need for a uniform set of procedures, there are twenty different interest conflicts to be worked through.

In the area of emotional support and comfort for the victim, the WRC would like to see an advocate of the Sexual Assault Victim Services (SAVS) made available when the victim reports the crime to Protective Services. SAVS is an organization based in Portage County, but Casper is presently taking steps to start a branch on campus.

While Protective Services' current procedure is to offer the victim a woman officer to report the case details to, the WRC believes SAVS would be a better choice. Its advocates are specially trained to provide emotional and physical assistance to the victim during this traumatic but, in terms of legal action, crucial time period. They are also qualified to explain all of the victim's legal rights and resources.

Both Protective Services and SAVS are to encourage the victim to report the crime to the police, although Protective Services also offers the option of referring the complaint to Student Conduct.

Another point of potential conflict involves the extent to which outside police forces, such as the Portage County Sheriff's Department, should be utilized for incidents occurring on-campus between students. Normally, Student Conduct investigates the violations accused to be committed by a student body. When a sexual assault charge is investigated, Student Conduct proceeds by a series of hearings involving the complainant accused to determine guilt or innocence. Student Conduct has a responsibility to protect the rights of all students, not just the accused. If guilt is determined, there is a series of disciplinary measures open, the most severe being exclusion from the university.

However, there is some question as to the ability of Student Conduct to deal with a matter as severe as an assault committed by a fellow student, Casper said. "Sexual assault is not a matter of mis-
Shame on you, Bernie.

To the Editor:

This letter is in regard to the last two editorials written by Senior Editor Bernie Bleske.

We feel sorry for you Bernie because your ignorance regarding Residence Life and leadership roles on this campus is truly incredible. In fact, we find your arguments so ridiculous that we are choosing not to refute them.

But we do have a few questions for you Bernie. What is the real purpose behind your last two editorials? Could it be that you are creating controversy in order to draw attention to yourself because you are creating the situation you are writing about?

So...the next time you feel like attacking an organization or a particular group of people on campus, ask that you do some investigative research into what the goals and purposes of that group or organization are.

Scott Laurent-second year RA
Lori Gozzo-Three year RA and current AD

To the Editor:

I've always had a "hang-up" with senior editors. Take Bernie. "Shut for brains" Bleske for example. Last week's Pointer was chocked full of his infinite wisdom, and for that matter incoherent criticism.

Throughout his whole editorial he rants and raves about how leaders are to be, "respected," "more than the rest," "vice," "looked up to," "admirable," etc. He again, for the second time, puts RA's down by saying, "RA's...feel they are better people than the rest."

Bernie, you are a DORK. I can't help but to see the ironic position you put yourself in, Bernie Baby. Are not YOU in a leadership position? Are not YOU as Senior Editor in charge of people, making revisions, constructive criticism, etc.? It seems to me that everything you wrote in your eloquent editorial is nothing more than a mirror image of your position on the Pointer Staff.

I think your generalizations of all leaders as wanting, "everyone to do exactly as they want" is biased, unfounded, and way out of line. I can say this because I was once an RA myself. During the '83-'84 school year I was the leader of the most rebellious, most written up group in the hall. My personal record reads like a ticket to Anytown, Chaos was the norm, but respected. I don't claim to know how the utmost importance.

Perhaps you had a headache for an RA. Perhaps he picked you on for no apparent reason. Perhaps you deserved it, perhaps you didn't. You are, however, generalizing and knocking the program for a few bad incidents you had.

Timothy Hehemann

To the Editor:

But, don't you realize that men with pierced ears don't do it to be "one of the guys." Sure, they may not do it to be "one of the guys." But, don't you realize that men with pierced ears don't do it to be "one of the guys." Sure, they may not do it to be "one of the guys." Well, thank you very much Dean Trainer (read sarcastically). It took guts to leave the plaque on the wall as it stood. "This student room has been decorated in memory of Joseph Karnat who died August 15, 1980 while enrolled as a student in wildlife." I urge all students, especially CNR students to sign the petition on the door of Room 324.

Beth Lademann

Our three-year and two-year scholarships won't make college easier. Just easier to pay for.

Even if you didn't start college on a scholarship, you could finish on one. Army ROTC Scholarships pay for full tuition and allowances for educational fees and textbooks. Along with up to $1,000 a year. Get all the facts. BE ALL YOU CAN BE.

Study suggests father's drinking a factor at conception

by Dan Dietrich  
Features Editor

A new study raises the possible relationship between regular alcohol use by men when their partners become pregnant and the lower birth weight of their children, it was reported.

Recent studies have suggested a significant relationship to an infant's birth weight, a June 18th UPI article reported by Wanda Stadler as saying.

Linda, the University of Washington in Seattle said, the findings were preliminary and more research needed before a conclusion as to the relationship could be established.

As part of the study, researchers questioned 277 mothers in a nine month period before and during pregnancy about their drinking habits one month before conception and at three different times throughout the pregnancy. The findings, considered "regular" drinkers produced women who weighed an average of 6 ounces less at birth than those of fathers considered "occasional" drinkers.

That regular drinkers were classified as those who consumed two drinks or less a day or five or more drinks on one day during the month preceding pregnancy. Occasional "drinks" were classified as those not meeting that level.

Birth weight is an indicator of whether a child was well a developed during pregnancy, and may be an indicator of that child's future health, the article reported Little as saying.

Little, an epidemiologist at the University of Washington, and Charles F. Stug, of the University of Michigan in Ann Arbor, presented their findings in a letter to the New England Journal of Medicine.

Dick Purnell speaks about relationships on Oct. 7, 8, and 9 at UWSP.

Dick Purnell knows and he's telling

by Brenda Berglin  
Staff Reporter

Maybe you've read it on a classroom blackboard. Maybe you've read it in the Prayer Pastor: Dick Purnell knows and he's telling.

Dick Purnell is a voice crying out in the wilderness about a subject that needs to be spoken to every student on campus: relationships.

A nationally-known speaker and counselor, Dick Purnell will be at UWSP Oct. 7th, 8th, and 9th giving a three part lecture series on relationships: "How to Know When You Are in Love" (Oct. 7, 7:00 p.m. Wisconsin Room/UC.), "Why Couples Break Up" (Oct. 8, 7:00 p.m. Encore Room/UC.) and "Sex and the Search for Intimacy" (Oct. 9, 7:00 p.m. Rec. Gym). Admission is free.

Purnell also speaks as a student and as self. He holds a Bachelor of Science degree from Trinity Evangelical Divinity School and a Master's in Education specializing in counseling from Indiana University, but because of his ability to relate to students.

"This man knows everything about relating to the students," Purnell's secretary, Angela. He speaks to students from more than 42 years of experience as a single, married and divorced man, "Casavas" who's had 34 former girlfriends. And now, having recently married, he speaks to a husband and father.

Purnell also speaks three warm, humorous man who is sensitive, friendly and optimistic on topics and relationships even Average, a report to the every student who addresses them.

