An issue argued for the rest of human existence

The issue of abortion is one that will be argued for the rest of human existence. I don't feel that anyone has the right to tell someone else how to live their life. That goes for pro-lifers forcing their views on women who are considering abortion. We are all entitled to our opinion but sometimes our opinions fall short of our beliefs.

The decision to go through with an abortion is not an easy one for any woman. I know that it may be hard to believe, but it's true. Yes, it may be self-sacrificing, not a murderous act, or some kind of torture in the eyes of many - but let's look at it through the eyes of someone who's been there.

Sure, there are the fun times before you get pregnant. Sex is great. Who can deny that? And yes, if we're old enough to have sex, we should be old enough to be responsible about it. Well what about the times we are responsible and it backfires right in our face?

Okay fine, you have fun and a few weeks or a couple of months later you discover you're pregnant. Now what do you do as a sophomore in college, raised by 100% full fledged Catholic parents and a whole life ahead of you? The first and only thing I considered was abortion. Yes now, there are those of you who are saying - "there be selfish and don't think of the unborn child. Hey come on - don't give me that crap! Don't you think I have?! Don't you think I gave a lot of time and hard thought about MY baby? (MY baby, NOT yours). What kind of life would the child have if I did go through with the pregnancy? Sure, the father and I could have gotten married, gotten jobs as a waitress or a bag boy at a local grocery store and raised a child the way it deserves to be raised! No chance! Yes, I messed up - I'm a child having a child and it just doesn't work.

So the only option the father and I see is abortion. What about adoption you ask? No, I don't want my child hating me when he's 20 years old because I gave him up. I don't want him to feel he was not loved as he was given to someone who would love him. That's not love. I do and always will love him. Maybe that's hypocrisy because of what I did and maybe not. So like I said, my only option was abortion.

Going through that was the worst time in my life. It caused physical, financial and emotional strain on my boyfriend and myself. Physically it was painful. It's not fun having needles put into your stomach so you won't feel pain later. It's not fun vomiting afterwards, it's not fun having body aches for two weeks after it's over.

Financially, it's not easy coming up with $729 for the procedure, plus driving to Madison and back.

Worst of all, emotionally it drives me crazy every day. Don't you tell me it's an easy, selfish act. I think of my baby every single day of my life. I wonder if I would have had a boy or a girl, I wonder what he would look like, what it might have become. Don't tell me it's easy. I live that terrible experience every day. Of course, I know I'm not the only one who has been there. I am sympathetic with each and every one of you women (maybe girls) who have. The only ones I don't feel sorry for are the ones who didn't learn the first time - Lord knows I did.

Name withheld by request

Is This For Real?

By Jessica Hochachild

Is this for real? I cannot believe the way the student senate is behaving! I am not a member of the student senate, just a bystander, but I am appalled in the manner in which they are acting.

These senators, who are supposed to be making important decisions for our campus, spend their meetings fighting. Just what are they fighting about? Perhaps you cannot get along with each other.

If that is the case, take it out of senate! You guys are responsible for a great deal of the decisions made on this campus. These decisions affect me and everyone else! So get your act together guys, because we are sick and tired of you childish behavior!

A Frustrated Student

Short of Thermonuclear War Itself

By Christopher Thomas

In response to Kyle White's anti-abortion article, (printed in the November 17th issue) I would like to raise a number of counter arguments to the articles rather emotionally based ideas.

First of all, the analogy where the abortion procedure is equated as Nazi torture is rather misleading. It suggests that the procedure is designed to inflict severe pain on the "unborn" (An entity that cannot experience the sensation of pain). This is rather fallacious since the idea is to eliminate the embryo not to maim it.

Moving on, it was stated that about 25,000,000 abortions were performed in the last 15 years in the United States. I do not know whether the figure is correct (I've no reason to doubt it) but that is inconsequential. The point is that if this is true there are not that many more people in the world missing and synergetically adding to the already overcrowded human population of 5,000,000,000 people.

As Robert McNamara has stated, "Short of thermonuclear war itself, mankind's most urgent and most frightening problem is the growth of the world faces over the decades immediately ahead."

As far as the embryo being human-like yet. At this stage the embryo is merely an extension of the female. In fact, it is taking nourishment from the female and is somewhat foreign tissue. It could almost be described as parasitic. Also the "blobs of tissue" is not self-sustaining nor does it possess a consciousness—two prerequisites for being a living human.

As far as justifiable reasons! The over-population idea was already stated. Here's some more. As far as welfare receiv-

ing families, the more people they have the greater the cost for the government and consequently the greater cost for you and me, the people. In short they become economical bur-

dens to families and society. Another reason is that unwant-

ed children can and often do be-

come psychological burdens to their parents with various re-

sults: child negligence, sexual and physical abuse, and verbal abuse. Other reasons include rape, and, in some cases, the enslavement of the mother's own existence.

Speaking of potentialities, what about potential murderers, ter-

rorists, drug addicts, cler-

gyman, and dictators? Certainly not ideal citizens. However, the most important question is what could have been are meaningless wastes of energy.

Out of curiosity, where is the connection between the whales of Alaska and the abortion issue? As far as that goes I tend to think that those particular whales are more valuable than any average person picked randomly off the street. Those whales were symbols of what is hopefully a trend towards a better ecological awareness and conservation view.

As a closing statement in reference to the comment about "taking political steps when people are victimized by Apart-

heid," is the writer of the arti-

cle suggesting that we support Apartheid? The whales are more valuable than any average person picked randomly off the street. Those whales were symbols of what is hopefully a trend towards a better ecological awareness and conservation view.

Pornography Awareness Week

Letter to the editor...
"I got my buck!"

To the Editor,

"I GOT MY BUCK!"

An eight-pointer. I wasn't ready for it. It just came from nowhere. The first thing I saw was its eye. Big brown eyes— not Bambi eyes—hard, cold ones with a split second stare that shot through mine like ice. It was directly in front of me—not time to think—BANG! I hit it. The sound was louder than a crack of thunder in a wild storm. My lungs sank heavily in my chest and my eyes shut tight (or I went momentarily blind) as the deer's heavy body violently flipped over and up the glassy road. It was a split second—barely missing the windshield, grazing the top of my Plymouth Valiant and ending in bloody slide along highway 1-1, just inside the city limits.

I'm not a deer hunter. I've never participated in the ritual of deer hunting nor do I ever intend to "give it a try" as some do, mainly out of cost for the experience. I've never overeagerly expressed any argument, for or against the humanity of deer hunting and the decision of those who hunt deer. I'm just a normal person leading a "normal" life—no quilts or quilrils—just daily living.

November in Wisconsin, however, succumbs the "normal" crowd to the obsession of the hunters. Scenery along the highway changes to blaze orange signs and split leaf bushes, bloody deer guts spewed by car tires, and countless deer roped to car tops, heads bobbling off the side, legs stiff as boards. I even saw a dead deer tied around my spare tire on the back end of a van. The individual freedom of choice in wether or not to hunt. I believe I have never existed.

This year, however, we have a fisherman can feed our stream, a grous hunters' prey fly above the treetops, but a deer hunter's prey must face out of the woods and into, almost literally, our laps. I'm now in a category of statistics that add to the number of deer killed in 1988. The hunter "drove the deer" of the woods...I "drove my car" into the deer. (how can I ever thank them for their help?) I gave the deer to the police, they're lucky—they don't have to take off work to hunt—there are so many hunting enthusiasts and winter enthusiasts. It is snowing a lot, and the deer are hard to find. I think I will go hunting in the future.

Sincerely,

Darcys A. Westcott

P.S. Thanks to the driver who stopped to help me after the "accident." All I know about him is that his name is Bob; he's from Rhinelander, and he is a computer science major at UW-Stevens Point. I guess he was involved this year, too!

**LETTERS**

**COFAC Gets Cheated?**

I often hear complaints from the students and faculty of the College of Fine Arts and Communication (COFAC) that the college gets cheated when it comes to getting funding than the other colleges. This is due to allocations that are not related to enrollments. The Mid-American COFAC has the fewest number of students, but is perhaps the most active college on campus. I commended the students and faculty of COFAC for the excellent entertainment and education they bring to this campus! In the future as enrollment dollars becomes tighter student government will do its best to continue to fund these important activities. I only hope that those members of the COFAC realize that they have not been cheated.

