Hearings close in Stevens Point

Bruce Marietta
Staff Reporter

The Senate Education Committee held a public hearing on the Reagent appointment of John Jarvis this past Wednesday in response to state-wide student lobby efforts. In preparation for the hearing, state Student Governments intensified their lobbying with petition drives, phone calls to Legislative Hotline, and a declaration of the week of September 14-18 as "Stop Jarvis Week".

At a previous press conference, United Council President Adrian Serrano explained a few reasons as to why the council has opposed Jarvis.

"There are two types of qualifications that we feel the student Regent must possess. The first is experience as a student...Jarvis has been on campus only two of the last nine semesters and some of the state-

ments he has made...indicate that he does not identify with the average student," he quoted.

Serrano also added, "The second experience the student Regent must have is in debating with public policy matters, especially educational and UW matter."

The public hearing, held yesterday at 1:30 pm, may have proved to be the last stand for Jarvis supporters and possibly a victory day for the Jarvis opposers. According to Serrano, over 30 people have testified against John Jarvis since the hearings began, compared with 9 testifying for Jarvis.

Jarvis' opening statement suggested that he was qualified on the basis of his self-paid broad school background and his business experience. He also suggested that the students could have a different opinion of

him if the time was took to get to know him and his ideas.

The recent complaints filed against John Jarvis have varied little from those made in past hearings.

According to Steve Cady, the President of the UWSP student government, Jarvis hasn't had any experience that even remotely parallels public policy, excluding a presidential term in his fraternity.

Cady also stated, "Another point is assertiveness...He tends to sit back and wait...He (is) not very assertive, he does not know the issues...With only a two-year appointment with the Board of Regents the students want someone who can sit on the board and immediately represent their views. They want someone that is going to hit the ground running. It's important

Controversial student regent John Jarvis attempted to defend his policies on Wed. in the University Center at UWSP.

UW-System mandates campus asbestos search

by Karen Rivedal
Editor

UWSP must conduct and compile an asbestos identification report for UW System Administration. According to the mandate, all UW schools must submit this information within one year. Up to this point, no exhaustive search and identification of campus asbestos has been conducted at UWSP.

Physical Plant engineer Hiram Krebs will handle most of the formidable task. At present, says Krebs, the university "knows where more than fifty percent of the asbestos is, by volume. The rest, we think, is in pipe covering or hot water tank covering."

The university has this information because the presence of asbestos has been logged regularly since 1985, in the course of regular building maintenance and modification. Krebs describes the current practice:

"Anytime we can't answer to a person that we know a particular location of insulation or ceiling covering does not contain asbestos, or if we know it does and tell them they shouldn't touch it, we take a sample."

Krebs and Mike Marksteiner, associate director of Physical

Plant, do all the requested asbestos sampling. The bulk samples, which fit into small, camera film canisters, are sent to either the state hygiene lab or Parker Services, a division of Sentry Insurance, for analysis. The lab results may prompt a removal project, the posting of a caution sticker, or no action at all.

Other UW schools are handling their asbestos in markedly different ways. At UW-River Falls, the "pinnacle" according to Krebs, of asbestos-monitoring, two permanent employees worked solely as campus asbestos-identifiers. "They went into every space in every building," says Krebs, and identified. And it cost them hundreds of thousands of dollars."

The comparatively low-key, essentially one-man search to be performed at UWSP has Krebs, who monitors asbestos in addition to many other job responsibilities, a little worried.

"We've got to get done in a year. I would guess that's going to be a problem for me, because I've got three building additions to design. If we get more positions like the budget says, maybe we could afford to put a full-time position on to do

Cont. p. 4

UWSP student government representation were in the audience to oppose Jarvis.

Enrollment tallied, plans made

UWSP News Release

The University of Wisconsin-Stevens Point has come very close to its target of cutting last year's overall student enrollment of 9,550 by 150.

The planned reduction included the call to trim the freshman class population to 1,700. The final tally is about 1,691.

Because of budget constraints, most UW campuses were directed to begin to reverse their recent growth spurts. Chancellor Philip Marshall orchestrated much of the UWSP policy and gave a preliminary report on the results

Wednesday to the Faculty Senate.

On a related enrollment matter, he said state lawmakers have recently begun expressing concern that policies are too lax within the UW System for dropping and adding classes after the beginning of each semester.

A committee of the senate will be asked to investigate the local drop and add procedures and make recommendations about possible policy revision to the full body.

Other reports:

-Steve Cady, president of the Student Government Association, said one of the issues his

organization is studying is a proposal to install dispensers for condoms in residence halls.

-William Kirby, local president of The Association of University of Wisconsin Professionals, said Oct. 1, the next payday for faculty and academic staff, will be designated as "2 Percent Day" to call public attention to the fact that this year's salary increase is below that approved in many other states and is creating need for a new round of "catch up pay." He also said his organization is beginning to address a "Unique problem" of increasing demand

EDITOR'S DESK

To skip or not to skip: a student dilemma

This is college, right? The four-year deal offering growth, maturity, experience, and knowledge? A place to be truly independent?

Because sometimes I can't tell. Sometimes this place downright reeks of paternal instincts. Just ask the freshmen and sophomores, who are by class rank alone guaranteed two full years of twenty-four hour supervision, orchestrated activities, and group showers.

But the forced dorm migration of underclassmen has been bitched about before, to no avail. University policy is, it seems, set in stone. It ranks right up there with in-grown toe nails for sheer evasion and longevity.

But there's another university policy that has no merit as a policy and no place in a university. Mandatory Attendance Policy: wherein faculty members attempt the high school hall monitor-combination-college instructor maneuver. It's a difficult trick to justify as professors place the attendance percentage of their choice above a student's proven abilities on graded material.

Profs rationalize out a lot of arguments to support the policy. Participation is a popular one. I had a professor whose methods for lowering grades so irritated me I used to skip on purpose. He said, "Classroom participation is a very important part of this introductory course. Obviously, if you are not present, you cannot be participating."

Equally obvious, though not stated by the prof., is the fact that one can be perpetually present but participate as little as one who is absent. So who's the better student—the one who makes a meaningless appearance, or the one who is busy with something else? And who gets the points docked?

The rest of his policy was characteristically vague, mentioning that absences "could" result in a lower grade. Constant ambiguity is the second big problem with formal policies. It's tough for teachers to figure out just how much to let attendance affect grade point. So they doubletalk.

According to the UWSP catalog, faculty are to provide "clear explanation" of attendance policy. Right. Based on the language actually used, ninety-five percent of UWSP faculty are functionally incapable of uttering a single, binding statement. In an effort to offend no one while retaining all power of action, profs write things like (these are actual policies): "I trust students to make their own judgements and choices about coming, or not coming to class." But

then continues: "Habitual and excessive absence is grounds for failure." What happened to trust? What good are the choices?

Or this "More than three absences may negatively affect your grade." Then again, they may not. Who knows? And this one: "I consider every one of you in here to be mature adults. However, I reserve the right to alter grades based on attendance."

You reserve the right? How? By virtue of your saying so? Is that like calling the front seat?

Another argument that profs cling to goes something like, "Future employers, by God, aren't going to put up with absenteeism." Well, let's take a reality pill. I think most students can grasp the difference between cutting an occasional class, which they paid for, and cutting at work, when they're the ones on salary. See, college students are capable of bi-level thought control, nowadays. (It's all those computers.)

In summary, mandatory attendance should be abolished because:

1. It is irrelevant. Roughly the same number of students will either skip or attend, regardless of what a piece of paper says. If the course is worth anything.

2. It is ineffective. It automatically measures neither participation, ability, or gained knowledge. That's what tests are for. Grades are what you end up knowing, not how many times you sat there to figure it out.

3. It is insulting. A college student is capable of determining a personal schedule, one that may or may not always meet with faculty wishes. An institution committed to the fostering of personal growth can not operate under rules that patronize or minimize the role an adult should claim for himself.

4. It is arbitrary. A prof. has no right and no ability to factor in an unrealistic measure of performance. A student should be penalized no more than what the natural consequence of an absence is—the missing of one day's direct delivery of material.

5. It abolishes free choice. By the addition of a factor that cannot be fought. We are not at a university to learn conformity. As adults, we reserve the right to choose as we see fit, even if we choose badly.

Finally, I would ask faculty to consider this: We have for some time upheld in this nation the sacred principle of separation of church and state; i.e. You are not God.

\$3.35 here to stay?

Time to increase minimum wage

by Jay Mazur
for the National Forum

The minimum wage was hotly debated when it was first established in 1938. Each time it was raised in subsequent years the controversy revived. Now with a drive in Congress to boost the minimum for the first time since 1981, the old debate is likely to be rekindled once again.

Opponents will argue that to lift the floor will bring on unemployment and thus hurt the very people the minimum is designed to help. They will say that a raise for these low-wage workers threatens to "price them out of the marketplace."

But a half century of experience with the minimum wage has shown that this is just not the case. In 1966, the Secretary of Labor summarized the experience of more than a generation: "The record is that following the original establishment of the minimum wage... employment in the United States always went up." And, the report noted that employment "usually went up more in the lowerpaid occupations most directly affected."

