One solution to the budget cuts, as Earl sees it, is to move people through the university more quickly, "think the university ought to get in there and complete for general pur­
pose revenue," he said. "I think tuition in the university benefits the peo­
ple of the state."

"What has to be done is to get rid of the sensor bottleneck busi­
ness and let people finish in four years," Earl said. "Give them the opportunity to get the courses they need in their ma­
jors on time."

Earl says the university ought to make more cuts in adminis­
tration, but not necessarily from the instructional side. He suggested that some adminis­
tration may be overpaid.

"The university's principal re­
sponsibility is in instruction. I was disappointed that when two­
aced with making 5 million in cuts, the university chose to close the libraries early, expand sections and cut some classes out," he said.

While he did not say how much money he was willing to com­
to the university sys­
 tem, Earl did promise to not close any of the UW system campus buildings.

Earl expressed hope that the state could provide a strong job market for future graduates.

"I'd like to make sure that peo­
ple can not only get a degree that is important to them, but a degree that they can find a meaningful and rewarding job here in Wisconsin," he said. "I think I can do that. I don't think my opponent is going to."
It's about time someone decided to do something about America's drug problem. Last week a third-grader (or a very short dealer on a skateboard) tried to sell me some pot. Never trust third graders. Oregano may smell good but it goes down like hell. See, it's all part of the corruption of American youth. First drugs, then skateboards, then who knows what—group kindergarten orgies or something.

Drugs are a recent problem. It started, I think, with PCP, when ordinary white American kids were transformed like werewolves into hysterical super-strength demons seeking poofy yapping at them from friend's armpits. That's when the media discovered drugs.

Before that, only hippies took drugs, and nobody worried about hippies because their hair was too long and they wore sandals and worked in candle factories.

Problem is, all those hippies were flattened by the eighties. They went to Vidal Sassoon, put on Reeboks, went to work at IBM and brought their marijuana with them—right into mainstream America.

Now second graders regularly sneak under the jungle jims to take a few. By sixth grade they meet in the johns to snort a few lines. It's all part of the corruption of American youth. (Tony aside, if Nancy or some dropout football player came to my third grade to tell me how all of America is using icky drugs and I shouldn't, I'd try them just to see what the big stink was all about.)

It's a good thing, though, that Nancy and Co. have decided to kick drugs all the way back to Columbia or wherever the hell they came from (certainly not America). Now my parents say drugs are the reason we're all so weird and lazy.

"Wow! They're all so weird and lazy."

"But I'm not on drugs."

"You guys are clever—shooting up through your earlobes and rimming your eyelids with white-out. I've seen it."

"You have?"

And there I'll be. They'll probably give me to the Marines for extensive discipline training and comically wasting in Nicaragua. Then I'll start using drugs.

Drugs are the new scapegoat. My grandparents said it was rock 'n' roll that screwed up the ir kids. (It couldn't have been that, though, because I'm fine.) Now my parents say drugs are the reason we're all so weird and lazy.

"Uh, dad, my grades aren't so hot this semester.

"But I'm not on drugs."

Death to Pushers! That's Nancy's idea. Her reasoning is:

"Because you're really talking about saving somebody's life, and it's hard for me to understand how anybody would be reluctant to do whatever they could to help save somebody's life." (UPI)

With reasoning like that, it's no wonder we're all screwed up.

It's odd, though, I never realized that most seniors graduating these days are hiding cookie spoons and crack under their Lev's and that instead of going out and getting blazed on a quarter-barrel like we did, they're lounging around a hazy Spiral notebook.

"You guys are clever—shooting up through your earlobes and rimming your eyelids with white-out. I've seen it.

"But I'm not on drugs."

"Really? You guys are clever—shooting up through your earlobes and rimming your eyelids with white-out. I've seen it."

Never trust a third-grader.
SMART software package at about $100/copy. That's over 200 copies/year about $2000/year of student funds). Right now, the University could buy a copy for $600.00. Students would have to use for about 300 copies at the $100 discount price already negotiated with Innovative Soft-

ems. How does Academic Computing insist that everyone must buy a copy, when "I-Copy, I-computer" would do the same thing? Is it just to get students to buy the package back unsealed when the student was ready to leave the UWSP. I will not reveal the clever "neat-of delivered" gag that one of your compatriots on the Student Senate proposed, but suffice it to say that student inven-
tiveness in the face of honesty is not dead. The majority of stu-
dents at the UWSP do not know how to use spreadsheets, data-
libase management, graphics or even word processing at this time. Is it to institute this wholesale levy on students when fewer than a handful of faculty have ever used SMART? No.

Problem 3: Have you seen SMART? We (students and facult-
ys) are being asked to buy into a massive commitment to one software gesamtkunstwerk SIGHT UNSEEN. I recommend that students do not buy the SMART package to teach it. "I didn't believe what I saw the first time I put on those amazing sunglasses..." Perhaps it's time for Academic Com-
ing to ask the company to put on some continuous demo's (in the lobby of the University Center?).

Unless you are only doing one thing, SMART is not designed to be used as a floppy disk program. It comes on 11 separate floppy disks. If you want to make a graph of some data that you have in the SMART spreadsheet program, for example, you would need to exchange four disks back and forth. Not too handy. SMART is meant to be loaded as a complete package onto a single high-capacity "hard disk," so the user can pick and choose parts as he sees fit without juggling different programs. If faculty is already installed on the UWSP computer network's hard disk so that it can be used conveniently in just that way, if students are forced to pay for the whole package and then use only a part of it, SMART is not as good a buy as the company would have you believe. Fribbie's are cheaper.

Problem 4: Who is going to teach the SMART package? The CJS Department already teaches SMART, but requires five CREDITS to teach it. Students must take CJS 101 (3 credits), then 3 separate 1-credit CJS courses in SMART word processing, database and spreadsheet - a total of 6 credits. CJS 101/392 should be restructured so that, within a single 5- or 6-credit course, the student would learn most of the SMART package. More time than this does not seem warranted in a 4-year University system.

Problem 5: There aren't enough machines on campus to service the 200+ freshmen requiring SMART and the upperclass-
men already taking the course. While some computer classes are now understudied, there are limits to what students can get to

There are some departments that already use the computers on campus for courses and many departments that think they would like to incorporate computers in courses. Business and Natural Resources already have assignments which can incor-
porate spreadsheet, database management and graphics pro-

ems. Most of the other departments new to computers think they would like to use word processing in their courses, students that people want...

Here is the problem: the University with lots of new computers for student use, but cannot afford to equip every computer with every popular software program that people want to use for (1) WORD PROCESSING (typing) (2) SPREADSHEET (large-
scale data recording and calculation) (3) DATABASE MAN-
GENERAL (cataloging, indexing and retrieving information) and (4) GRAPHICS (graph and charts from data). The popular Lotus 1-2-3 spreadsheet program, for example, costs about $450 a copy. Database IV Plus costs about $200 a copy. Microsoft Word, the campus word processing program, is about $200 a copy. Academic Computing cannot supply "pre-pressed" copies - it is not buy one copy for each machine in use. And they can-
not afford $1400 to furnish these programs for each computer on campus. Furthermore, the programs are not made by the same company, so switching from one to the other is a pain.

Here are the problems that I, many of my faculty colleagues and your senators see with the plan as it was presented to us.

The Faculty" are 300 individual humanoids with individual brains that think independently and have independent judgments about this plan. Don't make the mistake of putting all of us in the same pigeonhole.

Problem 1: Academic Computing has proposed that every entering freshman, starting in Fall '87 be required to buy the SMART software package at about $100/copy. That's over 200 copies/year about $2000/year of student funds). Right now, the University could buy a copy for $600.00. Students would have to use for about 300 copies at the $100 discount price already negotiated with Innovative Soft-

ems. How does Academic Computing insist that everyone must buy a copy, when "I-Copy, I-computer" would do the same thing? Is it just to get students to use the SMART package. That would be enough to equip the additional 100 comput-

Kasten toes the "right" line on foreign policy

by Debbie Kollem

If you've been watching Senator Bob Kasten's recent television appearances, you might have noticed that he hasn't been bragging about his record on foreign affairs. There's a good reason for that.

He is consistently supported by the Reagan Administration's Interventionist policies in Central America and Lebanon, and has been a consistent supporter of America's dictatorial "friends" such as Chile and Pakistan.

Kasten has also voted against several non-controversial appointments and treaties which were passed by huge majorities in the Senate, and has voted with Senator Jesse Helms (R-N.C) against a majority of his Republican colleagues no fewer than thirty times.

One of the best examples of Senator Kasten siding with Senator Helms occurred in February, 1981, when the Reagan administration nominated Frank Carlucci for deputy secretary of defense. Carlucci, who had been head of the CIA in the Ford administration, was confirmed by a vote of 94 to 5. Despite having CIA ties, Senators Helms and Kasten felt that Carlucci was "too liberal" to America's defense.

In yet another odd foreign policy vote, Senator Kasten voted against two non-controversial treaties which were ratified by a vote of 94 to 5. Only Senators Helms, Symms (R-Idaho), and the late John Ervin (R-Tenn.) were in opposition, the treaty, Kasten has never explained why he opposed a treaty so many members favored.

Even worse than Senator Kasten's recent votes, his entire "record" has been his consistent support of interventionist policies in Central America, Lebanon and Africa.

Kasten has been a consistent supporter of the 'contra' forces fighting to overthrow the government of Nicaragua, voting in favor of funding at least $15 million over the last three years. Senator Kasten supports the contra's despite the fact that they have an atrocious record of human rights violations and murder of civilian and non-civilian, and are reported to have raped, killed, and kidnapped thousands of civilians. Furthermore, the word court has ruled that the United States support of contra forces is a violation of international law.

"I thought it was important," Kasten didn't seem to bother the Reagan administration, which pulled out of the world court, joining the likes of law-abiding Libya, Iran and the Soviet Union.

Senator Kasten has also been a consistent supporter of aid to El Salvador, which watch groups such as Amnesty International have a worse record on human rights than Nicaragua. Governor Kasten is so violently opposed to, including numerous political assassinations. Recent reports indicate that government repression of human rights activists is still occurring. Yet Bob Kasten opposed removing the troops from Lebanon, stating El Salvador at least seven times. On April 1, 1984, Senate Armed Services (R-Pa.) introduced a bill which would have withheld aid to El Salvador until that government brought to the death of four U.S. churchwomen to justice. Senator Kennedy (D-Mass.) introduced a similar resolution concerning two American labor advisors who had been murdered in 1981. In an incredible display of callous unconcern, Bob Kasten moved to kill both resolutions. It was later discovered that the El Salvadoran military was responsible for the murder of all six U.S. citizens. Apparently Senator Kasten is only concerned about murder if communists are responsible.

Kasten also was a strong supporter of the administration's deployment of troops in Lebanon, and in September, 1983, he voted against all resolutions which would have given Congress any say in U.S. policy and voted for the Baker-Percy resolution which gave President Reagan carte blanche to make foreign policy in involving American soldiers in a permanent scope of which has yet to be defined by his proponents. This led many senators, including Alan Cranston (D-Calif.) to refer to the Baker-Percy resolution as Gulf of Tonkin II.