**ODN Seeks Concerned Students**

**Dear Editor,**

We are a national non-profit, student-run organization concerned with issues of global hunger and injustice. Being primarily a voluntary organization, we have extremely low overhead and, as such, cannot afford to spend our limited funds on promotional materials and publicity for our programs. In the past, many people have learned of our Bike-Aid program through word of mouth and the program has benefited from their participation. We hope that our Bike-Aid ’99 program will be of interest to you and that you will consider sending in for the individuals enclosed press release in your publication.

If you have any questions about the program or would like to speak in some of the past participants, please call us. Our new program brochures and information packets will be available by mid-November.

Thank you for your support.

Yours Sincerely,

Mary Krouch

ODN Domestic Programs/Bike-Aid Coordinator

**LIFE IN THE SLOWLANE**

Editor's note—about the cover: The truth is out—when mild mannered reporter Stan L. would have typed this weekly article for the Pointer, he ran out of space and bloody bullets. He stepped into a phone booth and became a singer songwriter. Musician extraordinaire—Mike Skirzek. The cover story is by the unassuming name of Mike Skirzek. Mike, or Stan if you prefer, is one of Steven's Point's best kept secrets. In this very issue will be your last chance to see Mike perform before his first national tour (not a joke). Don't miss it—guaranteed to be an unforgettable night of puns and poetry. (DC-Encore, Tuesdays 8-10 p.m. $1.50 at the door. No advance ticket sales.)

For this week's column I had hoped to conduct an up close and personal interview with a punster, but he laughed out at the last minute. The topic of the interview was to have been "weightless verses showw" with mirriors/liquid proplr in verse Dona Decker. We will well, maybe next week.

It's that time of the year once again, and I'm feeling the last days of the hunter to blow off some steam. I have therefore decided this week to express several of my more profound opinions regarding the most pressing issues of twentieth century America. Specifically, the moral issues of prejudice, the existence of God, TV talk show hosts—should they all be shot, violence in professional athletics, television—more violence than sex, and, most importantly, the question of the 1990's: Is it possible to get AIDS from a tissue let fall?

I can remember, in regards to the opinions that follow, if I were to earn someone's feelings, or say something even one syllable that was offensive to someone, I would simply break. Therefore, let me be clear about what I am about to say. I am not necessarily saying that someone can't have a good time while discussing other than the intended message.

New Chancellor to be Appointed in December

A new chancellor for UWSP may be appointed in December. Eugene Johnson, chair of the search and screen committee for UWSP's 11th chief executive, said his group will wrap up its deliberations Friday and recommend five finalists to UW System President Kenneth Shaw.

The committee will convene at noon and "we won't come out until we can send up white smoke," he announced.

Johnson conferred with Shaw recently and was told that if the finalists could be identified by Friday, then he and the UW Board of Regents committee would act with haste on the recommendations.

The earliest date for an announcement will probably be Dec. 9, when the regents hold their next monthly meeting.

That, of course, does not mean the new chancellor will be available to take over the job soon thereafter. It has been generally believed that when Philip Marshall leaves the office in early January, an acting chancellor will be named to serve part or all of the spring semester.

The search and screen committee was appointed last spring and has been meeting regularly since to process about 135 nominations and applications. The 15-member group made two recent trips to Minnesota, where 14 candidates were interviewed. In sessions since then, the field has been narrowed to seven, Johnson reported.

The candidates have not made official visits to the campus, but some reportedly have been here unescorted.

Johnson raved about the quality of the finalists. He also had high praise for members of his committee, noting that he was "pleased by the way they came together and took their work so seriously."

The search and screen process has been expensive at a time when the university budget is tighter than ever. Beyond the cost of providing transportation for candidates, there was an additional expense of the entire committee traveling to Minneapolis and spending several nights there. That was recommended as a means of providing confidentiality for the finalists. Proceeds from the soft drink vending machines were used to cover most of the costs, Johnson was told.

The UWSP will hold a reception tonight to honor Chancellor Philip and Helen Marshall who will retire from their positions at the beginning of the new year.

Regents Approve Tuition Increase

MADISON—The University of Wisconsin Board of Regents met last Friday and approved a 15% tuition increase for the 1989-90 school year and a 9.3% increase for 1990-91.

The budget also increases out of state tuition at the Madison and Milwaukee campuses to 1990.

Of the 15% increase that was approved for 1989-90, 7.2% will go for programming and 4.8% will be provided for a faculty catch-up. For 1990-91, of the 9.3% that was approved, 4.5% will be used for programming and 4.8% will be used for a faculty catch-up.

The programming increase would be spent on things such as supplies and expenses, general computer access and strategic planning for business education. The faculty catch-up was proposed to help bring University of Wisconsin faculty up to "peer" levels.

Regent Ody Fish proposed, then withdrew a motion that would have taken faculty catch-up out of the tuition increase. According to Fish, "we constantly give lip service to students but something else is always more important. The student always comes last."

The United Council is currently supporting legislation that would cap resident undergraduate tuition at 30% and out of state tuition at 106% of instructional costs. The United Council is a lobbying group for most of the University of Wisconsin campuses.

According to Jim Smith, President of UC, "we firmly believe in the tuition cap and will not sacrifice its passage by accepting this provision. This cap is moving forward and we hope to put it on the Governor's desk this spring."

The 30% tuition cap was approved by the Assembly last March, but was not brought before the Senate because of time restraints.

"No matter what the tuition increase ends up at financial aid must keep pace," Smith said. "Students aren't in a position to scream financial aid catch-up right now, because they don't have the power to threaten a walk-out."

Krebs Cited as Associate of the Year

The Wisconsin Association of Physical Plant Administrators has given its "Associate of the Year Award" to Hiram Krebs of Stevens Point.

It cited him for "an outstanding professional career as a physical plant administrator" and for "excellent contributions to the physical plant profession and his meritorious service to the association."

Krebs has spent the past 18 years in the physical plant administration of the University of Wisconsin-Stevens Point, and before that was director of public works for the city of Stevens Point and operator of his own engineering consulting firm. He currently holds the title of university engineer.

He was cited at a recent association meeting at Trek labs, UW-SP's new natural resources field station near Tomahawk. He guided both planning and construction of the buildings there and is currently involved in the start-up work for additions to the classroom building and main lodge.

Krebs had a role in the construction of many of the buildings that now comprise the main UW-SP campus and in the remodeling of most of the other structures that were put up before he became affiliated with the institution.
Computers Important at UWSP

About 41 percent of all students at UWSP are taking courses this semester in which they are required to use computers as part of their classwork. This statistic illustrates why UWSP has become a national model for the application of high technology equipment to academic pursuits. UW System President Kenneth Shaw was told Thursday during a campus visit that UWSP's decentralized computing program for all instructional and administrative units of the university was given a boost in September when it was designated by the UW System Board of Regents as one of 49 Centers of Excellence in the state.

After meetings with campus administrators and a public address, Shaw was given a demonstration of the computing operations and a history of how it was developed in cooperation with AT&T.

The firm has designated UWSP as one of its national showcases, where its equipment can be demonstrated. Since the mid-1980's, more than 40 universities and companies have sent representatives here to view the operation, the president was told.

Chancellor Philip Marshall noted in a recent letter to alumni that what has been developed at UWSP is "the best example I know of an outstanding program resulting from cooperative efforts of literally dozens of talented faculty and staff. It also involved a good deal of serendipity."

The program began with the addition of phones to each residence hall room and the replacement of the old campus phone system. In this process, a fiber optics network was installed.

The new system gave the university a state-of-the-art highway for voice and data at less than the cost of continuing the old phone system. Next came a series of Title III federal grants totaling more than $2 million, which were used to acquire computing equipment and provide training for faculty and staff.

With that stage set, AT&T agreed to a special arrangement of subsidizing microcomputing equipment, so that the technology could be available for every faculty member wishing to use it.

Marshall reported that experts in the field have informed him that UWSP new ranks among the top 10 universities in the country in terms of providing student access to computers and computing instruction.

Beyond the 41 percent of the student body required to use computers in coursework, 66 percent of the students used the technology in courses which did not actually require it. There are 13,900 students enrolled in specific word processing and data base courses.

