Mall on north side nears completion

by Scott Hiebscamp

Although the building for the shopping mall on Stevens Point's north side is up, it will still be some time before shops are open for business.

According to John Galecke of Galecke Realtors, the leasers for the mall project will take approximately two to four weeks to set up, a little longer for restaurants." He said, "People from town are going to Milwaukee and Wausau, malls for clothing shops and Galecke has confidence that that void can be filled.

"We look at demographics, find out what the market needs, what it is short on, who is high in town and needs competition, and those are the ones we go after, because they are the easiest to sell to, because we have already done their work for them."

Currently, the mall, the north side rests between the IGA and the Road Star hotel, and rests on 14,400 square feet. Two of the project will involve building an additional 10,000 foot building to the north contingent with the existing structure and phase three will add an additional structure running east and west to total 38,000 feet. The site of each individual store is 2,500 feet. Galecke said the mall should turn out to be a business because the stores are not enclosed under one unified roof.

"We designed it enclosed at one point and we took that 50 percent off, town and needs competition, because we have already done their work for them."

The first three buildings for the Northside Mall has been completed for some time. Currently, only one business is operational but more stores are expected before Christmas.

Waiting for U

The Collegiate Network has introduced U. (subtitle: The National College Newspaper), a big (32-page), bright (four-color) tabloid, featuring stories by student journalists. It'll premiere on campuses, as an insert in 170 student newspapers, around February 3.

The Painter is one of these 170. UWSP students will be able to pick up their free copy of U. in February, March and April near the areas where the Painter is normally distributed.

Collegiate Network invited "all the large campus dailies and the weeklies with a good journalistic reputation" to send in their best stories, photos, and cartoons, says Richard Sublette, marketing director. As a result, the submissions are "coming in by the bagful," he says, and U. staff members are hard at work choosing selections for the February issue.

Collegiate Network will pay $25 to both the student journalist and campus newspaper for whatever is selected. It will also pay for the cost of inserting U. into college papers.

There's another benefit to students, too. Beginning in the spring, U. will offer paid, semester-long internships.

An editorial board, composed of college press leaders from many schools, will provide another link to campuses. E. has received start-up funds from Grand American, Inc., a real-estate development and restaurant company. Collegiate Network expects advertisers to provide ongoing support.

The new tabloid will provide advertisers an opportunity that's not really available elsewhere, says Sublette. Most campus papers can't offer an advertiser color on every page. And many giveaway student magazines are never even read—"you see them stacked in boxes and boxes in campus hallways," Sublette says. "That's money wasted."

So, U. will benefit advertisers as well as student journalists and campus papers. Come February, there'll probably be a lot of people watching for that premier issue.

UWSP's Homecoming parade rolls along Isadore Street. Residence hall teams battled inclement weather during the weeks activities but the homecoming's still a success.

photo by Bryant Esch

Homecoming week has come to a close. Everyone is finished constructing their floats and yelling like hell. The final results, Homecoming 87:

suits for the weeks events were tallied and Watson Hall is the 1987 homecoming Champ!

This year's homecoming king is:
1. Watson Hall
2. Hansen Hall
3. Roach Hall

and queen, also from Watson Hall, are Dale Armstrong and Kim Mistet.

4. Neale Hall
5. Stimson Hall

There's another benefit to students, too. Beginning in the spring, U. will offer paid, semester-long internships.

Stevens Point News

"The completion of the final leg of the Highway 51 construction project represents a historic achievement for Central Wisconsin," according to State Senator David Helbach (D-Stevens Point). The final 0.6-mile stretch of road is scheduled to open to four-lane traffic at noon on Sunday.

A symbolic "ribbon-tying" ceremony is planned for October 23 in Westfield, Helbach and other state and local officials will be on hand to commemorate the joining of northern and southern Wisconsin by the new, four-lane road.

Last Saturday was a busy day for the Stevens Point Police Department. The police department recorded a record 123 entries on its activities log, which stretched for nine pages.

The previous record had been 118 entries on eight pages and was set on Dec. 8, 1986. It was the second successive record-breaking UWSP homecoming weekend that a record had been set.

College paper:
The Collegiate Network is at work on a national college newspaper. The first issue will premiere in February. The Pointer will make the new paper available to UWSP students.

Hazardous Waste:
Two years after the initial system survey of hazardous substances, five UW schools can claim hazardous-free conditions.

Scientific Wisconsin:
Faculty members Dr. Douglas Post and Dr. Richard Behm unveil a university scientific journal written by UWSP graduate and undergraduate students.

Commuter blues:
Special orientation sessions, ball programs, and a new student organization are three of the ways UWSP is approaching the problem.

University Writers:
For students with a journalistic bent, University Writers provides the opportunity of involvement.

Homecoming football:
The Pointer football team suffers a disappointing loss to the Eau Claire Blugolds.

First buck:
A deer hunter takes a nostalgic look back at his very first buck.
Hazardous Waste Update

Chem Waste begins second-round clean up of UW System

by Karen Rivedal

Editor

Hazardous waste and the UW System—the two have been too close-for comfort for the past several years, according to most state officials. Currently, five UW schools including Eau Claire, La Crosse, River Falls, Stevens Point, and Whitewater have disposed of hazardous waste stored for years in chemistry backshelves and maintenance rooms. This is two years after the UW’s initial campus-wide survey of hazardous waste. In 1986, the state passed special hazardous waste storage.

One of the university’s own initially exposed the problem when Michael Schmoldt began a system-wide survey of hazardous substances in October of 1986. Schmoldt was the hazardous substances management officer for system.

The survey findings, which Schmoldt submitted to UW administration in January of 1987, showed a long-term accumulation, or back log, of hazardous substances and wastes on campuses throughout the system. According to a Milwaukee Journal article, the state Public Building Commission granted a $601,100 funding request from System Administration. According to Leigh Leonard, UW System Hazardous Substances Training officer, “It took quite a bit of time to convince the public officials that we needed a special allocation for this and that we couldn’t absorb it out of the UW System budget without a cost to other areas like academic programs.”

With the allocation, the university could begin screening potential private contractors to dispose of the waste. About four months elapsed between the funding grant and the hiring of a contractor.

“You just don’t hire a contractor by the seat of the pants when you’re contracting for hazardous waste,” said Leonard of the bid deliberations that resulted in the October 1986 choice of Chem Waste Management, Inc., an Illinois-based disposal firm.

Referring to the need for careful inspection of contractor disposal facilities, Leonard said, “We hired contractors that we felt were really going to do the job.”

Turn to page 20

**Hazardous Timeline:**

**October 1985:**

A system-wide inventory of all toxic and hazardous materials begins. Michael Schmoldt, newly-hired hazardous substances management officer, conducts the survey.

**January 1986:**

Four months later, the survey results are in. Schmoldt submits his findings to system administration.

**Jan.-June 22 1986:**

UW System submits joint Financial and Public Building Commission request for funding to begin removal project.

**June 22 1986:**

The Milwaukee Journal publishes Schmoldt’s findings.

**June 28 1986:**

UW System receives $601,100 from Public Building Commission to collect and dispose of the accumulated hazardous and toxic waste.

**June-Sept. 1986:**

Administration hazardous waste officers search and screen various private contractors.

**October 1986:**

Chem Waste Management, Inc., an Illinois-based firm, is contracted to dispose of System hazardous waste.

**November 4 1986:**

First meeting held between Chem Waste officials and representatives from each of the 26 UW campuses and centers. Participants discuss guidelines and procedures for storage and packing of hazardous materials.