Back in 1977, an editorial in The New York Times warned that an increase in the minimum might cost between 200,000 and one million jobs. Quite the reverse happened. Between 1977 and 1978, employment rose by more than four million, and the next year the number employed rose by 2.7 million.

From 1950 to 1968, the minimum wage was always slightly higher than half the average hourly wage in the private sector

an opinion essay

— an intent of the law whenever Congress acted. Since then the minimum has slipped. Right now it is at the lowest point since 1949; worth only 37 percent of the average wage.

The minimum wage is no longer a shield against poverty. In all but three of the years from 1960 to 1979, a wage earner working could only earn about 80 percent of what would be necessary to lift his or her family out of poverty.

Lifting the floor would bring a measure of economic justice to a significant portion of the American people. Many others would also benefit, because the American market would be vitalized by the increased earnings of the nation's working poor. Relief rolls would be lightened since many of those working at the present minimum are legitimately receiving welfare payments.

A living wage will also provide an incentive to be productive. Who could possibly be productive. Who could possibly be inspired to make a real effort for a wage that yields no more than a welfare payment? Also, the history of the last 50 years suggests it will again be a mistake to raise the minimum without any provision for automatic adjustments in the future. Leaving the minimum wage at its present inadequate and deteriorating level would increase poverty, weaken incentives to step up productivity, deny the neediest a living wage and protection from exploitation and—most important—deprive our economy of a necessary stimulant to lift us from our present stagnant state. It's time to raise it.

The National Forum provides the nation's press with the views of national experts on timely public issues. It is funded as a public service by AFSCME, the public employers union.

Gov. Thompson plans veto for wage increase

Scott Huelskamp
Staff Reporter

Governor Thompson has already said he plans to veto a proposal to increase the minimum wage.

The UWSP Student Government joined the United Council in support of the concept of increasing the state and federal minimum wages.

After being sent to the state Capitol in Madison, the proposal passed through the Senate 60-34 with bipartisan support. A Democratic majority exists in both houses.

The State Assembly also passed it, but during that session the budget received priority and the floor closed before Governor Thompson could issue the veto.

The press release office in Madison says the governor intends to veto an increase in the state minimum wage because it would only help a small number of people, while hurting small businesses and perhaps forcing

them to go out of business. Only certain businesses must adhere to a state wage increase, whereas all places of employment must go along with a federal increase.

The proposal will be reintroduced at the fall floor period October 6.

The United Council, which works full-time lobbying state legislators to pass student-related issues, said they will continue to work on the wage increase but it will not be one of the 12 or 13 platform issues (agenda for the year).

"The wage increase was a side issue at the time and not debated heavily because Governor Thompson had already said he intended to veto it," said United Council President Adrian Serrano.

"Although it is not a platform issue we will continue to work on it, discuss it with our Legislative Affairs Department and meet with Peter Barca (D-Kenosha) and get his advice on who to target our energy to-

ward."

If passed, the minimum wage would increase from \$3.35 an hour to \$3.55. The current state and federal wage has not risen in six years. In 1977 legislation enacted gradually increased the minimum wage from \$2.30 to \$3.35, January 1, 1981.

The UWSP proposal says, while tuition has increased more than sixty percent since 1981, the buying power of the minimum wage has dropped nearly thirty percent due to inflation. Also, ninety percent of all UW students work at some time during the year to help pay the costs of their education.

Said Serrano, "We want to encourage other university SGA's to write proposal letters for a wage hike."

Student questions, concerns? SGA is at your service. X3721

Prof. communicates views on speech

UWSP News Release

C.Y. Allen says his moonlighting experiences as a professional public speaker have exposed him to new ideas, technology and attitudes which, in turn, are used to enliven his communication classes at the University of Wisconsin-Stevens Point.

Needless to say, Allen is an apostle of those in business and education who are encouraging professors in the UW System to be involved in economic development projects.

For academicians to share their expertise with executives and employees of business isn't a one-way street, he is learning.

"I come back to the classroom from these appearances like I've had a postgraduate course in what's going on right now in organizational settings," he observes.

Throughout each summer, on weekends, during semester breaks, and during many evenings and early mornings, Allen can be found anywhere between Stevens Point and the East and West Coasts of this country, giving speeches on leadership and conflict resolution.

It's a lucrative business but the professor says he often places a higher value on opportunities of listening to other speakers at these conventions than on the check he takes home. "It's fascinating," he muses.

"After all, I'm a teacher of public speaking, so I feel more competent and prepared to do the job by getting involved in public speaking as I do," he continues.

photo by Joe Landtke

Comm. prof. C.Y. Allen logs many a mile on his public speaking circuit

What is the professor telling his audiences nowadays? It really doesn't matter which group is being addressed, he explains. His message transcends professions.

Allen says he doesn't emphasize how to communicate as much as he promotes what to communicate. Successful leaders give messages by their actions that often are as important as their rhetoric. These actions reflect how leaders approach commitment to an employer and how they deal with change.

To be a high achiever, from

Allen's perspective, is to be willing to "soak up some pain in the process—being willing to confront conflict, be dislocated, experience stress."

The professor defines leadership as social influence in a democratic society, and to achieve it requires personal credibility, reliability and trustworthiness.

Allen believes being a reliable source of information helps a person achieve credibility, and being able to look at situations from the perspective of others is a way to develop the trust of others.

Asbestos

from p. 1

it."

Krebs expects the initial bill for investigation and testing alone to top \$100,000.

The state of Wisconsin, through its building commission, finances any actual asbestos removal projects on tax-supported university buildings. Student fees, however, in the form of reserve funds, must pay for any work on auxiliary-area buildings. These include the

University Center, Debot, and the residence halls, all of which are either slated for removal projects or already have undergone one.

The year 1985 marks the university awakening to the presence and problem of asbestos on campus. In that year, additions begun in the Fine Arts Center first turned up potentially dangerous asbestos, the Environmental Protection Agency

tightened requirements, and a tragedy close to home heightened awareness of the need for closer monitoring. A university employee died from terminal asbestosis.

Says Krebs, "We doubt that he got it here, but we don't know where he could have gotten it. He worked here fifteen years. When you have one of your own people... (dies), you begin getting nervous about it."

Krebs is uncertain whether

from p. 1

of about two in the system which has resisted the change. The change would provide for an appeals committee to be the "functional equivalent" of academic department in such non-renewal matters.

the upcoming asbestos identification report will result in very many major removal projects at UWSP. He does note that asbestos located in the Wright Lounge of the University Center should be a high priority target. There, a ceiling has been painted to encapsulate the asbestos contents. Pray Hall is another area where Krebs says the asbestos content is "pretty bad."

For more minor projects, the university has a "blanket order", according to Krebs, with Wausau-based Jaeger Insulation Company. Under the agreement, the company will remove asbestos-containing pipe insulation for the university. Jaeger Insulation has performed services at UWSP six times in the last twelve months.

Jarvis,

from p. 1

because John would probably be stuck in neutral for awhile."

However, John Jarvis did share the spotlight in the hearing. The Governor's Appointment Secretary was attacked by Adrian Serrano in his recent testimony. Serrano suggested that perhaps not all of the candidates were interviewed, or equally interviewed. He and the United Council further suggested that the Governor's Appointment Secretary and the Governor's staff may have known that Jarvis wasn't qualified but were trying to show that he was the most qualified of the group of applicants interviewed.

The United Council is accepting applications for the position in the event that the nomination is defeated or withdrawn.

Enrollment talks reported

of professors to "participate intellectually, professionally and politically" in activities beyond their classrooms.

—John Tallman, Madison,

staff attorney for the UW System, explained reasons why system officials are recommending revisions in the state administrative code dealing with nonrenewal of faculty. The faculty at Stevens Point is one

Finding The Right Taste Was Hard. Choosing The Name Was Easy.

You can call it Point Special Beer. You can call it a Blue Bullet. Or you can simply call it Point. But whatever you call it, you can't deny the old-fashioned traditional taste of Point. Which explains why most people are hard-pressed to find another feeling in all the world that matches their first taste of an ice-cold Point on a hot, dusty summer afternoon. Point Special Beer from the Stevens Point Beverage Company, Stevens Point, Wisconsin.

Score A Few Points Tonight.

LETTERS

Jerk? Goodbye

Dear Editor,
I am writing this letter in response to the editorial in the Sept. 17 issue of the *Pointer* entitled, "Goodbye" and also the article on page 10 by Mr. Bleske. I think Mr. Bleske is missing the point on why we are here at college.

Some people on campus may feel that students are just in college to get a degree, that may be so for some people. The smart student takes advantage of all the various opportunities on campus, because this type of student knows that learning goes on all over campus, not just in the books. In college we find out what our strengths are and how to enhance them and what our weaknesses are and how to deal with them. When

we do this, we make the world not only better for ourselves, but also for other people as well.

In college we also learn to work within a system. No, Mr. Bleske, we don't need "cantankerous jerks" giving us a lot of lip service and no action. What we do need is individuals who will cooperate with each other tactfully and diplomatically to promote change. If we've done our best to actively produce change, we can rest easy in the knowledge that we've done our personal best.

Isn't that what school is about—giving it our best intellectually, intrapersonally and interpersonally? Isn't that what life is about?