Dick Purnell has traveled and lectured to 27 different countries during the past 18 years and has spoken to more than 150,000 people, some say he's "the most talked about speaker on campus.

Dick Purnell was convinced he was going to be a doctor.

"I even had a scholarship to medical school in Texas," Purnell says in a telephone interview from his office in Richmond, Texas. That need to be a doctor drove Purnell to be a doctor of medicine.

"As a counselor, I knew I wanted to talk about relationships," says Purnell. "It's the desire of many people to have good relationships, but most people have a lot of problems with relationships. Fifty percent of the marriages today end up in divorce, and single people go through as many as 100 relationships in their lifetime. They don't know how to establish a relationship," laments Purnell. "I started talking about relationships at luncheons where I was well received, so I kept talking, talking, and talking."

One of the main demand speakers for college groups across the country, Purnell often speaks three times ranging from luncheons to campus-wide lectures. "My talks revolve around three burning principles of lifelong relationships: sex, love and breaking up. People are really questioning. What is love? How do we stay together?"

That questioning makes Purnell all the more committed to his cause. "I believe love is a very serious thing. If I can help one person develop a good relationship, I've accomplished a lot. As long as I see the needs and desires of people, I'll keep talking about relationships built on solid backgrounds. I'll keep doing it until I die."

Are you looking for love, UW-Stevens Point? Is search of romance? Just want to find out more about the opposite sex? Then lend your ear to Dick Purnell. After all, Dick Purnell does know and is telling October 7th, 8th, and 9th.

Pregnancy and contraceptives

by Dan Dietrich  Features Editor

"In the 1980s, there is no reason why we should have any children at all," editorialized the UWSP Health Services October 7th.

But there are.

Last year, 225 pregnancy test were performed at Health Services, 50 were positive. Eight years ago, approximately 20 tested positive.

The decrease, Hettler hypothesized, is threefold: increased availability of contraceptives, better informed students and increased availability of home pregnancy tests.

According to Health Services, the effectiveness of various contraceptives in preventing pregnancies:

- Abstinence - 100% effective
- Foam (spermicide) and diaphragm - 99% effective
- Oral contraceptives - 90 to 99.5%
- Condom - 50%-
- Diaphragm - 80 to 99%
- Sponge - 85%
- Foam - 70%-
- No contraceptives - 15%

"What needs to be pointed out," said Hettler, "is that these figures represent the effectiveness when the contraceptives are used under optimal conditions, following the proper procedure - exactly."

Pregnancy tests are free to UWSP students at the Health Center.

All of the contraceptives mentioned, except for the sponge, are available at Health Services.

For more information, call 336-4661.
Graduate into Management at Taco Bell

Your college education was the first step in your business career plan. Now you're looking for more than just a job. You want a progressive career in a top company where there's room to grow. And that's exactly what we can offer you at Taco Bell.

As a leading division of Fortune 50 PepsiCo, Inc., Taco Bell is built on success and currently operates over 2,000 restaurants. When you consider that fast service is the second fastest growing service industry in the U.S. with sales over $115 billion, you get an idea of the remarkable potential for Taco Bell and for you.

Our comprehensive Restaurant Management training program is designed to give you hands-on experience in the full spectrum of restaurant operations, including accounting, cash management, inventory control and human resource management. If you have the ambition and drive to excel, you can advance rapidly to multi-unit supervisor and beyond. These opportunities are available to graduates from any academic discipline. As a college graduate, you will earn a minimum starting salary of $1.16/hr. annually and receive excellent company benefits.

Now is the time to explore your career potential at Taco Bell. We encourage you to talk with our Representatives who will be interviewing on campus.

Equal Opportunity Employer.

TWO YEARS OLD

CATHEDRAL SEEKS RESTORATION FUNDS

More than 1,000 UWSP graduates will be receiving letters in the next few days inviting them to join a campaign to save one of their favorite landmarks in Madison.

The 600-year-old Salisbury Cathedral is the point of falling apart, and Robert Baruch, an administrator at UWSP, says it would be appropriate for the select group of alumni to respond to a fundraising appeal that was made by Prince Charles during his recent visit to the United States.

Since 1980, about 50 UWSP students have gone each semester to a semester abroad program in England, and one of the all-time favorites for each group's tour of the country has been Salisbury and its cathedral, according to Baruch, assistant to the assistant chancellor for student life.

"(The fund drive) presents us with an opportunity to show our appreciation and gratitude to England and its people for their dedication to preserving historic buildings such as the cathedral," Baruch wrote in his letter.

Accompanied by his family, Baruch was a faculty leader for a group that went to England in 1980. He remembers the cathedral as "a beautiful building in a lovely, pastoral setting."

He said he became aware of the fund drive in a recent newspaper article in which it was reported that about $1.5 million of the estimated $9.75 million needed to do the refurbishing has been collected.

Though letters are being mailed to alumni and faculty who served in the British program, anyone may make contributions. Checks may be made payable to UWSP Salisbury Cathedral Fund and mailed to Baruch before November 1 in care of Dotel Hall, University of Wisconsin-Stevens Point, Stevens Point, WI 54482.

If money is collected, Baruch said that arrangements can be made to have faculty and students currently in England hand deliver the check to cathedral officials. "Every cent collected will go to the fund - no mailing charges, no fees, no collection charges," he said.

HOW TO KNOW WHEN YOU'RE IN

Sponsored by Campus Crusade for Christ
"Dance With a Stranger"

****

by Jan R. Pike
Staff Repoter

Pop music - "Music you can hum to!" (courtesy of the Pike Dictionary of Rock 'n' Roll terms)

The hardest thing in the world to find (right up there with finding classic Don Knotts' films) is good pop music. I am, of course, using the above definition and adding to it, "without feeling stupid." I let's face it, anyone can write a meaningful and significant song and not be labeled stupid. I mean, at the very least it shows that you are committed to something important. You may be wrong, but at least your heart is in the right place. It's at least a hundred times more difficult to write music that's light, buoyant, danceable, humorous - and not dumb.

Britain's Woodentops on their American debut, Giants, demonstrate that they are equal to the task. First of all, to show just how meaningful and significant these guys are, they get their name from a popular British cartoon about a理想信念 guy who's feeling good today. No wry political speeches, no brooding reflections on a love gone bad. Just a guy who's feeling good today.

VALUABLE COUPON

"Dance With a Stranger" by Ed Terry Staff Reporter

When I saw the poster for "Dance With a Stranger," my first reaction was, "What the hell did they do to Stevens Point?" The poster is a black and white, arty-fartsy picture of two glamorous young lovers. It looks like the kind of movie that would be made in Madison or Minneapolis.

"Dance With a Stranger" is a film that never makes an impact in either of those areas. It was released last year. It won the Best Foreign Film award at the 1985 Cannes Film Festival in France. The director Mike Newell and actors Miranda Richardson, Rupert Everett, and Ian Holm are relative unknowns. This movie simply does not belong in Stevens Point.