**November 29, 1986:**

Campuses receive a memo from Don Gerhardt of UW System administration requiring a list of each university’s hazardous waste accumulated through 1986. UWEP reports a total of 476 lbs.

**Early summer 1987:**

Approximately six months later, Chem Waste performs first pick-up of hazardous waste from a university campus. By July, all 26 institutions are visited once by Chem Waste.

**July 1987:**

State allocates an additional $300,000 for completion of clean-up procedure.

**Currently:**

Chem Waste has performed a second pick up at UW-Eau Claire, Whitewater, River Falls, La Crosse, and Stevens Point. These universities are fully "cleared out," i.e. all accumulated waste has been removed.

More effort put into writing for audiences

On Assignment

When I was a college student," says Dr. Douglas Post of UWSP's biology department, "I was really bored writing term papers just for the sake of writing them. I think students need a reason to write before they will produce their best work."

It is with this in mind that Post came up with an idea for a university scientific journal. The premier issue of SCIENTIFIC WISCONSIN can be purchased both at the Academic Achievement Center in the basement of the LRC and at the University Center book store for $3.50.

SCIENTIFIC WISCONSIN features scientific articles written by UWSP graduate and undergraduate students with emphasis being on undergraduate work. In the first issue were published a wide range of articles from "Clutch Size Variance in Snow Geese" to "The Heat of Combustion of Aspirin."

Teaming up to coordinate the project with Post is Dr. Richard Behm of the English department. He has extensive experience in both publishing and editing. Behm is from the same school of thought that suggests that students are more motivated to write for an audience other than simply a professor.

"SCIENTIFIC WISCONSIN is a good way to encourage students to write and see their work published," says Behm. He also says the journal provides students thinking about attending graduate school with an excellent opportunity to publish their scientific writing.

Both Behm and Post have been actively encouraging professors to submit quality samples of student scientific writing. They are quick to point out, however, that students are welcome to submit articles on their own initiative to the Academic Achievement Center, 108 LRC. Manuscripts are reviewed twice each year, in January and May. Deadlines for submissions are January 1 and May 1. Any papers not accepted for publication will be returned to the course instructor or to students who provide a self-addressed, stamped envelope with their manuscripts.

How do students know if their article is right for SCIENTIFIC WISCONSIN? "It doesn't have to be a novel idea," says Behm, "we're simply looking for examples of sound and concise scientific writing."

Post has assembled a corps of UWSP science faculty to form an editorial board which will be responsible for manuscript screening and for making future decisions about the journal. Post says the faculty approached to serve on the editorial board were very receptive to the idea of the journal, but perhaps more importantly, students have taken a noticeable interest in the new journal.

"Over the years," says Post, "I've tried several different tactics to get students interested in writing. One of those tactics included having the students write a book by each writing one chapter until the book was completed. As he noticed that students put forth greater effort when they knew that an

Quick thinking student saves Prof.

A university professor was revived after a near fatal heart attack last Thursday at Ella's Bar.

Foreign language professor Michael Morton collapsed after having been in the bar only a few minutes. UWSP student Brad Moe was at the bar and rushed to his side. After discovering Morton had stopped breathing, Moe began Cardiopulmonary Resuscitation (CPR). Moe has a CPR certification.

"He (Morton) came into the bar, took off his glasses and placed them on the bar," said Scott Goltry, who also witnessed the incident. "He started to sweat a little bit and just fell over. It was a weird thing to see."

After a couple of minutes of CPR, the Stevens Point paramedics arrived and continued the process until Morton began breathing on his own. He was taken to St. Michaels Hospital and placed in the intensive care unit.

Plans for commuter involvement

by Blair Cleary  
Staff Reporter

In the past, lots of resources have gone into programming for residence hall people. Two reasons for this is the large number of dorm residents and the ease in which they can get involved in activities. Sometime, however, it is easy to forget that there are a whole group of students out there who are neither located on the campus nor have an easy time getting involved. These people are the commuter students. For the past year Eileen Kelz of the Student Development Area has been working on the commuter issue and has made the following observations. First of all, commuters are not as involved on campus as people who live in the residence halls. Secondly, many commuters don’t feel as comfortable or at home on campus as the residence hall people. As a result of this, commuters don’t participate as much in student activities and organizations. Also, the campus retains fewer commuters than residence hall people.

This year several things have been done to combat this problem. Last summer during the orientation there were special sessions for the commuters and in the fall orientation there was a big push for commuter involvement. The reason for these special orientation sessions, according to Kelz, is to get the commuters knowledgeable about the campus and to have them meet people. This gives them a better step into things.

Another new program this year is the Wing Membership Program. The program, which this year exists in both Neale and Hanson Halls, assigns a commuter to a given hall’s wing. The commuter is, in a sense, adopted into the wing and takes part in social activities, as well as hall meetings. This gives the commuters a place to base themselves so they can get more involved. There are 30 students in the program this year.

In addition to all of this there is a newly recognized organization called the Campus Comuters Organization. According to Kim Kowalski, the president, and Kathy Sniadajewski, the publicity officer, the purpose of Campus Comuters is to meet other students, share resources and information about UWSP (sports, activities, academics, etc.), form links to residence hall students, and help advocate the needs of students living off campus.

Any commuters who wish to know more about the Campus Commuters Organization are encouraged to attend the organization’s first meeting on November 19. This Sabs and Staff get-together features a tour of the UC as well as a chance to socialize with other commuters. Commuters with questions are encouraged to call Eileen Kelz at 4845 for more information.

The writers' niche: University Writers grow

by Susan K. Ferck
Special to the Pointer

Are you interested in writing? Do you find yourself jotting ideas in a notebook or writing a story for fun? Do you want to write to expand your horizons and explain the mysteries of the universe in a science journal? There are the kinds of ideas encountered in University Writers.

U-Writers is an informal group of students who get together to discuss organization, and learn about writing. Student writers discuss their work in peer workshops, organize readings, and publish their work in the University Writers.

Membership is open to all students interested in writing. We especially like to meet new writers, who have the most gain from our activities. However, our group has writers at all levels and even some published authors. Members are interested in many different types of writing, such as poetry, essays, short stories, fiction and non-fiction, novels and song lyrics. Meetings are usually bi-weekly and are held in the Academic Achievement Center (AAC) located in the basement of the LRC. The AAC provides us with many valuable resources: books, handouts, magazines, newsletters and fellow writers who encourage and help us with our writing.

For writers interested in getting their work published, U-Writers puts together an annual publication called "Barney Stree," available at $6.00 at the AAC. Material for the next edition will be accepted in November.

University Writers is also a member of the Associated Writing Programs, which provides students—graduates and undergraduates—with a job listing, placement service, catalog of college writing programs, and a newsletter which lists grants to support writing. For more information on these and other writing opportunities, contact the AAC.

The fees may not be static for long as UWSP's enrollment is cut. Although lower enrollment will provide a better education by decreasing the student-faculty ratio, fewer people paying student charge will decrease the regressed fees collected by Student Activities. The end result may be higher fees, which cause the fees have will have to increase to keep Student Activities going.

In an effort to avoid tuition increase, Student Activities
University Honors Program

Sapere Aude "Dare to Think"

Tamara S. Zorn
Staff Writer

The University Honors Program is an opportunity for the superior student to be in an intellectually stimulating environment than the traditional classroom offers. It gives the student a chance to read, openly discuss and question different views in history, comparing them with contemporary issues, environmentally or within themselves.