The presentations to Shaw were made by some those who have had a role in the development of the network--James Schurter, dean of academic support programs; Bruce Staal, director of the Center for Distributed Academic Computing; Ron Lastetter, controller; Colleen Andrews, director of student computing programs; and Dan Goulet, director of academic computing services.

One demonstration showed how a professor, by striking a few commands on the keyboard of a personal computer in his or her office, can contact the library here or at UW-Madison and make a check on all of his holdings by merely typing in the name of the subject being pursued. The information will flash on the professor's computer screen.

Though the capabilities of the network are broad, its benefits can be realized, according to Goulet, with ordinary, inexpensive computing equipment.

Gil Regnier, a vice president for AT&T, said he and others at his firm are pleased with the results of the showcase at UWSP. Howard Thoors, vice chancellor for academic affairs, added that much of the credit for the system goes to Marshall for his willingness to take a chance and support the innovation. "His fingerprints are all over it," Thoors remarked.

At a dinner Thursday night at The Cottage in Plover, Regnier also paid tribute to Marshall, who will retire soon. The executive of the computer firm said there is special meaning when business arrangements can be made which spur so much public good, notably AT&T's partnership with a university.

Regnier unveiled a portrait of the chancellor, which includes images of the Old Main cupola, the mural of the Natural Resources Building and a computer. The work, which was created with computer assistance, was presented to Marshall.

In Honor of Trytten

The chemistry lecture hall at the University of Wisconsin-Stevens Point will be dedicated Saturday afternoon, Dec. 3, in honor of retired professor Roland A. Trytten. It will be followed there by a reception.

"He's been a major force in shaping our department for more than 40 years. He hired most of us who are now on the faculty and he set the tone for what we are doing," said Jack Reed, who heads the chemistry program.

A ceremony is scheduled at 4 p.m. in the hall, located within the UWSP Science Building, off the lobby facing Reserve Street. It will be followed by a reception. The event is open to the public.

Chancellor Philip Marshall will do the official dedication following tributes to Trytten by chemistry professors Oliver Andrews, Robert Weaver and Don Showalter. Reed will be the master of ceremonies.

Parking will be available in a lot directly across from the hall on Reserve Street.

Trytten taught chemistry at UWSP for 38 years, from 1946 to 1985, and continues to take part in departmental affairs as a professor emeritus.

During his tenure on campus, he served 25 years as his department's chairman, was one of the principal architects of the pre-engineering program, a planner of the Science Building, organizer of the Central Wisconsin Section of the American Chemical Society, and according to Reed, "provided the inspiration for the early planning of the UWSP paper science major."

He also served as chairman of the university faculty and was president of the local chapter of the organization that is now known as The Association of University of Wisconsin Professionals (TAUWP).

Trytten's contributions to UWSP have been recognized several times in the past. His departmental colleagues recommended him for the honorary title of professor emeritus and also established a scholarship fund in his name, which is used to provide financial incentives for outstanding incoming freshmen. The American Chemical Society gave him its Outstanding Service Award for his service with its Central Wisconsin Section.

A native of Wildrose, N.D., Trytten is a Norwegian-American who attended St. Olaf College and earned a doctorate from UW-Madison. He began his career as a chemist at the Kimberly Clark paper mill in Niagara, in 1946, before teaching a year in a teacher in higher education two years later at Ripon College.

The UWSP Science Building, constructed in 1963 and enlarged by two subsequent additions, has three lecture halls. The one for Trytten is in the original section of the structure, seats about 110 people and is particularly familiar to the professor because he taught many classes there. The other two were dedicated to Gilbert Faust, a retired chemistry professor and registrar, and the late Monica Bainter, a physics professor and longtime chair of her department.

Stress Factor

We hear it all the time, "I'm under a lot of stress." But what is the origin of this stress? And what will be the result? The Bible can give us some helpful answers.

Jesus said, "Be on guard, that your heart may not be weighted down with... the worries of life" (Luke 21:34). Now the human heart involves the mind and emotions as well as the physical being. And Jesus knew that we could put all sorts of stress on our minds, and emotions and bodies! "We can do it with worry or anxiety! Worry about tomorrow! Worry over children! Anxiety about bills! Worry, worry, worry! This is self-inflicted stress. And it is sin! Listen again to Jesus, "Do not be anxious for tomorrow; for tomorrow will take care of itself" (Matthew 6:34). And why does Jesus exhort us to avoid this self-imposed stress? Simple! It can break us.

But we human beings are skilled at imposing stress upon ourselves. For example, God gave us twenty-four hour days! And we regularly try to stuff more into a day than the hours permit. Then worry ourselves sick over the work that has not been done. We need to recognize this self-imposed stress. We need to learn to back off. We need to learn to say, "No!"

Wellness Commission

The Portage County Wellness Commission currently has vacancies for several positions on the board of directors. The Commission is an incorporated private, non-profit agency dedicated to increasing the quality of life of Portage County residents. The Commission promotes health fairs, fun runs, educational information, "Celebrate Wellness Day", and other activities which foster social, occupational, spiritual, physical, intellectual, and emotional wellness. Board of directors terms are for three years. Meetings are held monthly.

For more information and an application form, contact Joe Gracza, Stevens Point Recreation Department, 2442 Sims Ave., or call 346-1323.
This coming summer, the Overseas Development Network (ODN) will be sponsoring its fourth annual cross-country hunger awareness bike-a-thon, Bike-Aid '89, to raise awareness and funds for self-help development projects overseas and in the U.S.

In the past three years, 287 cyclists have crossed the country with Bike-Aid, raising public awareness of the problems of world hunger and poverty, as well as a cumulative total of $390,000. This past summer, 41 cyclists with Bike-Aid '88 completed the 3,600 mile journey when they arrived in Washington D.C. on August 31.

For 1989, ODN seeks individuals who are concerned with the various issues connected to world hunger and poverty and who are willing to discuss them with the US public. Aside from raising a projected total of $350,000, participants are expected to be involved in various events and presentations across the country, to bring attention to the plight of the poor and hungry at home and around the world, and to encourage and provide opportunities for public action toward solving these problems.

Bike-Aid '89 will begin in mid-June from four West coast cities--Seattle, Portland, San Francisco, and Los Angeles. A shorter ride will originate from Austin, Texas beginning in mid-July. The ride will be completed in mid-August when cyclists from the five routes converge in Washington D.C.

People of all ages and backgrounds are encouraged to apply. Closing date for the application is February 15, 1989. All interested should apply immediately. It is very important that the necessary preparations for the ride begin as soon as possible. For more information, contact:

Bike-Aid '89
The Overseas Development Network
P.O. Box 1234
Stanford, CA 94309
Tel.: (415) 123-4567 ext. 1234

The Overseas Development Network (ODN) is a national student organization dedicated to addressing the fundamental issues of global poverty and injustice through educational programs, volunteer work, and partnerships with grassroots projects worldwide.

---

ASE Seeking

by Molly Shallop

Contributed

At least 20 UWSP students are waiting for Student Government's approval on the constitution of a new organization, Alliance for a Sustainable Earth (ASE). Approval, which is expected by December, will not only give the group official recognition by the University, but also access to SGA funding.

The group was formed for reasons other than resume padding. ASE secretary Mary Koebele explains, 'I'd like to affect change because I think it involves our future...I think it's time for people to take action, and I'd like to be a part of that.'

ASE's goals are stated in the proposed constitution: to promote understanding of global environmental issues, to promote positive ways to effect change, and to provide information on these issues to the community at large.

ASE plans to accomplish these aims by action and community involvement. Possibilities include sponsoring guest speakers, providing literature for consumers, starting a Christmas tree recycling program, and becoming a political watchdog group. Other surprises may be planned as well.

ASE membership is open to all persons, not only university students; the community is encouraged to attend ASE meetings. Board meetings are held weekly, and the group will officially become active in January. For more information, interested persons may contact ASE's faculty advisor, Dr. Hans Schnabel, at 346-4260.

Semester in Poland
Jim Malzewski
Features contributor

Greetings from the Homeland, Steven Point. Prawn dobry! We arrived in Krakow, Poland-wide-eyed and anxious to experience life in Eastern Europe. Now, over a month and a half later, we've traveled to the Baltic seaport of Gdansk and the southern mountain village of Zakopane, taken Polish language and culture classes, visited churches and museums, and are still nowhere near understanding this complex country.