"Dance With A Stranger" is a love story. kind of. It has the classic love triangle where the woman is torn between one man that is good to her and the other man who she finds attractive. But there is no love in this sto­ry, which makes it an unusual love story.

"Dance With A Stranger" is filled with the same sort of fatal­ism that was common in the film and movie of the 1930s. The three main characters are unhappy with their lives. The character's situation is in change, but they always fail and end up going back to their normal lives.

The setting is London in 1964. Mrs. Ellis, the central charac­ter, has separated from her husband and is in the process of getting a divorce. She works at a night club, which is actually a glorified whore house. She has a good mind for business and loves her sons. Desmond Casson loves her, but he is so weak that his fear of rejection keeps him from doing anything about his feel­ings for her.

David, an aspiring race car driver from a wealthy family, soon enters the picture. David is strong, forceful, and is attracted to Mrs. Ellis. While making love, David says that he loves her, but she responds with, "Everybody does. You don't have to be different." It is this kind of cynical attitude toward love that dominates the film.

Most of their time is spent ei­ther fighting or breaking up. In most love stories, when the couple breaks up and gets back together again, the man says something like, "I can't live without you." But in "Dance With A Stranger," when David comes back to Mrs. Ellis, he says, "I can sleep without you."

Mrs. Ellis goes through ter­rible moments, but she is par­ticularly responsible for it. Even though David seems to treat her with any respect and often hits her, she always lets him back into her life. Getting beat-up seems to be a normal part of life for her.

In one scene, Desmond Cas­son asks Mrs. Ellis if David is hitting her again. She says, "I don't know." He responds by saying, "Even you must know when someone's hitting the liv­ing daylights out of you."

"Dance With A Stranger" creates a world of its own, where the characters are help­less victims. The sense of fatal­ism is so strong in this movie, that you know it must have a tragic ending before you're halfway through the film.

What makes such this a great movie is that the characters are well developed. The audience can identify with Mrs. Ellis, we not only care about her, but we also feel the same feeling of helplessness that she constantly must feel.

Movie critics are constantly saying that people just don't make films like they used to. "Dance With A Stranger" is proof that the critics are wrong. Dough David doesn't have the same emotional depth that has more to say about love and relationships than "About Last Night" seems like cotton candy.

The rating is: Poor. Interior, flawed, weak, flimsy, or better; you think you get the idea.

9 (no stars) - Bad. A film that never should have been made. A film so bad that it can destroy a person's career. A film that is devoid of any thing, like "I can't live without you."

BYED TERRY

Just it's my opinion

by Ed Terry
Staff Reporter

The star rating system allows the critic (that's me) to accu­rately communicate the overall opinion of a film. Because watching movies is a subjective experience, different people will have different opinions on the quality of any given film. It seems to me that this is all peek that would be popular in good little reporter, do I what my "star" rating should be...

**** - Excellent. A great film. A film that will last for years. People will point to films like this and say that they don't make 'em like they used to.

**** - Good. An above aver­age film which may possess considerable appeal for fans of a particular style. There are basically two different kinds of film movies. The first is a film which would have been a 4-star movie even if it was in a flawed way. The other kind is a film that is so great, but is con­siderably above the others * - Fair. This is either a film which has nothing worth­while to offer or has some seri­ous short-comings.

- Poor. Inferior, flawed, weak, flimsy, or better; you think you get the idea.

9 (no stars) - Bad. A film that never should have been made. A film so bad that it can destroy a person's career. A film that is devoid of any thing, like "I can't live without you."

Woodentops "Giants"

Columbia records

Yep, no doubt about it now, we are safely within the realm of pop music here. But, it's not in any sense of the word, dumb. No sirree! Not an ounce of dumberness on this record.

In tracking through this disc, it's very evident that this band is a lot more comfortable with their mellower tunes. Oh sure, they rock out. But every time they start to get a little rough, they rope it in and safely bring it back to a more restrained vein.

If any song typifies this album, it has to be the cut, "So Good Today." The song has a very easy rockin' feel to it. In its own way, it has a very bi­sneer instrumentation. Three­part harmonies, acoustic gui­tar and strings give it a fully feel. At the same time, they add marimbas and Latin per­cussion to give it a south of the border tinge. And just what is this bizarre orchestrated tune about? It's about feeling good... today. No wry political speeches, no brooding reflec­tions on a love gone bad. Just a guy who's feeling good today.

"Choices" made for us
by Bernie Bleake
Senior Editor

Last year several Southern Wisconsin business organizations, particularly the Wisconsin Association of Manufacturers and Commerce, joined hands together to try to cut state taxes. The state, they reasoned, is simply spending too much. Something must be cut.

They chose as their target the UW system.

If they get everything they want the UW system will have to both cut enrollment and raise tuition. The WAMC has already printed up several pamphlets and produced a short video called "Choices," which will be shown to several thousand state employees.

It is a scary situation, both because of the apparent lack of concern among those it will affect most (students and faculty) and because many of the facts used by the WAMC are misleadingly misleading.

The video "Choices" points out that Wisconsin has 100,000 students at 13 State University campuses, compared to only 80,000 in Washington State (which has about the same population). What "Choices," don't mention are the 60,000 students in Wisconsin who go to two-year campuses (which are not mentioned in the total Wisconsin figure).

"Choices" says that Wisconsin's personal income tax is the sixth highest in the nation and is 30% above the national average. These figures, however, are from 1983, before an 8% tax cut and an $8 million cut in UW spending. Wisconsin now is 13th in state personal taxes, and after a planned $8 tax cut will drop to 17th. (The videotape was made in 1986, so the information was deliberately outdated.)

Moreover, Wisconsin is ranked 47 in state business taxes, one of the lowest in the nation.

"Choices" points out that UW Madison was ranked the fourth best school in the nation in 1983, but that tuition for Madison is 81% less than the average for the top ten. And no wonder, since the top ten include most Ivy League schools with tuitions above $10,000. This makes it look as if Wisconsin is paying $10,000 for each student (they actually spend about $4,100). "Choices," as author David Helbech points out, "mixes apples with oranges."

James Hasey, president of Wisconsin Manufacturers and Commerce, points out that, while "Choices" claims that Wisconsin spends more for public high schools than the national average, it ignores several important facts.

First, Wisconsin has more high school graduates than the national average and more of them go to college than the national average.

Second, on an annual basis, the instructional budget of the UW system is $600 less per full-time student than the national average.

Third, Wisconsin's taxes only support 38.5% of the total UW budget, and that every state tax dollar is "averaged over 2.5 times through grants, fees, and auxiliary earnings."

"Choices" also attacks State employees, claiming Wisconsin has too many and that they get too many benefits. What "Choices" ignores are the 9,400 State Employees (of 36,296) not funded by State tax dollars, the $1,506 and $1,638 in State taxes employees pay, and "when conservative economic multiplier effects of repaying are considered, every state tax dollar in the Universities' budget generates an additional six dollars in state and local income, and a minimum of 18,756 additional jobs for Wisconsin's business community."