The Honors courses cover a wide variety of the disciplines and, instead of emphasizing the differences between the disciplines, try to find connections. In a less structured environment, one can exchange ideas and investigate different viewpoints and learn. Thus the Honors Program is a great opportunity for those serious students to broaden their outlook and have fun stating their ideas.

As it is a great opportunity for the Honors student, the professors also receive a chance to work with interested and hard working students more directly. As a few professors told me, they enjoy teaching in a style of free flow discussion, because they are able to learn along with their students. The professors who teach in the Honors Program are drawn entirely from the Honors Faculty (winners of the University's Excellence in Teaching Award), and winners of academic departments' Excellence in Teaching Awards.

Honors 301-3 cr.-American Political Science (Prereq: Approx. 3.5 GPA), with J. Morser. This course is an examination of a select set of questions about the nature of American policy and its relation to other social systems. J. Morser is a professor in the field of Political Science. "Dare to Think"

NOTE: This was last semester's outline and is subject to change.

Honors 370-3 cr.-Great Problems: The Reality of God (Prereq: Approx. 3.5 GPA), with D. Fadner, Philosophy Department. This is a look at the idea of God primarily within Western Culture. Contemporary criticisms of God and God's practicality in real life will be discussed in depth.

Honors 378-3 cr.-Great Problems: The Relevance of Human Language (Prereq: Approx. 3.5 GPA), with J. Pratt, Communicative Disorders. Based on a series of questions, the origins of language and the acquisitions of normal language are explored. The contrast of human and animal languages will also be discussed.

Honors 379-3 cr.-Great Problems: Science and Poetry as World Views (Prereq: Approx. 3.5 GPA), with R. Belah, English Department. This course will explore a variety of questions.

Trek
From p. 7
sleet. A rain from the day before had gotten my bag wet and the cabin was a welcome haven that cold morning. I flung my bag over a rafter, wrapped my hands around a cup of hot cocoa and decided I could face the day after all.

I think it's important to note that I went on this trip alone, as did most of the other trekkers. Everyone was at first strangers and after 3 days of togetherness we could all sense a warm feeling of friendship. We all had the love of the outdoors in common and at the end of the trip, an elation that we had met the challenges.

The Lung Association also sponsors two bike treks in the summer; to New Glarus and Door County. Combined with this fall trek, the ALA raised more than $65,000 in 1986 for the prevention and control of lung diseases: asthma, emphysema, chronic bronchitis and lung cancer. The idea of participating in a fitness activity, while at the same time helping others, makes good sense. If you would like your name on the mailing list for next year's treks, call the ALA at 1-800-242-5160.

Indian Summer
Tamara S. Zoern
Staff Writer
White butterflies dancing amidst the carpet of green,
Colors of fire surround me,
pumpkins and autumn leaves,
Squinting in the bright sunlight.
The force of the wind blows warmth through my hair, caressing my face.
I wiggle my toes in the cool dampness of the ground below while the smell of harvest floats through the air.
The soul lightens up as the warmth and energy flow about it.
Drifting back to summer days of splashing in the lake and wet, sticky watermelon on your face.
As the evening closes, the sun, an orange surrounded by blue and pink skies begins to lay its head to rest upon the horizon.
One last chance to soak it in.
For Old Man Winter wins out and that cold north wind begins to blow
And then the icy sheet slaps you in the face and the toes become like icicles.

Funding
From p. 7
How is the $277,000 budgeted for annually-funded organizations?
Organizations submit annual budgets in January and February for the following academic year. Generally, these budgets are the ideal of the organization, so the Financial Committee tries to decipher what is needed over what is wanted. Non-monetary benefits are a major concern:

"We have to ask how a student is benefited by allocated money and how many students are benefited."

Travel is a real problem in this area. Student Activities does not have the funding to reimburse many travel expenses for organizations. They advocate attendance at conferences if, and only if, the representatives of the group are bringing back valuable information or experience to their group.

"We can't send someone to a conference for their own personal gain. We can't pay for lodging at a luxury hotel when there's a budget motel next door. It all goes back to the group's purpose statement."

With all these rules and control, why does an organization have to earn revenue Besides...

"Fund-raising doesn't help us, it helps the organizations. We can't give an organization everything they ask for to fulfill their purpose in their constitution. Of course, we don't want the organization spending 80 percent of their time fund-raising. That would defeat the purpose of the organization. We do believe, however, that the members have to show a commitment to what they're doing, whether that means selling popcorn or paying membership dues. Hopefully, the group will find a balance between earning revenue and fun."

Student Activities helps organizations by publishing lists of possible fund-raising events, from popcorn to Christmas wreaths.

"Revenue should be earned by methods that enhance the group's purpose. Selling M&M's and popcorn should be a last resort if there are other possibilities more related to the organization."

What if they don't earn their revenue?
"They don't spend as much. It's pretty simple."

As a writer for the Pointer, I wanted to know why I couldn't get paid for the few hours I spend each week writing.

"We look at how you benefit by writing for the Pointer, the experience you get from that. If we pay you for your efforts, the money will have to be taken from something else. You may earn money from the Pointer, but you'll lose it somewhere else."

That was good enough for me. What if they cut expenses by only publishing the Pointer bi-weekly, just because I wanted some personal benefit? Despite the time it takes to write for the Pointer, I'd rather keep the opportunity open to do it each week than worry about what my time is worth. If the Pointer didn't exist, there wouldn't be anything to worry about. I'd rather worry about feeling unappreciated.

Amusing, isn't it?

Political oppression, unjust legislation, Contra Aid, World Hunger, Apartheid. Are you laughing yet? What, you're not amused by these issues and people who are well informed and have beliefs based on facts concerning them? I don't understand. According to your self-proclaimed spokesmen, UWSP students are not interested in these issues and they find people who are (SNIF) quite amusing.

A letter to the editor was printed in last week's Pointer whose author asked to have his name withheld. This daring writer claimed that UWSP students don't care about SNIF concerns which are of global significance. He went on to call Student National Information Front demonstrations "hippy-type demonstrations" that "aren't the way to go about it." Well, Einstein, why don't you enlighten us with THE WAY to go about it.

It never ceases to amaze me how uninformd, uninterested and, usually, uneducated individuals unfairly attack people who are trying to improve conditions for everyone, even their critics. Voicing one's opposition to existing policies is essential in protecting ourselves using the advantages our democratic society affords us. Don't you see that SNIF is an organization that should be praised for its persistence in education and its courage in talking about real issues in a hear no evil see no evil environment? Stevens Point is not exactly in the thick of things. One could exist in Point and never be touched by any of the issues of today (unless we're tricked or receiving financial aid for school or living). Because of this we should be thankful for SNIF and groups like it.

Maybe SNIFers are a little different in superficial ways, but who cares? Are we so limited by our eyes that we can't hear what they're saying to us about what is truly important. Democracy, promotion of just legislation, feeding the hungry, and unlocking the chains that bind millions in their own countries. Amusing isn't it? All that SNIF represents is good, real, and necessary if we are to have hope for a better way of life for people of all nations, including our own. Because of SNIF's commitment to freedom, humanity and peace, the group and its members deserve our respect, honor and a fair chance. No, you don't have to agree with what they're saying, but at least listen before you play judge and executioner. Attend one SNIF meeting.

To all of you SNIF aggressors out there, please, open your minds before you open your mouths. If you haven't the courage to sign your name to an opinion, then maybe it needn't be expressed. SNIF students aren't afraid to get out and take responsibility for their beliefs, why can't you?