Mary J. Korbak

No need for Nudity

Dear Editor,

Once again it is that time of the year that is known to college students everywhere as "Rush Week," when new members are recruited into the various fraternities on campus. But, you say, you're sick of swallowing goldfish and walking home from the Square naked as initiation tactics?

Well, there is a society on the UWSP campus that rewards academic achievement. Phi Eta Sigma is a national college scholarship honor society that encourages and rewards high academic standings among freshmen.

All freshmen, men and women, are eligible for Phi Eta Sigma who can achieve a 3.5 GPA their first semester. And besides having the opportunity to be a permanent member of the honor society (this looks great on the resume!), you will also join an active organization that is dedicated to keeping the proud tradition of promoting excellence (and having fun!) alive.

As this year's officers, we would like to take this opportunity to challenge freshmen to strive to do their best, knowing that induction into Phi Eta Sig-

ma is one further incentive.

Also, be watching your mailboxes next week for a free copy of a study skills pamphlet especially for all hall residents.

So, if you are a freshman, there is another reward besides a pat on the back by Mom and Dad for your good report card—there is an invitation to one of the finest honor societies on the UWSP campus.

Rick Govek, Jesse DeWitte, Brian Brashaw, Leslie Carnot, and Jodi Rymer

FEATURES

Success?

by Gwen Schwanke
Features Editor

It's what we all work for, isn't it? Success. That upper-middle class socioeconomic group make up of four-bedroom colonials in the affluent suburbs. We dream of mowing our lawn diagonally, (or rather, having it cut diagonally). Attending neighborhood cocktail parties, sipping vodka martinis and flirting with the others' spouses. Then pouring home after a fight with our own to gulp brandy manhattans before stumbling up to bed, worn out after, "A hard day at the office."

Yet this is what so many of us fall into. And we're expected to do so, no questions asked. Our parents, teachers, counselors, advisors and the media all train us to believe that bigger is better. We go to college at our parents' wishes and expense. We graduate with honors with a degree in Practical Application for Successful Employment. We enter the world of high-finance, business, law, banking, white collars, tall office building, congested expressways, smog, divorce and mediocrity, or rather—upper mediocrity. Our financial problems are few but so are our freedoms and pleasures.

Our most exciting activity consists of infrequent jaunts to the lake house up north or down south—that is, if we can take time away from our precious 'careers.' Kentucky seems to be the latest trend in vacant summer homes.

Our biggest challenge is keeping our kids off drugs, or rather, keeping them away from our supply. "It helps us through the day." We rationalize.

We know that this is the

'bright' future we look so eagerly toward, yet we are patterned to accept and actually work our tails off to achieve it. Our parents of the fifties started this trend to success; they blazed our trail, as it were. The sixties protestors tried to stop this downfall, but so caught up in protests for protests' sake, caused their own destruction. The seventies, after the war, was Lost Generation. Now, we in the affluent eighties, carry the burden of maintaining our parents' hard-earned wealth. We're pressed to success. When we achieve it we are unhappy and dissatisfied with it. Our parents can't understand our selfishness and our ingratitude. Yet we live it. We feel guilty that we are miserable but we just can't help it. We conform.

Whatever happened to living

life to its fullest? To being happy for happiness's sake? To free will? Where have the dreams gone? The dreams of touring Europe by bicycle or of living in an inner city loft, pen or brush in hand, inspirations on paper and canvas? They all have vanished; burned to ashes in a world of paid-off mortgages and falling interest rates.

Yet, I can only watch myself deteriorate. I look at my surroundings—where I am, what I do and where I will go—and I sigh. For self-pity, for regret, for exhaustion, for success, forever. Yet I too have been conditioned to strive and settle for the lifestyle I am expected to live—the lifestyle my parents fought for—the lifestyle I have come to dread.

Hill 937. The Screaming Eagles. *Hamburger Hill*. Like the other two Vietnam War movies of the season, *Platoon* and *Heavy Metal Jacket*, *Hamburger Hill* tries to capture the actual circumstances and drama of the time, place and people. Unfortunately, however, this screenplay, for the most part, never quite reaches that goal.

While *Hamburger Hill* is bloodier and far more graphic than any other war movie I've

Finding Truth in Europe

by Annie Arnold
Staff reporter

This previous summer has taken a slightly different turn than all of my summers past. Instead of my usual horse shows, beach parties and inevitable summer jobs, I set off for Europe.

I've been wanting to leave this country and see what the rest of the world was like for as long as I can remember. I was under the impression that people everywhere were concerned strictly with material things and self-advancement. It seemed to me that people had lost sight of what was truly important.

After graduating from high school, I took a year off to get a job so that I could raise the funds to leave. When I had enough money together, I set off to find the "truth."

When I first climbed aboard the plane, all the doubt and anxiety of the past few weeks erupted at once, and I nearly turned around and got off the plane there and then. The time that I had dreamed about for so long had finally arrived, and I was terrified.

I had nearly eight hours to contemplate my actions before I would be arriving at Heathrow. Here I was, a 19-year-old girl who had never even been away from home for any great length of time, and now I was to be on my own for three months. I didn't know anyone in Europe, and I was going to be hitchhiking from country to country. All the things friends and relatives had told me kept creeping back into my thoughts. Feelings of doubt and inadequacy covered me like a shroud the entire plane trip. However,

when I landed, things brightened considerably.

London is a great city, and although I now live in a small town in Wisconsin, I'm originally from California; big cities are nothing new to me. I stayed in London a few days, then headed off to start the way of life that would be mine for nearly three months.

The lifestyle that I would become accustomed to, and now miss terribly, was one of pure freedom. I could go wherever I wanted, whenever I wanted, just by sticking my thumb out. I met so many wonderful people who took me to local places of interest. I met other travelers in youth hostels and would go with them to other countries. I had no restrictions and no commitments. I was absolutely free.

I stayed in Norway for two weeks. I spent a week in the most romantic city in the world: Paris. I stayed in the beautiful desolation of the North Yorkshire Dales where I met author/vet James Herriot. I also journeyed to "forbidden" places like Northern Ireland, where I found the people to be the most helpful anywhere.

I've been to 13 countries, and yet I feel like I've seen nothing. There still so many untainted areas, and I intend to find them. How different I am now from when I left O'Hare nearly five months ago. I've lost my cynical feeling that people are on a one-way path to destruction. There are people who actually know what Amnesty International is and believe in what it represents. This journey has given me a lot of things, but most importantly it has restored my faith in the spirit of man.

The Power of an Era

Hamburger Hill

seen, (an effect which, in this case, adds to the realism), it lacks the kind of emotion and depth of feeling a story needs to really move its audience. I left the theater almost disappointed that I wasn't as upset as I should have been. For those of us who were too young to appreciate the power of the era, *Hamburger Hill* doesn't do enough to make us really absorb the experience these men lived.

Maybe it is the acting; or possibly the plot—or rather, the lack of plot—that caused the movie to fall short of expectation. The characters are somewhat flat and one-dimensional; few of them even have names. Though this name omission was most likely intentional, perhaps reflecting the way many Americans viewed those soldiers—as nameless fighting bodies—the audience was kept detached from the men and removed from the scene. Movies of such a compelling topic are intended

to help viewers understand the problem and possibly enlighten them, if only for those two hours of darkness. For the most part, *Hamburger Hill* leaves the curtain drawn closed.

I must say, however, that *Hamburger Hill* did improve as the movie progressed. As the Screaming Eagles battle up and down Hill 937, a sense of unity evolves; the platoon matures. The scope of the film is ten days—May 10-20, 1969—ten days of living hell.

The men are proud but weary. They are angry and frustrated, often fighting amongst themselves, always fighting within themselves. To passify their fury, they repeat the phrase, "It don't mean nothin', nothin' at all," in an almost chant-like fashion. Though I'm not yet sure of what, those lines definitely meant something to me.

Zoo Story Opens The American Dream: Farce and Agony

UWSP News Release

Edward Albee's "Zoo Story," a dramatic exploration and indictment of the American Dream, opened Wednesday in the Studio Theatre at the University of Wisconsin-Stevens Point.

The production continues at 8 p.m. on Sept. 24, 25 and 26 and at 2 p.m. on Sept. 27. Tickets are on sale in the College of Fine Arts box office. Admission is \$3 for the public and \$2 for senior citizens, UW-SP students and youths.

Directed by faculty member Thomas F. Nevins, the play attacks the artificial values, constraints and cruelties of contemporary society. Written and staged in 1959, the symbolic drama attempted to raise the consciousness of complacent Americans. Its two characters, Jerry, a lonely drifter who has

like" figure, and Peter, a conformist suburbanite, are symbols of frustrated modern man's inability to become involved and communicate with others.

Nevins describes the drama as "an exploration of the farce and agony of human isolation. It is a good play—heavy, but with some light moments—which allows our actors to flex their muscles."

The role of Jerry will be played by J. Andrew Voight of Antigo. Deborah Lotsof, a new member of the UW-SP faculty, is the costume designer.

According to Nevins, the Studio Theatre productions enable students to "stretch" their acting and technical skills. The presentations, including original, experimental and classic drama, provide "quality" theatre experience on a smaller, less expensive scale than mainstream plays.