Overcoming A Handicap

by Peter Teska

Imagine yourself walking around campus wearing a blindfold that you can't remove. This is how Ginger Torske describes being blind. The 19-year-old freshman from Janesville and her dog, Rhonda, are new to UWSP this fall. Ginger is a Home Economics Education major. In her spare time, she loves to participate in all sorts of sports.

The middle child in a family of three, her blindness is the result of an accident which occurred at the age of five. Instead of becoming bitter at this twist of fate, Ginger has fought to fit into the mainstream. She credits most of her success to her mother, who refused to pamper her. Her mother made her learn to do things for herself. Ginger believes that something good comes from everything and that her blindness has made her a better person. This is readily observable, as she is a friendly, outgoing person.

After the accident, she started attending a school for the blind in Janesville. By the time she had reached high school, she was also taking classes at Janesville Parker. An accomplished swimmer, at one time she was rated number one in the U.S. for persons that are totally blind. By her senior year, she was going to Parker full-time, and had acquired her seeing-eye dog, Rhonda. In June of '88, both she and Rhonda graduated, as an all-star show.

photo by Bryant Kech

Poland is often called "the land of paradoxes," and our interactions thus far can not refute this description. There are just so many contradictions. For example, exchanging money on the black market is supposedly illegal, yet every day we are approached openly in the main square, sometimes with milicja (police) in plain view.

Another paradox in this land is the near 38 million people, where the average monthly salary is around 18 dollars, there are an estimated one million VCR's. This one particular item alone amounts to over a year's worth of labor.

While much of this is illegal, I wouldn't actually label their behavior as a paradox, as most people are just trying to maintain a level of subsistence. Just like all people, they are struggling to improve their situation, which is made extremely difficult in light of the repression and soaring inflation of present day economies and an alternative avenues must be transferred. Perhaps the most blatant paradox evident in Poland is the strength popularity of the Catholic Church, which, of course, directly contrasts the official atheist stance of the Communist Party. Over 90 percent of Poles are Roman Catholic, and the Church plays a big role in everyday life. Here, crossed pictures of Pope John Paul II (The first Polish pope who visited his Homeland three times since his election ten years ago), are virtual everywhere. Ironically, while walking around the city of Gdansk at night, the most visible and identifiable structure is the lighted cross that sits atop the St. Mary Mariakiw church located in the center of town.

The Church is also a refuge for Poland's outlawed Solidarity trade-unionists and is a driving force behind its continued existence. In Gdansk's St. Bridgry Church, the Solidarity banners and memorials abound. Outside the church, people carry the last of the last day protest on October 14 draw supporters throughout the day. At a mass last Sunday attended by at least 1,000 people, Poles held hands, chanted Solidarity songs while displaying the peace symbol with their right hands, the priest himself called for the legalization of Solidarity in his homily. I was most moved by an old man who held red and white (national colors) carnations high in the air throughout the entire mass. A procession of old mass and led to a statue of Pope John Paul II located outside the church; more songs were recited and Solidarity flags waved. The mass was not only a religious experience centered on worship, but also an outlet to vent frustrations caused by the current economic situation and an opportunity for nationalism to be manifested.

Fittingly, milica in vans and jeeps patrol the streets, her, being blind. The average monthly worth of labor.

...O Something Like This

J.S. Morrison

Features Writer

I once read (or was told—my memory is not the most dependable of instruments) that a writer can't write while writing. The writer, about anything he or she can think of, should write about whatever is currently occupying their mind. And, if the evil demon known as Writer's Block attacks, the writer should write about that.

I have thought about above advice quite a bit over the past few weeks, as I stared at a blank piece of paper. I considered writing a review of the new album by R.E.M., which is entitled "B Turk, and it's running, but I realized that I wouldn't wind up writing a review. I would wind up writing a lot of confused questions instead.

What is the significance of the number four superimposed on the letter K in the band's name and the letter it in the album title on the cover of the album? Why does the band use air and metal to designate the sides rather than Side 1 and Side 2? And, who really gives a damn about my opinion anyway?

I also considered writing about the things that I was thankful for this Thanksgiving. It's always easy to write a seasonal column. But, I couldn't really write about Writer's Block attacks, the writer should write about that.

Then I considered jumping on the JFK handbag and writing an article about someone who is named after President Kennedy. But I decided that the JFK column wouldn't be too inappropriate considering I wasn't born early enough to remember any of the president's time in the man. Besides, if you're interested in reading a remembrance of Jack Kennedy, you should have an extremely difficult time finding it.

Then there's the article that's just been written about the incredible abundance of telephone numbers that begin with the digits 1-900. After all, how crucial is it that we have MTV, in Your Face or Fresh Prince but that I understand that there will soon be a 900 number which you can call to hear someone explain why 900 numbers are an annoyed, milking milkers blemish on the face of America. So let's go all spend two dollars for the first minute and forty-five cents for each additional minute to catch guy's opinion.

...and let's not forget the column that would write about exotic dancers without catching any of the man's beards. This is the latest episode of Donna's Final Pleasure Column that was featured in the inexpensive columns, I just might have done that.

But I will say I just admit that I had nothing to write about this week and that I could stretch while while getting an entire column. Nah, that would have been too easy.

Collier's Encyclopedia

POLAND

The truth is that many Poles must seek alternative routes to make a living: work crossed jobs, travel to the West to work abroad in the Polish fashion, as Jark, a Pole I met this past weekend told me, how else can you explain that we spend twice as much as we earn? Even the old baltic farmers who sell their sweaters on the street will ask that we pay in dollars.

Mary Croft co-author of Writing Book

A new book went on sale this month to provide, according to its authors, inspiration, suggestions and examples for individuals and groups of older adults who want to write.

"The Leisure Pen—A Book for Elderwriters" is a 236-page softcover work by Mary R. Croft, associate professor emer­ita of English and retired director of the writing laboratory at UWSP and Joyce S. Steward, professor emerita of English and retired director of introduc­tory courses in English and of the writing laboratory at the University of Wisconsin-Madi­son.

It was printed by Palmer Publications, Inc. of Amherst and is being marketed nation­ally.

The authors said they were encouraged to proceed with their idea of this book because of the growing number of peo­ple beyond retirement age who are in search of "how to" infor­mation on ways to be involved in creative activities.

"Such a book never existed before, so we view what we've done as a trendsetter," observed Croft.

"Writing can be a great personal outlet," added Steward, "because there is often a great sense of gratification felt after completing such a project."

"The Leisure Pen" has chapters entitled, Why Write?; De­veloping as a Writer, Letter Writing and Reading Someone; Journals, Letters, Diaries; The Art of Storytelling; Writing Short Memories; Writing Mem­ories; Writing Family His­tory; Writing About the Lives of Others; Writing Poetry, Writing Stories and a Miscellany of Ideas.

An appendix includes a series of "helpful hints" to writers.

Each chapter includes exam­ples of the kind of writing being explained. Some of the works are by professionals such as Andy Rooney and Mark Twain. Other examples are by older men and women, including a letter by President Lincoln.

Croft and Steward also fea­tured what they regarded as outstanding work by "elderwrit­ers" who have been in classes they have taught.

Unpublished writings by Ste­ven Point area residents include diverse examples of letter writ­ing by Ray Hager, Marjorie F. Werner, Ella Morse, an essay by Herb Boyce and poems by

Murilla Weronke and Had Man­dson.

"The picture of Stevens Point that emerged from these works was delightful," Croft said. One short story by Warner re­counted the day her grandfa­ther purchased a used automobile with the excuse that it was needed for his funeral business. The deal created a fu­neral in the family when it was learned that the previous owner was the madam of a local house of ill fame.

Both of the authors said they have sensed growing interest among people to re-create the past.

Croft said she enjoyed writing a piece for the book about members of her family, because the exercise, from today's per­spective, gave her new insights on some very old relationships with kindfolk.

About writing itself, Steward observed that there are fewer restrictions today and fewer dogmatic rules, "although many of those rules were pretty shaky all along."

She added that efforts were made to select examples of writing that were lively and "fun to read." Croft continued that "we also wanted to show people that writing is indeed attainable."

They joke about references to older people who would com­prise their audience. "Suddenly we remembered that we were there, too," Steward said. On

Nighttime Jogging

By Anne T. Wemlaff
Features Contributor

A person driving through campus will observe a large number of joggers on any given evening. Jogging is a great way to stay cardiovascularly fit, reduce stress, and invigorate yourself for a long night of studying, but it can also kill you. A casual observation of campus joggers reveals that very few are wearing reflective material and most are wearing dark clothing.