A different outlook

My whole life had been a mess; nothing went right with me. I was living in a world in which everyone sought to take advantage of the other. Men ruled over women, and these days some women are trying to do the same.

Let me start with an argument I had with my wife the other day. Before we got married, Damsel (that is her name) would get up at five every morning to prepare my breakfast. God, in those days she really was the woman of any man's dreams. She never complained about anything. She was virtually at my beck and call.

These days everything has changed. Damsel now expects me to prepare my own breakfast; claiming that she has the right to enjoy her sleep uninterrupted. To add insult to injury, she also wants the time she used to have in the home. These days, I am told of the liberated woman. Her reasons? My salary was not enough to take care of the bills! Fellow men, I know

Frankly Speaking

This comes by way of sharing and self disclosure. Why? Because I will be seeing my name on this column in the coming months, so we might as well get acquainted. Hello, my name is Frank. I'm a non-traditional student working towards my undergraduate degree in Health Promotion and Wellness. This is the fifth University that I have attended. It has taken me sixteen years to return to school; the term 'non-traditional' applies in more ways than one. I have two kids and raise two others. The story behind how and why I am here and what I'm doing挂着 these keys will become clearer to both of us as we get further acquainted.

Suffice it to say that I am very much like you except that way back in one of my very first English Composition classes I took the advice that my professor gave me seriously. I wanted to be a writer. His advise to me was to get out into the world and experience things, then go back to school to learn how to write about them. His explanation took the form of a metaphor somewhat of the following: "Have you ever seen the way that a school of fish swim? They always follow the very first fish. Which ever way the first fish darts or turns, the rest of the fish follow." This was his analogy to the higher education system in this country. In my words, "we are teaching students what to think, rather than how to think." Through various jobs and occupations I have found this to be sadly true. Why is it that so many people seem to be reluctant to take the initiative for themselves. I can understand the inertia caused by having to make ends meet and trying to keep your head above water, but what effort is involved in considering another opinion? It's frightening to think that there have been several generations raised on television and rock and roll. Not that these are bad but it demonstrates the distance we have come since the Industrial Revolution. Some of the implications of a society raised by adults unaware of

Turn to page 20
"Hippy Protests" worth the effort

Dear POINTER,

I am writing to express my concern about an editorial in last week's POINTER which accused the Student National Issues Front (SNIF) of sponsoring "hippy-type protests." The unnamed author in his/her attack of SNIF also takes a direct shot at our system of democracy.

As a fan of student activism, I applaud all efforts to raise awareness and challenge our beliefs with alternative ones. I do not necessarily concur with SNIF, however, I dare say this is not the goal of their organization. To stimulate debate and bring about introspection seems to be the primary motives of these "hippy protests."

I would appreciate ideas from the author on how to bring about social change without these grass root movements. Experience teaches me that change does not originate in our legislature's office, but rather in the wants of its constituents.

The gag order that the author would seemingly like imposed on these "fringe groups" shockingly parallels political systems foreign to our own. Further, to even have the gall to suggest that UWSP has no interest in what those groups have to say, clearly indicates that this is the view of one ignorant individual and not mine.

Sincerely,

Stephen J. Cad
Student Body President

Dearest Pointer:

Did someone forget to take out the garbage at the office? Geet, someeone might wanna do that, cause I think it's starting to seep into the paper.

Obviously, I'm writing in regard to Duke Baffle's "Keep on Drinking" piece. Big Duke Baffle is quite the crusader for this earth-shattering cause of drinking for the underaged. I wouldn't go so far as to call him a rebel or a radical, though. And I hope that no one else, underaged or of age, would either. Those titles are reserved for those who go against the grain, not for those who are playing the same games as the majority of underaged folks. I'm sorry that Duke feels this issue should be a war between the residents and the R.A.'s, or the lived during the Vietnam War.

As an R.A. and a Pointer staff person, I'm disappointed and disgusted with the "Keep on Drinking" article that does nothing but take up space. And since the Pointer didn't have enough common sense or maybe enough guts to check this article into the trash receptacle where it belongs, then I guess I'll have to put it in mine. Too bad.

Sincerely,

Kyle L. White

Welcome to the Pointer's new look. Pointer readers are welcomed and encouraged to make their opinions known through this public medium. Letters to the Editor should be typed double-spaced and no more than 300 words. The "As I See It" section is available for longer opinion essays. Deadline for submission of all letters, personals, and classifieds is Monday noon.

Drake University Law School

De la fact that the University of Wisconsin-Stevens Point is a nationally recognized leader in the promotion of healthy lives for its students, faculty and staff (Wellness Program Mission Statement Policies), I believe we must be more aware of what we eat, whether it be "junk food" or "healthy food." Many students don't eat a breakfast or dinner for a wide variety of reasons. As the day wears on, they get a need for energy and they don't have time or money for a well-balanced meal. These students go to the vending machines and buy a soda, candy bar, or chips to hold them over, till supper.

The fact is that these foods are a poor source of energy, deplete you quickly and they are not nutritious. This brought up the question of what kinds of "health food" vending machines we have on campus. I observed the vending machines on campus and noticed the "health food" vending machines are hard to find (hidden), out of order, and unstocked. So, as students, we must become more aware of our body's needs and eat healthy foods even though we may end up eating an apple, from a vending machine, for dinner.

Small game forecast

Pheasant outlook has hunters crowing

by Chris Dorsey
Outdoor Editor

For the first time in a decade there is genuine cause for optimism among Wisconsin pheasant hunters. That word came from Ed Frank of the DNR's wildlife bureau as he is expecting an increased harvest by hunters because of what he calls the St. Louis-like winter and spring Wisconsin experienced in 1986 and '87. There was excellent carry-over of wintering birds because of the low snowfall and mild temperatures. Nesting conditions were nothing short of ideal for Wisconsin birds as temperatures warmed early and the spring was unusually dry which is an unbeatable combination for increasing pheasant numbers.

Frank says last year's surveys of pheasant populations revealed that the bird total was up about 50,000 roosters along with an additional 10,000 hens pheasants will be released on state properties to supplement existing wild pheasant populations. Frank says he is reporting farm facilities at the state game farm have largely been responsible for the improved success in raising pheasants for release on public hunting areas. Despite the increase in pheasant numbers, says Frank, Wisconsin hunters shouldn't expect hunting to be on a par with that found in Iowa or the Dakotas. But the long-term future for Wisconsin ringnecks looks hopeful as more farmland is taken out of production under the auspices of the federal Conservation Reserve Program. These CRP lands now total 374,000 acres in Wisconsin and provide sorely needed additional winter and nesting cover.

If predictions hold true, this year's pheasant harvest could very well approach the 300,000 mark. This would be an improvement from last year's 200,000 harvest figure. Although it's doubtful that pheasant populations will ever return to the levels experienced during the soil bank years of the 1950's this fail could well be a Wisconsin pheasant season worth remembering.

Also opening at noon on Saturday is the small game season in that portion of the state south of highways 54 and 10. Frank said that although we haven't had the increases in the harvest he expected the past two or three seasons, he looks for a good year for this species. "This year our population indices are up enough, like 40 to 50 percent in the southwest and our Dodge County study area, so that I'm going to stick my neck out and say we are going back to harvest index of 600,000 and beyond this year," Frank said. The harvest has been as low as 350,000 the past few years. "Perhaps I'm being a little optimistic, but I am looking for a harvest close to double that figure this season, he added.