But the real problem is that we are losing the battle by default. So far, hardly anyone has spoken or written to state leaders about what "Choices" doesn't mention that apathy continues on our part. State Legislators will assume that we agree to every- thing the WAMC claims and wants.

That would not be good.

Credit card fraud

This year, 83 percent of all college students have joined the 90 million credit card holders in the United States.

To educate consumers on how to select and use these credit cards the United States Office of Consumer Affairs has published a new brochure, "Choosing a Credit Card. These 15 Tips May Save You Money." The brochure suggests that consumers look for lines that have low interest rates, that cost and shop for the best deals before acquiring a card. Credit card fraud may reach $11 billion by 1996. To avoid credit card fraud, keep a running list of credit card numbers and issuer's phone numbers in case of loss or theft.

Before accepting a credit card, be aware of finance charges that will be imposed if the balance is not paid in full. Students may not be aware that it is illegal to acquire a "pre-approved" credit card in the mail. If a student receives a credit card in the mail and doesn't want it, the card should be destroyed.

Any student wishing for a free copy of this brochure, write: Bureau of Consumer Information Center, Pueblo, CO 81009.

"Die Young As Late In Life As Possible"

by Dan Dietrich
Features Editor

As a college student waiting in academia, I learn to dance. A new step here, how to move when this music is playing, and how to carry myself throughout.

After four years of practice and development, I write about my qualifications.

Marketability is a big word now. "How marketable are our skills?" And more importantly, "How marketable are you?"

But in this process of becoming marketable, I've become a commodity; an item to be bought. "A useful thing," states Webster of commodities. I am a useful thing.

Until recently, I accepted what was provided. There is a preaching that says, "Be like them, get professional like them, have the skills that they do." I followed, because I wanted a job.

But last week, the professor for my business writing class said, "Wear the uniform." Vincent of Willie Lohman appeared in my eye's view. There was old Willie, sitting at his kitchen table. And standing behind him was a business in a blue suit. Big business, saying, "Wear the uniform!" And maybe, I'm talking to you! Wear that uniform.

It's time I stopped the music here. There is nothing too manipulative in that statement.

Each morning I stumble through my pile of clothes and wonder my closet. I'm not an eccentric dresser. Walking down the street, I blend fairly well with the other people walking there. But my dress choice is mine. And dressing styles seem to symbolize (or at least represent) philosophy.

But "out there" everyone wears the same thing. They wear the uniform. Granted, that it looks more professional, that I would not buy a computer from a man in a leotard, and that Ronald Reagan clad in only Bermuda shorts while talk- ing about defense contracts would not have much credibility, but "wearing the uniform" still feels too manipulative.

Also, I have never been overly impressed when walking the streets of downtown Chicago or Minneapolis. The site is a bland one. Hundreds of people, all dressing the same, all looking the same. Business suit. Tight tie. Leinen Fog rain jacket. It is one hand. Befuddled the other. A black stare forward predominates; not dead, but unemotional.

That view scares me. It reeks of conformity. It reeks of retarding individuality.

Few would disagree that business is concerned with innovation, with new ideas. But it may be that by imposing dress conformity, they are suppressing independent thinking.

Or, may we be inflating this balloon of conformity with too much air of importance. Or perhaps I am not there. I will realize that dress conformity is something that must be added to by one to continue. Perhaps.

OUTDOORS
P.E. 115 a natural choice at UWSP

by Chris Dersey
Outdoors Editor

For the past 50 years, P.E. 115 has been scoring high marks with UWSP students. P.E. 115 is the largest credit course in bowhunting.

There's a natural interest in bowhunting, says Dr. Pete Kasson, instructor for the popular course. Dick Rinneot, senior, is one of four credit P.E. requirements. "Even the first year we offered one section of the course, it filled up in a hurry," says Kasson. Kasson likes to keep the class size to a limit of about 40 students so there's plenty of room to safely shoot.

The course covers the whole gamut of bowhunting. Lectures include the history of bowhunting, using equipment, shooting tips, hunting methods and even processing of big game.

Kasson makes use of the many instructional films and literature currently on the market to illustrate field techniques and safety. He also stresses personal safety first. "Ethics can always be improved," says Kasson. "For example, I don't think about a eight-week, one running 50 yards away is ethical."

Kasson gears his course to producing ethical and effective hunters that wait for a killing shot-out shot. It's important to teach hunters the merits of these qualities at a young age, says Kasson. "I'd encourage high schools to start bowhunting classes or clubs as a way to improve the quality of hunters in the woods."

Weather cools but action heats up

In the northwest, river water levels are high in the Brule River area resulting in light fishing pressure. The Brule River area is considered one of the best steelhead areas in the state. Bob Cruse, a Brule River guide, says that he is seeing good numbers of steelhead.

In the southeast, excellent success is being witnessed by those fishing the Eau Claire area. Fall trout fishing has been outstanding in Brule River area. Fall trout fishing has been outstanding in Brule River area. The Brule River is considered one of the best steelhead areas in the state. Bob Cruse, a Brule River guide, says that he is seeing good numbers of steelhead.

Outdoors

Waterfowl stamps
Hunters pay their way

by Bob Cruse
Staff Reporter

With duck hunting season opening this weekend many hunters may be disappointed to find that waterfowl populations are still falling short of the current demand. Things could be worse, however. We should feel fortunate to have the Migratory Bird Hunting Stamp Act without which our present waterfowl populations would be far below their present status. The shortage of ducks in North America has been a problem since the beginning of this century. Around 1900 duck populations were diminishing, largely due to market hunting and habitat loss. Drought and the drainage of wetlands for agriculture deprived North American ducks of vast breeding grounds and migration rest sites causing tremendous and long lasting damage to most waterfowl populations.

The Migratory Bird Conserva- tion Act of 1929 helped to alleviate this problem by allowing the government to buy wetlands for wildlife habitat. This act fell short of its intentions because it failed to supply the necessary funding for the purchase of these lands. J.N. (Ding) Darling, a political cartoonist, along with several other conservationists, recognized this problem, set out to obtain funding for the habitat acquisition allowed for in this Act. Darling came up with the idea for a federal revenue stamp and on March 16, 1934 Congress passed the Migratory Bird Hunting Stamp Act. This allowed for the sale of duck stamps, the proceeds of which were used to buy and lease waterfowl habitat throughout the United States.

In the first year of this program, over 600 thousand stamps were sold at one dollar each. Sales increased to over 1 million in 1938. This money went toward the purchase of many large areas of wetlands. Many of these were purchased for as low as one dollar per acre.

At the present time land purchases may cost as much as $1000 per acre which has caused a great decrease in the rate of wetland acquisition and an increase in the price of the stamp to $7.50. In recent years, the program has focused on the preservation of wetting and breeding habitats especially for those species whose numbers are especially low or declining. Each duck stamp features one of many species of North American waterfowl. The first of which was drawn by Darling and consisted of a pair of mallards. Each year the federal government commissioned a leading artist to design a duck stamp until 1949 when the annual duck stamp contest was instituted. This contest has gone...
The American industrial machine was beginning to use and destroy unprecedented areas of land. In trying to solve this problem, he became an ideological conflict with his political counterparts. Gifford Pinchot and Teddy Roosevelt maintained a "conservative" attitude, whereas Muir went beyond conservation to favor a preservation ethic, saving land for reasons other than human use.