Demonstrate your Opposition

by Michael Achel

Special to the Pointer

The national campaign to stop Contra aid and end the Central American war has designated Tuesday, Sept. 29, as National Demonstration Day. Demonstrations are a necessity for free thought. Can a democracy function or act properly without the input of the whole of its society? We must examine our convictions as a society as well as individuals. As individuals we are acting as a single unit, not as a whole or society unit. Are our present government's foreign policies an input of separate countries, each filled with their own societies? We cannot afford to leave the problem solving up to individuals alone, when the problems are society's problems and should be solved by society as a whole.

This leaves us with the issue at hand. Problems concerning the conflict in Central America are social problems, and must be rendered by society or the societies involved, whether for good or evil. For those of us (Americans) who believe in not aiding the Contras and resuming trade with Nicaragua, or for that matter, to stop supporting any slanderous military outpost in Central America, then by all means give your support. The UWSP organization SNIF (Students National Issues Front) will be demonstrating on the Central American issue in an effort to stop Contra aid Tuesday, Sept. 29, in front of the UC on campus (noon-1:00 p.m.). When we do give our support let's not do it simply individually, but as a united group of society.

Nutrition Points

Live Longer Each Morning

by Toni L. Wood

Staff Writer

"I didn't have time for breakfast...and I'm starving", explained one student to another, half defensively, half apologetically, as she popped open a can of diet cola and gulped it down. "I can hardly wait until lunch." That was part of a conversation that I overheard as I waited for class to begin last Thursday; a conversation that each of us has heard or spoken ourselves a number of times. The student that spoke those words was a breakfast skipper.

Breakfast skippers span all ages and in one half of American families, one or more persons routinely pass breakfast by. So what's the big deal? You don't die from skipping breakfast, right? Well no, not in and of itself, but there are studies that indicate that those who eat breakfast every day do live longer and there are other benefits to eating a daily breakfast.

Breakfast literally means what it says, to "break fast", and it's the time to stoke yourself up with fuel to run optimally throughout the day. Granted there is nothing absolutely magical about three meals, but those who routinely skip breakfast are not likely to have adequate energy.

Breakfast skippers, who do so for the sake of dieting, will be disappointed. You're more likely to lose weight when eating breakfast than when not. If you have an appropriate breakfast, the calories you consume will be utilized in energy expenditure as you go about your daily

business. Where as, if you skip breakfast, and develop a voracious appetite at lunch or dinner, you're likely to consume more than necessary at those meals and store excess calories in the form of body fat. This is particularly true if one "holds out" for a large dinner meal and spends the remainder of the evening in sedentary tasks, such as studying or watching television.

Lastly, those who skip breakfast will probably miss out on a number of essential nutrients; particularly calcium, riboflavin, and vitamin C. It's tough to pack the food value of three meals into one or two and something is bound to be left out.

The nutrients most likely to be left out are calcium, riboflavin, and vitamin C; that's because they are found in many typical breakfast items and may not be consumed in adequate amounts throughout the rest of the day.

There are those who skip breakfast because they aren't

New England Charm in Nelsonville

by Tanja Westfall
Staff Writer

The first 80-degree day of last spring put me on the road with the windows down and the radio playing. I was heading to Nelsonville to visit a friend.

As the corner of County Trunk SS is rounded, the town of Nelsonville opens up like a New England greeting card, from the little white church on the hill down to the clapboarded homes and the red mill with rushing water. Later I was to discover that its appearance is authentic; Nelsonville was first settled by "Down-Easters" in 1852. Fifteen years later, Jerome Nelson dammed the Tomorrow River, dug a pond and built a grist mill. He became an influential figure and later the town's namesake. In 1908, Nelsonville was incorporated to get rid of the saloons the Town of Amherst refused to vote out. It is still a dry town today.

The feed mill stands at the threshold of the town, although it is no longer operating and the pond has become a swamp. As I peeked in its windows, my friend told me that preservation had begun to make the mill usable for artists.

I was not to visit Nelsonville again until this fall, when I saw a poster announcing a benefit for the Rising Star Mill. The performers were Tom Pease, Gary Baring and L.J. Booth, all well-known local folk musicians.

I went early to tour the historic building. Throughout the mill, which has been relieved of 20 dump truck loads of debris since the project began, photographs are posted showing "before" shots of each room. The "after" results stand before you and they are impressive. Each room is clean, faintly smelling of grain, cobwebs, dust and country air. Huge mechanisms that processed the grain between the first and third floors haunt the open spaces. From the south windows, the water flowage can be heard rushing below.

During the performance, I slipped out and asked some

questions of Ray Reeser, who is the chairman of the Rising Star Mill Committee. Ray is a contractor by trade who exchanged labor for shop space and has now assumed the chairmanship after Bill McKee moved to Ann Arbor.

"Bill came to the area and lived with us for awhile. He is a sculptor and needed some studio space. He thought the mill could provide that."

"The pond, dam, and mill were bought by the DNR in the 1960s. Over the years the pond had silted in due to the agriculture in the area. The DNR was concerned because the Tomorrow River is a class A trout stream and they wanted to preserve it. They drained the pond. Trees are coming there now and they're hoping the swamp will firm to soil."

The DNR offered the mill to the Portage County Historical Society for a 99-year lease. It was eventually sold to them for one dollar, with the stipulation that it be maintained or risk being destroyed. The DNR still owns all the land, including what the mill is on.

Unfortunately, the Historical Society lacks manpower and money. Bill McKee's offer to clean the mill and convert it to studio space for artists was welcomed.

Ray explained the huge pulleys and machinery I had noticed:

"A mill is unique in that the whole building operates like a machine. Grain is moved by elevators to the third floor."

"The mill is only used April through September because of

prohibitive costs of heating. It hosts fund-raising events, local activities and an annual art show the second weekend in August. This year, three sculptors, two potters and several pen and ink artists displayed their work. Approximately 2,500 people attended the show and sales were good. Ray noted that, although the show is young, it was professional.

The committee's long-range goals are concentrated on preserving the mill for studio and gallery space and providing a community resource for events.

Renovation projects for the summer of '88 include partial residing, reroofing the porch, painting, foundation work and new interior wiring. The fund-raisers will pay for the cost of materials. The committee also applied for a WCC crew, a state funded program, and was granted 8-13 weeks of labor. These crews are composed of juveniles who need job disciplinary training. Ray hopes that the group will work well and accomplish a lot for them.

I returned to my seat as Tom Pease was ending the evening with the audience participating in a sing-song. The chorus followed me home and filled my 20-minute drive with the spirit that the mill has come to represent:

"We believe, we believe; By our work it is easy to see, That the future is more than the following day, It's fashioned securely in the clay."

Humor— The Sixth Sense

by Margaret Thayer

Special to the Pointer

If you are involved in a tight-living situation with many people, for instance, a college dormitory, you will find that scientists were wrong about humans having only five senses. Human beings have a sixth sense—the sense of humor. It may be this sixth sense that has prevented the species from becoming extinct!

Laughter has diffused many a tense situation. But one also quickly discovers that not everyone has the same sense of humor; not everyone is going to laugh at your sparkling insights into the realm of the humorous. So it would be wise to be sensitive to other types of humor to keep the peace with your fellow human beings.

One type of humor is the stereotypical Dumb Blonde next door who giggles at every word spoken by the male half of the species. This is called "Barbie Doll" humor. A second example is the freshman guys upstairs who find it extremely amusing to create disgusting body noises and bathroom wall graffiti—one could call this juvenile humor.

Particularly in the younger generation, an incredible number of people find an outlet for humor in sarcasm. Those are the students who write English papers satirizing some aspect of the human race, such as humor. And there's always an intellectual whose sense of humor can't be understood by the rest of the population.

Up on the fourth floor are the psychotics who delight in Dead Baby jokes—the sick sense of humor. On the lighter side of bizarre humor is Far Side humor, whose title is taken from the quirky cartoon by Gary Larson. Far Side fans have the rare quality of comprehending the peculiar humor in this cartoon.

Underlying all of these senses of humor is the one basic to all—conversational humor. We all enjoy making wisecracks about ourselves, or better yet, others, and have to smile when someone trips on the stairs. This includes such favorites as ethnic jokes, topical humor, that strange area of sexual humor, and the humor of day-to-day existence.

Humor is imperative to the survival of the human species. We should have all killed each other off long ago if it weren't for laughter. So even if you and the stranger across the hall don't have a compatible sixth sense, take heart; you can both laugh at that idiot who just tripped on the stairs.

Hill,
from page 7

Hamburger Hill is a Vietnam War story. Its design was to be the portrayal of an experience and the reflection of an attitude our country has not yet come close to sorting out. Unfortunately, however, due to problems with acting, as well with character and plot development, the movie isn't polished enough and isn't unsettling enough to be moving. Strange outcome, since its subject matter and theme are one of the most powerful concerns of our time.

Hamburger Hill can be seen at 6:30 and 8:45p.m. at *Essence Rogers Cinema* 2725 Church St. Stevens Point

Before you choose a long distance service, take a close look.

You may be thinking about choosing one of the newer carriers over AT&T in order to save money.

Think again.

Since January 1987, AT&T's rates have dropped more than 15% for direct-dialed out-of-state calls. So they're lower than you probably realize. For information on specific rates, you can call us at 1 800 222-0300.