Residents can look forward to a good raccoon season on the opener, October 17. "There ought to be enough to satisfy everyone," Frank said. He noted that trapping pressure has been off because pellet values have been lower than they have been historically and the numbers of raccoons are as good as they have been for some time. The raccoon season for nonresidents opens on October 31.

Frank said there is no reason to believe that Hungarian partridge are any more abundant than they were a year ago, and he sees no major change in the hunting for that species this year. And, while bobwhite quail populations have been declining very slowly the past three years, Frank said "the past mild winter and very dry spring helped the population and it appears it is back to the level it was three years ago." He reminded hunters that in Wisconsin, bobwhite quail are at the northern limits of their range, and "if we take five or six thousand of these birds a season, that's about it."

The bobcat, sharp-tailed grouse and jack rabbit seasons also open on October 17. Hunters are reminded to check the 1987 hunting regulations pamphlet, as for some species the opener is only in a portion of the state, and in some cases the seasons open at noon.

"Overall," Frank said, "this promises to be a good year for small game hunting, most reports to date on the ruffed grouse, woodcock and squirrel seasons, already underway, are good. From what I've heard so far raccoon hunting has been very good."

Really big bug show, dioxin in tampons

by Cynthia Byers

Yellowknife, Canada just might be the place most of our Midwest winter weather comes from. Yellowknife commonly has colder temperatures than we think of as really cold, but residents there say it's not too bad. Why? Because they live in an "arctic desert." Temperatures of 30 degrees below zero are usual but come without a wind chill or humidity like here.

Dwellers in Yellowknife think of winter as pleasant, something to think about when our winter winds kick up.

Insect collector Dan Cappe has been touring with part of his collection. Cappe has been showing a display he's taken 36 years to assemble. More than 500,000 species of insects live in the world and he has a long way to go yet to collect all of them. Some of his exhibits were captured over 100 years ago. No special preservatives have been used beyond simple drying for the fish by department biologist. It was told that requests for the fish by department biologists were not needed because they were not in writing.

Wisconsin recieves gift of swans

by Chris Dorsey

Outdoors Editor

Madison, WI-Six trumpeter swans were transferred Tuesday to their new home at an overwintering site in St. Croix County where they will remain until they're 23 months old. The 5-month-old cygnets are part of the Department of Natural Resources Trumpeter Swan Recovery Program. The swans had been housed temporarily at facilities at the Milwaukee County Zoo where two pairs of adult trumpeters remain.

These swans were donated recently to the DNR by Ramon Whitney of the Dellwood Wildlife Foundation in Dellwood, Minnesota to make up for the cygnet losses to predators and vandals during the spring cross-fostering activities. Of the 20 trumpeter swan eggs acquired last spring, two of the 11 hatching cygnets survived to the age of 4 weeks. Snapping turtles and mink are believed to have killed nine and DNR officials are investigating the possibility that a young boy may have killed the remaining two. Nine of the eggs never hatched.

These 20 eggs were the foundation of the cross-fostering effort in southeastern Wisconsin. In the cross-fostering program, trumpeter eggs were incubated and hatched in the nests of mute swans, a species of similar habitat and habitat.

"The ultimate loss of all 20 eggs was a setback to the recovery program," said Sumner Matteson, coordinator of the Trumpeter Swan Recovery Program. "But the donation of the six young swans by Mr. Whitney gives us the edge we need to forge ahead with the program."

"We will care for these birds at the overwintering site until they're 23 months old. Then they will be paired and released at suitable sites in western Wisconsin in the hopes that they'll establish nesting territories and raise young in Wisconsin when they reach the age of three to four years. Those may be the first native trumpeter swans hatched in Wisconsin in almost 100 years."

The overwintering site consists of a shallow lake where open water can be maintained throughout the winter by aeration. Food and shelter is provided, however, caretakers avoid unnecessary contact with the birds.

According to Matteson, a modified cross-fostering program will continue next spring. Eggs acquired through a cooperative program with the Minnesota DNR and Alaska will be incubated and hatched by Wisconsin mute swans at a facility in Illinois. When the cygnets are five weeks old, they and the adult mute swans will be returned to their original nesting site in southeastern Wisconsin where the adults will continue to raise the trumpeter young.

"We proved that the cross-fostering technique can work and with a large scale predator control effort earlier in the spring to live-trap snapping turtles and mink from the area, we believe the cygnets will have an excellent chance of survival," said Matteson. Officials believe the 5-week-old cygnets will be large enough to be less attractive prey to any remaining turtles or mink.

The fund raising efforts for the programs are also continuing through the Natural Resources Foundation of Wisconsin, Inc. Donations are sought statewide to support the $35,000 program budget for 1988. Individuals contributing $5 or more will receive a beautiful full-color poster of a trumpeter swan adult shielding her young on the nest. Contributions may be sent to the Natural Resources Foundation of Wisconsin, Inc., P.O. Box 136, Madison, WI 53701-0129.

For additional information on the trumpeter swan recovery program, write or call the Foundation (608) 266-2592 or the Bureau of Endangered Resources, P.O. Box 793, Madison, WI 53707, (608) 266-7012. Canada goose viewing is excellent in the Horizon area as the birds have arrived large numbers. In the north, falling leaves have improved visibility and success for upland bird hunters.

A WARM WINTER ??? Learn how to at the WEATHERIZATION WORKSHOP

Attend a Weatherization Workshop and learn how to make your winter warmer while saving energy.

Tuesday, October 20, 7-8:30 pm (sign up in the concourse U.C. Oct. 14, 15, 16)
-Do-it-yourself weatherization.
-In-class hands-on practice.
-Learn to conserve in rental property.
-Free weatherization kit refreshments. Sponsored by Wisconsin Public Service and S.G.A.

Lucky seven UWSP students recieve awards

Seven spring graduates of the UWSP are among 21 student botanists from throughout the country to receive national recognition.

The Botanical Society of America has announced its Young Botanists Awards for 1987, given to a student judged by the organization to be outstanding. The winners were nominated by biology faculty members at universities and colleges throughout the United States.

According to John Curtis of the UWSP biology faculty, this is a new program initiated by the society to recognize high-caliber senior students who are involved in research. They received certificates of merit, winners by hometowns, are:

CEDARBURG: Laura Pearson
COLUMBUS: Luther Raechal
MADISON: Troy Layne
MARIBEL: Marilee Ramish
STEVENS POINT: Mark Anderson
SULLIVAN, ILL.: Dianna Shervey
WISCONSIN RAPIDS: Juanita Mitchell

These swans were donated recently to the DNR by Ramon Whitney of the Dellwood Wildlife Foundation in Dellwood, Minnesota, to make up for the cygnet losses to predators and vandals during the spring cross-fostering activities.
Hunter fights anxiety, bags first buck

by Andy Goehl

Outdoor Writer

Spending two hours hugging an elderly white pine in the Oneida County forest when it's 15 degrees out is not exactly what I call fun. I felt like my whole body was frostbitten and numb as I decided it was time to quit my morning bow hunt. Standing on my tree climber and lowering my bow, a reflection of sunlight caught my attention rather abruptly.

I noticed a whitetail buck approaching via a well-worn trail. I could feel my stomach tie itself into a knot as I stood there totally surprised by this unexpected visitor.

Quickly pulling my bow back up to my hand, I now stood on my platform in confusion, trying to think of what to do next. Standing just 15 yards away, loudly crunching corn from my bait pile, was a hungry six-point buck.