Muir, working in the 1890s through the 1910s, conceived the concept of a human ecological consciousness and ethic. These ideas were expressed in the great literary work, "A Sand County Almanac."

John Muir was born in Scotland. Aldo Leopold was born in Iowa. However, a common feature between the two was their Wisconsin connections. Muir emigrated to Wisconsin at age 11 and attended UW-Madison for a couple of years. Leopold's classic book was written primarily from his "shack sketches" which he wrote on an abandoned farm near the present day city of Portage in Columbia County. He spent much time in this area of our state developing the ideas which were to be incorporated into the formal studies at UW-Madison where Leopold taught. It is in this fact, that both were connected with Wisconsin. They are now in the Wisconsin Conservation Hall of Fame located at the visitor center in the Schmeeckle Reserve.

Sport figures are no longer the only ones to end up in a hall of fame. The reason people are put into a hall of fame is for their existence, not apart from it.

When compared to this type of recognition, Carson, Ohio and Cooperstown, New York (honest in the baseball and football Hall of Fame) have nothing over Stevens Point.

Two others in the Hall of Fame are former Wisconsin Conservation Department Chief, Ernest Swift, and former Wisconsin Governor and Wisconsin Conservation Hall of Fame inductee Gaylord Nelson. As governor, Nelson passed the Great Lakes Dredge and Fill Act of 1972. As a result, the Great Lakes are protected for shipbuilding and related activities. As senator, Nelson passed the National Environmental Policy Act, as well as laws to control strip-mining. Nelson was the originator of a national "teach-in" on the environment to raise awareness of environmental issues. Nelson is presently a counselor for the Wilderness Society.

Ernest Swift began as a game warden and later the director of the Wisconsin Conservation Department, the forerunner of our present DNR. He helped to enact many conservation bills. These were based on scientific study influencing management decisions. Later, Swift served as the executive director of the Wildlife Federation.

The Wisconsin Conservation Hall of Fame Foundation was organized on April 28, 1984. It was established to maintain a "conservation ethic" as a legacy for the people of Wisconsin. The Hall of Fame also fosters cooperation between the many environmental organizations.

The board of public commemoration to educate and inform people on the conservation heritage of our state. To be selected for the Hall of Fame, names and their biographies are submitted to a Board of Governors. The board currently consists of five members, all faculty of either UW-Madison or UW-Stevens Point, appointed for staggered two-year terms. Criteria used to evaluate possible inductees are the scope of interest and value of the nominee's contribution to the field of natural resources from a historical perspective.

Donald Laat, treasurer of the Hall of Fame, cites Wisconsin's history of innovative and clear thinking in the natural resources field as an important reason for the existence of the Hall of Fame. Schmeeckle's visitor center has even more to offer. Lifecycle simulations of Wisconsin's land and water communities, and the impact on both. It is, in the eyes of many educators, refreshing to see this type of positive growth in an educational facility while most creative ideas are being stifled by lack of funds.

For more information write: Earl Spangenberg, President, Wisconsin Conservation Hall of Fame Foundation, Box 962, Stevens Point, WI 54481.
Too early to pack away fishing gear as action improves

by D.J. Daniels  
DNR Public Information  

With the changing of the seasons, the birds are migrating already, many angling enthusiasts were wishing they had rods away for the year and won't think about fishing until next spring.

Not so for DNR's coldwater fish hatchery managers and their staff.  

Fishing is a busy time at Wisconsin's hatcheries. Managers are gathering and batching the fish eggs that will become the seven million trout we will stock in state waters next year.

The Osceola hatchery staff in west central Wisconsin started spawning rainbow trout brood fish in July, and finished collecting about 1.5 million eggs the second week of September.

Managers at the state's Wolf River hatchery in central Wisconsin induced spawning in brown trout by manipulating the amount of light to which the brood fish were exposed. Staff so far have collected and are hatching two million of those brown trout.

These early-hatched fish will allow us to raise and release brown trout as frylings at a size comparable to our usual yearling fish.

Another 1.7 million brown trout will be hatched at the St. Croix and Bayfield hatcheries sometime in October. Five million chinook salmon and 1.8 million coho salmon eggs will be hatched at the St. Croix and Kettle Moraine hatcheries.

Stocking fish is an important part of our management program and perhaps the one most visible to the public. Yet DNR hatchery personnel may be the most overlooked people on our staff.

Preservation of life in those eggs is a difficult task. Throughout the rearing process, managers have to contend with bad weather, disease, parasites, predatory birds and mammals, and still come out with fish to stock.

Their skills range from those of a farmer to those of pharmacists and veterinarians. They adjust rations, detect and treat disease, and help deliver the next generation—mostly unseen—by those of us who depend on their handiwork for our nice limits of trout and salmon.

Once collected, the eggs are carefully incubated in ground water until they hatch. I like to describe fry at this stage as 'two eyes and a wriggle.'

Hatchery crews then transfer the fry to rearing tanks, where the fry fish are fed under controlled conditions until they are large enough to move to rearing ponds. This process can take up to 18 months before stocking occurs.

The next time you catch one of these trout or salmon, think about the tender loving care and controlled environment that produced the fry at a DNR hatchery.

Think also of all that effort the hatchery will be wasted if we don't keep our water quality high through proper control regulations and responsible use. Both stocked fish and those produced by nature need clean water to survive.

Groundwater Center opens

by Tim Albers  
Staff Reporter

Earlier this week I was requested to do a story on the "Central Wisconsin Groundwater Center." Up to this point I didn't really know what this new office is in the basement of the Student Services Center. For those of us who are getting checks or doing whatever you do at the Barron's Office, you may have been wondering what this place was too.

The director of the Central Wisconsin Groundwater Center (CWGC) is Tom Osborne. Working with him are Chris Meehan, an educational specialist and Mike Bohn, who works part-time and is based in Madison with the Wisconsin Geological and Natural History Survey. Along with support personnel, these people are the backbone of the center. One other familiar name who has been involved with the CWGC is Dr. Byron Shaw, a professor in the College of Natural Resources.

CWGC is co-located with the Golden Sands Resource Conservation and Development in Room 601 of the Student Services Center. They have an open house on June 22 and in Osborne's words, "That kicked us (the Center) off."

The purpose of CWGC is to collect and make available data on Ground Water in one location and to establish and develop an educational program in Central Wisconsin. The establishment of the center was made possible by IUSB state legislation. It is, however, operated through UWSP and the Cooperative Extension Service.

The new Central Wisconsin Groundwater Center is located in the basement of Student Services Center.