And AT&T offers clear long distance connections, operator assistance, 24-hour customer service, and immediate credit for wrong numbers. Plus, you can use AT&T to call from anywhere to anywhere, all over the United States and to over 250 countries.

You might be surprised at how good a value AT&T really is. So before you choose a long distance company, pick up the phone.

AT&T

The right choice.

The right way to skin a deer

Larry W. Engebretson
Special to the Pointer

With six years experience as a professional meatcutter, I've seen it all when it comes to mistakes in skinning a deer. Mechanical peeling and forceful pulling may cause serious damage to some of the most tender cuts on a deer. Warm temperatures and improper storage of deer carcasses can cause venison spoilage.

These are just a few of the most common mistakes made by people lacking common sense when handling fresh meat. You will find yourself highly satisfied with the results of following this step-by-step instruction for a basic but highly efficient hide removal process.

The tools needed for this are a skinning knife and a meat-saw. However, if these are not available any sharp six to eight inch blade knife and a hacksaw will serve just as well. Additional materials include newspapers, one garbage bag, and two three-foot lengths of rope. A garage or building with low rafters is a good place to hang the deer for skinning. I recommend cooling or thawing your deer to approximately forty degrees Fahrenheit for hide removal.

Tie the two ropes around the hind legs of the deer. Elevate the deer and tie the ropes to the rafters spreading the legs approximately twenty inches apart. Lay newspapers under the deer for easy cleanup. Next take the handsaw and cut off the lower part of the legs at the knee joints (all four legs). Remember to keep the registration tag with the deer.

From here on, most of the work is done with a knife. Starting with hind legs, the object is to work your way down evenly and smoothly. Cut down the edge of the hide on the inside of the hind legs without severing the meat surface. Remember to

cut just through the hide throughout the whole hide removal process, and avoid contact with the meat as much as possible.

Starting where the legs were cut off, pull on the hide and you will notice a membranous tissue between the hide and the meat surface. Pulling on the hide while carefully slicing through the membranous tissue is what I call the peel and cut method. By using this method the hide will be removed evenly and smoothly without damage. Keeping the hide whole preserves sale value and keeps hair off the finished product. Peel and cut both legs down until they meet at the hip. At this point if the tail will easily pull off of the tailbone. Continue evenly and patiently downward keeping the hide in tact.

When progress is made to the front legs, the cuts previously made on the hind legs are simply duplicated. Peel and cut the front legs until even with the main body peel and cut. Continue down the neck to the head without making a slit. This will be convenient for the taxidermist if mounting is desired.

When the amount of desired hide removal along the neck is achieved, use the handsaw to cut through the neck until head hide fall to the floor.

There are many theories on the removal of unavoidable hair and debris off the deer. Using water causes the meat to become saturated and difficult to work with in the cutting process. I recommend that a propane torch and damp cotton cloth be used. Singing the hair without burning the meat surface with the torch is not difficult. Then after wiping the deer thoroughly with the damp cotton cloth your deer will be neat and clean.

Buckshot

Proper care of venison is particularly important during the early weeks of bow season when warm temperatures cause meat to spoil quickly.

Environmental News updates of interest

by Cynthia Byers
Outdoors Writer

The U.S. EPA plans to restrict ozone controls in Wisconsin, Illinois and Indiana next year. This summer, high ozone levels were found with health threatening levels in some areas. Major ozone pollution is caused by chemical emissions from industrial plants and automobile exhausts. The EPA will ban building of new industries that emit volatile organic chemicals (VOCs) in some areas. Efforts to restrict VOCs and nitrogen oxides from autos in some urban areas will be increased.

A joint Canadian-Soviet ski trip for peace is being planned.

The exploration will take the skiers from the Soviet Union across the North Pole and into Canada. It is the first journey of its kind. Members of the 1,075-mile trek will carry packs initially weighing 100 pounds. Along the way the 12-member team will conduct experiments in geophysics, glaciology, pollution and medicine. The trip is planned to begin in early March.

Hazardous chemicals possessed by Wisconsin businesses and state and local agencies must be reported. The request comes from Wisconsin's Emer-

gency Government administrator. The Federal Superfund Amendments and Reauthorization Act directs states to possess a statewide inventory of hazardous materials and a safety program to protect people and the environment. Each county now has a planning committee responsible for preparing emergency response plans by October, 1988.

The biggest multiple bond default in history has occurred because of two unfinished nuclear power plants. Wall Street firms that underwrote \$2.25 billion in bonds have settled on a \$92 million law suit. The money was used to finance two Washington

state power plants. Plant construction was halted in 1983 with less than a 25 percent completion because there was no foreseeable need for the power.

A plan is being developed to study the possibility of dumping Lake Michigan water into a deep aquifer. The aquifer, which supplies city water to some counties in Illinois, is being overused. The rate of consumption is two and a half times the recharge rate. Many people have opposed any diversion of Great Lakes water. There may be environmental risk involved with mixing water from two different sources. Illinois scientists will be studying

existing research concerning diversion to help them come to some conclusions about the plan's validity.

Endangered turtles are being released along the southwest coast of Sri Lanka. A turtle hatchery created in 1981 has released over 200,000 turtles. Many of the species have become endangered because they are taken for food. Local people are now encouraged to bring turtle eggs to the hatchery for a profit. Tourists and school children have become especially interested in the hatchery program.

Costa Rica for christmas break?

by Andrew J. Fendos
Outdoors Writer

Just as it is already fall, winter with all its cold and snow will soon be upon us. Although little thought is usually given this far ahead to most of us there are questions that have to be answered. The main one being just what are we going to do with the month of spring break?

Perhaps visiting a foreign country or sitting on a hot beach could pass the time. Swimming in the Caribbean or exploring a tropical forest certainly would do as well. But add to this the ability to earn three credits plus many other experiences: a couple of weeks in a warm, distant country; walks through tropical islands, and spectacular bird and animal life. All of this can add up to be a very worthwhile way to spend

any break.

Costa Rica, with the Caribbean sea and Pacific ocean, its mountains, cities, people and constantly changing plant and animal diversity, is being offered again as the site of a Tropical Ecology Interim.

A three credit, natural resource 475 International Environmental Studies Seminar with no prerequisites, it explores many of the natural and cultural beauties of this country. Along with world famous biologists and environmentalists, you will be able to visit rain forests, coral reefs, volcanoes and coffee plantations. See the wonderful diversity of life forms in the shape of leatherback turtles, hundreds of bird species, thousands of plant species, as well as camp under a tropical forest canopy. Skin dive the Caribbean waters around Cano Inland, or just relax and enjoy the friend-

ly people while learning about their history and third world cultures.

As an ecology trip it is the diversity of the land and nature that draws people here. The country is small and narrow, about the size of West Virginia. One short distance away, is a tall mountain range. The differences between the two elevations creates numerous biomes and ecosystems, each holding some new group of life. Changes between them are equal only to the amount and types of life there.

The species of bird, insect and animal life in Costa Rica greatly outnumber that of the United States. Just the larger birds here will keep any bird watcher busy. But, as changing as nature here is, the diversity of their culture is also a drawing point.

As a third world country, Cos-

ta Rica serves as a role model in many ways for other developing countries. A visitor will be given a chance to see how they developed a system of managing natural resources as well as the people in the fragile environments of Costa Rica. Farming here is important to the local economy, but also can lead to losses of habitat through deforestation. Interest in the mechanics of the farmer can be explored here as the farmers and rural people are all very friendly and open to new ideas and methods. This gives even an amateur environmentalist the chance to dig for understanding, not only in foreign agriculture, but also into the people's way of thinking. It gives the economist and the social scientist the opportunity to follow and observe a democracy that has held its own in the modern world despite the trou-

bles of its neighbors and the rest of the world.

Holiday planning should have gotten easier now that you've heard a little about Costa Rica. Certainly a chance to experience the people and diversity of the country is worth the trip itself, coupled with the opportunity to learn first hand about many of the issues involving the present day world. The interim is a very good way to spend any time or vacation.

Students of economics, the social sciences and of the natural sciences will all find Costa Rica interesting, but anyone is invited. All interested parties may contact Mary Duritsa at 824-2428 or write Costa Rica, CWES, 7290 county MM, Amherst Jct., WI. 54407. Limited scholarships are available and the deadline for enrollment is October 31.

Resource students gain experience

"This summer, through working with a professional forester, has served to complement my college course work with vital hands-on experience. The Student Conservation Association has made me a better educated, more job ready college graduate."

These are the words of a Student Conservation Association volunteer who spent twelve weeks last summer working as a Resource Assistant for the Bureau of Land Management in Wyoming. This summer, the student will return to Wyoming as a paid, seasonal forester for the Medicine Bow National Forest. He is one of approximately 1,000 volunteers who serve each year in the SCA Resource Assistant program at one of over 200 national parks, forests, wildlife refuges and other resource areas across the country.

For over 30 years, the Student Conservation Association has been offering college students, recent graduates and other adults, the opportunity to develop job skills, gain work experience and cultivate professional contacts in the resource management field.

Through the SCA's Resource Assistant program, volunteers work independently or assist conservation professionals with such tasks as wildlife surveys, natural history interpretation, backcountry or river patrols, and biological or archaeological research. In return for their efforts, volunteers develop skills and gain experience that often enhances their educational background and gives them an edge in seeking paid employment with resource management agencies. Past participants have used their volunteer service to obtain academic credit through independent study or campus experiential learning programs.