I couldn't believe this was actually happening to me; this kind of situation only happened in deer hunting stories you read in magazines like Outdoor Life, I thought to myself. But this Sunday morning, here I was in real life form, standing on a piece of plywood 15 feet above the forest floor. In my left hand was my bow, in my right hand a quiver of arrows and around my waist was a hunting rope, swinging lazily back and forth beneath my tree stand.

Ten minutes of trying to keep a buck from noticing you can give anyone a slight case of "Buck Fever." My short struggle ended, however, when I managed to knock an arrow and pull my bow back without being detected by this white-tail wonder. A well placed shot in the front shoulders and a case of the shakes later and I watched the buck bound away.

After a 20-minute wait, I cautiously followed this graceful animal only 80 yards into some oak trees and now had the satisfaction of successfully bagging my first white-tail buck by bow and arrow.

How did this college senior manage to bag his first buck with a bow? Luck was definitely a big part of the success, but not the only factor.

The major reasons I scored were pre-season scouting, knowing my hunting area and selecting an appropriate tree stand in the area where I could be less detected by deer. Hunting over a bait pile of corn and trying to understand the deer habits as they approach the bait helped me to cut down on my missed opportunities. What helped me the most in being successful was constant shooting practice from a tree stand, having patience in waiting for the right shot and just plain being in the right spot at the lucky time.

The leaves are almost gone at home in the northwoods and the weather is turning colder. My thoughts are already turning to outsmart a bigger buck next year. For right now though, I know this is one archery season I'm not about to forget for a long time.

From One Heart To Another

The Red Cross Bloodmobile will be at UWSP Oct. 20, 21, 22 in the Wright Lounge of the University Center.

Sign-Up will be in the University Center Concoursce Oct. 12-19 and at Allen and Debop Centers during the meal hours.

If you have any questions please contact the U.C. Building Manager Staff at 346-3201.

Gift benefits wildlife, education

MA\'SISON, WI-Children in the classroom and wildlife in the field will both benefit as the result of a generous donation from the Safari Club International Conservation Fund, Wisconsin Chapter. The gift of $10,200 was accepted by the Natural Resources Board at its recent meeting in Wisconsin Delta.

A portion of the gift, $1,000, will help support the Protect Wild Program. Project Wild, a cooperative educational effort of the Wisconsin Departments of Natural Resources and Public Instruction, reaches young children emphasizing awareness, appreciation and an understanding of wildlife and natural resources.

Two endangered species in Wisconsin, the pine marten and the osprey, will also benefit from the Safari gift. A portion of the money, $2,000, will be committed to establishing a population of pine martens in the Chequamegon National Forest in a continuing effort to bring back that important furbearer to northwestern Wisconsin. Another $2,000 will be used to construct osprey nesting platforms to help increase the population of that bird in the state.
Checklist of bowhunting dos and don'ts

By Brian Leahy

You've been standing in your tree stand for what seems like an eternity and you haven't seen any deer. Now it is getting dark and you will have to leave in a few minutes. Suddenly a large buck emerges from the thick underbrush. He is heading straight toward you and you're becoming nervous. You lean out to shoot, but in the process your stand squawks. Immediately the buck stops and begins to sniff the air. His tail purls up after he has smelled the cheap after-shave you are wearing and he runs off into the next county. You have no shot, so you leave and go home in disgrace.

Bowhunting takes skill and practice. One of the most important things to consider is how to minimize your errors. Your chances for success improve proportionally as you make fewer mistakes.

Equipment problems are easily avoided. Before you go out to hunt, run through a mental checklist. Ask questions such as: Did I buy the right arrows? Are my bowheads sharp and is my game tracker functioning?

One item easy to forget is the shooting glove. To avoid misplacing it, hook it on to your bow after you are done hunting or shooting.

For those hunters who choose to wake up early in the morning and go hunting come hell, high water or hangovers, remember to bring along a flashlight—a flash light that works. Attempting to navigate through the dark, pre-dawn woods is futile without a flashlight as you stumble into trees and make a lot of noise. It's also very difficult to get to the correct tree to sit in, because everything looks alike at 3 in the morning. You end up sitting in a tree that is surrounded by thick growth and overlooks nothing like the tree you intended to sit in which overlooks a major deer highway.

One final note on equipment. The line you use to pull up your bow should be tied to both your bow and your quiver. If the quiver were to become separated from your bow in transit, it would fail and land on the forest floor.

Other mistakes to avoid involve odors. A deer's nose is his primary defense against predators. Use a cover scent to mask your body's natural human odor. Be careful to select the proper scent, for example, a pine scent would be unnatural in an all-hardwood forest. Once the rut begins use a doe-in-heat scent.

Cover scents aren't cure-alls, so avoid anything that has an unnatural scent. Don't gas your car up before you head out and please no smoking in the car on the way out there. Also avoid foods with repugnant odors—deer don't like bacon. When you bathe, use uncented soaps. Don't use any after-shave. You are going deer hunting, not on a date. If the quiver were to become separated from your bow in transit, it would fail and land on the forest floor.

Other mistakes to avoid involve odors. A deer's nose is his primary defense against predators. Use a cover scent to mask your body's natural human odor. Be careful to select the proper scent, for example, a pine scent would be unnatural in an all-hardwood forest. Once the rut begins use a doe-in-heat scent.

One of the primary defenses against predators is hearing. Your ears and the noise you make are the key to staying quiet. So, try to avoid slowing your respiration, heavy breathing, loud heavy footprints and other sounds as: Did I buy the right arrows? Are my bowheads sharp and is my game tracker functioning?

Blugolds upset Pointers on Homecoming

By John Gardner
Staff Writer

Turnovers and missed opportunities told the tale of the Pointer homecoming loss to the Eau Claire Blugolds.

The key statistic of the game was Pointers' seven turnovers, compared to the Blugolds' one, three of which were converted into touchdowns. This, coupled with Pointer frustrations, led to a 31-22 loss at the hands of the Blugolds. The loss dropped Point one game back of the conference lead and inevitably the loss of their No. 5 ranking.

The game was true to form as it was considered by many to be an aerial circus. The Blugolds had 118 yards rushing while throwing for 363 yards, resulting in 471 total yards. The Pointers also had a profitable passing game. Moehling had four golds' one, three of which were converted into scores. This, coupled with Pointer frustrations, led to a 31-22 loss at the hands of the Blugolds. The loss dropped Point one game back of the conference lead and inevitably the loss of their No. 5 ranking.

Golfers capture second
Four players earn all-conference and all-district honors

by Karen Kulinski
Sports Editor

It wasn't a typical Wisconsin State University Conference golf meet, but it did go down to the final hole to determine the winner.

In the end, UW-Stout prevailed as the Blue Devils won their first-ever WSUC title with a 14-hole total of 1180. The meet, which was a combined WSUC-NALIA District 14 meet, was held at the Masconet, Tuscarawas and Lawsonia Golf Clubs. Stevens Point finished only two strokes out with a 1182 followed by Oakosh at 1192. Parkside 1204, Eau Claire 1227, Wisconsin Valley 1235, Platteville 1271, Milwaukee School of Engineering 1273, River Falls 1287, La Crosse 1313 and Superior 1325.

The team scores were close after the first day with Stout in the lead by 11 strokes at 362 while Point was 11 strokes behind at 363. Oakosh posted a 394. The Pointers gained on the second day and shot a 395 to overtake the Blue Devils and lead by two. Stout shot a 399. On the deciding final round, it came down to the final hole as Stout came up with an offensive error and the Blue Devils took over. "You can't expect to win a ballgame when you turn the ball over seven times," he said.