Even Republicans questioned the strategy of remaining in Lebanon in September, 1983. Senator William Roth of Delaware stated that "I believe our presence in Lebanon serves to confuse military purpose and the present should withdraw them as soon as prudently possible." Polls showed that 38 percent of the American people agreed with Senator Roth. Yet Bob Kasten opposed removing the troops from Lebanon, stating "I do not think this would result in increased violence and bloodshed." On October 23, 1983, less than 6 weeks after Senator Kasten made that statement, 24 U.S. Marines were killed in a terrorist bombing. And several more Marines died before the Reagan administration found the sense to pull out of Lebanon.

Senator Kasten's record on South Africa can be described at best as mixed. While he generally votes for sanctions bills, he has voted for amendments to weaken those sanctions. And on the issue of Angola, he has consistently supported the interests of the apartheid regime of South Africa.

Kasten voted to repeal the Clark Amendment which prohibited aid to Angolan rebels, who have received most of their funding from South Africa, and has supported sending aid to the UNITA forces led by Jonas Savimbi.

Savimbi was a Marxist who was thrown out by the current Socialist regime in Angola, and is now trying to overthrow that regime. Despite differences between countries was profound in 1983, when he became the first Republican foreign senator to be appointed by the president as a voting delegate to the United Nations General Assembly. His work, along with former Ambassador Jean Kirkpatrick, helped raise the standing of the U.S. in the eyes of our allies.

Kasten was singled out for recognition by the president for his leadership in developing the new tax code. His leadership in this area helped to devise a fairer system which took millions off the tax roll completely and saw to it that corporations would be paying a greater share of the burden.

Among his committee assignments, Kasten serves on the Appropriations and Budget Committees. He has been able to parlay those positions into tangible results for Wisconsin. Because of Kasten's diligence in this area, billions of dollars have been poured into Wisconsin communities which prompted early endorsements from the mayors of such Democratic cities as Stevens Point and Superior.

Kasten's concern for the quality of life in Wisconsin is not new. His sponsorship of the Clean Water Act recently perhaps stems from his concern developed in the Wisconsin State House. Back in 1973, Kasten was named the Conservation Legislative of the Year by the Wisconsin Wildlife Federation. Recent work of Kasten's in support of a pollution bill which expanded the Apostle Island National Lakeshore in northern Wisconsin.

As we've all struggled through this campaign, it's been apparent that neither candidate for the Senate is perfect. Are any of us? But Kasten has proven that he is effective as a national leader as well as a representative of Wisconsin's needs. He should be re-elected.

As November 6th approaches, efforts to increase the population on election issues and encourage voter turn out intensify. As well they should.

With nearly 9,000 voting-age students, the student body of UWSP has impressive power to decide the issues which must directly affect them. If politics and its issues seem distant to you, consider this: "the government you elect this year will exert tremendous influence on the UW system through his or her power to appoint the Board of Regents who govern the UW system. Questions of tuition, funding, and financial aid are decided by the Board of Regents. Student issues are the essence of the UW system." So please vote.

The Gubernatorial Race

This year's gubernatorial race pits liberal-minded (Democrat Tommy Thompson) against self-proclaimed "right-to-work" booster (Republican Tony Earl). The race was introduced in an article by a Milwaukee Journal Sep. 1st. Earl hopes to gain. Publius Research Service polls, with 48%, slightly ahead of incumbent Earl at 47%.

Tony Earl has waged a "positive campaign" in his bid for re-election, citing the achievements of his four years in office to combat criticism.

His actions on behalf of Wisconsin's farm community include a plan to help farmers place their plantings to the point where "the state in search of more favorable tax climates." In the area of state spending and taxation, Earl cites tax cuts and program reforms that have cut the total tax rate from 7.9% to 1.9 percent. Earl's plan promises to cut property tax rates by 100% as promised by "the administration," and offers "adequate funding for the environmental protection is evident by the many achievements in this area. The Governor's Association Committee on Energy and the Environment has already added a new phase to the state's new clean air regulations." Earl also leads the resistance to prevent a nuclear waste dump in Wisconsin.

A Milwaukee Journal voter preference poll showed Thompson with 45%, slightly ahead of Earl at 43%.

Republican Governor candidate Tommy Thompson asks Wisconsin voters to "vote for what's right," "bad enough" of Tony Earl's administration, at the same time, "his plans for a new direction." Thompson has been involved in Wisconsin politics 15 years, holding office as State Rep., since 1973-1981, and Re­publican Floor Leader since 1981.

He believes the case for what he has been involved in defense spending, and offers a plan for lower costs, control­led government spending, and "free market" economic policy. His campaign promises to cut property tax rates by a "dis­tinctly lower" 1% to 3.5% of the state income tax, and to close loopholes in the inheritance tax 6 Providence business interests and 5 change attitudes toward good financing by making quality appointments.

Says Thompson, "Our state isn't dying. It's just been weakened by bad judgments."

It will be seen that Thompson's proposed budget cuts will not leave the university system unscathed. $900 million of state support will be eliminated by the state Board of Regents, and the UW system will absorb this loss by eliminating the faculty's cup payment plan, closing down campuses, or placing several hundred members of the faculty and staff on layoff.

Thompson also supports an increase in tuition of UW schools, so that Wisconsin becomes "a medium- to- low tuition state, with financial aid increased in proportion to tuition increases." Opponents of Thompson argue that he does not understand the important role that the university plays in the state. Says State Rep. Tom Lothian, "we would impose a funding cut on the university with no idea of what the consequences would be."

Thompson has received the endorsement of the Wisconsin Right to Life Political Action Committee. Governor Thompson's consistent support of right-to-life issues has been confirmed by the Committee's record. Tony Earl, on the other hand, adheres to a pro-choice belief system that advocates the right to abortion within the realm of individual freedom. Thompson and Earl in 1983 Planned Parenthood conference that "the freedom to choose abortion without government intervention" would lead to a "fairer and healthier" society. He went on to say that "We must lead the trend in promoting the very positive concept of reproductive freedom."

(Labor Farm Party candidate Kathy Christiansen) offers "a quality of life" alternative to Wisconsin voters. She opens pre­mises an environmental commitment, economic growth, and a stable family farm community. Her tax program reflects a strong commitment to fully state-supported education and local control.

Christiansen hopes to move the state towards a greater "economic democracy and stability" by building strong worker/community ties and "empowering domain" business strategies.

Along with rocks, directed energy weapons are another "boost phase." Directed energy weapons travel at near the speed of light and offer a much greater potential than rocks. Unfortunately, they also present many technological problems. According to Reeder, lasers can't actually destroy warheads and particle beams can't reach the warhead outside of the atmosphere.

The final technological problem that Reeder believes with the SDI program is the "battle management command and control software," according to Reeder, laser beams don't possess the right angular accuracy, which has to be 99 percent efficient, to be able to guide the rocks to impact. "This is a daunting technical challenge," he stated.

A major concern among Wisconsin policy makers has been migration of businesses and their jobs opportunities out of the state and in search of more favorable tax climates. In his defeat Earl cites a 36% decrease in unemployment in new programs designed to stimulate business and create jobs. Earl has doubled funds for tourism promotion and established trade offices in West Germany, Hong Kong, and Japan.

Earl's strong commitment to environmental protection is evident by his many achievements in this area. The Governor's Association Committee on Energy and the Environment has already added a new phase to the state's new clean air regulations. Earl also leads the resistance to prevent a nuclear waste dump in Wisconsin.

Star Wars, from p.

backed away from a 100 percent effective shield and has aimed instead for a three- or four-layer system with 99 percent effectiveness at each level.

Reeder pointed out that in the 1980s an attack at ballistic missile defense is "not a guaranteed success. On the other hand, hopes to overcome this problem by intercepting missiles in their "boost phase." It is during the boost phase, which lasts between 2.5-4.5 minutes, when the missile is most easily trackable. Destroying the missile in this lift phase makes it a worthwhile target since the warheads aren't sent to their targets until the missile reaches the atmosphere.

Although destroying the missile with its warheads still intact seems a relatively simple defense solution to enemy attack, Reeder explained that a major obstacle still exists. Researchers are working on developing a "fast-turn" booster which would shorten the boost phase of a missile's flight by 1.5-3 minutes down to one. During this 60 seconds, the defense system must encounter the difficult task of evaluating the threat, for the launch—of not announced—could be for peaceful uses. Also, within this 60 seconds, the targets would need to be tracked, deployment would take place, and either the ground in or space and the attack would need to be verified as either successful or unsuccessful.

If the missile is not destroyed during its "boost phase," SDI would still have a chance to destroy it during its mid-course and terminal phases. Unfortunately, the mid-course phase is the amount of time during which warhead information is required and out of the atmosphere, SDI must distinguish between decoys and the real thing. And during the terminal phase, which occurs when the warheads re-enter the atmosphere, only 30-40 seconds remain for SDI to destroy them. To make the situation even more complex, the warhead is under attack, it will automatically explode if prevented from being destroyed. Reeder said that this is another reason that contributes to the uncertainty of defense.

Reeder continued to stress more problems with SDI technology beginning with the use of rocks. These are simple, non-nuclear projectiles that destroy their targets on impact. Enemy missiles would be destroyed by firing these rocks at them with the use of specially developed guns. According to Reeder, however, these guns do not possess the right angular accuracy, which has to be 99 percent efficient, to be able to guide the rocks to impact. "This is a daunting technical challenge," he stated.

"This is a daunting technical challenge," he stated.
The University Center was the scene of Monday's head-to-head debate for the candidates running for 7th Congressional District. The three-way debate, featured incumbent Dave Obey, a Democrat from Wausau; Kevin Hemmening, a Republican, also from Wausau; and Joseph Damrell, a Sociology professor from Northland College in Ashland, running on the Labor Farm ticket.

In the first round, the candidates presented their opening remarks with Damrell providing the opening punch. He has three reasons for running: war, social injustice and the lack of a political dialogue. His closing comment was, "In music and politics, no talent is not enough."

Hemmening stated that Wisconsin ranks 46th out of 50 in the amount of tax dollars returned to the state from the federal government based on the accurate tax paid. Obey indicated that this was a result of the few defense contractors in Wisconsin.

In his opening remarks, Obey said that his 17 years of experience in Washington made him the most qualified candidate. The first question presented to the candidates dealt with the problem of raising costs for liability insurance. Hemmening said Obey was unsympathetic to the plight of the small businesses as a direct result of his accepting major contributions from the Trial Lawyers Association, a group opposed to limiting liability insurance. Obey came back indicating that he had no sympathy for the company which produced the Dak-Kon Shield. Damrell wanted to know if this was an issue.

Addressing a question about Nicaragua, Hemmening said the sandinistas are exporting terrorism and are providing a repressive government for their people and as a result, he supported recent Congressional action providing funding to the freedom fighters known as Contras. Obey pointed out that he had led the unsuccessful fight against the aid and said that "Mexico is potentially the most threatening country to the security of our nation." He didn't expand on that comment. Damrell simply said that we are going to war in Nicaragua unless we head it off right now.