SCA is presently accepting applications for over 150 posi-

tions to be offered during the 1987/88 winter and spring season. A sampling of available positions include:

VIRGIN ISLANDS NATIONAL PARK, V.I.

Work on wildlife projects, underwater surveying of shipwrecks, monitoring coral reef conditions.

BLM CALIFORNIA DESERT DISTRICT, CA

Assist with archaeological work including rock art studies and cultural resource inventory.

RIO GRANDE VALLEY NATIONAL WILDLIFE REFUGE, TX

Conduct inventory of woody vegetation, including mapping, cover-typing and analyzing data.

HALEAKALA NATIONAL PARK, HI

Guide hikes and walks, dispense information to visitors; assist with endangered species monitoring and feral animal control.

While carrying out their assignments, volunteers receive a grant for round trip transportation to their program area and a weekly stipend to help offset food and basic living expenses. Free housing is provided by the hosting agency at the work site.

Positions are filled on a competitive basis. Although a specific academic background or previous field experience may be requested for some positions, many others require only enthusiasm and an interest in conservation work.

Applications will be accepted as long as positions are available. While there are no final deadlines for acceptance of applications, there are dates when the SCA begins processing applications, there are dates when the SCA begins processing applications and forwarding them to agency personnel for review and possible selection. Applica-

tions by these dates enhances the applicants chances of selection. These dates are as follows:

September 30, 1987 Positions Begin November/December 1987

November 15, 1987 Positions Begin January/February 1988

January 15, 1988 Positions Begin March/April 1988.

The SCA will be offering an additional 500 positions during the summer and fall of 1988. A complete listing of these positions will be available in December, 1987.

Any person interested in participating or learning more about the SCA internships should contact: The Student Conservation Association, Inc., PO Box 550C, Charlestown, NH 03603. (603) 826-5206 or 5741.

BACKGROUND INFORMATION

The Student Conservation Association is a non-profit, educational organization founded in 1957 to enable young people to actively participate in the management of wilderness areas and natural resources. More than 12,000 young men and women have volunteered their services through the SCA's programs.

Programs are carried out in cooperation with federal agencies including the National Park Service; the U.S. Forest Service; Bureau of Land Management and the U.S. Fish and Wildlife Service. SCA also works with several state and private resource management agencies.

SCA's programs are financed on a cost-sharing basis with cooperating agencies. The Association raises its share of the funds from foundation and corporate donations and contributions from its membership.

The Student Conservation Association operates an equal opportunity program. All quali-

fied applicants are considered for placement without regard to race, creed, sex, national origin or age.

Bowhunting highlights outdoor activities

The archery deer season opened in Wisconsin on Saturday, September 19th. Upland bird hunters in some areas report they were hampered by the heavy foliage during the opening week of hunting.

In the northwest, fall color varies in the Brule area with maples at their peak in Iron and Ashland counties and at about 40 to 60 percent color in Bayfield and Douglas counties. Grouse hunting is excellent in the Flambeau River State Forest, and very good elsewhere in Rusk County. Several bear were taken over last weekend in the county. Grouse and squirrel hunters are seeing a lot of game in the Cumberland area. There is good musky action on Sawyer County waters.

Farther south in the west central counties, bluegills are hitting on the Mississippi River along the wing dams off Buffalo and Trempealeau counties. Teal are beginning to show up on the river. The deer herd in the Black River Falls area appears very high this year for the opening of the archery season on Saturday.

In north central Wisconsin, hunters had good success on squirrels opening weekend in the Wisconsin Rapids area, but heavy leaf cover interfered with ruffed grouse and woodcock hunting. Fall color is about 30 to 40 percent in the Woodruff

area where ruffed grouse hunters had a fair opening. Hunting will improve as the leaves fall.

In the northeast, there was good walleye action in the Bay off Brown County last week, along with some northern activity. Trollers found some action in Kewaunee County off the mouths of rivers fishing near the bottom last week. Walleyes were providing action at several locations off Door County. Some nice northerns were caught in the Bay off the Little River in Marinette County. Perch action remains good off the breakwall at Oconto and off County Parks I and II. Fall color has reached about 30 percent in Florence County.

In the southeast, chinook and rainbows were taken by trollers off Sheboygan County, and trollers caught chinook off Ozaukee County as well. Limit catches of browns were made by shore anglers at the Port Washington power plant. Several nice chinook were taken by pier anglers early last week at Racine. Perch action was fair early in the week off Kenosha County, but slowed as the week progressed.

In the south and southwest, the heavy foliage is hampering squirrel and grouse hunters in the Dodgeville area. Fall color has started to show there. Fishing is improving in Jefferson County with walleye action re-

ported on the Rock River and Lake Koshkonong. Anglers are taking some perch on lakes Mendota and Monona, and fair numbers of bluegills are being caught on Lake Waubesa. Northerns and perch are biting on Lake Puckaway in Green County, and Canada Geese will begin arriving on the Horicon Marsh next week with peak numbers of birds expected in October.

Stevens Point Area

The opening weekend for hunting was a success. Hunters in central Wisconsin reported good quality squirrel hunting. Ruffed grouse and woodcock hunting was slower due to heavy leaf cover on the underbrush and trees. One hunting accident was reported when one hunter did not see another hunter. The person wounded was not wearing blaze orange at the time.

Woodruff Area

The woods are alive with color and most ground ferns have turned brown. The trees are now 30 to 40 percent colored. This is an excellent time to plan a nature hike. The mushrooms are starting and the wild berry crop is finished. Outdoor recreation spots are quiet and peaceful and there are many campsites available. The ruffed grouse season opening was fair and it will get better for hunters as more leaves come down.

Env. News, from p. 11

The death of 2,000 fish in the Fox River last week is still a mystery. There have been 20 die-offs since the spring with losses up to 10,000 fish at a time. DNR fisheries researchers are anxious to find a reason.

They are comparing healthy fish to the ones dying to try and find a clue. The water is being tested for chemical pollutants such as aluminum, benzene, xylene and toluene. None of these have been found in lethal concentrations. Water chemistry

and biological tests will continue.

The Milwaukee County Parks have begun the practice of herbicide spraying again. After two years of no spraying, herbicides will once again be used to suppress broadleaved weeds. The spraying ended because of concern over environmental and human safety. Residents near the parks complained about dandelions spreading from the park. Park officials said the lack of spraying led to problems of maintenance.

The eaZy pc™
It's almost as easy
as turning on your TV.

Zenith Data Systems introduces the eaZy pc™ ... now available at great student prices!

You want easy to operate? You've got it! Because with the eaZy pc™, all you have to do is plug the system in... just like a TV. Once you turn it on, it tells you exactly what to do, in plain English—thanks to Microsoft's® MS-DOS Manager.

You'll be up and running within minutes after opening the box. So you can do your homework. Term papers. Research. And more. All with an ease you've never before experienced.

Your coursework is difficult enough. So don't hassle yourself with a complicated PC. Turn on to the eaZy pc™ from Zenith Data Systems today!

PLUS—the eaZy pc™ offers you all this...

- A 14" monochrome monitor attached to a tilt swivel base.
- PC-compatibility... runs virtually all important MS-DOS software.
- 512K RAM... more than enough to handle your coursework.

- Compact, high-capacity 3 1/2" 720K disk drives.
- A complete personal computer system at a great price... so it's easy on your budget, too!

Baumgartner and Twet connect to give Pointers 26-23 win

by Craig Roberts
staff writer

In three seasons as a Pointer, Steve Twet had only caught five passes.

This season he has caught four and his ninth career reception, which came with 29 seconds remaining, was his first TD reception and it gave the Pointer football team a 26-23 win over UW-Whitewater last Saturday at Goerke Field.

The win was a big one for the 15th-ranked Pointers as it gives them a 2-1 overall record and a 1-0 conference mark. Whitewater is now 2-1 and 0-1.

"It was a post and fly pattern," said Twet, who hails from Stanley-Boyd. "The safety was cheating on (Aatron) Kenney on the outside so I had single coverage. I just found the seam of the zone."

Stevens Point set the tempo of the game on the game's second play when Dan Dantoin picked off a Jeff Olsen pass and scrambled 33 yards for the first score of the game.

The two teams then traded field goals into the third quarter and, with the game down to the final 15 minutes, the Pointers held a 13-6 lead.

They got the ball back just 32 seconds into the final quarter and 1:02 later Kenney was crossing the goal line after hauling in a 58-yard pass from quarterback Kirk Baumgartner.

Those last-minute heroics were needed after Point had gotten out to a 2-6 lead because of a furious comeback by the Warhawks which saw them score 17 points of 10:44.

All-American running back George Rainey capped a seven-play, 70-yard drive with a 19-yard run with 11:08 left in the game and, on their next poses-

Steve Twet

son, UW-W marched 65 yards in just 2:20 to tie the game at 20-20.

Whitewater got the ball back with 4:53 at their own 47 and meticulously worked their way down to the Pointer 17, using up 3:29 on the clock and winding it down to 1:24 before Dave Emond gave them their first lead of the game at 23-20.