The first quarter was a stalemate as both defenses dominated. The scoring opened up in the second quarter as the Pointers found the end zone on a gutty fourth and ten pass from Baumgartner to Jim Prince for the touchdown. Following the kickoff and two plays later, Chris Herzog ran for a 35-yard touchdown to tie the score, 7-7. Point scored later in the half on a Blair pass to give Point a 14-7 halftime lead.

In the third quarter, Stevens Point surprised the Blue Devils by using its running game. On the opening drive, the Pointers marched down field behind the strong running attack of Keith Majka, who ended up with 30 yards. Point made it to the Blugold two-yard line and on fourth down, the ball went in and out of the hands of Majka and into the hands of Eau Claire's Chris Gustafson.

Following a scoreless third quarter, the Blue Devils capitalized on a Pointer fumble and evened the score at 14-14 with a TD pass to Osborn. After a Pointer punt, Clark went to the air for the Bluejacks once again and found the former basketball standout Mike Blair along the sidelines and connected with him for an 83-yard touchdown pass. Eau Claire added a field goal set up by a Todd Janke interception.

The Pointers, starting at a 24-14 deficit, came back and, starting on their own 20-yard-line, drove the length of the field to Eau Claire's two-yard-line. The following play took the wind out of the Pointers sails. After leaping up and over the goal line, Stevens Point fumbled in the endzone. Eau Claire recovered the questionable fumble.

Eau Claire iced the game on an Osborn run, set up by a 9-yard halfback pass to Galen Schiebelhut, giving the Bluejacks a 31-14 lead. Prince caught another touchdown pass to tighten the score, but an attempted onside kick failed to travel the required 10 yards.

This is a game that we never should have lost, but it is a blessing in disguise," said LeRoy. "This game will prove to be worthy and is a good way to unite the team. We need to reorganize now and take one game at a time."

The Pointers, 5-1 in conference play, trail Eau Claire and River Falls who are each 3-0 in the WSUC. Point is 4-2 overall while Eau Claire improves to 4-1.

Stevens Point travels to Superior on Saturday at 3 p.m. to take on the 0-4 Yellowjackets.

The Pointers entertain Stout on Oct. 24 at Goerke Field.
The Steinways Point Rugby Club went into this past weekend ready to carry on a highly touted Elgin, Ill., team, and it showed as Point pulled out a physical victory. Elgin was named the team of the month by "Rugby Magazine" and next month they are flying to Scotland to play in a tournament. Kathy is able to go, however, had reason to win. It was Homecoming and the team needed a victory after losing to Stout last week.

"We wanted to win," said Dean Stevens, who led the way scoring all 10 points for Point. Rummel scored both tries and converted the critical two-point conversion after the second try. Point broke out to a 4-0 lead after about five minutes into the match, as Rummel took a pass from Dan Vaughn and broke down the sidelines to score.

The momentum swung back to Point's side against Ripon. Singles winners were King at No. 1, Neja at No. 2, Amy Stanfield at No. 3, Kelleen Onrad at No. 4, Jane Sanderfoot at No. 5 and Chris Diehl at No. 6.

Doubles victories went to

King-Neja at No. 1, Onrad-Diehl at No. 2 and Sanderfoot-Egstad at No. 3. In an exhibition doubles match, Sanderfoot and Cindy Tortsvet won a three-setter, 6-1, 6-4 and 6-2.

"It was very cold and we didn't finish the last match until 6:00 p.m," said Page. "Sandfor and Egstad were the last one off the courts as they were the only varsity doubles team to go three sets (67-47), (48-63). Although we won 94, we had to dig down and reach for something extra to pull out some of those matches.

The Lady Pointers were only able to win one match and take only two matches to three sets against the Warhawks.

The lone winner for Point was Standiford at No. 3 as she won 6-7, 6-3 and 7-6. The other match to go three sets was King at No. 1 who lost 6-1, 6-7 and 7-6.

"The 8-1 match score doesn't indicate how close the match was," said Page. "King and Neja lost to defending conference champions at singles and doubles. The No. 3 doubles match with Standiford and Neja won by a very narrow margin and could have gone either way. "Although I would have liked to have won more matches, I was pleased with our efforts."

The netters, whose season is winding down, traveled to Oshkosh on Tuesday, before heading to Watertown on Saturday to close out their dual meets. The NAIA District 14 championships are scheduled for Oct. 22-24 in Eau Claire, while the WWIAA meet is set for Oct. 29-31 in Madison.

by Karen Kulinski

The Lady Pointer Junior varsity cross country team had a chance in the varsity race at the Eau Claire Invitational last Saturday.

With the top seven runners staying back, all of the pressure landed on the junior varsity squad. "With our top seven runners taking the weekend off, this group handled the pressure of a big meet very well," said coach Len Hill. "I was very pleased with some individual efforts."

Oshkosh won the invitational with 22 points, followed by Mid-East, from p. 10 what or why they are teaching their kids, is considering. Consider this: there is a large amount of college students that believe it was the Communists that we were fighting in World War II. Where did Communists become equal to Nazis? Why has so much of the history of the Native Americans become abbreviated into teepees and pipes?"

So why bring up these irrelevant points? And what has all this got to do with students attending UWSW? Good question. Here's my point: for a democracy to work - there must be an intelligent voting body. In a period of our history when the economy is disappearing, the most powerful country in the world is fussing over whether to pay professional football players twelve or fifteen thousand dollars A WEEK !!! We seem to want a presidential candidate that is capable of walking on water yet never to have gotten his feet wet. We will more than warrant capable of taking away life than we spend taking care of our sick, homeless, and elderly. We are truly a world out of balance.

Please don't take my word for any of this.

I can remember the time I came home from college on Christmas break and was all fired up to tell my sister about all the things I was learning that were wrong with the world and how I was going to help change them. She was hurt and angered that I had spoiled her future. Her words were full of dreams dashed and futures grim. She did not want to think that what she grew to expect as a child, would as an adult, be a lifestyle contributing to a wasteful nation. That day I realized that some people do not want to know about current events. Would some people be better off not knowing about their future? And suddenly I knew that if I was aware of this, then there were certainly men in positions of power and influence that knew this also. I dedicated myself to learn how to wake people up without destroying their hope for the future or their security.
Soccer team improving

By Dave Lee
Staff Writer

Improvement. Improvement. And finally a win. That’s the best way to describe last week’s Lady Pointer soccer games against UW-Oshkosh and St. Norbert.

The kickers broke a six-game losing streak and now own a 3-3-2 record.

On Wednesday, Stevens Point tallied a 4-1 revenge win over the Oshkosh team that beat them one week earlier, 7-1. Barb Updegraff had two goals and one assist. Ronda Richmy (Jill Peeters assist) and Ann Matranga (assists to Peeters and Updegraff) scored the other goals. Three of the goals came in the first half.

“This was an exciting game for us,” said Pointer Head Coach Sheila Miech. “We’re starting to open up some holes and create opportunities. We also reacted better to the ball. Miech also felt that a real strength for the team was the midfielders who contributed a lot to the defense.

Point only had 17 shots on goal, while Oshkosh had 29. Lady Pointer goalie Teri Clyse saved 25 shots, as the Titans only kicked out 11.

The 7-0 score didn’t indicate how well the team played Sunday against St. Norbert. SNC scored four goals in the first half and added three in the second.

“St. Norbert is the best team we’ve played all season,” said Miech. “Our enthusiasm remained high throughout the game. We didn’t let down, but St. Norbert is one of the best in the state.”