Regarding how budget cuts are affecting monies for higher education, Damrell said the solution was to put Reagan out of office. Hemmening said we'd have more money for education if Obey's committee wasn't spending $12.5 billion educating people in foreign lands. Obey countered by saying that he cut his committee's budget more than any other committee chairman.

About the new immigration law, Hemmening stated that he favored the part which granted amnesty to all illegal aliens who got here before 1982 was unfair and that those aliens should not be taking jobs away from Americans. Obey said that he agreed with the bill as presented and felt that this was one area in which he could side with the President. Damrell said that the illegal aliens from Mexico are here as a result of America's policies in Central America.

Regarding SDI and the forlorn summit, Obey said that he never commented on the summit because he had conflicting information about what was actually on the table. He felt that we need a greater build-up of conventional forces and while he voted for SDI research, he's not comfortable with a system which would only prevent 90% of the nuclear missiles from reaching the U.S. Hemmening came back saying that he welcomed a system that could keep 90% of the nuclear missiles off of our soil and that he supported the research to keep the remaining 10% away. Damrell stated that the President should have stayed in Iceland until he had a treaty.

On farm issues, Hemmening suggested that Obey should be on the Agriculture Committee which writes the farm legislation because that's where the farm bills and appropriations requests are generated. Damrell said that he would have supported the current farm bill. Obey said that he was among the five or six leaders who unsuccessfully fought the current farm bill.

When questions about Obey's residence were raised, Obey defended himself by pointing out that in addition to the home he owns in Virginia, he also has two more homes in Wisconsin.

When Hemmening was challenged as not being in the district which he wishes to represent, he pointed out that Obey was born in Oklahoma and felt "that subject wasn't an issue."

In the final analysis, it's hard to tell who won the match after the final bell. The voters will make that decision next week. Hemmening clearly threw the most punches and Obey's 17 years in Congress give him a strong edge in the election as a result of extensive name recognition. As for Damrell, well, he scored a few points by being able to represent his party in the ring with Hemmening and Obey, but next time he should call Dan King.
Candiates vie for Senate seat

by Karen Rivedal
News Editor

The race for the United States Senate between Democrat Ed Garvey and incumbent Republican Robert Kasten is seen by many as one of the most heated competition in the election. The candidates view important issues are often diametrically opposed, reflecting their differing ideologies.

Kasten earned impressive achievements and recognition during his first term as senator. He has held key positions on both the Budget and Appropriations Committee, chairing the Consumer and Foreign Operations subcommittees. In addition, he has served as chairman of the Senate Subcommittee on Problems Facing Small Businesses and received the "Guardian of Small Business" award by the National Federation of Independent Businesses.

In 1982, he received the "Taxpayers Best Friend" award by the National Taxpayers Union and has been named the Watch Dog of the Treasury every year he served in Congress. Speaking of the success of the Republican-controlled Senate, Kasten says:

"Taxpayer" and tax cuts have spurred our economy to the strongest recovery since World War Two. Here in Wisconsin, I've fought for legislation to improve our state and worked to secure our fair share of spending."

Kasten's challenger Ed Garvey, whose varied background includes a private law practice, an attorney general appointment, and director of the NFL Players Association, but no history of elective office, sees a less positive picture of Wisconsin's economy. His goals for office reflect ideals of equal rights and opportunities, and he would use his office partly to correct for perceived injustices in the nation's tax system. He envisions a system in which the rich and large corporations pay their fair share.

"Wisconsin deserves a senator who understands that we need classrooms not Contras, scholarships not Star Wars, text books not nerve gas." - Garvey

Garvey has said that he would have voted against chemical weapons, the MX missiles which he calls "a worthless system" and Star Wars research, which he thinks "will protect the profits of the military industry."

On the issue of aid to Nicaragua, the Contra rebels, Kasten has voted in favor of $100 million in aid, $70 million of which would finance weapons and training for the contras. Although Kasten does not support sending American troops into the Central American country, he does say the ultimate U.S. goal "has got to be to get all foreign arms and foreign troops out of the region." Kasten sees military aid as the "security shield" behind which democracy and land reform in Nicaragua can develop.

Turn that position around 180 degrees and you have Garvey's view on the issue. He states:

"We should not be involved in trying to overthrow the government of Nicaragua. It is time we begin treating other nations as neighbors instead of banana republics or training grounds for the CIA."

Speaking in a similar vein, Garvey calls education "the most important security issue for the U.S." and claims Kasten has consistently voted to cut federal aid to education. Garvey maintains that "Wisconsin deserves a senator who understands that we need classrooms not contras, scholarships not Star Wars, textbooks not nerve gas."

For the candidates, the race for United States Senate for the state of Wisconsin also involves much more than the seat. Republican Raymond Farrell and incumbent Democrat Garvey are vying for a Senate seat which could determine the balance of power in the Senate.

Farrell and Garvey have campaigned extensively throughout the state, and their messages have been quite different. Farrell has emphasized the need to increase job opportunity in the area and control state spending. As a state representative, Farrell would seek membership on the Economic Development Committee to try to establish a working relationship between business, industry and state government. In addition, Farrell opposes any cuts in the UW System budget for 1987 and 1988 and would propose a tuition cap at 37 percent for student financing of educational costs.

Don't forget
Nov. 4
Get the vote out

Star Wars, continued from page 1

grams such as aid to education. 2) A fog of disinformation exists concerning Star Wars. Hoyakivak was an "enormous failure" because the Soviets only requested us to keep SDI in the lab for 10 years. This request was not enough because in no way can we get SDI out of the lab before 1990. "I don't know why the president refused the offer of Hoyakivak," Reeder said.

Reeder stressed that the true test of SDI, if we deploy the system, would be the destruction of all of our offensive weapons regardless of what the Soviets do. Achieving SDI technology, however, and then getting that technology into space is a difficult transmutation phase, for if one superpower attempts to put up a shield, the other superpower will most likely use its offensive weapons to destroy the shield before it is in place. For this reason, sharing the SDI technology with the Soviets in order to get it in space may be the only means of preventing its destruction.

The candidates for state representative in the 71st Assembly District, which covers parts of Fox River and Waukesha counties, include Democratic incumbent Stan Garvey from Stevens Point and Republican Raymond Farrell of rural Waupaca.

Farrell has based his attempt to unseat Garvey on a "Listening to the Needs of the People" campaign. Farrell is committed to lowering property taxes for Central Wisconsin and seeks to completely eliminate the inheritance tax, which Garvey supports. Farrell holds that: "This is one way, on the state level, that we can help many senior citizens and the farmers."

Farrell also sees the need to increase job opportunity in the area and control state spending. As a state representative, Farrell would seek membership on the Economic Development Committee to try to establish a working relationship between business, industry and state government. In addition, Farrell opposes any cuts in the UW System budget for 1987 and 1988 and would propose a tuition cap at 37 percent for student financing of educational costs.

20 delicious dinners, just one price.
Every Thursday is Steak for Two night at SenteeyWorld Sport Plate restaurant.
You and a friend can enjoy our all-American steak dinner with your choice of potato and vegetable plus our own Sport Plate salad. All for just $30.95. You're also enjoy our drink specials in a very relaxed atmosphere.
Just do it, just one price. Thursdays at the Sport Plate.

The 7th Congressional District heats up

by Karen Rivedal
News Editor

The 7th Congressional District, bolstered by the bid for congressional re-election, has consistently sought resources for agriculture education and health programs.

Obey’s $1 billion cut in the administration’s military aid for foreign powers was the largest percentage cut by any appropriations chair.

His work as a member of the Appropriations Subcommittee on Education, Health, and Labor led to more than 30 amendments in these areas, including one to double the nation’s research efforts to find a cure for AIDS and another to expand community health centers to rural areas in need.

Republican challenger Kevin Hermening has concentrated on his own consulting company. He was elected to serve on the Wisconsin

GOP Executive Committee and claims affiliation with the Chamber of Commerce and Veterans of Foreign Wars organization in Wausau, as well as AMVETS in Stevens Point and Toomasters International.

As congressional representative for the 7th District, Hermening has pledged to push for rural enterprise zone laws, support laws that help small businesses grow, and increased job opportunities through a variety of retraining, tax incentive, and diversification programs.

Hermening levies serious charges of power abuse.

Hermening supports reduced federal spending while maintaining a strong national defense. He would attempt to cut the budget through November 4. On election day, SGA will also offer rides to the polls for interested students.

Education, and would continue to monitor acid rain and water quality concerns.

Throughout the election, Hermening has levied serious charges of power abuse against Obey as chair of the powerful Joint Economic Committee.

Hermening claims Obey knowingly published false census data for personal political gain and political party advantage.

Hermening also takes issue with certain statements in Obey’s campaign brochure that may be misleading. It remains to be seen how Wisconsin voters will respond to these charges.

For more information about any of the candidates, check out SGA’s Candidate Awareness Booth in the University Center Concours area. SGA will sponsor the booth through November 4.

On election day, SGA will also offer rides to the polls for interested students. Contact SGA at x4036 for more information.

Another look at “choices.”

by Bernie Bleske
Senior Editor

Several weeks ago we ran an article outlining the controversial video “Choices.” State Senator David Holtschuch came to UWSP and gave a presentation against the video. Yet little has been done.

In the last article, we told how the video is dishonest and misleading, presenting deliberately outdated figures and charts. For example, they show a cute little diagram of dots representing people swarming from neighboring states into Wisconsin to presumably, take advantage of all our social benefits. “Choices” fails to mention that out-of-state students pay 138 percent of the cost it takes to educate them, and that there has been a 3 percent decrease in people applying for welfare in Milwaukee County.

This is not an editorial. The facts speak for themselves and unless something is done the video will win, simply because nobody else brought the issue up.

The goal of the video is to cut state spending on education and welfare benefits. The goal of the video, being shown to hundreds of thousands of Wisconsin workers, is to bring Wisconsin’s higher education down to the level of such states as Alabama and South Carolina, while raising tuition. The goal of the video is to raise admission standards and cut the number of students allowed to attend the UW System.

The principle here is simple. Politicians will not debate an issue that only one side is arguing for. In this case “Choices” and the organizations backing it, the Council of Small Business Executives and the Independent Business Association of Wisconsin, will win.

ENVIRONMENT

- Successfully sponsored legislation creating 24,000 new wilderness acres in Wisconsin.
- Authored Great Lakes Management Act to provide comprehensive environmental management of Great Lakes.
- Introduced legislation to halt consideration of Wisconsin as a nuclear waste dump site.
- Named Conservationalist of the Year by the Wisconsin Wildlife Federation.

The highly respected news magazine National Journal has named the two best legislators of the U.S. Senate GOP class of 1980.

They Chose Our Senator, Bob Kasten.

Our senator, Bob Kasten, is one of the best legislators of his class, according to the highly respected, non-partisan publication National Journal.

The Journal's assessment was based on more than 80 interviews with U. S. Senators, their aides, White House officials, and experts from both parties.