They assist the management team in charge of our ground water through informing the general populous on how we can protect our ground water from contamination and how to recognize problems with the water. They will do this by distributing informative brochures (one is coming soon), conferences (they will have one in March 1987), and by working with high school teachers and giving demonstrations using groundwater models.

Information and reference collection is their main purpose. They collect anything which concerns groundwater including graduate student thesis. This information is available to students doing research and is available to anyone who wants access to it.

Confessions of a bowhunter

by Tim Albers  
Staff Reporter

This may seem foolish to those of you who are die-hard bowhunters, but I did go hunting on opening weekend.

Yes, I know, but I'm not a die-hard...yet.

I spotted a nice buck in the middle of one field but decided he was too far out. The next deer I saw were two does laying in a field. I was curious so I glanced back to have another look. When I looked closer I saw more deer on the other side of the field and one of them was "Big!"

My blood pressure rose, but when I approached the field where the monster stood, I could see a fawn, a case of trespassing or simply waiting for the deer to come my way. I decided to wait. The sight of the deer was truly magnificent. I was glad to just watch for the half hour that I had.

While I waited the fawnies, the buck just munched the hayfield to the cornfield. Then, all of a sudden, I saw him bolt for the woods. I looked up the fenceline and saw my buddy. Apparently the deer caught scent of him. He tried to sneak around to see what the deer was doing but when he got to where he wanted to be the buck was gone and I witnessed it all.

When my partner strulled down to where I was, I saw something on the fenceline about 300 yards away. Judging by the way it moved, I could tell that was a buck.

By the time my partner and I learned to have a round and headed home, the buck was gone. The buck was really nervous. I decided to leave the does that had approached the rut must be starting next time.
Raccoons continue to thrive across Badger State

by Robert Blaett & Scott Crevan

Raccoons are the only representative of their biological family which inhabit Wisconsin. Their closest relative is the coati of South America, and pandas. The raccoon's scientific name, Procyon lotor, can be roughly translated to "before the dog" (denoting is distant relationship to the dog family), and "a washer." Most people know the animal's scientific name, denoting is distant relationship to the dog family, as "raccoon" or "coon." The common names are derived from an Algonquin Indian word "arunk" which means "he who scratches with his hands," and is probably a reference to this animal's dexterous use of its forepaws.

Raccoons have a robust body, broad head, and pointed nose. The ears are 1 1/2 inches long, rounded, and stand erect. Black, alert eyes reflect the mask, ringed tail and black face of a raccoon's feet are naked. Each of the 5 toes on a raccoon's foot bears a short, curved claw. The forearm is similar to human hands in appearance and their ability to manipulate objects. A combination of flat feet, short legs, and a robust body give the raccoon a shuffling gait as it walks. Raccoons make a variety of vocal sounds, including a harsh growl or snarl, a rasping yowling, and a loud "prrr." Adults average 14-24 pounds, but may reach 40 pounds and exceed 3 feet in length.

Food: Raccoons are omnivorous, meaning they eat both plant and animal matter. Nuts, fruits, berries, seeds, insects, fish, frogs, turtles, eggs, birds and mammals (especially young ones), crayfish, carrion and garbage are common food items. Wisconsin raccoons in agricultural areas, corn may represent an important food source during winter and early spring. A raccoon's diet varies with the seasonal availability and abundance of particular food items. Raccoon numbers and productivity may be limited in local areas by available food.

One of the more widely known aspects of the raccoon is its habit of "washing" food in water. Actually, raccoons do not always dunk their food, even when near water, and certainly will not hesitate to eat a tasty morsel when water is not nearby. Many theories have been proposed to explain this strange habit, but so far, raccoons are the only ones that are sure or they "wash" their food.

Species Spotlight: Raccoons can transmit rabies, canine distemper, and parvovirus to domestic animals and humans. You should avoid any raccoon which is active during daylight hours, has lost its fear of humans, and appears uncoordinated, confused, or listless. If you observe an animal displaying these symptoms is encountered, a local DOM conservation warden or wildlife manager should be contacted immediately. Disease is most often prevalent in raccoon populations which become too great to be supported by available food and habitat. Since raccoons have very few natural predators, disease is likely to occur in residential areas and state parks where northern 1/3 of the state are not near great densities, except in local situations, due to severity of winters, lack of favorable habitat, and fewer available food sources. Management: Raccoons provide an important source of recreational and economic opportunities for Wisconsin residents. Because raccoons are often located in or near urban areas, non-consumptive use of raccoons has increased. Synonym: Procyon lotor.
bowhunters. Some students, in fact, have purchased bows just to take the course, since they aren't provided. Another indication of the course's popularity is that students must provide their own transportation to the field range, and they willingly do.

Cont. from page 13

P. E. 115 hits mark

Kasson has no trouble relating to his students as he is an avid bowhunter: "I'm not a nut about bowhunting," says Kasson, "but I get out as much as I can. Good bowhunting is a great sport." Besides his teaching, Kasson coaches the men's golf team and is a father. He spends whatever free time that remains reading literature on bowhunting to keep current on the latest gadgets and techniques. It's a job in itself, but one which Kasson wouldn't trade.

Outdoor Report, from p. 13

conditions have hampered bow hunters.

In north central Wisconsin, fall color is at or nearing its peak in the Antigo, Woodruff and Wisconsin Rapids areas. Trout fishing has been good on trout streams around Antigo and walleyes and perch are biting on Lake Mohawk. Walleyes are also being caught below the dams on the Wisconsin River in the Wisconsin Rapids area. Many ducks are being seen on waters in the Woodruff area and deer, bear and skunks are on the move. In the southeast, perch continue to be caught at the new bridge at Sturgeon Bay. Limits of brown trout were taken last week at Badleys Harbor. Walleyes were hitting off Voyager Park and at the dam in De Pere in Brown County. Fall color has reached about 50 percent in Shawano County. Nice catches of perch and bluegills are coming from Partridge Lake in Waupaca County where bow hunters had a good opening weekend. White bass fishing is good at Winneconne.

Cont. from page 16

Raccoon populations

In the southe st and southwest, cattails are biting on the Wisconsin River in Grant County. Fall colors are nearing the peak in many Wisconsin Rapids areas. Good catches of muskies are being reported on Lake Mew- hawkin. Large numbers of geese have been seen flying into the area. The fall colors are at their peak in many locations and the news is good for grouse hunters as cover is beginning to drop making the birds more visible.

Wisconsin Rapids Area

Fall colors are nearing their peak in many Wisconsin Rapids areas. Good catches of muskies are being reported. Anglers below the dams of the Wisconsin River are reporting decent catches of walleye.

Woodruff Area

The outdoor report for this week is: yes, yes, yes! Good weather for ducks and many can be seen on local waterways. The animals are on the move in the woods. Many deer, bear and skunks have been seen. With the weather still mild, and the colors at their finest, it's a good time to enjoy a hike along the Bearskin Trail which is located in Minocqua.

Waterfowl,

from p. 13

millions of acres of waterfowl habitat. These funds have primarily aided in the preservation of breeding, nesting migration and winter habitat.