According to the Wisconsin Department of Transportation, between 100 and 200 pedestrians are killed each year. Many hundreds more receive injuries, some of which are permanently crippling. Even minor injuries are frightening and painful—so fun!

Pornography and Censorship

By Peter Teska
Features Writer

Pornography, which means literally "writing of prostitutes," is a catch-all phrase that can mean just about anything. While pornography is not a legal term, its commonly used synonym, obscenity, is. Obscenity can be defined as "that which is lewd." Law defines "that which is lewd." And, purient means "that which is obscene." This circular definition is one of the reasons that obscenity laws are often vague and misleading.

Strictly speaking, in 1973, the U.S. Supreme Court ruled that obscenity is not protected by the Constitution. What constitutes obscenity, however, is determined on a case by case basis. Pornography is a word that has no denotive value. That is, there is no tangible way of measuring something as being pornographic. Instead, pornography has only commative value. The best connotative value of pornography, is "that disgusting me."

Mainly because of this subjective viewpoint, there are no laws concerning porn as a whole. Also, while a large body of viewers may see a XXX-rated movie, and all be disgusted, it is not at all apparent that such a movie should be censored. Nowhere the Constitution are there re. sources to cen-

THE PART-TIME JOB THAT HELPS YOU PAY OFF YOUR COLLEGE LOAN.

There's a lot more to the Army Reserve than you might think. If you have a significant student loan, and it's not in default, you can get it paid off at the rate of 1% per year or $500, whichever is greater, up to a maximum of $5,000. In addition, you may be eligible for the Montgomery GI Bill that provides you with up to $5,040 for current college expenses or selected VoTech training.

It's all part of earning a nearby Army Reserve unit. Following Basic Training and an Army skill training school, you'll usually serve one weekend a month and two weeks Annual Training. And you'll earn over $100 per weekend in pay.

Think of it. Good part-time pay, help in paying off your college loan, plus additional money for school while you attend. It makes making a phone call worthwhile, doesn't it?

UWSP Strives To Raise Minority Population

The Office of Educational Opportunity Programs (EOP) is sponsoring a gathering to demonstrate to the minority students the appreciation the people of UWSP and of the surrounding area have for the diverse cultural mosaic of the university's population.

Admissions Director John Larsen, who also is serving this year as acting director of EOP, said he believes the minority students currently at UWSP show more promise of completing their bachelor's degree than any previous group.

"Many of these students are very talented, and they are doing important things in many different fields."

There is a thrust in the UW System to recruit and retain more minority faculty members, staff and students. It's called "Design for Diversity." According to Larsen, it is not an easy assignment for administrators at places such as UWSP to carry out, because of the community's location so far from urban settings, where most minorities live.

But Larsen said that geographic considerations should not be used as excuses for not raising the minority population. "We as a system and a society must do everything that is necessary to assist all members of minority groups who want to graduate from college."

From his own perspective, he believes particular attention must be given to the minority groups in the region, most notably the Native Americans, Hispanics and the recently arrived Hmong families from Southeast Asia.

In reaching people who do not have traditions of college attendance, Larsen believes an appreciation for learning must be promoted among their children when the youngsters are barely beyond the toddler stage. "It might be too late if you start trying to instill this in their minds when they are in the fifth grade," he added.

While problems of discrimination are still evident in overt as well as subtle ways in Central Wisconsin, the causes of minority people still appear to be making progress, Larsen believes. "It troubles me deeply that human beings do some of the vicious things they do to other people who are just a little different than themselves," he continued.

But he is encouraged by the efforts being made as the result of UW System administrative decree and the goals of a minority task force made up of UWSP personnel and students and community residents.

Moreover, Larsen said having high achieving minority students in the performing arts and other areas as well as athletics is helpful in conditioning the general public to the need for a larger minority population here. "They are great role models," he said.

This fall's number of 222 minority students includes 54 blacks, 82 Native Americans, 51 Asians/Orientals and 35 Hispanics. The total count is up by 14 from last year and within 15 of the all-time high minority census logged in 1986.

Larry Sipiorak, associate registrar, said the minority population has increased slowly since records about students so labeled began being kept in 1972. In that year, there were 146 minority students here including 53 blacks. The gains in the total number throughout the 16-year period were realized despite some wide fluctuations from one year to the next.

Minority Affairs Column

The Minority Affairs Committee of the Student Government Association is sponsoring an evening of entertainment.

The Minority Musical Extravaganza will take place in Mchelsen Hall in the Pine Arts Building on Saturday, Dec. 3, from 7-9:30 p.m.

The Chicano-American, Native-American and Asian-American Dance Troops will perform. The program will also include Gospel choirs from Whitewater and Oaksho.

My Name is Ed. I’m a Racist.

by Ed Kinane

I recently went with a friend to a meeting of Alcoholics Anon­nymous. Before each person spoke she said, "My name is ——— I’m an alcoholic." AA knows that recovery requires acknowledging one’s illness; de­nial makes recovery impossible. What follows isn’t about drink­ing, but about a more wide­s­pread disease. Before I say more, I want to introduce my­self: "My name is Ed. I’m a racist."

No, I’m not flaunting my big­otry, nor being cleverly rhetor­i­cal, nor terming myself with guilt. I’m acknowledging that I’ve been deeply conditioned by a society that is permeated with racism and that recovery is the task of a lifetime.

AA teaches that alcohol is curable; so too is racism. Just as it is hard to admit alcohol­ism, so too is it hard to admit racism—thanks to our stereo­typed notion of what racism is. Conveniently, our stereotype in­volves alien behavior we’d nev­er engage in. We know we’re not racist because we’d never condone burning a cross on someone’s lawn; we may even wince at ethnic slurs or take offense when someone says "nigger."

We view racism as elsewhere, as coarser, bullying, face to face; Bull Connor and lynching in the bad, old, rural South. But after World War II, as blacks by the millions were dispos­sed of their land and sought sanctuary in Detroit, Boston or New York, racism got hip and turned inside out. In the urban, liberal North, racism, still the mainstay of class privilege, be­came systematized, spanning sub­urb and ghettos.

i quit school to work construc­tion. The job paid well, thanks to the building boom of the six­ties which, in the name of urban renewal, forced the relo­cation of thousands of black people off the precious real estate between downtown and the university. Few of them could break into the construc­tion trades; there wasn’t a sin­gle black in our union local. My fellow workers were determined to keep it that way. It’s no won­der that when I was in South Africa it seemed so much like home.

Anti-racism has also become stereotyped. Again, convenient­ly, the face is on the alien or far away. We know we’re anti­racist because we angrily con­demn apartheid; we may even do some organizing against US investment in South Africa. But if our concept of racism/anti­racism is limited to such obvi­ous examples, it’s unlikely that we grasp racism’s breadth and subtlety, or perceive the social and economic forces that foster the de facto apartheid that creeps across every facet of our so­ciety.

Propuggling this lower case apartheid is what can be called liberal North, racism, it’s infinitely more destructive than the mal­ice of the Ku Klux Klan. Tunnel vision is a cultural ego­lism that only white history or suffering or interests or discoveries are worthy of notice. Most of us who grew up in white neighbor­hoods went to white version of life. Our openness to people of color was colored victories” at an early age. In my first fourteen years of school I had only three black classmates; I’ve never had a black teacher. I was nine­teen before I had my first con­versation with a black person. My first years of college were spent with the Jesuits in a love­ly enclave set off by walls and security police from the teem­ing inner city at its gate.

My first years of college were spent with the Jesuits in a love­ly enclave set off by walls and security police from the teem­ing inner city at its gate.

We were young, we had no control over our indoctrina­tion and so weren’t to blame for our tunnel vision. But now that we’re grown, we’re responsible for the kinds of callousness and ex­clusivity we choose to honor. Many of us, eagerly or unwill­ing­ly, fast along the main­stream that invalidates the lives of the disempowered. Their gifts and their rights, their needs and their pain are syste­matically negated, rendered in­visible.

What can we do to shed our self-constrived blinkers? What can we do to burst the bubble of our self-constrived segregation?