The Journal called Bob Kasten "influential" and a "key Senate player."

It paid Kasten's leadership on a number of issues important to Wisconsin have brought him "more than his share of successes."

For a freshman senator, that's an impressive record of accomplishment.

For Wisconsin, it's a record of which we all can be proud.

Bob Kasten — one of the Senate's best — working and winning for Wisconsin.
To the Editor:

Recently I attended the Weatherization Workshop sponsored by SGA. I found this to be quite informative and well worth my time. I was, however, disconcerted by the attitude of one of the other participants. He was one of the landlords who attended along with us tenants, to whom this workshop was geared. At one point, in an aside to another landlord, he mentioned that a lecturer had given him ideas on what to look for when checking his house after occupancy. For example, paint removal when removing tape on plastic "storm windows." Instead of looking at it as an energy saver with possible problems, he approached this as another way to make money from his renters.

Sincerely,
Denise Kabara

Are landlords lindman?

This man made it fairly clear that he distrusted all student tenants. I hope that there are some landlords out there who do realize that we are not just "kids" out to have fun and trash a house; many of us are adults who want to and are capable of caring for our homes.

Penny-Wise?

Pound-Foolish?

To the Editor:

First off, I want to say that the convenience stores in Debolt and Allen centers are really great. I am glad someone got the initiative to get them going!

I recently purchased some saltine crackers and was charged a tax on them. It is not the convenience stores in Debolt, I recently purchased some.

The convenience stores in this country. I would like to know how they get away with this. Furthermore, individuals using personal points are not charged any tax. I would like to know why this is.

Thank you,
R.J. Porter

Another political plug

On Tuesday, November 4th, we have the opportunity to elect Republican candidates who are running on a platform of more jobs, less taxes and less government spending. Getting the government off the backs of American business will help new businesses to be established and encourage current businesses to expand. This will cause more economic growth and more economic growth here in Wisconsin means more jobs for the people of Wisconsin.

On Election Day, I encourage you to vote for Senator Robert Kasten for the U.S. Senate, Kevin Hamburger for the U.S. Congress, Tommy Thompson for Governor and Ray Farrell for State Assembly. These candidates are committed to making Wisconsin a great place to live, work and play.

Philip M. Braun

Lights are cheaper than hot water.

Lighting costs $3 to $6 a month for the average apartment. So if you cut lighting by, say 15%, you could save 50¢ to $1 a month. Now that's nothing to scoff at: it'll buy you a couple rounds of Pac-Man, if nothing else.

But you'll save substantially more by cutting back on hot water use. That's because heating water takes a lot of energy and that means it costs you money. For perspective, a shower is 500 to 1,000 times more expensive than lighting a 60-watt bulb for the same time period.

So the next time you're standing in the shower in the dark, think about it.

To the Editor:

Most of us at UWSP are here for the same reason. We are working toward a degree that will help us find a good job after we graduate. But, what if the jobs aren't there after we receive our diplomas? In the competitive job market, we are better off with a degree than without one, but will that search lead us out of Wisconsin? We need more jobs in Wisconsin!

Thank you,
R.J. Porter

To your health

A mandatory class. This class consists of contraceptive awareness, human sexuality, male and female sexual responses and attitudes, and sexually transmitted diseases. Because some students have strong feelings against participating in anything on these subjects, the policy of this mandatory class was looked into thoroughly.

This is the night of 'Halloween.' When a witch or monster is seen,
Some 's' them black,
Some 's' them green,
Some 's' like them turtle beans.

A Scottish Halloween song

by Brenda Bergelin
Staff Reporter

In one more "night," Halloween, the spooktacular, medieval festival of mischief will be open upon us.
Halloween has always been a night-annual system with the supernatural and reverent ritual. Who can't remember running around as a child in the crisp, black, windy October night wearing an old sheet with two eyeholes while begging for treats from strangers? Who can't remember vicariously carving a pumpkin with dad? Who can't remember peanut butter kisses, lollipops, candy bars, hooked candles, Indian corn and Hershey Miniatures all rolling around among cookies, raisins and apples at the bottom of a shopping bag?

These are old, universal Halloween customs conceived in innocence, carried out with youthful, yet born in pagan customs. It is not until the "night of Halloween" is traced that these rituals take on a new and added significance.

Just as with many other holidays, the origins of Halloween is a combination of a Christian festival and pagan customs, according to several books on holidays. The name comes from the fact that October 31 is the eve of All Saint's Day, which was known as Hallows. The ancient belief was that on this night between October and November ghosts and witches wandered across the earth. By carving burning wags of straw on pickets (the origin of the candle), people tried to frighten off hellacious devils and spirits, but just in case this didn't work, they also put on grotesque and terrifying costumes. For if you dressed in a horrible enough fashion and went frolicking around with the spirits all night, they would thank you for one of them, and do you no harm. This is where the Halloween custom of dressing up and wearing masks originated.

Traditional presents for visiting ghosts were apples and nuts, a nutritious custom that has been handed down from the days of a Roman festival held in honor of Pomona, the Roman goddess of orchards and especially of apple orchards. Although the apples and nuts have been replaced by Brach's candy corn, bubble gum and McDonald's Halloween gift certificates, the idea is still the same: the young Halloween visitors who come to your door will play no tricks if you "treat" them.

Did you ever wonder why we carve a giant squash, more commonly known as a pumpkin? The custom of lighting a lantern inside the peeping pumpkin face dates back to the Druids of northern Britain. The Druids were an ancient group of Celtic sorcerers-priests, including hards, prophets, physicians, wandering workers and judges who lit a fire to scare away evil spirits and witches who were waiting to come rubbing in when summer was over. 

Customs lost: Carving pumpkins, trick or treating and bonfires are all popular customs which thrive every Halloween, but there are several customs which have lost their fizzle over the years. With Halloween night being so filled with supernatural powers, people believed it was possible to catch some premonitions of their own future, especially in matrimonial matters. For instance, there is an interesting Halloween custom of looking into a mirror. A girl must eat an apple while looking in a mirror. Then if she sees a man appearing over her shoulder, he will be the one she will marry.

There are also the Three Luges, or glasses, which Robert Burns mentions in his poem, "Halloween." (This is for men instead of women.) One dish holds clean water, one dirty water, and one is empty. The man is blindfolded and dips his fingers into the first dish he feels. Clean water, as you can guess, means he will wed a maiden, dirty water a widow, and if the dish is empty, he stays single. For the earlier days of our Witches, before trick or treat became popular, October 31 was a nervous time for houseowers. People who had such things as birdaths, gates and lawn chairs had to stow them away somewhere before dark and the arrival of children dressed as demons, ghosts and witches haggled them away along with every other movable thing they could find.

Halloween today

Whereas this was mild mischief making, today serious incidents of vandalism against trick or treating children spoil Halloween. Because of dement ed people and their hostilities towards children and property, Halloween is a custom that has been burned. Halloween has become a home-born children's night.

Carving the face of Halloween

by Brenda Bergelin
Staff Reporter

Carving a pumpkin is the most under-rated ritual in American culture. Anyone can hack Santa-printed wrapping paper and a bow on a box and call it a "Christmas present." Anyone can toss jelly beans and dyed candied apples into a hobo basket and call it an "Easter basket." Anyone can take red construction paper and scissors and cut out a heart and call it a "Valentine," but it takes a certain talent to take a big, orange squash the size of a basketball and carve it into the face of Halloween.

Pumpkin carving is a talent, an art which originated with the ancient geometrical colonists who used the "pumpkin" (which meant a melon "cookeen" by the sun) for brewing beer, for stews, breads, sausages and as lamps. With a rich history like that, it is naive to send an inexperienced person into a pumpkin patch, hand him a sharpened knife and then expect him to spontaneously produce a Picano Pumpkin. Naive does not mean impossible, however. Like any talent, the knack for pumpkin carving can be acquired with patience, practice and the implementation of the following pumpkin carving instructions.

Harvesting Season: When cold winds blow out of the Northeast, when hawks fly south, when the leaves turn to red and gold, when Tom Turkey is ready for roasting - then it's time to think of Halloween and a suitable pumpkin to wear Halloween's face.

Purchasing the pumpkin

If you don't have a pumpkin patch in your backyard, go to the nearest Farmer's Market or a nearby grocery store and buy a pumpkin. NOT BUY A PUMPKIN AT A GROCERY STORE! This is a crucial mistake similar to buying a used car from a car dealer named Honest Eddie. Store pumpkins cannot be trusted.

For starters, you don't know what pumpkin patch they came from. (Maybe home was Aldi's Carrot Alley.) You don't know how old they are. (Maybe they've been stashed in a freezer or since last Halloween.) Play it safe. Utilize a farmer's market. Choosing the right pumpkin patch

Choosing the right pumpkin to wear Halloween's face is like choosing one's mate; it's no easy matter. Begin by studying the geography of the pumpkin patch, the parental ground of your jack-o-latern. Then select a pumpkin that fits the following criteria:

Deep orange color

Medium size: (Nothing overgrown or gaudy) A healthy 7-10 pounds is ideal.

Fine round shape. (Use your eyes to detect an idyllic head size.)

Chop the pumpkins

After transporting your pumpkin home, give it a preferable

Cost. p. 14
Pumpkin, from p. 13
scrub. Be sure to remove all pumpkin-patch debris. When it's completely clean, brush it with a soft towel. Now comes the time can scoop out the seeds and pumpkin-patch:

The Road:

One extreme is a paved, level road. Pick it up.

The other extreme is a colorless, stagnant pond:

The Water:

This represents the strength of the libido; the strength of the will. To get you back into shape and turn to your natural resources like the pumpkin is completely clean.

Diligently cut along the face of the pencil guide marks, revealing a little of the inner pulp behind each outline. Heat the bottom of a double-omed candle and let enough wax drip into the pumpkin to hold the candle firm when it hardens. Light the candle, put on the top, and Halloween’s fear is quite often that of all halloween objects.

You now have before you an object of art, comfort, ritual, and love quite possibly, talent. You also have before you a heap of halloween impediments to deal with. These fibrous insides give you another chance to develop another artistic talent: Halloween cooking.

Roasted Pumpkin Seeds
Preheat oven to 350 degrees. Put unwashed pumpkin seeds in a 1/2 teaspoon salt

1/2 teaspoons brown sugar

1 teaspoon garlic salt

1/2 teaspoons Worcestershire Sauce

Put unwashed pumpkin seeds in a 1/2 teaspoon salt and Worcestershire Sauce and season salt if desired. Bake at either 350 degrees for 30 minutes or (28 for 3 hours) stirring often.

One final word: Please note that on Halloween Eve as you back in the dimness of the night you will make a solemn and munich on pumpkin seeds, if you find yourself in a desperate situation and not overly fond of pumpkin carving advice to trick or treaters who compliment you on your Halloween jack-o-lantern. This advice is only sug-

After placing the cup down, continue down the road. As you walk, you notice a WALK is across the road. You head up to it. But in order to continue on the journey, you must now get to the other side.

Congratulations.