The Wisconsin Waterfowl stamp has benefited much more than just waterfowl. It has provided habitat for numerous other wildlife species, storage of flood waters, preservation of coastal shore lines and a filtering agent against water pollution. All of this in addition to providing recreation for thousands of people throughout the United States.

The 1980s are continuing to create a great demand for the duck stamp. With over 400,000 acres of valuable wetlands being drained yearly, the need for this stamp has never been greater.

Picnic,

from p. 14

New Hope Pines (Portage County) is the largest and the best remaining northern dry­ mesic forest in central Wisconsin.

Millelbeau Lake (Waupaca County) is a large undisturbed lake bordered by a forest which contains tamarack, soft maple and white pine.

A plan picnic gives the Bureau a chance to say thank you and is open to Endangered Resources volunteers, checkoff recipients, DNR staff, and any interested people. For more information contact the DNR Bureau of Endangered Resources, Box 7921, Madison - 53707, or call 1-800-365-7012.

**Keep unbeaten streak alive**

Point ruggers overcome Oconomowoc, 26-14

---

by Scott Heelskamp

Staff Reporter

The Stevens Point rugby club kept their undefeated streak alive with a dramatic, come-from-behind victory over Oconomowoc, 36-15.

The first half was a sawmill battle with Point scoring first on a Dean Rummel try. Oconomowoc countered with a try of their own to tie the score at 4-4.

Point pulled into the lead, courtesy of Tim Keven's try, only to have Oconomowoc tie the score again at 8-6 going into the halftime break.

The Point offense stalled and energy dropped. Coach Don Lasky gave Oconomowoc the advantage with a try. The conversion kick was good for a 14-6 score.

With six minutes remaining in the game, Point made a serious move for the lead.

**Point Alumni to enter hall**

by UWSP Sports Information Office

**STEVENS POINT — Five star athletes from the past and a faculty member who was an instrument in the development of sports programs for women will be inducted Oct. 11 into the University of Wisconsin-Stevens Point's Athletic Hall of Fame.**

They are Sue Bradgård, Professor Emeritus Marge Spring and Fran Roman, all of Stevens Point, Fred Kelly, Paul Finsen, and Charles Newcomb, New London.

The induction will be during a dinner program beginning at 6:30 p.m. on homcoming day at the University Center. The induc tions also will be introduced at halftime of the afternoon football game at Goerke Park.

Tickets for the dinner may be ordered from the UWSP Office of Alumni and Development in Old Main.

Bradgård, who taught at Willis Knecht High School before returning to UWSP as a graduate student, was a standout collegiate athlete in both basketball and field hockey. As a freshman starter in basketball, she led her team in scoring each year and was a first-team All-WIAC selection in 1975-76. She was twice named the team's Most Valuable Player and currently is the third all-time scorer in the school's history with 998 points. In addition, she is second in career rebounds (884), rebound average (9.5) and career field goals (281).

As a two-year starter on the field hockey team in 1975-76, she scored 11 goals in leading her team to a 20-14 record.

At coach of women's field hockey teams from 1969-89, she enjoyed her most successful season in 1980, when her team finished 5-4 and outscored its opponents 94-6.

In 1968-69, she was one of several women to take part in discussions regarding the formation of the Wisconsin Women's Intercollegiate Athletic Conference (WIFLAC). In the fall of 1979, after years of work, the WIFLAC was formed.

Spring, a retired physical education professor and president of the honorary title of professor emeritus, taught and coached women's teams and promoted the upgrading of women's athletics from 1962 until her retirement in 1983.

From 1969-69 she also guided the women's track and field program. Starting from scratch, she sent a women's team to national competition.

In 1981, Sport magazine included her as a women's sport pioneer.

Finsen was a strong influence in the development of women's athletics as the programs exist today. Due to her boundless energies and efforts.

**Witt's harriers 2nd at Wombat**

by Kent Walstrom

Sports Editor

**SHEBOYGAN, WI — With coach Dick Witt running a younger squad, the UW-Stevens Point men's cross-country team finished in the runner-up spot at the five-mile Wombat Invitational here last Friday.**

UW-Oshkosh (36) secured first place by finishing three of the top six runners, while Steven Diffy of Wisconsin-Green Bay claimed fourth place finish with an individual time of 18:13.

---

**Spikers edge St. Norbert**

by Scott Heelskamp

Staff Reporter

The Stevens Point volleyball team spotted St. Nor bert College two games, 4-1-2-3, before winning the next three, 15-9, 15-16, 15-4, to take the match last Wednesday at De Pere.

The Lady Spikers had spotted the Point attack with 17 spike kills, and Massman added 16. Bartolotta also contributed 26.5% service accuracy with three aces.

"We stayed with it in games four and five and won the match composed of the best rugby players in Wisconsin. The selections were based on game performance and an optional try-out session held in Madison last Sunday. The team will travel to Louisiana for a tournament at the end of October."

The Point rugby team will rest this weekend but face Oshkosh in two weeks.

---

**TOP TEN INDIVIDUAL RESULTS**

1. Scott DeGroot (GB) — 18:13
2. Philip Hartwig (FO) — 18:16
3. John Spadel (GR) — 18:17
4. Steve Wittl (GF) — 18:17
5. Scott Plaisance (WP) — 18:19
6. Mike Stotler (GR) — 18:20
7. Marty Kroupa (GR) — 18:22
8. Ben Tracy (GR) — 18:24

---

"The Pointers, second with 43, managed four runners in the top ten, including No. 5 Steve Wollner (17:36) and No. 9 Marty Kempf (17:37)."

"They were disappointed that we lost to Oshkosh in a close meet, but we made improvement and that was the important thing. Our young runners gained experience and as a whole the entire group ran better on a tough course," said Witt. "The entire course had to be changed prior to the race due to flooding, so that didn't help matters."

Other Pointers finishing in the top twenty were Steve Apgar and Brian Miller.

UWSP will travel to the Notre Dame Invitational October 3rd, then head to the Eau Claire Invitational at Eau Claire Oct. 11.
Kevin Krause and Baumgartner, UWSP watch cats drive 59 yards to pay dirt before responding with three more touchdowns in the final three minutes of the second quarter to gain an insurmountable 34-7 lead at intermission.

During the scoring spree, Baumgartner first hooked up with halfback Mike Christman for a 56-yard touchdown pass with 2:14 left, hit split end Dave Steavpack with an 11-yard scoring pass with 1:32 remaining, then returned to fire a six-yard touchdown strike to Christmas just two seconds before halftime.

Defensive tackle John Lesczynski snared an interception and lineman Jeff Politzer pounced on a fumble to aid the last-minute scoring explosion.

“Our defensive team is playing superbly,” said LeRoy. “I think Northwest (Missouri State) may have underestimated us this afternoon.”

Dave Steavpack, who also caught a touchdown pass in the third quarter, finished the day with seven catches for 144 yards. Mike Christmas, in addition to his two touchdowns, caught four passes for 92 yards.