The Pointers made their win-

ning drive in seven plays with Baumgartner accounting for 59 yards and scrambled for one while Keith Majors had one carry for five yards.

"The whole team knew what had to be done and it started with Kenney's middle return on the kickoff which gave us good field position," said Pointer coach D.J. LeRoy, referring to the Dallas, Texas senior's 30-yard return. "A lot of credit has to go to coach (Ron) Steiner who really made some great calls and to the offensive line which did its best blocking of the game on that drive."

Offensively Whitewater out-gained Stevens Point 416-347, thanks to a 141-yard rushing effort by Rainey. Olsen picked up 243 yards through the air on an 18-for 35 passing game. He hit for one TD put was intercepted four times, including a Tom Gaugert interception with 0:16 remaining in the game.

Majors and Theo Blanco each had 52 yards rushing while Baumgartner hit on 16 of 26 passes for 239 yards, two touchdowns and four interceptions. Kenney hauled in five passes for 93 yards while Todd Bonlander had four for 50.

The Pointers return to action this Saturday when they travel to Maryville, MO. to take on the Northwest Missouri State. The Bobcats, who are also 2-1, are an NCAA Division II scholarship-school whom UW-SP downed 49-21 last year.

Flora leads volleyball team to tie for 3rd

by Karen Kulinski

Sports Editor

Led by Lee Flora, the Lady Pointer volleyball team tied for third place in the 12-team La Crosse Invitational last weekend.

Point played five matches and lost two, both to conference rival UW-La Crosse. The Lady Pointers started out with a win over Macalaster (15-11 and 15-11) and then beat Northeastern Illinois (15-5 and 15-8). The first loss to La Crosse took three games, with Point winning the first game, 18-16, but losing the next two, 8-15 and 10-15. Another win, this time over Carleton (15-13, 15-5) was followed by another loss to La Crosse, 6-15 and 9-15.

"We played excellent volleyball until we lost Mary Miller early in game two against La Crosse, with a sprained ankle," said Head Coach Nancy Schoen. "She hit 83 percent in game one with five kills in six attempts. We lost the momentum and were not able to regain it that match."

"We played well enough to beat Carleton in the next match, but we were still lacking the middle front position. Nobody plays the middle like Mary. We did not have any block kills in the second match against La Crosse and only one against Carleton. Part of that

may have been due to fatigue but Miller is definitely a key front row player for us.

Flora, who Schoen named Pointer player of the week, was the top spiker and blocker over the weekend. In the spiking category, Flora hit 47.6 percent while she also had four solo block kills and nine assists. She had four service aces and served 94 percent throughout the tournament.

Lee Flora

Deb Wielepski was the top server with eight aces and only one error and Tammy Kuester had five aces and two errors. Miller was 45.6 percent spiking and Renee Bourget was 37.25 percent. Miller also had three solo blocks and four assists.

The Lady Pointers, who hosted La Crosse yesterday, are idle until next Wednesday.

Netters post three wins

by Karen Kulinski

Sports Editor

The Lady Pointer tennis team faced three foes over the weekend. And in a matter of two days, all three became victims of the Point squad.

UWSP began with a 6-3 win over Carroll College, a 7-2 win over Carthage College before winding up the weekend wins by edging UW-Parkside, 5-4.

"We had a good weekend," said Head Coach Nancy Page. "The absence of the pressure of conference play was welcomed. Everyone had a chance to play

several varsity matches and our freshmen gained a lot of confidence."

Singles winners against Carroll were Kathy King at No. 1, Amy Standiford at No. 3, Kathleen Onsrud at No. 4, Jane Sanderfoot at No. 5 and Kim York at No. 6. The lone doubles victory went to King-Neja at No. 1.

All of the matches were decided in two sets except for Standiford who won 6-4, 3-6, and 6-4 and York, who won 3-6, 6-1, 6-2.

Carthage didn't prove to be a major obstacle for the Lady Pointers as Neja, Onsrud, San-

derfoot and York won again in singles. York had quite a struggle though, losing the first set 3-6 and then coming back to win 6-2 and 7-6 (7-3).

Stevens Point swept the doubles matches as King-Neja won at No. 1, Onsrud-Chris Diehl at No. 2 and Sanderfoot-Jill Egstad at No. 3. Sanderfoot and Egstad had the only three set match, winning 6-4, losing 5-7 before taking the deciding match, 6-3.

"Standiford had problems with blisters on her feet so we

Cont. p. 16

Golfers hold 3rd in WSUC race

The Wisconsin State University Conference is turning out to be quite a race for the golfers in the league. UW-Stevens Point competed in the second leg of the WSUC meet this past Sunday and Monday at the Mascoutin Country Club in Berlin, WI.

In the 14-team meet, Oshkosh came out on top with a score of 781 with Stout right behind at 782. Stevens Point grabbed third with a 792 and Eau Claire had an 802 and Parkside an 808 to round out the top five.

Jason Zahradka, only a fresh-

man, captured medalist honors in his second meet this season, posting a 150 with 18s of 76 and 74.

Mark Pukall was the second lowest Pointer golfer at 158 (80-79), Greg Majka 160 (78-82) and Kurt Rebholz 160 (80-80), Mick Gilbert 167 (81-86) and Mike Frierder 169 (86-83).

Stevens Point was in third place after the first day with a 395 and then came back with a 397 for the 792 total.

"Jason played just excellent," said Head Coach Pete Kasson.

"We played really well in the rain and his great score kept us from falling back a few team places. Mark also shot very well."

With two legs already played, this is how the WSUC race looks: 1-Stout (17 points); 2-Oshkosh (15); 3-Stevens Point (14.5); 4-Whitewater (12.5); 5-Eau Claire (11); 6-River Falls (8); 7-La Crosse (6); 8-Platteville tied with Superior (3 each).

"The conference race is really shaping up to be a great one," said Kasson.

Cindy Margolofsky of South Hall competes in the potato sack races during Spud Bowl festivities last Saturday. The football game attracted a fired-up crowd of 5,086 which saw the Pointers win, 26-23.

Hoel and women runners perform to perfection

by Karen Kulinski
Sports Editor

Kris Hoel is making her comeback. She proved that with a win at the North Central College Invitational in Naperville, Ill. last Saturday.

In fact, the whole squad proved something, as the UW-Stevens Point women's cross country team posted a perfect score of 15 to take the top honors.

"We went into this meet knowing that we would win it," said Head Coach Len Hill. "I didn't dream we would have a perfect score of 15."

In the five team meet, Wheaton placed second with a 53 followed by NCC with 97, Valparaiso Ind. 102 and the University of Chicago 117.

Along with strong confidence, Hill had a strategy in mind. "We wanted to work on running as a team," he said. "We wanted to run a pack of five runners up front and then a second pack of seven runners a little ways back. The front pack was all together at the mile mark and had a 20-yard lead so I told them that they could race the way they wanted."

Hoel led the front pack with a 17:31.6. Jenny Schoch moved into the second position with an 18:03 while Amy Cyr was third at 18:08. Kris Helein was fourth at 18:23 and Jenni Bugni in fifth at 18:33.

Point had 10 runners finish in the top 12. Maureen Seidl was ninth at 18:43 and right behind was Nancy Woods at 18:45. Other Pointers who finished in the top 12 but were not given team place finishes include Chris Rauen (18:48), Kay Walander (19:06) and Cheryl Cynor (19:07).

"This is the first group of runners since I've been at UWSP that has enough talent

up front and deep enough to run in a pack," said Hill. "I can't say enough good things about this team. They worked together during the race and did everything I asked them to. We were 1:02 from first to fifth runner with runners six, seven and eight 17 seconds behind the fifth runner."

Leading the Pointer pack was Hoel who sat out last season, because of a stress fracture. She didn't have quite the comeback she had hoped for last week at the Pointer Invitational, finishing third. But she made up for it this time out.

Kris Hoel

"This win was really important for me," she said. "I didn't feel that at the Pointer Invite I was really racing. That was my first meet, I didn't race last year and I just didn't feel satisfied. It wasn't like a comeback meet. I didn't race smart."

Hill had a strategy. And it worked. "He wanted me to run with the pack at least for the first mile," said Hoel. "The best part of my race is the kick and that's how I'll start racing for the rest of the season. I followed his strategy, worked at it and I felt a lot better."

Schoch was named Pointer runner of the week. "Jenny moved into the second spot on the team," said Hill. "She was worked hard to overcome an injury problem which tends to limit her training mileage. When she gets to be 100 percent, she will definitely be a runner to watch."

In the NCAA Division III Cross Country Rankings, the Lady Pointers hold down the eighth spot with 46 points with conference foes Oshkosh in second (93) and La Crosse in fourth (86).

Point will rest for one week before travelling to the University of Minnesota on October 3. The Lady Pointers will have the opportunity to face tough competition, including UW-L. Other teams Point will be watching will be St. Thomas and Mankato State.

"We'll do interval work this week and have two hard days next week," said Hoel. We'll be in better shape as a team and we'll also have more individual strength."

"Now I know what I have to do. I learned by my mistake at the Pointer Invite. I won't go out fast and I'll concentrate and stick in the pack. I'll look at the other runners in front of me and try to keep the pace up. I'd be satisfied with a finish in the top 20 but I'd like to be in the top 15."