On the other side, you continue...

Leaving the house, you continue. You come upon the final WATER.

According to Kortenkamp, these five images may symbolize your internal views on the following:

The Road is symbolic of your view of life and the future.

One extreme is a paved, level road.

The other extreme is a colorless, stagnant pond.

The Water:

This represents the strength of the libido; the strength of the will. To get you back into shape and turn to your natural resources like the pumpkin is completely clean.

Book Review

"Game Plan"
Conducting the U.S.-Soviet Contest

by Vicky Sura
Staff Reporter

Remember when you were a kid and one of your favorite things to do was play army with the neighbor kids? The biggest bomb of the day was when mom called you in for supper.

Now that you're an adult, don't you get sick of our leaders playing war? Everywhere you look the hottest news around is nuclear warfare. Turn on the TV - you'll hear about the sum- Perhaps because of his look a bookstore - you'll find shelves of books on U.S.-Soviet rela- sides the 19 proton nuclear warfare. Turn on the mom called you in for supper.

Game Plan was written by Zbigniew Brezezinski. If the name sounds familiar it's be- cause Brezezinski served as Na- tional Security Adviser to Presi- dent Carter. He is now a coun- selor at Georgetown University and a professor at Columbia University.

Perhaps because of his cur- rent occupation, Brezezinski has read about Reagan's SDI. Go to a bookstore - you'll find shelves with statistics and maps. Be- sides the 19 maps which he has so generously strung throughout the book, there are numerous charts of statistics and in-text figures which, I assume, are put there to bogglie the reader's mind. As an added bonus for making it through the book, a dedicated reader gets - you guessed it! - an appendix filled with numbers.

The reason I use the phrase "making it through the book" is that while the author has only seven main propositions, it takes him 288 pages to present them. This may not be an excessive number, in some cases, however I felt my intel- ligence was insulted. Brezezini- ki takes eight pages of expan- 

enson before he feels comfortable with the fact that I understand that Russia and the U.S. have, historically, been in conflict with each other. Come on, could anyone living in the 20th cen- tury, not know this fact?

Lest this review become a book in its own right, I'll throw out a few of Brezezinski's points and let you think about them. He names three strategic fronts: Europe, the Far East, and southwest Asia.

He also states that, "Should the internal problems of Central America merge with a larger domestic explosion in Mexico that inflames the U.S.-Mexican relationship, the Soviet Union is almost certain to exploit it, thereby opening up a 4th cen- tral strategic front."

He points out that the Soviets have, traditionally, been expan- sionists and that the U.S. must stop them. For this to be done, the U.S. must "counter the So- viet Union's war-fighting capa- bility at all levels of nuclear escalation."

Brezezinski says that "ulti- mately, change in both the scope and character of Soviet power will be needed to assure a more stable American-Soviet relationship, and the United States should promote such change..."

Gee, I'm not surprised that in the August 11th Newsweek, Morton M. Kondracke stated that "(Brezezinski's) new book...is all the rage in the Reagan Administration." If I were Reagan, I'd love this book too, as it has an almost mystical way of appealing to all that is American in the reader—much like R.R. himself. Unfortunately for Brezezinski, this reader is a logical human being. I can rea- son, and that blows this book right out of the water.

I think that I've got the solu- tion to all this mess. It's really quite simple: We need to get the mothers of our weapon-tot- ing leaders to tell them that, if they don't put down their "toys" and behave this instant, they'll both be sent to bed with- out supper. It always worked for my mom when the wars I fought got to be too drawn out and dangerous. Like mom said, "It's always fun until somebody pokes an eye out." I'd hate for that eye to belong to an incon- cent bystander of "The Game."

Bridging that gap over troubled waters

"I can categorically deny that I have anything to do with the South African government. I'm just not in the least bit hesitant to repudiate that policy," Cole said.

—Paul Simon

Musician Mag. Release

Bast restored as best remembered the shorter, better-equipped half of the pop-folk duo Simon & Garfunkel. The former lived most of his new album, Grace, in South Africa. It has been hailed as the most musically ambitious and politically venturesome of his career.

In the November issue of Musician magazine, Paul Simon discusses his musical rites of passage:

"When I heard this music was South African, I said, 'Life would be easier if this music came from Zimbabwe or Kenya.' Then I thought, 'Isn't that illegal? This is where the music comes from. Am I supposed to say, 'I don't love it because it comes from a country that happens to be ruled by a proto-fascist government?' If you love it and you want it to be real, you gotta go there."

In 1965, Simon flew to Johannesburg and met with the black musicians' union:

"They voted to have me come because they felt they had a music scene that was ready to make an international statement. I... would be somebody who could get their music heard.

The political implications of such a project:

"When you get out of music and into the world of politics, it gets tricky—I can't make an overt attack on that government without having to consider the consequences to those guys who are living there... I think that I'm doing it can be in no way damaging—I don't think that anyone gets harmed by music."

Between Carlin and Cosby is Alex Cole

News Release

Stand-up comedian-entertainer Alex Cole likes to think that his style falls somewhere between George Carlin and Bill Cosby. "And no, that's not just in the phone book, but in my style and presentation," Cole says.

He refers to himself as the average Joe, but this average Joe paralyzes life's everyday experiences and observations into comedy material.

It wasn't just recently that Cole got the comical itch. He has wanted to be an entertainer since he was five, when his dad played a Bill Cosby album and told him what it was about. The flame to be a stand-up comic was lit.

That was all it took to unleash the grade school funny-child, a St. Cloud, Minnesota native who, it was said by the FTA, was the kid who takes over the classroom at the beginning of the day and doesn't give it back to the teacher until the final bell rings. Scholastically, Cole says, "I'd always shunned cheating, and with that uplandish attitude I combined a little bit of stupidity to force out a quite mediocre C average."

At age 16, Cole, a member of a rock 'n' roll band, joked between songs as the band played for huggers and beverage. "The better we performed, the better we ate. So we played until all our hearts and stomachs," he said.

In 1978, he began playing college campuses with crowds ranging from 50 up to a house of over 5,000 at the University of Pittsburgh while performing with Pure Prairie League. Cole has continued the college circuit, playing up to 150 shows per year.

Through his college dates, he earned the 1985-86 nomination for Entertainer of the Year and Comedian of the Year by the National Association for Campus Activities. Along with this recognition came a bevy of other accolades and highlights: earning a tie on the national TV show "Star Search," regular stints at the Improv in New York and the Comedy Cellar in Greenwich Village, being named the first Comedian of the Year at the 1983 Minnesota Music Awards.

Alex Cole has also entertained audiences for the Oak Ridge Boys, The Commodores, Gladys Knight and the Pips, Cab Calloway, Stanley Jordan, The Talking Heads, and The Tubes.

"There are absolutely no plans here for failure," he said, "because I can't afford it, it's too expensive."

Cole currently lives in Coon Rapids, Minnesota. He says that he has his eye on the big-time, "I study how comedy works. I like to know why people laugh and how I can best entertain them. I just like to get out there and shake up the crowd," Cole states.

Jazz trombonist to perform Nov. 10

Jazz trombonist Bill Watrous, two-time winner of Downbeat Magazine's Critics Award, will perform at 8 p.m., Monday, Nov. 10 at the Sentry Theater.

His appearance is sponsored by the University of Wisconsin Stevens Point's Performing Arts Fine Arts Series with funding from the Wisconsin Arts Board. Tickets are on sale in the College of Fine Arts box office.

In addition to performances at colleges and high schools throughout the country, Watrous has played in several studio groups and has recorded nine albums. His second release, "Tiger of San Pedro," was nominated for a Grammy as Best Performance by a Large Jazz Ensemble.

Watrous started playing trombone at the age of six. His father, a professional trombonist who appeared with the name bands of the 1940s, was his teacher. While in grade school, he played in ensembles and in high school, he performed with the jazz band. After graduating from high school, he joined the navy and continued to play his instrument, performing in San Diego and New York. Following his discharge, he settled in New York where he appeared with the Ray Charles Sextet, Ray Ellington, Quincy Jones, Woody Herman, Count Basie and was a member of the group, "Ten Wheel Drive."

Jazz duo slated to appear

University News Service

A "Duo Jazz Recital," featuring Gary Larryck on the vibraphone and Richard Pinell on bass guitar, will be presented Monday night, Nov. 3, at the University of Wisconsin-Stevens Point.

The public may attend without charge, beginning at 8 p.m. in the Program-Retaurant Room of the University Center.

The new exhibit "From Sheep to Shawl" is now open at the Marathon County Historical Museum. The exhibit features a variety of antique and modern hand-woven textiles. The display has been organized by a local club, The Midwest Spinners and Weavers. Featured are over 75 hand-woven pieces, many done by members of the club. Some of the natural fibers used include wool, cotton, and silk. Many of the textiles have been created from hand-spun yarns.

The exhibit includes a variety of afghans and coverlets, household linens, clothing, bedspreads and art weavings. Different weaving techniques will be featured, including cord, tablet and tape loom weaving. Indian finger woven and bead woven pieces will also be on display. A variety of handmade baskets woven from natural materials will be included.

Special spinning and weaving demonstrations will be conducted on weekends at the museum by members of the club. They will be demonstrating techniques for the public on both antique and modern equipment.

"From Sheep to Shawl" opened October 4 and will remain on display through March of 1987. The exhibit is located on the second floor at the Marathon County Historical Museum, 403 McIndoe St., Wausau. Museum hours are: Tuesday through Friday 9 a.m. to 5 p.m. and Saturday and Sunday 1 p.m. to 5 p.m. The museum is closed Mondays and holidays. Admission is free.

"From sheep to shawl"
What happened to the philosophy?
Radio programming

by Jon Pike
Staff Reporter

Rock'n'Roll! Rebels without a cause, dancing in the streets! At least that's what rock'n'roll was when it started out. It was always there, as long as someone heretofore was something to sing about. It just needed to be heard.

Alan Freed, a Cleveland disc jockey thought it needed to be heard. Freed, who always had an ear to the ground, noticed the beat of ''Moondog's least that's that white, heard. Freed, who always had test from black doo-wop groups evies sounds of the British invasion doesn't mean he didn't believe the airwaves and auditoriums of Freed: Cleveland disc jockey Freed was a hustler. But, tracks. It or rock'n'roll radio artists.

But today, there are only hairstyles, from commercial advertisers, exciting artists, classic rock, and just about everything else can be heard emanating from our college campus radios. The mainstream of today's top 40 radio programming can be illustrated locally. A local commercial radio programmer routinely rejects albums that don't appear on Billboard's top 40 charts. Examples culled from his reject pile include, the WoodenTops (a British pop band that is tearing up the college radio charts), and The Ramones (who are probably one of the most mainstream punk bands around). The programmer even considered David Lee Roth's "Yankee Rose," too far out in left field to program. This is still America, and people are allowed to make money any way they want. But is it too much to ask that a couple of different album cuts be interspersed with the same top 40 songs and commercials?

This top 40 programmer has recently showed some leeway in allowing college radio hit-makers like R.E.M. and Timbuk 3 on to his playlist.