**Football**

*by Kent Walstrom  
Sports Editor*

Freshman quarterback Kirk Baumgartner threw for four touchdowns passes and completed 30 of 34 throws for 335 yards as the Pointers upset NCAA Division II Northwest Missouri State 49-21 here Saturday afternoon.

Coach D.J. LeRoy's Pointers (6-1-3) used a 22-point surge in the final minutes of the first half to build a 36-7 halftime lead, then extended the gap to 49-2 before surrendering a pair of fourth quarter touchdowns.

It was the first collegiate start for Baumgartner, who found an abundance of support from a previously dormant Pointers offense. Just as importantly, UWSP's defense, led by sophomore linebacker Steve Day, proved equally adequate in holding NW to just six first downs and 98 total yards in the first half.

Day, credited with seven solo tackles, was again backed by a consistent Pointers secondary, which added four interceptions and a fumble recovery.

After jumping to a 34-0 lead on touchdowns runs by flanker Kevin Krause and Baumgartner, UWSP watch cats drive 59 yards to pay dirt before responding with three more touchdowns in the final three minutes of the second quarter to gain an insurmountable 34-7 lead at intermission.

During the scoring spree, Baumgartner first hooked up with halfback Mike Christman for a 56-yard touchdown pass with 2:14 left, hit split end Dave Steavpack with an 11-yard scoring pass with 1:32 remaining, then returned to fire a six-yard touchdown strike to Christmas just two seconds before halftime.

Defensive tackle John Lesczynski snared an interception and lineman Jeff Politzer pounced on a fumble to aid the last-minute scoring explosion.

“Our defensive team is playing superbly,” said LeRoy. “I think Northwest (Missouri State) may have underestimated us this afternoon.”

Dave Steavpack, who also caught a touchdown pass in the third quarter, finished the day with seven catches for 144 yards. Mike Christmas, in addition to his two touchdowns, caught four passes for 92 yards.

doors were opened to women's collegiate athletics on a scale only dreamed of at that time, according to former students and former students who nominated her for the "hall."  

Charlesworth, a retired administrative assistant to the New London School System, played football from 1924-28 and basketball from 1927-38. He was an all-conference honoree as an offensive tackle in football in 1928. The team compiled a 5-1-1 record and shared the conference championship with UW-Oshkosh. In 1930, he coached the team for its final game against Eau Claire, a 6-0 tie. After college he went on to play semi-pro football with the New London Bulldogs and in Wisconsin Dells. He was a member of the All-Point football team selected for a 10 year period between 1924 and 1934.

As a three-year player on the Pointer cage team, he was part of squads that compiled a 14-6 record. In the New London school district he taught for 31 years and was named as one of the "hall" mer students who nominated him for the "hall." His 1975 football teams have compiled a record of 14-16 and 210 losses. His 1958 team won the WIAA championship and participated in the NAIA National Tournament in Kansas City. His career average of 16.4 points per game was fourth all-time and his touchdowns are a school record. His 1975 squad won the WIAA championship and participated in the NAIA National Tournament in Kansas City. His career average of 16.4 points per game was fourth all-time and his touchdowns are a school record. His best compiled record for his play on the baseball field, Roman, a catcher, was a four-year letterman who had a season best .495 average in 1966. That average ranks as the sixth best compiled by a Pointer. Also a member of the unbeaten football team, he played both ways for the Pointers. The team compiled a record of 14-16 and 210 losses. His 1975 team won the State Tournament. He received an "Excellence in Coaching" award from UWSP in 1984.

Fran Roman, a Stevens Point insurance agent, was a two-sport athlete at UWSP from 1964-68. He was named as one of the "hall" mer students who nominated him for the "hall." His best compiled record for his play on the baseball field, Roman, a catcher, was a four-year letterman who had a season best .495 average in 1966. That average ranks as the sixth best compiled by a Pointer. Also a member of the unbeaten 1965 football team, he played both ways for the Pointers. The team compiled a record of 14-16 and 210 losses. His 1975 team won the State Tournament. He received an "Excellence in Coaching" award from UWSP in 1984.

Thanks to the nearly 100 students that already signed it, I feel if a conference room is needed, one of two options are available. First, use the Department of Biology Conference room. (Room 156 is obviously not used all that much). Or, since it's a bureaucratic need, let them use your office (Room 156). But let the students study.

Thank you.
Andy A. Rodemals
Senior, Wildlife Biology Student

To the Editor:
Ed Comes Out

Il there are 'a few' liberals on this campus Ed, better high-tail your veinsful self-aggrandizing far straight for the city. And take your real knight, Murphy, with you. Maybe he can laugh off your petty backstabbing. I suspect, however, that even the Republicans wouldn't have a backyard large enough
Signed, W. Paul

The Exorcist, uncensored, on Oct. 2 at 7:15 and 9:00 p.m. in the UC-Phle. Only $1.50 with I.D., $2.00 otherwise.

University Theatre presents: Miller's The Misers, a classic satirical comedy about parental control (and we all know about that). Walter Kerr and Anthony Newley present this modern reading, showing Oct. 3-5, 9:11 at 8 p.m. in the Jenkins Theatre. Tickets are only $2.50 with I.D., $5.00 every other day.

The Athletic Department presents a Channel 3 sponsored all-male Torch Toss. Sat. Rocky Rococo prizes are awarded for the longest toss. Sat.

Laffs in the Lunchroom, a comedy sketch show outside DeBolt (if rain, in the UC-Phle). A drive-in without the drive-in.

Sixth Annual Homecoming, the first 313 and 3:15 p.m. in the UC-Encore at 8:30.

Oct. 7, it's Casino Night in the Encore from 8-10 p.m.

Oct. 8, UAB Athletics Entertainment System in the Encore from 8-10 p.m.

Dinner: tickets are $4.50 at the stock ticket office.

A tennis raquet was left in the UAB Student Services office on Monday, Sept. 15. It can be claimed by Debbie Getts-Loft or Linda Herk at 346-3028.

Come and help make some decisions on what kind of entertainment comes to campus! Join UAB Alternative Sounds! We meet Sunday evenings. Visit the UAB Alternative Sounds office at x2413 for more info.

Are you looking for info on parties? "The Party Line," will be the talk given by Dick Purnell on Thurs., Oct. 9 at 7:00 p.m. in Berg Gym. Cadets: Blind respect serves no man, does it sir?

Are you Welcome to the family.

Ladies & S's... We're looking for everything especially Chi-Chi's. The Roommates.

Are you Heritage cheer team: Great job on Saturday! Keep up the good work and no going to jail, jury? ...an ex-

Is Anyone Out There? Just wanted to let you know that UAB Alternatives Sound is looking for team members! If you're interested in progressive music you've got an on-going job! Meet on Saturday night.

For more info, stop at the UAB office or call Kent at x2413.

Are you welcome to the family.

Ladies & S's... We're looking for everything especially Chi-Chi's. The Roommates.