I can imagine a world where our society would engage in a pro­found exploration of the meaning of our history and our society. In such a world, we would look to the stories of those who have experienced our history and society, stories that have been suppressed, stories that have been written by others. We would engage in a process of self-examination, a process that would involve us in a re­consideration of our own role in the creation of a society that is oppres­sive to others.

Who’s No. 1 in College Football

WSU Final Stat

by Jimmy Cullen
Sports Contributor

The final standings in the WSC found Stevens Point placed with a 4-2 record. The Pointers finished the season behind La Crosse and two teams behind Whitewater. Both La Crosse and Whitewater advanced to the playoffs where Whitewater was eliminated in the quarterfinals and La Crosse advanced to the semifinals.

Stevens Point finished in the upper half of five of the six WSC team statistics for 1988. The Pointers were second in total offense with a game average of 333 yards a game. The Pointers were also first in passing in total offense behind Whitewater and Platteville.

Quarterback Kirk Baumgartner repeated last year’s performance by finishing first in passing offense with an average of 399.9 yards per game. Baumgartner also was first in passing in the WSC with three straight 300 yards per game. Jim Mars placed in four statistical categories. He finished first in passing yards per game, second in total offensive yards, third in touchowns with 84 total points, second in passing yards receiving with 84 total points, second in passing yards rushing with 84 total points, and second in passing yards receiving with 84 total points.

Stevens Point - For U.W. Stevens Point head coach Rick Witt, national competition is nothing new. When the Pointers cross county team came up with an impressive showing at the NCAA III Regional in La Crosse last weekend, it marked the eighteenth time in 11 years that his team has qualified for the Division III National Meet.

The Pointer hallchers will challenge the top points hunters at the Wisconsin State High School Field Park Course in St. Louis, Missouri on Saturday, Nov. 19. The men’s race will begin at 11 a.m. with the women’s run beginning an hour later.

Off coming off the best finish ever for a team at national (4th) last season, this year the team has improved as they are prepared to compete for team points and take home a state championship.

Panel Harriers Look for Top 10 Finish at Nationals

The Pointer Harriers who traveled to the UW-Oshkosh Field Course over the holiday weekend came home empty handed.

“We should have taken auto­ graf books and cameras,” Coach Loy stated. The competition was tough and the runners were in awe as they stood on the mats meeting Dan Cab­ ble, the Spanking Farmer and other Olympic Gold Medalists.

Points Meet Olympic Champions

The Pointer wrestlers traveled to the UW-Oshkosh Field Course over the holiday weekend, but came home empty handed.

(continued on page 14)

Sports

Hockey still undefeated

The Pointer Hockey team improved their record to 8-4 overall and 4-4 in the NCHA with their incredible two game sweep of the UMD Bulldogs last weekend.

Bemidji State produced an impressive hockey history with nine national championships under their belt and was defeated by a team a few years ago which would then have entered a 300 season acceptable.

The Pointers outshot Bemidji 41-30 in their victory and have a solid defense with Nick Krueger, Paul Barahona and Dietz. Senior Eric Fossum (142 lbs.), Jeff Borman, Scott Crone and Mike Green.

Errors were scored Saturday by Ralph Barahona, Scott Krueger, Paul Canfield and Joe Butcher. Sunday’s game saw Barahona score two, and Wheel­ er, Buha, Dietz and Wadron with one apiece.

Joe Butcher, who was coming off his two week layoff after suffering a fractured jaw, responded with his two points including the game winning goal with 2:58 to play in overtime. Barahona extended his point scoring streak to 29 games and tied his own school record by scoring a goal in his 30th straight game. The win broke the school record of 27 straight games set in 1986. The 16 shots on goal was the second lowest total any Pointer team has ever allowed.

Though the Pointers were eliminated by the final round, four wrestlers achieved victory by hiking 112 lb. Dibble, 146 lb. Doug Dietz, 170 lb. Bean and 184 lb. Jeff Borman.

"A lot of good came from this competition," Loy said. "With this, we’re in top form and the team is now prepared to compete for team points and take home a state championship."
Rap with Coach Miech

by Jimmy Cullen
Sports Contributor

"Offense wins football games but defense wins championships," stated Coach Miech as he summed up his team's 1988 football season, which ended with a 6-4 record. Miech said his team this year was to win the conference, even though he had a relatively inexperienced team coming off a season of adversity.

Adversity in the form of two ineligible players on last year's team, which resulted in Stevens Point suspending its national title. According to media guide of the NAIA, the Stevens Point's Athletic program was to have trouble surviving the year, much less have an opportunity for a playoff birth. Miech said, "The dedication and hard work of his football team enabled them to jell midway through the season and become united in their effort to make the playoffs." Miech also said, "It could have been very easy for the team to give up on the season after we lost to Whitewater and La Crosse, but the guys hung in there.

"It amazing that our offense, which only returned two senior starters, finished first in the nation in total passing yards and third in total offense. The players showed a lot of character to keep striving for a win, knowing they had to win in order to make the playoffs," coach Miech stated in regard to his team's late season charge for a hard fought playoff birth.

Miech suggested that if he could have done anything different during the season it would have been putting more of an emphasis on special teams play. Miech said, "Because we started off the season with tough games and games we had to play well offensively and defensively, I chose to pay the majority of the attention to our defense and offense, and thus our special teams play did not mature until the latter part of the season."

Coach Miech's three goals for the early part of next season are to have his players improve physically over the off-season, come into two-a-days (mid-August) with emphasis on winning the first game against St. Norberts and finally to win the first conference game against Wisconsin Platteville. Miech stated that if the Pointers are successful in the early part of the season, they may opt to try to gain a playoff spot in the NAIA Division III playoffs instead of the NAIA Division II playoffs, because the NCAA system provides its playoff teams with more benefits including extended media coverage. According to Miech, with better media coverage, schools have a chance to draw more quality players from across the state and country, which could help Stevens Point in the future to become more competitive.

Although the NCAA system enforces stricter drug codes than the NAIA system, Miech said, "This is not a problem at Stevens Point because I do not tolerate steroid use on my team."

The Pointers are losing six players who contributed greatly to this years team. Miech said, "With the return of Rick Roth on the defensive line and Tom Johnson, Rick Drey and Peter Lucas to the offensive line, we are looking forward to getting off to a quick winning start." Miech added, "Stevens Point is not known for winning early, but I will stress this in the practices next year and hopefully we will get the current starters to play better and help build a solid team."

Illegally-taken elephant ivory is selling at a record rate on the world market so elephants are being killed in Kenya. Poachers killed ten more elephants last week and saw off their tusks with chainsaws. One hundred and sixty elephants have been killed in Kenya since April. In the past 10 years Kenya's elephant population has dropped from 35,000 to 5,000. The most recent killings come on top of the slaughter of Kenya's last white rhinoceros three weeks ago.

Recycling grants are going to be available from the Wisconsin DNR. The grants will take care of half of the costs to develop new, local recycling projects to a limit of $75,000. The DNR would like to reduce the burden on landfills especially as sites become scarce and tipping costs go up. Paper, plastics and industrial wastes are going to be targeted for reuse. A state objective is to reduce the volume of landfill waste 50% by 1990.

Waste to energy is a topic now under consideration in Polk County. This would be the processing of current waste into a combustible material that could be mixed with coal. The University would use the fuel to produce electricity from a turbogenerator. Two problems are not yet solved: pollution standards and ash disposal. Proponents say most heavy metals should be removed in the sorting process. They also claim that better control over the fuel will create fewer pollution hazards.

"Worker worms" are another researcher's way of dealing with a growing trash problem. Jim McVetty says that worms can provide soil salvation and trash relief just by doing their job, eating organic material. He says two tons of worms will process one ton of waste per day from virtually any kind of organic material. The product of this work is a rich fertilizer made entirely by natural means. British and Italian researchers are also working on the possibility of "worm factories" to process organic waste.

There are many signs that the summer season is gone and it is time for the world to prepare for the cold of winter.

The days grow short and the nights are cold.

The leaves turn many shades of red and gold, before going to brown and falling to the ground.

The intermittent snows then come, blanketing the earth with a solid coat of white below, for the first few times, melting away to expose the ground below.

These are some of the signs that winter is on the way.

But one sign is more than all of the rest. One of nature's biggest mysteries, and one of her most fantastic spectacles, is announced by the doves. The doves make their annual migration southward.