This, however, is still far from the days when radio programmers believed in exciting their audiences with the newest and most diverse offerings available. The trend today seems to be safety. Programmers believe in exciting artists, classic rock, and just about everything else can be heard emanating from our college campus radios.

As the 60's progressed and people's moods expanded, San Francisco's Tom Donahue expanded the airwaves with the revolutionary concept of playing album cuts longer than the standard two-and-a-half minute pop song.

But today, this visionary spirit of rock'n'roll radio programming is, for the most part, dead. Top 40 charts (or Contemporary Hit Radio) are full of artists whose sole reasons for being there are silly hairstyles, trendy clothes, and synthesized tracks.

Sooner, Cleveland's airwaves...

The youths arrested for damage to the Mead office were near Milladore. Initial damage estimates were placed at nearly $20,000. According to detective Phillip Johnson of the Marquette County Sheriff's Department, the vandals entered the office on four separate occasions through the course of the evening.

When they first entered the building, the vandals broke through an office window and stole small items like bells, said Johnson. They returned to the office later and stole a truck by driving it through a locked garage door. They then went back to the headquarters to get a handgun and another vehicle because the first truck they stole was low on fuel. On the final return trip, the vandals stole yet another pistol and looked for headlights to replace the lights that had been broken while on their outing.

According to Johnson, there didn't seem to be any motive against the DNR as the youths began the evening by indiscriminately smashing mailboxes and highway signs before the vandalism escalated to the Mead office. Johnson also said the youths had been drinking that evening.

On October 22, a passerby found one of the missing trucks almost entirely submerged in the nearby Little Eau Pleine River. The other truck, said Brian Peters of the Mead office, was found in a wooded area about 10 miles from the headquarters.

Mechanic Steve Gandolph inspects DNR vehicle after vandals drove it into the Little Eau Pleine River near Milladore Oct. 21.

To date, nearly all the missing property has been recovered except for some small items from the office. The eight person crew at the Mead office later returned the damage done by the vandals.

Detective Johnson credits the early coverage with media giving the incident its anonymous tip which led to the eventual arrest of the youths.

Social forestry helps bridge people gap

by Bob Crane
Staff Reporter

Natural resources in the trop­
cal countries of the world are being destroyed at an alarming rate. This destruction has far reaching effects on the more than 200 million people who are dependent on forest resources in developing countries. This trend also has extensive climatic and technological effects on the entire earth.

Many causes have been men­tioned for the demise of our tropical forests including, fuel-­wood cutting, cattle ranching, shifting agriculture, industrial forestry, and the myth of management soils are destroy­ing.

Fuelwood cutting is the lead­
ing cause of deforestation since wood is the sole fuel of the rap­

didly multiplying populations of the tropics.

Cattle ranching and shifting agriculture are two systems in which people clear great areas of land, then plant grasses or agricultural crops which use up the soils limited nutrients. After the soil has been depleted these people just move on to another area to repeat their destruction. Most cattle raised here are a di­

rect result of the cheap beef mar­

ket demanded by the Amer­i­

can fast-food restaurants. Shif­
ting agriculture is due to nomad­ic people who have been dis­placed by shoddy governments or failing economic conditions.

The myth of management is a term used by Dr. David Brow­

ey of the University of Wiscon­

sin Madison, to describe the re­

verse effect that government protection of forests often has. This occurs when forest benefits are misappropriated toward in­

dustry and government and fails to involve the local people in the planning, implementa­tion, and benefits of these pro­

grams. This type of manage­

ment alienates the people who then tend to misuse the land.

Unless these people become producers as well as consumers perhaps the forests or the people will survive. "Social forestry" is aimed at gaining greater in­

volvement and responsibility from local people by bringing them larger and more direct benefits from their efforts.

A new type of forester is needed who is both a teacher and a facilitator, as well as a technically qualified professional. Foresters must demonstrate how trees can provide food such as fruits and nuts, improve food production (soil preservation and improvement), and provide income through local forest product sales. Many social for­

ery programs are now in op­

eration, sponsored by many government agencies, volunteer organizations, and religious groups.

Hunter’s choice permits being mailed

MADISON, WI — The first batch of hunter’s choice permits for the 1985 gun deer season in Wisconsin was mailed October 22, according to Department of Natural Resources licensing of­

ficials.

Dick Royson, supervisor in the department licensing sec­

tion, said that because of the much larger number of permits this year than a year ago, sev­

eral thousands of dollars could be saved by mailing them in several batches, rather than all at one time as was done prior to last year. "We began sending out choice permits to qualified applicants last week," Royson said, "and the final batch is scheduled for mailing on No­

vember 7." "We want to advise hunters who applied for permits of this," Royson said, "so if they hear of others receiving their permits, they will realize that their permit may be scheduled for a later mailing."

The department received in excess of 400,000 hunter’s choice applications this year for the 250,000 permits available. FOR INFORMATION, CON­

TACT: Dick Royson 608-566-­

Duck stamp fees rising

by Bob Crane
Staff Reporter

Since the 1929’s the Federal Duck Stamp Pro­

gram has raised over 300 million dollars for the acquisition of 3.6 million acres of waterfowl habi­

tat. This highly beneficial program may encourage a tremendous change over the next five years with the increase in price of a duck stamp from $7.50 to $15.00.

Don’t despair, this bill may be what North Amer­i­

can waterfowl need most in an age of federal envi­

ronmental budget cuts. It would allow for a 300 million dollar congressional loan which would aid in the purchase of much desperately needed water­fowl habitat. This loan would later be repaid with the added revenue provided by the increase in the Duck Stamp. This bill would also guard against Gramm-Rudman budget cuts which would other­

wise affect the Duck Stamp program.

Some people believe that this bill, which has already passed in the House and is pending in the Senate, will discourage many duck hunters. Water­

fowl expert Dr. Lyle Nauman of the CNR’s wildlife department, believes that the bill may discourage beginning hunters, but will not affect veteran waterfowl hunters.
Cousteau tradition reaches across the globe

by Joe Janssen
Staff Reporter

The name Jacques Cousteau has become synonymous with ocean exploration and oceanography. Those interested in learning about and seeing the vast wonders of our oceans and waterways gained a unique interpretation from biologist and photographer, David Brown.

Brown spoke October 21 in the Wisconsin Room here at UWSP. His lecture, accompanied with a brilliant slide show, captivated the audience. The presentation began with a brief history of the explorations of Jacques Cousteau beginning in 1943, and led to the founding of the Cousteau Society 30 years later. The reason Cousteau, a former French naval lieutenant, decided to explore, photograph and document this underwater world was more than an adventurous spirit. He realized the great damage being done to this fragile marine ecosystem by human pollution.

With his invention of the "aqualung" in 1943, he was able to explore depths never before seen. Throughout the 30 years of exploration prior to the establishment of the Cousteau Society, many underwater wonders were uncovered including natural marine life as well as ship wrecks.

In 1947, Cousteau and his partners came up with the self-contained underwater breathing apparatus, or scuba. Around the same time, Cousteau renovated a Greek ship used in World War II. It was found on the island of Malta and quickly became a scientific vessel known worldwide as the "Calypso." Its first voyage as the Calypso was in 1948—ironically on an oil prospecting mission.

Cousteau wrote his first book, The Silent World, in 1957. He continued with his explorations of the world's oceans, and discovered that "the most important treasure the ocean holds is its fantastic array of life."

In 1959, Cousteau's team of scientists developed the "diving saucer" submarine. It transported two people to the depth of 1,200 feet. This allowed for the creation of "oceanauts." So Albert Falco, Cousteau's head diver, pioneered this realm, living one week at 33 feet.

In 1973, the Cousteau Society was founded, a non-profit organization relying on grants from its 350,000 worldwide members to "protect and improve the quality of life for us and future generations."

Concern was growing over the condition of our ocean's resources and the "delicate web of life in the seas that are vanishing." So, in 1977, water quality surveys for pollution were made to end the disastrous short-term use and destruction of these natural areas.

In 1980, a sail ship, the "Alcyone," was made. It used much less fuel and was completely computer operated. It is the only ship of its kind and its many uses have just begun to be explored.

Cousteau's latest expeditions have also been his most dramatic. The first was an 18-month land and sea excursion of the Amazon River in South America. Going 3,000 miles upstream and 1,800 miles by land, the discoveries were many. One of these was a tribe of natives thought never to have had contact with outsiders. So the Cousteau team promptly left the area so as not to disturb them.

The most recent trip was to the Sea of Cortez in Mexico. Brown showed many beautiful views of this area, including many whales and dolphins.

Cousteau's next major expedition is to rediscover the world as the Calypso circumnavigates the globe. This will provide follow-up data on places visited years before and will show the results of human impact, as well as to visit areas of the oceans Cousteau has never seen. And with over half a million miles sailed on the Calypso during the filming of Cousteau's "The Undersea World of Jacques Cousteau," there are few remaining. The Cousteau Society continues to emphasize global environmental education and environmental sanity.

Soil team places second

A soil judging team from the University of Wisconsin-Stevens Point has been chosen to participate in a national contest in New York State next spring.

The students of James Bowles in the UWSP College of Natural Resources were among the top three finishers in a regional soil judging contest near DeKalb, Illinois, sponsored by the Agronomy Society of America.

Students were at Treehaven natural resources field station where teams were entered from:

- Students are Wisconsin's Best Resource

Ray
—Will fight reductions in UW System budget
—Will work to stop tuition hikes
—Wants to create more jobs in the area

Authorized and paid for by the Election of Ray Farrell, Sue Farrell, Treasurer.
Treehaven construction continues.

Construction has been completed on the first of three buildings to house faculty and guests at Treehaven, the University of Wisconsin-Stevens Point’s natural resources field station near Tomahawk.

The building, with a price tag of $100,000, has sleeping space for eight people in four bedrooms plus a kitchen-dining area, lounge, two full baths and laundry-storage area.

The construction was covered largely by a state appropriation plus additional support from the UWSP Foundation.

The university has named the building the Fern Young Lodge in honor of a Palmyra woman who heads the Irvin Young Foundation which has donated about $350,000 to UWSP projects, most of them associated with the development of Treehaven.

The field station’s main lodge is named for her late husband, Irvin Young.

Plans are to have two identical housing units added within the next few years. Long-range plans call for an addition to the classroom center for meeting space and a maintenance-stor­age building.

Treehaven Director Charles (Corky) McReynolds says the new building unit is large enough to accommodate all of the faculty who are at the field station during the annual natural resources summer camp for UWSP students.

At other times of the year, the building will be used for either educational programs or partici­pation in them.

During the fall, winter and spring, Treehaven has limited one by UWSP students so the facilities are open to govern­mental agencies and organiza­tions that are in need of facilities where they can conduct special programs or hold meetings.

The field station has a main lodge, classroom, two 48-bed dormitories and the new faculty house.

In the fall of 1986, five groups used the facility. So far this fall, 17 groups have had activi­ties here. “There’s still a lot of room for growth,” according to McReynolds, especially for meetings and special programs on weekdays.