Statistically, Stevens Point had seven shots on goal compared to 37 for St. Norbert. Pointer goalie Clyse saved 22 while SNC only had four.

Harriers take 6th at Eau Claire Invitational

by Karen Kulinski
Sports Editor

Covering a wide range of the spectrum was the performance of the UW-Stevens Point men’s junior varsity cross country team.

Head Coach Rick Witt, who left his top 13 runners home, was pleased with some of the Pointer finishes, but thought better showings could have been attained at the Eau Claire Invitational.

“We left our top 13 runners home to get rested for a big meet this weekend,” said Witt. “I thought we ran only average. However, we did have some men run very well, but on the whole, I really thought we could’ve run better.”

Eau Claire won the 19-team meet with 33 points followed by St. Thomas with 50, Milwaukee 80, and Minnesota-Duluth 87, Stout 181, Stevens Point JV 188, Platteville 190, Oshkosh 203, Green Bay 259 and Superior 367.

“I felt we should have been much closer to the top four teams even though we only had our JV runners,” said Witt.

“Holman is beginning to round back into form after being ill,” said Witt. “He is ready to challenge for a varsity spot. Meinke continues to get better each week and also is ready to make varsity.

“I thought Hamilton ran well, as he made a big jump in the team order. The rest of the team only ran average and need to be a little more aggressive if they are to be really tough college runners.”

With a 14-7 lead going into the fourth quarter, Points punter was getting his kicks on the sidelines.

UWSP then gave up 24 fourth quarter points in a 31-22 loss to Eau Claire on Saturday.
Hazardous Waste from page 3

maintained. "There's no point in collecting waste, removing the risk from our own backyard and causing another problem somewhere else."

In November 1986, the Hazardous Substances Division of the Dept. of System Administration, which oversees the removal project, requested a listing of hazardous waste from each UW campus and set up an initial Chem Waste-campus representatives' informal meeting.

The first Chem Waste pick-up of hazardous waste from a UW campus was not until late spring, 1987.

"You have to remember," said Leonard, "we're coordinating for 26 institutions, most of whom have never had a hazardous waste collection program until now."

Four people are employed by the UW System to coordinate the removal project, including Leonard, Pat Kanzora—hazardous substances management specialist, Neil Howells—chief of Technical Services, and the Bureau of Technical and Information Services supervisor.

"Staffing is an issue that we're concerned about," re-marked Leonard. "The need for more staffing is recognized, but it takes a long time to have the concern answered through the budget processes."

By July of 1987, the initial allocation was running out. System again asked for, and received, a Public Building Commission allocation, this one for $380,000. A schedule of second pick-ups on UW campuses began in August. According to Leonard, by December 1987, Chem Waste will complete its second round and remove back-up from all system campuses.

December is also the tentative date for a full accounting of the amounts of campus waste removed. In January, each UW campus will dispose of its generated wastes, through Chem Waste, Inc., every ninety days.

Start is made at the rate of 26 institutions, most of whom have never had a hazardous waste collection program until now."

Pointers from p. 17
conference and four of the 12 all-district players," said Kason- son. "That's super and almost unheard of."

Steve Dailey, a junior from Stout, was the overall medalist with a 230. He won by one stroke over freshman Dan Thomas of Oshkosh who had a 231. Along with the close finish, the tournament also featured a hole-in-one by Platteville's No. 8 golfer. Randy Zahn used a nine iron to ace the par three, 144-yard second hole at Tuscmia. He concluded the tourney with scores of 72, 70 and 74, the fourth highest total in the tournament.

With the fall season over, Point can look forward to its condensed spring schedule. "We can still be considered as a selection for the NCAA III tournament," said Kasonson. "I'm looking forward to our spring season."

Writing from p. 5

audience of many students and faculty were going to read their work instead of one professor. Post says students interested in submitting writing have approached him to get details about how to do this. The journal is one way of instilling a desire to write in students, but Post also says it's a way for students to separate themselves from other students who don't have any published writing.

Post approached several faculty chairpersons for funding for the project and says he has been pleased with the reception he's getting. Funding for the project has also been provided by the Academic Achievement Center for Academic Support Programs. Private donations are also being accepted to ensure that the journal continues to be published twice annually.

REAL COUCH POTATOES have hit the market, according to the National Association of College Stores—but they're not people, they're soft, brown pillows shaped like a spud. And for those who like to sleep late, there's an alarm clock shaped like a softball—you can hurl it against the wall to make it stop ringing.

THE GRAND JURY ISSUED NO INDICTMENTS in the killing death of a U. of Texas-Austin fraternity pledge a year ago. Now, the pledge's family is going the civil-suit route, naming as defendants the school, the national fraternity, and several individuals from the UT chapter. The pledge, with a blood-alcohol count of .39, after being handcuffed and forced to drink, died after a "ride," or abandonment in unfamiliar territory. The school's Interfraternity Council president said he was "shocked" at the suit. The university has expelled the fraternity.

Press here for a great data processing career.

The right time. The right place. State Farm is hiring.

If you're a senior with a data processing, computer science or math background, there may be a very special career opportunity awaiting for you in one of the largest corporate data processing facilities in the country.

There are actuarial and auditing jobs open, too.

Blue Chip. Green light. State Farm is one of America's leading insurance companies. Through innovative marketing and a proud service tradition it has become the nation's leading homeowners' insurer, and one of the top life insurance companies in the country.

You'll receive expert training. You'll work on state-of-the-art data processing equipment. You'll go as far as and fast as you can. We want-early to a strong, solid base to build a career on.

Contact your campus Placement Director about State Farm today.

Or visit the State Farm Recruiter. Our representative will be on campus October 27.
Are you going to be ready when its time to Graduate?

O.K., so you'll have all your credits for a degree, but will you have the job experience to go along with that degree? If you don't, and if you feel you need to gain management experience before you graduate, consider this:

The University Centers will be offering Management positions for Spring Semester, 1988.

1) Gain valuable management experience while your in school.
2) Develope your supervisory, leadership, communication, and organizational skills.
3) Establish a business network for when you graduate.
4) Round out your college career with the skills and experience that are highly sought after.

These positions offered are:

Head Building Manager and Building Manager Staff.

All positions require that you be in good academic standing (2.0) GPA, be registered for at least (6) undergrad. or (5) graduate credits, and have at least 2 semesters remaining in school.

If you feel you possess the ability to excell in one of these positions and want to greatly enhance your job marketability, please be encouraged to apply.

Applications will be available Oct. 12 for the Head Building Manager Position and Oct. 19 for Building Manager positions. Applications can be picked up at the Information Center in the U.C.
Interviews require sign up for appointment time and registration with the Career Services Office (otherwise noted). Stop by 134 Old Main Bldg., or call 364-1316 for further information.

Honors program

These are the courses for the spring semester of 1987. If you receive an invitation or are qualified, I am sure that the professors would like to see you in their classes. It is very beneficial.

I spoke with a few Honors students; this is what they said about it. I like the Honors courses, because my professor assumes I have an education and treats me like I do, he doesn't talk down to me. Also my high school didn't have any program like it and I enjoy the higher level of learning; it is my favorite class, "and, " My Honors course is my favorite class because I have discovered that I can really think through more than just the input-output process, like the other classes I have. What I mean by input-output process is that you sit and listen (input) and output by the means of the test." I, as a fellow student, as well as an Honors 100 student, recommend the Honors courses if you have the opportunity to do so. If you're here to challenge your mind, and really learn something worthwhile, you cannot pass up this chance for growth.