As the autumn and winter grow near, an unknown signal is sent out to the doves. It is time to make the trip to wintering grounds further south.

The birds gather in their annual groups, which sometimes can number in the hundreds, and in a matter of minutes, take off to the south and fly toward the great ocean current. They are not just going to the colonies to roost. They are staying in the air current. They fly in a direct line from their colonies. They fly in an air current. They fly in the current of winds, the winds which affect the birds' flight. The birds are constantly adjusting their positions in relation to the surrounding flocks to take the greatest advantage of the air current. Thus, when it appears that one group of birds is flying faster than the others, they are actually remaining in the perfect form of the winds.

The doves often take their time right into the winter, as more flocks join a larger group at the wintering grounds.

Throughout North America, large numbers of the birds take over whole lakes, with so many birds present that at some times the sky is filled with them and some of the birds cannot even fly because the current of nature is such that it is virtually impossible to fly in the air current.

So, the birds migrate to the south, and in the winter they cannot fly because of the natural phenomenon of the winds. The winds are always working against the birds.
Reflections
from page 18

ing conditions throughout the
world.
In India, the a week monsoon
season has forced many landless
farm laborers and other poor
people away from agri-
cultural regions into other areas
of the country in search of
employment. The lack of jobs and
resources has forced many of
these people to sell themselves
to slavery and their female
children into forced prostitution
as their only way to survival.

Ethiopia, where over a mil-
lion people died in the 1984-85
drought, again was hardest hit by
the lack of rain. Food re-
sources are so low that it is
expected that the people there
will need at least 1.5 million
metric tons of food just to sur-
vive until the end of the year.

Throughout the world, the
poor weather has caused food
shortages, to the point where
the world’s food producers will
be unable to grow enough food
this year to meet the demands
of a hungry population.

As a result, the world’s sur-
plus of food supplies will have
to be invaded to feed the starv-
ing people. Two years ago, the
surplus of corn and grain in the
world approached 660 million
metric tons. By the end of 1987,
that surplus had dropped almost
to the 460 million mark. Be-
dides the drought, there are
two other factors which have
added to the decline in the food
surpluses. First, there has been
an increase in the amount of
meat consumed in third world.
While this leads to a drop in the
direct consumption of wheat, it
is actually an increase in grain
consumption as the production
of meat is an inefficient source
of food in relation to the grain
used to feed the animal.

Another reason for the drop in
food resources is the continued
population growth throughout
the world. Last year, global
population increased by approxi-
mately 80 million people and
now stands at over 5.1 billion
people. At the current growth
rate, population will surpass six
billion by the year 2000 and 10
billion by the end of the third
decade of the 21st century.

Washington, D.C.

Air quality

course offered

The Natural Resources
department at UWSP will offer a
course on Air Resources during
the second semester.

Natural Resources 357 will
cover how air quality affects
water, soil, wildlife and indus-
try.

Instructor Mike Ritter, a
member of the Air Resources
Committee, will also look at
the 1988 drought, the greenhouse
effect, and the depletion of the
ozone layer as effects of air
quality problems.

The three-credit course will
meet Tuesdays and Thursdays
from 11 a.m. to 12:15 p.m.

By Paula Kramer

Have you ever noticed how often men have tried to tell us what our "nature" as women should be? Here are a few examples:

"...it seems to me that God adapted women's nature to indoor and man's to outdoor work...As Nature has entrusted woman with guarding the household supplies, and a timid nature is no disadvantage in such a job, it has endowed woman with more fear than man...If anyone goes against the nature given him by God and leaves his appointed post...he will be punished..." (Xenophon, The Economist)

"...females are weaker and colder by nature; and we should look upon the female state as being it as a deformity, though one which occurs in the ordinary course of nature." (Aristotle, On the Generation of Animals)

"As regards the individual nature, woman is defective and misbegotten, for the active force in the male seed tends to the production of a perfect likeness in the masculine sex; while the production of woman comes from a defect in the active force or from some material indisposition, or even from some external influence. On the other hand, as regards human nature in general, woman is misbegotten, but is included in nature's intention as directed to the work of generation." (Aquinas, Summa Theologica)

"...but the natural reason is that she is more carnal than a man, as is clear from her many carnal abominations...All witchcraft comes from carnal lust, which is in women insatiable." (H. Kramer and J. Sprenger, Maleficarum)

"...men have larger heads and therefore have more brains and sense than women. The poets expressed this metaphysically when they said that Pallas Athena, goddess of wisdom, was born from the brain of Jupiter and had no mother; they meant to show that wisdom never comes from woman, whose nature is nearer to that of brute beasts." (J. Bodin, De la demonomanie des sorciers)

"...for as to works of genius, they are beyond their capacity; neither have they sufficient prevision or power of attention to succeed in sciences which require accuracy of knowledge and precise technical skill; but to physical knowledge, it belongs to those only who are most active, most inquisitive, who comprehend the greatest variety of objects; in short, it belongs to those who have the strongest powers, and who exercise them most, to judge the relations between sensible beings and the laws of nature...Women have most wit, men have most genius; women observe, men reason..." (Rousseau, Émile)

"...The female is naturally proper to be a wife; for as a pious mind. Her confining nature leads her more readily than men to accept the protected grace of the Gospel...Women possess a peculiar trait-modesty, which is one of the most charming of their attributes: springing probably from their natural timidity and sense of dependence, of which it is the ideal expression. All rude, bumptious, and immo­distant speech or action unsettle and disgraces woman." (C. Meigs, Woman: Her Diseases and Remedies)

If any of the above traits were inherent in our nature, no one would have to tell us or force us to behave in ways appropriate to those traits—we would behave that way on our own. Women's history has proven that such definitions of women's nature are untenable and restrictive. What is in our nature as women is anything we do, whether it be outdoor work, or devoting ourselves to a career rather than children, or scientific research, or staying single, or getting married and staying home with our children, or anything else that expresses our talents and choices.

The Women's Resource Center plans to celebrate our true nature as women by sponsoring and co-sponsoring programs that recognize our wide range of interests and talents. On Thursday, December 3rd at 2:00, the WRC (with the GPU) presents a talk by Woodwoman in the Communications Room of the UC. And on Thanksgiving weekend, the WRC presents Can't Lie Low, a women's folksinging trio in the first floor lounge of Nelson Hall. Admission is free for both programs. Join us now, and watch this column for notice of future programs.

Coors is Awarding Here

To be eligible for consideration, applicants must be 22 years of age or younger as of March 15, 1989, and already be enrolled full-time in an accredited four-year institution of higher education in the United States or an accredited two-year program leading to a four-year undergraduate degree.

Additionally, they must have a cumulative college grade point average of 3.0 or better on a 4.0 scale and be the son or daughter of one of the following: an Honorably Discharged American veteran, Active Duty military, Guard or Reserve military (minimum six years or called to Active Duty), or American service person killed in Action, Missing in Action or who has Died in the Line of Duty.

Scholarship applications are available at college and university financial aid offices, by calling 1-800-6COORS, or by writing Coors Veterans' Memorial Scholarship Fund, P.O. Box 3111, Northbrook, Ill. 60065. Deadline for completed applications is March 15, 1989.

Applications may also be obtained from the following veterans service organizations: Air Force Sergeants Association; American Ex-Prisoners of War; American GI Forum of the United States; American Legion; AMVETS; Blind Veterans Association; Catholic War Veterans, USA; Gold Star Wives of America; Jewish War Veterans of the United States of America; Marine Corps League; Military Order of the Purple Heart of the USA; National Association of State Directors of Veterans Affairs; National League of Families of American Prisoners and Missing in Southeast Asia; Paralyzed Veterans of America; Polish League of American Veterans, USA; Veterans of Foreign Wars of the United States; and Vietnam Veterans of America.

To date, Adolph Coors Company—America's fourth-largest brewer—has contributed more than $2 million to 487 students since the scholarship program began in 1985.

We've reformed the correction system.

Prisoners of old-fashioned correction systems, freedom is here—Smith Corona's Correcting Cassette means an end to twists, tangles and fumbles. It's an easy-to-load, drop-in correction tape you can insert in mere seconds. There are no spoils to unwind. No complicated threading. No more muttering under your breath. It's that simple. What's just as simple is our Right Ribbon System. It simply prevents you from using the wrong combination of ribbon and correcting cassette.