Professor Jay Cravens lectures to a group of CNR students at Treehaven. Construction is under way to complete three additional build­ings at the field station near Tomahawk.

Fish controversy brewing over tag returns

by Jim Adlin
DNR Fish Management

Earlier this year, the debate about Strohs Brewery’s offering a free case of beer to any angler who returned a Wis­consin fish tag with information about the DNR needed was hot and heavy.

Sure, DNR fish managers who felt they hadn’t been party to the decision or at the very least, hadn’t been informed about it by me, were upset about the offer and outspoken about their reservations.

Outdoor writers joined the fray, and in general, judging from the news clippings I read, they didn’t like the idea either. One writer, a good friend of mine, likened the effort to a contest.

I think this tagging project has some lessons to teach all of us. For one thing, DNR just doesn’t have enough fish man­agers and financial resources to manage a million-acre water and over six million acres of Great Lakes, not to mention 25,000 miles of warm­water streams and over 1,400 miles of trout streams.

It’s not likely that Wisconsin’s fishery management program will get more funds in the near future, either. Anglers have always supported DNR requests for license fee increases, and I believe will continue to do so.

But right now most fee in­creases provide only enough funds to keep us even with past losses caused by inflation. Few people, even dedicated conser­vationists, are going to jump on the bandwagon of government expansion.

That means we have to find different ways to do business. It’s expensive to tag about $10 to $20 each. So why do we do it? We tag fish to find out what happens to them. Some die, some are caught, others migrate great distances to other locations, and some stay right where they are caught.

We caught in our nets the next year.

Besides tagging, we also rely on some very expensive tech­niques, such as reef surveys, to estimate the number of fish caught by anglers. We also encourage anglers to voluntarily return tags to DNR so we can determine when the fish was tagged and the fish’s age. Then we send that information back to the angler who returned the tag.

Despite these efforts, year after year fewer tags come back.

So when Strohs Brewery ap­proached us last February to see what they could do to sup­port our fishery program, we were ready to talk. At first Strohs wanted to sponsor a con­test, but we strongly discour­aged that idea.

After a lot of discussion and the rejection of a lot more ideas due to unanswered policy ques­tions, we settled on a project that would promote tag returns and be valuable to our fishery management program.

The Strohs representative was able to make his decision on the spot, but we needed to touch base with our legal staff, field fishery staff and other policy makers to determine if we were on sound ground.

The idea was immediately challenged within the agency. After prolonged debate, we set up an in-house task group to de­termine how and when DNR program managers should be­come involved with private companies in ventures like these. Then we told the brewery to go ahead with the tag promo­tion idea.

The idea was immediately challenged within the agency. After prolonged debate, we set up an in-house task group to de­termine how and when DNR program managers should be­come involved with private companies in ventures like these. Then we told the brewery to go ahead with the tag promo­tion idea.

Although the jury is still out on the wisdom of that decision, the program continues.

HELP WANTED

This job involves living with a farm family to care for a 36-month-old girl. The farm is located in Hancock, Wisconsin. It is a 325 acre vegetable farm. The home is very modern and clean two­story. The child care giver will be the only occup­ant upstairs and will have a private bedroom and bath. The farm is partially wooded and much opportunity exists for walking, biking and enjoy­ing nature.

Compensation:
1) Room & Board Provided
2) Paid Tuition
3) Transportation Provided
4) Opportunity To Earn Spending Money

...
Outdoor forecast

Statewide fishing action is excellent

In the northwest, there’s good ruffed grouse and squirrel hunting in southern Douglas County and woodcock hunters have enjoyed excellent success in Douglas and Bayfield counties. Grouse hunting is also excellent around Park Falls. Lake Superior tributaries are providing excellent salmon action and walleyes continue to hit on the Turtle-Flambeau Flowage.

Further south in the west central counties, hunters report increased numbers of ruffed grouse throughout the 14-county hunting season. Grouse hunting is also excellent around Woodruff, and Woodcock hunters have changes and the rut begins. anglers caught walleyes around Woodruff, and squirrel ant hunters had good success in this area. Archers are having limited success so far this season in the north central counties, but that should improve as the weather changes and the rut begins.

In the northwest, trout anglers reported some good action on browns, brookies and rainbows at the Kewaunee State Plant. Anglers caught walleyes while trolling off Potosi State Park and Sawyer Harbor in Door County. And, eight to 15-pound walleyes are being taken in Green Bay off Marinette County. White bass action on the Wolf River in Winnebago County has slowed.

In the southeast, pheasant hunters are having good success on the Wisconsin Rapids area. That is the area in excess of 150,000 Canada geese in the White bass action on the Wolf River in Winnebago County has slowed. Though the hunting seasons are in full swing, anglers are enjoying success on many Wisconsin waters.

In north central Wisconsin, grouse hunting has been good around Woodruff, and squirrels are reporting very limited success in the Wisconsin Rapids area. Archers are having limited success that grouse populations are beginning to recover from past season lows. Deer hunters are looking for better times ahead as the weather improves and bucks begin their annual rut. So far the bow season is down about 15%, but some managers say as the deer become more active that harvest numbers should begin to improve. Fishing remains slow on most waters in the Wisconsin Rapids area as high water levels continue to hamper anglers.

The national competition at the National Contest and UWSP. The national contest will be hosted April 24 by Cornell University. The 208 contestants are from 3108 Martha’s Lane, a native of Chillicothe; Steve Petznick of Appleton; and Mike Lohrang of Green Bay.

Fish controversy, from p. 22

as of September 23, 1,300 tags had been returned to DNR from 70 different bodies of water. Pelagic trout still and still believe that much of the fuss people made over the tag promotion idea was unreasonable. I’ll admit that we could have done a better job of informing everyone about this project, but so far I don’t see that any damage was done.

The most important lesson I learned is that government agencies must assess a much wider range of policy issues than private firms when we consider such projects. That means that we just can’t react as quickly to new opportunities. Still, given what we see as needed to be done to manage and protect Wisconsin’s fisheries, we intend to continue to find new ways to get resources, use volunteers from conservation organizations, and work with businesses to find ways to get the job of providing good fishing done.

Thorough the hunting seasons are in full swing, anglers are enjoying success on many Wisconsin waters.

Horizon-East Central area of Wisconsin providing good hunting and viewing opportunities. Woodcock Area

Grouse hunting was very good this past weekend, and as a bit Antigo Area

Deer hunters are continuing to have limited success this season largely because of weather troubles. The wet conditions have limited access to the woods of the Antigo area. Game managers say as the weather

**Dual meet ends in deadlock**

by Wade Turner

UWSP Sports Office

Rostering their top eight runners, the UWSP men's cross country team ran to a tie with Eau Claire this past Saturday at Stevens Point.

Pointers Andy Sackmann took the individual title with a time of 26:56. Coach Rick Witt said he was pleased with the way his runners performed. "Andy simply needed more races," he said. "Otherwise we would have rested him this meet." Witt said he used this meet to determine who would fill the remaining four spots on his 15-man roster next week at the conference meet. Steve Wollman, 3rd (27:01); Kurt Lepak, 6th (27:46)

**Intramural Corner**

Reminder to all you Aerobics participants: this year's entries were due on Saturday, Nov. 2 and held on Saturday at 5:00 in Quandt Gym.

Upcoming Events and Deadlines:
- The entry deadlines are due TODAY for men's and women's doubles racquetball tournament. Play begins tomorrow! Good luck to all those participating.
- Anyone interested in participating in intramural basketball? Intramurals is sponsoring a 3-on-3 tournament to open men and women's basketball leagues on Wed. this week! The first deadline is due the next day, Nov. 6. Play begins Monday, Nov. 10.

**Points awarded by Kott Wallstrom Special to the Pointer**

**MADISON—The UW Stevens Point women's tennis team beat high-seeded teams to finish fourth at the Wisconsin Women's Intercollegiate Athletic Conference Meet at Nielsen Stadium over the weekend.**

Winning the WWIAAC title was Eau Claire with 17 points, fol-

led by: La Crosse (16); Whitewater (15); Stevens Point and Stout (11); Oshkosh (7); Platteville (6); River Falls (4) and Green Bay (3).

"Going into the tournament, I thought we had a good chance to place fourth," said Pointer coach Nancy Page. "Each player did her part in scoring points and I'm pleased for all of them. Stevens Point is one team we could not take lightly. We had a good tournament.

"This was the first time the dual meet record was taken into consideration in determining the overall conference standings. In the conference tournament, we finished fifth (only two points behind Stout), but in dual meets we finished fourth. With everything com-

bined, Stout and us finished with 11 points."

UWSP's No. 1 doubles team of Delores Mark-Kathy King defeated the No. 3 seed from La Crosse (Stacey Johnson-Jeanne Seichert), 6-3, 7-4, 6-2, in the opening round. They beat the No. 1 seed from St. Olaf (Anne Groth-Joyce Proctor) from Whitewater, 6-4, 7-5, 6-2.

The No. 3 doubles team from UWSP, Amy Staftand-Ann Stenger, advanced to the finals by defeating Jill Ferber-Rita Hernandez of River Falls, 6-0, 6-1, and Karen Blas-Tara Stabel of Stout, 6-4, 6-4. In the finals, the duo lost to Chris- tyan Gilbertson-Cheryl Grillo of Eau Claire, 6-4, 8-6.

Beth Neja-Kolleen Onsted, the Pointers' No. 2 doubles team, put upset in the race for the No. 2 seed (Anne Griffin-Lauren Gross) from Eau Claire, 7-5, 7-6, 7-2. The two duo won the consolation championship by defeating Mary Miller-Diane Sulli van of Whitewater, 7-5, 6-4.

At No. 1 singles, King won the consolation championship against Wickman (Platteville), 6-4, 6-0. At No. 3, Neja defeated Neja-Dierdre of Eau Claire in the quarterfinals, 6-4, 7-5, but lost to No. 1 seed Jill Jacobsen of La Crosse, 6-2, 6-3. Neja then captured third place by defeating Julie Glynd of Platteville, 6-1, 6-0.

Staftand, at No. 5 singles, defeated Jill Ferber of River Falls, 6-4, 6-1, in the opening round before losing to Connie Peterman of Eau Claire, 6-4, 6-2, in the semi. She took fourth place, losing to Stabel (Stout), 6-5 6-3.

Stenger finished sixth at No. 6. In the opening round, she lost to Jill Potters of Stout, but then went on to defeat Laura Cooper of Oshkosh and Chris White of Platteville. In the consolation fin-

als, she lost to Seichert (La Crosse), 6-3, 6-0.

"I'm very proud of this team," said Page. "We have only one seed and one junior, so we should be very competi-
tive in the future. Our only sen-
ior, Delores March, had an outstanding year—especially after having to sit out last year because of abuse in surgery. She has contributed a lot to this team and we'll miss her.

"Next week: Pointer Women's tennis team finished fifth at the nine-team WWIAAC tourna-

ment in Madison last weekend.

**Spikers eager for WWIAAC tournament**

by Scott Heitschamp

Staff Reporter

Life on the Pointer Women's volleyball team this season has had its ups and downs.