The JV team will be in action this weekend at the Wambat Invitational at UW-Sheboygan.

Pack running and depth pay off for harriers

by Karen Kulinski

Sports Editor

The No. 3 ranking of UW-Stevens Point's men's cross country team was put to a test at the North Central College Invitational in Naperville, Ill. over the weekend.

NCC, ranked No. 2 in the country in the NCAA III poll, grabbed top honors with a 26, followed by the No. 3 ranked Pointers who had 34.

"It turned out pretty much like you'd expect when two of the top teams in the country meet," said Head Coach Rick Witt. "Eight points in a 12-team meet is like one point in a basketball game."

"It wasn't decided until the last 200 yards who would win. It could've gone either way. The difference was that it was a home meet for them and they had their fans."

"We needed to find out whether that third place ranking was legit. We just wanted to see how good we were stacked up against them."

Following the top two teams were Wing Foot Club in ;third (85), College of Dupage (122) and Wheaton(141) rounded out the top five.

There were very few hills on the course, which consisted mainly of course rock trails with mode trails through a field. A lot of water created muddy areas and wet terrain.

Tom Morris led the Pointers once again as he won his second invitational in as many tried with a 24:39.6. Two teammates

were not far behind as Andy Sackmann placed fourth in 25:40 and Rob Sparhawk in fifth (25:40). Mike Butscher placed 10th (26:03) while another pack was stacked up in the 14th through 16th spots - Eric Fossum (26:09), Mike Nelson (26:15) and Tim Olson (26:1&).

"I kind of expect Tom to be up there," said Witt. "I'm not taking anything away from him. He had to do the work for himself. We had a pack and Sackman and Sparhawk really ran well. I really don't want to single anybody out."

"We had seven runners in the top 16 and if you want to have a good team, you to have that. We have the luxury of having another seven guys who could step in. That's a luxury we didn't have before."

Coming off a win at the Pointer Invitational, Morris had confidence heading into the NCC Invitational. "I ran the race through my head and concentrated where I should be at every mile mark," he said. "I went at my pace in this race and it was a lot more comfortable."

"I know what Coach Witt wants and expects me to do and I go out and do it. I have the confidence now that I can run with anybody in Division III."

Morris and the Pointers will have a better idea of who they can run with at the Notre Dame Invitational in two weeks. The men will gear up for this meet

Cont. p. 16

Sports Briefs

Soccer

Last week, the Lady Pointer soccer team played to a 1-1 overtime tie with UW-Green Bay.

Ann Matanga scored Point's lone goal off assists from Barb Updegraff and Jill Peeters. Point had 35 shot s on goal compared to only 20 for Green Bay. Goalie Teri Clyse had 18 saves.

"We played well together as a team," said Head Coach Sheila Miech. "Our defense was tough. Our offense played well, they just couldn't get the ball in the goal. We have made improvements on everything except the fact that we couldn't get the ball in the goal."

The Lady Pointers were scheduled to host St. Norbert yesterday.

JV cross country

The Women's Junior Varsity Cross Country team competed

at the five-team Titan Open last weekend:

Cindy Ironside topped the Lady Pointers with a victory in 20:58.3. Other Stevens Point entrants were Renee Breu who finished fifth (21:31), Tami Langton is sixth (21:57), Brenda Kies in seventh (22:08), Carlene Willkom in eighth (22:09) and Kris Mundt if 11th (22:39). (No team scores were kept).

"We did not compete with our top 13 runners and neither did Oshkosh," said Coach Len Hill. "This meet was for our new people to gain experience in collegiate cross country. I was very pleased with the efforts in this meet. Ironside ran an excellent race. She took the lead from the gun and built it to a 50-yard lead. Breu, Nlagon, Kies and Willkom all ran very well. If this meet would have been scored, we would've won. This was due to the pack that finished in the fifth through eighth spots."

AN INVESTMENT IN FUTURES

Bikers took part in the Best of the Midwest Criterium Classic last weekend. At an average speed of 26 mph, the men's A race covered 30 miles.

Netters from p. 14

juggled the doubles line-up," said Page. "Our two freshmen-Diehl and Egstad- played very well. York pulled out a close match and Neja, Onsrud and Sanderfoot totally dominated their opponents in singles."

Playing indoors because of rain, Parkside gave the Lady Pointers a bit of a struggle. Neja and Onsrud won in singles competition as did Diehl who played at No. 6. Onsrud won her match in three sets, losing 2-6 but coming back to win the next two, 6-4 and 6-2.

Victories in two of three doubles matches proved to be the deciding factor in the match. King-Neja won at No. 1 and Egstad-Standiford pulled out a win at No. 3 to give the Lady Pointers another win.

"Parkside has improved a lot over last years," said Page. "The outcome of the match was in doubt until the last match left the court. We played inside-which was very fast and slippery. Onsrud made a great comeback in her singles match."

Page named Sanderfoot the Pointer Player of the Week for winning all four of her matches.

The Lady Pointers, 3-2 in duals this season, travel to River Falls on Saturday to take on UWRF and Carleton College.

Harriers from p. 15

by taking a weekend off. In the latest rankings, La Crosse is No. 1 in the country, while Oshkosh is No. 10. Both teams will be at Notre Dame.

"This will be a definite chance for us to really sort out the rankings and see how we compare," said Witt. "We planned on having one week off so the guys could get some rest."

On the individual level, Moris will take this meet rather seriously. "I'll increase my mileage this week to about 70 miles and then next week I'll lower it to about 55," he said. "With the two wins I've had so far, I've gained more confidence and I'll go into this meet like it was a national meet, because there will be more competition than I've had so far."

"I'm looking forward to it. It'll be fun to see how I stack up against other top quality runners."

While the varsity gets a break, the JV will run at the Wambat Invitational at UW-Sheboygan this weekend.

FRIDAY:

SAME AS MONDAY

CAMPUS AMERICA (30 minutes)

The only national television newsmagazine for college students, "Campus America" covers everything from investigative reports about the hottest issues on campus to news about the latest winner of the intercollegiate jello jumping contest.

CARTOON CLASSICS (working title; 30 minutes)

The best of Betty Boop, Bugs, Daffy, Elmer ... all the favorites. Plus a few surprises.

UNIVERSITY (working title; 30 minutes)

The only national college soap opera. Follow the loves, the lies, the deception, the romance, the intrigue of life on a college campus. Co-produced with college students and faculty.

UNCENSORED (30 minutes)

Powerful documentaries every week. Topics range from hardhitting, controversial issues to touching profiles of some of America's unsung heroes.

RICHARD BROWN'S SCREENING ROOM (30 minutes)

The leading filmmakers and actors of our time join host Richard Brown to preview their latest films and tell what goes on behind the scenes.

THE GREEN HORNET (30 minutes)

The famous action-packed series from the '60s. Bruce Lee stars as Kato, the masked man's faithful sidekick. Every week, this dynamic duo of crime-fighters hits the streets in their anticrime mobile; The Black Beauty.

NEW GROOVES WITH MEG GRIFFIN (60 minutes)

The most progressive music video show around. Miles ahead of mainstream music, "New Grooves" charts today's hits and tomorrow's trends.

JIM GETS CAUGHT IN A BABY SHOWER. -KW

Cont. from p. 8

hungry on waking, food doesn't appeal at that time of the day, or they would rather sleep than eat. If this is the case for you, try to get something in two to three hours after waking so you have something to run on. Whatever the reason, it is tough on your body to go through a day without adequate fuel; you couldn't drive from Stevens Point to Milwaukee on an empty gas tank, and similarly you can't expect your body to run on an empty tank either.

So what's to do? First, breakfast does not have to mean traditional breakfast fare, nor does it mean you have to eat it in your kitchen. Traditional breakfasts of bacon and eggs are high in saturated fats and cholesterol as well as being high in calories and sodium. Having such a breakfast occasionally may be reasonable, but consider instead some alternatives that you may not have thought of before.

Mix peanut butter with chopped dried fruit, raisins, ap-

ple, nectarine, banana, or peach chunks, or a little honey or apple butter and spread on bread; broil or microwave for a cold winter morning.

CRUNCHY CEREAL

Rollled Oats, quick cooking 3 cups

Unsweetened wheat germ 1/2 cup

Coconut, unsweetened, flaked 1/2 cup

Nuts, unsalted, chopped 1 cup

Margarine, melted 1/4 cup

Honey 2 teaspoons

Raisins 1 cup

Preheat oven to 275 degrees F (very slow). Mix rolled oats,

wheat germ, coconut, nuts in a large bowl. Mix margarine,

honey, and vanilla. Pour over rolled oat mixture. Stir slightly

until evenly mixed. Spread on a 15 by 10 by 1 inch baking pan.

Bake one hour, stirring every 15 minutes. Cool. Break up any large chunks. Mix in raisins.

Store in an airtight container. Makes about 7 cups.

Class. from pg. 18

ern. Just \$23.00. Sign up at the campus activities office by Sept. 25. Sponsored by UAB-Travel!

It's a Pep bus to UW La Crosse on Oct. 3. Show your Pointer Spirit. Sign up in campus activities Office today!! Sponsored by UAB Travel & Athletic Center.