You'll find our Correcting Cassette and Right Ribbon System on the Smith Corona XL 2500 typewriter. You'll also find lots of other great features on the XL 2500—like the Spell-Right™ 50,000 word electronic dictionary, full line correction, WordEraser™ and more. You might expect a type-writer this sophisticated to cost a bundle, but the XL 2500 is surprisingly affordable. All of which makes it one of the best values you can find today. Case closed.
A Christmas Present

The University of Wisconsin-Stevens Point’s planetarium will offer two different programs on Christmas themes each of the next four Sunday afternoons.

"A Christmas Present" will be given at 1:30 p.m., geared for families. It is the story of a shuttle launch on Christmas Eve, during which an astronaut recalls a story his mother told him during his childhood about Christmas. The majority of the show follows this lead, according to Planetarium Director Randy Olsen, with the woman telling about the phenomenon in the skies as viewed by shepherds and Wisemen. The program ends with traditional Christmas songs.

At 3 p.m., "The Christmas Star" will feature an examination of the sky as it is believed to have appeared at the time of Christ’s birth 2,000 years ago. There will be a discussion of scientific possibilities for the bright light that occurred in the sky. Explanations include comets, planetary configurations and supernovas such as the recent one in the Large Magellenic Cloud.

To first showings will be Sunday afternoon, Nov. 27. The program will be repeated weekly through Dec. 11. Please contact the Planetarium office in the Fullerton Annex to reserve seats for both programs. There will be no admission charge and free parking will be provided in the lot across Reserve Street.

"A Christmas Present" has not been given for local audiences before; however, Olsen has been presenting his own version of "The Christmas Star" since his arrival on campus about four years ago. There have been several different "Christmas Star" programs since the planetarium shows were begun immediately after completion of the Science Building about 25 years ago.

First, in no way will I intimate that the Gay People's Union has ever been affiliated with the Rugby Club, or with ex-Rugby Club members named Adam who currently teach Communications 101, drive Volkswagons and who wear grey sweaters and turbansocks 90 percent of the time.

In no way will I suggest that, at any time in my life, I have ever seen anyone regurgitate either inside or within three furlongs of Buffy’s Bar. I will be careful to avoid negative statements regarding the members of the fine fraternities on this campus. In no way will I intimate that Greeks drink too much alcohol. In no way will I suggest that these boys are obnoxious and immature, in addition to being slimy republican bile. It would be extremely unfair of me to make these accusations, since I do not actually know any of these young men.

In no way do I support the opinion that anyone who concedes a woman’s decision to have an abortion is the equal of Adolf Hitler and/or Charles Manson.

Finally, I will not suggest that anyone who did not vote for George Bush is a democratic-liberal-communist-homosexual.

And now, on to my heartfelt opinions:

Opinion 1) Life’s a beach, and then you dive.

Opinion 2) Always keep a copy of your diary in a safety deposit box, so that when you are reincarnated, in case you can’t remember all the details of your current life, you can go to the safety deposit box, recover your diary and get a job with the National Enquirer writing about your past life.

Opinion 3) God does in fact exist. Last Sunday night, while watching ESPN Sunday Night Football, I was witness to Lawrence Taylor of the New York Giants praying for his team in the huddle before the kickoff. The kicker made the field goal and the Giants won the game, therefore God exists.

Opinion 4) Does Geraldo stink, or what?

Opinion 5) The current practice of allowing professional hockey players to fight until they fall to the ice should be amended. Every fight should, in my opinion, be a fight to the death. Not only would this be a treat for the spectators, but the length of each game would be extended, thus allowing for more commercials during the television broadcasts; and, as we all know, without commercials, where would America be today?

Opinion 6) Yes, television is more addictive than nicotine. The shows highest in tar and nicotine include 1.) Days, 2.) All my kids and 3.) The NFL on CBS.

Opinion 7) AIDS from a toilet seat? Get serious! Thought for the week: as you sit and gaze at your television, how do you know that there is not someone watching you?
ATTENTION ENGLISH MAJORS There will be a preregistration for English majors, minors and writing minors. Anyone wishing to preregister for English courses for second semester, 1988-89 should go to the English Department, 454 CC, December 5-9, Hours are 3:30-11:30 am and 1:00-4:00 pm.

SKI VAIL-The UWSF Ski Club is sponsoring a trip to Vail, Colorado, Jan. 7-13. Includes transportation, 6 nights lodging and 5 or 6 day lift pass. Cost is $365/22. Sign up at Campus Activities. For more info call Mark at 341-0761 or Jesse at 341-9463.

If you have returned to recycling aluminum cans to pay for your phone bill? The cheapest way to phone home is to see UAB's presentation of E.T. Sat. Dec. 3 8:30 and Sun. Dec. 11 1:15. Both in the Wisconsin Room $1.75.

UAB Visual Arts $1.00 for kids under 12. Mom and Dad won't let you get a family pet. Well some parents are nice. Come and see Harry and The Hendersons tonele 8:15 Wisconsin Room. UAB Visual Arts Pictures with Santa! You mean I can have my picture taken with Santa here at UWSF?!? Yes, Virginia you can Dec. 9 from 14-30-2:30, Santa will be making a special appearance at the landing of the UC by Corner Market. Due to his appearance during daylight hours, a $2 charge will be placed. Spon­ored by ACT.

FOR SALE / RENT

Previously owned stereo equipment. Commercial and home units. Mixers, amplifiers, turntables, cassette decks, speakers BOSE, JBL, Yamaha. Tear, Bic. Call 346-9448, ask for Chris or Conrad.

Female roommate needed. Second semester single room. $750 per semester. Call 341-2499.

For Rent Male-second semester-share a really nice house, very near campus. $450. 341-3184.

Classified ads and personals can be placed in The Pointer free of charge, but since they are placed in leftover blank space in each issue, we cannot guarantee that they will be run. If you find that your classified, or personal ad has not run we suggest that you keep trying.

Have a great next semes­ter. We'll miss you! The Happy House Sammy, Where are you? You've left my life barren of controver­sity and boring to the touch. Please come back w/your cute little goggled eye and remem­ber. A broken hip is worth a trip to the Martini Factory. Had Banned. A Rising force dig it, live it, be it, listen! Mitch, Cheo and Kathy You are the best! Thad Hey Mike are you going to see ET this week? 7:30 or 8:00 or Sun:13: Wisconsin Room.

Julie-of-course I'm going to see ET I wouldn't miss it for the world.

Eva Marie need to relax to a great comedy? Come with me and see Harry and the Hendersons tonele 8:15 Wisconsin Room. Hey Maggie! Know that picture your little brother keeps hugging you for? Well, you can have your picture taken with Santa on Dec. 8, at the landing outside of Corner Market. What better a present for little bro' than a picture of you!?!?

Mamps, I hope you know you're loved. Harold

Bags: Thanks for the help in Combs, Oh... yea, Nate you look swell in those white shorts, let that hang out. Sinecy calves, swiney calves, where's the man with the sinecy calves?

Troy Cetic Sax: Roses are red, Violets are blue, I saw U2 and Bonzo is a lot cooler than you.

Mosh Man-chans for 11/20/88 (one of the best days and nights of my life). Kirkirk Shrah and the ride home-pure ecstasy!! I wanna Mosh it up with you-name the date & the place & you know I'll be there!! Let's trash over break in Mil­waukee!!! Ragin Rander

Dochess, the first year has been like the Rose Bowl, I'm thankful for you everyday. You're the only Wolverine I'll ever want. Duke

Ken-so, how about our Friday afternoon date, you promised me twice, remember?? I missed you over break, even if you didn't. I'll Congrats on the nice dog (oops) I mean dog you got last Wednesday. You're such a hunter! Don't get mad. Love ya! JILL

CLASSIFIEDS

ANNOUNCEMENTS

The Christmas tree at the Madison, the beauty of Hill Memorial in the Little Theater region and the old-fashioned tradition of Point Special beer... all hang on in Wisconsin and each produced solely and painstakingly to ensure quality results. But whatever your major Wisconsin points of course... the lights are on in the halls or that first hour at the local pub... make it Point Special beer. Most people are just pleased to find another feeling in all that world that makes the taste of an old Point beer go down.

It's the only major Point we know of that really gives you a good point.