The spikers posted a 6-3 re-
cord in matches last weekend in the eight team invitational at Duluth University in Minnesota. Point split their four matches Friday with victories over southwest State (MN) 1-5, 17-15, 5-15 and Auguston (MN) 15-6, 5-15, 15-6 before being shut down by NCAA Division II opponents Du-

The roller-coaster weekend for the spikers continued Saturday as they knocked off Divi-

The Pointers' overall record is 13-19, with a 6-3 mark versus NCAA Division III teams and 7-

3 against teams in the WWIAAC conference.

"The matches we lost were against very strong NCAA Divi-
sion II and NCAA teams. We At-

ttracted two tough victories over Division III schools," said coach Nancy Schoen.

**Next week: Pointer Hockey Preview**
Purple-Gold intrasquad game set

by Kent Walstrom
Sports Editor

The UW-Stevens Point hockey team will play their annual Purple-Gold intrasquad game here in the Willett Arena this Saturday, Nov. 1, according to head coach Mark Mazzoleni. The Pointers are coming off their most productive season in school history having earned a share of the WSUC championship and NAIA District 14 title during Mazzoleni’s first term as coach.

Right now, as the Pointers continue preparations for their home opener Nov. 7 against UW-Superior, it appears their biggest problem may be deciding which players will get the starting nod.

Entering the intrasquad game, Mazzoleni has eight forward lines, six defensemen and three goalies bidding for top spots on the roster.

“These jobs are wide open,” said Mazzoleni, who added that every player would see action in the Purple-Gold game, scheduled to start at 7:30 p.m. All UWSP students will be admitted free with a student ID card into Willett Arena, which now boasts a newly installed heating system.

The Pointer is now accepting applications for Sports Editor. Call X 2249 or stop in at Room 117 of the Communication Bldg.

SECOND STREET PUB IS HAVING A ROCKIN’ HALLOWEEN PARTY

COSTUME PARTY—Friday & Saturday 9-12
Prizes awarded to the top 3 costumes—

Sunday night—15¢ taps

The UW-Stevens Point women’s cross country team, with a first place finish from Kathi Seidl, overcame UW-Oshkosh in a battle of conference rivals here Saturday at the Stevens Point Country Club course.

The Pointers (27), despite surrendering the second through fourth spots, found support from Seidl’s top effort of 20:56 and grouped five straight spots within the top 10 finishers to nudge the Titans (31).

Beth Benzmillier (22:02), Debbie Backhaus (22:05), Barb Knuese (22:06), Maggie Krockahl (22:11) and Carry Even

Pointers, Seidl 1st at dual meet

WSUC Football Roundup

Pointers trample Superior 56-0

by Kent Walstrom
Sports Editor

UW-Stevens Point's football team crushed wireless UW-Superior here Saturday at (oorkie Field, 36-0).

The Pointers (-1), 5-3) ran their win streak to five games but more importantly remained first one game behind league leader River Falls and tied for second with La Crosse. The Pointers meet the Falcons in their last regular-season game at River Falls Nov. 13.

Meanwhile, UWSP's demolition of the Yellowjackets (9-1, 4-1) permitted Coach D. J. LaHaye to give his reserves some playing time, in particular the second offensive unit.

All the while, UWSP continued to rack up impressive statistics as the frustrated Yellowjackets fell to their 15th straight loss.

The Pointers, in addition to rolling up 401 yards on offense, managed 29 first downs and 35 second half points while allowing Superior's modest offense to cross midfield just once during the whole game. Point defense also held Superior to a mere 171 yards of total offense and eight first downs.

Freshman quarterback Kirk Baumgartner, limited to just over a quarter of action, opened first with a three-yard scoring toss to tight end Ted Blanco. Baumgartner scored himself on a 1-yard run minutes later to give the Pointers a two-touchdown lead.

Placekicker Kim Drake converted all eight extra-point tries and in doing如此 tied his own one-game school mark established against Oshkosh last season.

A second touchdown pass to Ted Blanco with 14:46 remaining in the half extended the score to 21-4.

Dan Dantun, the Pointers' reserve quarterback, came in to replace Baumgartner and completed 13 of 21 passes for 196 yards and threw for three touchdowns.

Dantun's first TD pass went 29 yards to halfback Mike Christman with 9:34 remaining in the half. He later connected with split end Dave Steavpack from 16 yards out and added a 15-yard scoring throw to tight end Don McGilvrey with 10:17 remaining.

Christman also ran 38 yards for a touchdown midway through the third quarter.

The Pointers' last touchdown came on a 46-yard burst by freshman fullback Ken Stellmacher with just over five minutes to play. Stellmacher finished with 14 yards in nine carries, while Christman added six pass receptions for 92 yards and 80 yards on 14 rushes.

Starring defensively for the Pointers were free safety Dan Hilliker and cornerback Scott Nicolai, both credited with eight tackles. Linebacker Steve Day contributed seven stops and end Craig Ewald six.

The Pointers host UW-Platteville in their final home game of the season this Saturday. Game time is set for 2 p.m.

In other WSUC games, UW-River Falls (5-4, 6-1) stayed a game ahead of Stevens Point and La Crosse with a 34-13 drubbing of host Whitewater.

The Falcons' Greg Corning bruised for three touchdowns and 133 yards in 23 carries, and quarterback Mark Cota provided a pair of touchdowns and 138 yards in 13 rushes to keep River Falls in control of the WREC.

At UW-La Crosse, the Indians fumbled rival Eva Claire, 38-14, as Ted Pretakse rumbled for two touchdowns and 167 yards. La Crosse also saw a three-touchdown performance from Matt Pokranke.

The College of Fine Arts presents a Halloween musical for children. The festival, which runs from 5 to 10 p.m., has a costume theme. A special costume contest will be held at the Festival of the Dead. Prizes will be awarded to the best costumes, and there will be a "passport" for each student to collect stamps. All prize winners will receive new costumes for next year.

them and how long they can use them before there is a colossal back-up. Academic Computing has presented no specific plan for expanding the number of machines, only a fervent assurance that it will happen.

Problem 6: Is the present staff of Math/Computer Information Sciences adequate to handle the teaching of SMART? If not, does this mean we will be committing one or more valuable additional positions needed in several departments on campus (like mathematics, for example) to teaching SMART?

I would like to see those academic programs at the UWSP that need an integrated software package get it. I think that SMART is a good program of its type. I do not think that selling the program to the entire student body makes any sense at this point—very few of the faculty have a concrete idea of how to design computer-based assignments for their courses. The fact that SMART is a good package is not an argument for its purchase by every student on campus. Most assignments envisioned would require word processing (i.e., typing), for example, but some of the other features of SMART that make it attractive and expensive. We don’t require students to buy typewriters; we don’t even require them to buy textbooks. Thus a package of disks?

Instead, I think the University should purchase this year, one copy of SMART for each of the 300 PC’s that will be in the computer labs (about $30,000-time purchase). That makes the use of the SMART software “legal.” Use these copies as the basis for course assignments THIS YEAR. There are some academic departments who wish to implement immediately word processing and graphics and database management and spreadsheet in their courses (Business/Economics, Natural Resources, for example). They would be able to do so.

The faculty would be able to design course assignments around SMART, which would be available on a network in the micro-labs—so it is now. They could assign it and student demand would drive the purchase of the software. If there is a need for a steady budget to buy more machines and keep the computer labs up-to-date, we should think about a computer access fee. It would cost less per student and be charged only to those who use campus computers.

SMART could then decide if they wish to purchase of disks?

I hope that SMART contracts have not already been signed and that we are not whistling in the wind. As intelligent members of the University, regardless of your expertise at computing software, you as students have a right to have answers to these questions and an obligation to debate them. The SMART proposal comes up for approval at the Faculty Senate meeting next Wednesday, November 5th, 3 p.m., COPS 116.

The Canterbury Club promotes other social opportunities for its members. This year there are plans in the works for road trips, holiday gatherings, lunches, and other activities, for further information call 341-3184.

To the Hoo Has House: Watch out for those ghosts now that Halloween is upon us! You never know when they may speak. It’s time to make turkey hands now eh Mary??? Happy Halloween to a great bunch of roomies. Love ya - Zen

Hey sexy! If you save the ropes for me, I’ll put away the whip and chains. Meet you in the back yard and we’ll have a Haulooween Halloween. Love, The One and Only Blonde.

South Burroughs: Congratulations on your intramural soccer championship. Your ball is proud of you.

Hoot was your birthday. I miss seeing you at PERKINS. There are two Beths on SEC-OND Floor. Are you the babe in Room 301 or 307? Your not so secret admirer, Pete.

Scrooby-Doozy-Doo!! Thanks for coming Amos. We love you. To My Favorite American-Pa-ranoid. “You’re cool Rani” - Tracy

Fire-up 3-South Burroughs! Chicago isn’t gonna know what hit ‘em! P.S. You guys are too cool!!

The Beatles are O.K., but RHYTHM AND RULE THE WORLD! T. Hart

Dear Gumbys, It Hurts to read the personalis.

The eyes have it! All and SPASH and the Pointers, SPASH and Parrini.

To the Hoo Haa House:

I thought you wanted me Darn it Sincerely, your Missionary Woman.

Tony. My back is sore! HINT, HINT, Ya Adrian! Burroughs is tops!

NCTV PROGRAMMING

On Audophilia, Bob Dylan and Tom Petty team up to sing folklode and rock classics.

On Adult Cartoons, a selection of visual anamnies from the Warner Brothers studios and others.

On Uncensored, Growing Tobacco in America. A portrait of a farmer discovering that hard work no longer assures survival in our society.

On The Golden Years of Television, “Beat The Clock”

On New Grooves with Meg Griffin, the most progressive rock videos.

On SETV this week: 7-9 p.m. Thursday

-News Scoop - We finally have a campus TV news show.

-In The Stands - UWSP has it’s own live sports show featuring the Pointers, SPAH and Parrini.

-Student Senate Spotlight

-Mr. Curiosity - He’s just a durn curious fellow terroring the campus and community.

Trivis Quest, the trivia game show on SETV, will be looking for teams of four to participate in this new, nifty show. Sign up will begin on Friday the 26th in the Concours.
Your chance to win a FREE BIKE!

Come to Little Caesars. Bring the valuable coupon you see on this page and get a free pizza with the purchase of an identical pizza at regular price. Then, fill out an entry blank, and you could be the winner of a free bike!

Of course, no purchase is necessary and the contest ends November 7, 1986. Little Caesars Pizza, where else can you get so much food for so little money...and a chance to win a free bike!!

Entry forms available at

Little Caesars Pizza

Call ahead for quick pick up — Carry Out Only

345-2333
Church Street Station
STEVENS POINT

Open for Lunch with pizza by the slice, Caesar Sandwiches and Salads
11 a.m. to 11 p.m. (Fri. & Sat. until 2 a.m.).

Tuesday is Always Twosday. "Buy One, Get One FREE. The Month of October features "Crazy Bread" the Month of November features "Sandwiches" (no coupon needed for this Tuesday offer).
