Property tax quarrels delay state budget

by Karen Rivedal

Editor

Republican Governor Thomas Thompson has until May 13 to sign or veto the 1988-89 state budget bill passed by the Democratic-controlled Legislature. The proposed measure contains $334 million in property tax relief, no state tax increases, an early end to the state's mandatory seat belt law, and a ban on hard-core pornography.

It may also earn a full or partial gubernatorial veto, because the bill falls far short of the governor's goals for property tax relief and contains less stringent controls on local spending.

"Everybody knows," said Thompson after receiving the plan, "that the proposal that was sent to me doesn't have any type of property-tax relief in it and I think the people are asking for it."

The Governor presented his own budget and property tax relief plan early in the year, and debate among legislators over the methods of tax relief has followed. Thompson's plan reduced the property tax load on citizens by increasing other taxes and strictly limiting spending by local municipalities, who assess the property tax and use its revenue to fund government, and the school system.

Most Democrats, including Speaker Thomas Loftus (D-Sum Prairie) who said the governor's plan "was dead on arrival" because of the $250 million tax increase, felt Thompson's plan was over-dramatic, even though it provided $257 million in property tax relief, or a twenty percent decrease in rates state-wide.

The Democrats fashioned and passed by majority the property tax plan currently before the governor. It gives property tax breaks to low income farmers and homeowners.

"Emerging Leaders" program planned

by Ginger Edwards

Staff writer

A comprehensive Leadership Program is underway at UW-Stevens Point. The program, developed by Student Life, is geared to new leaders. The objective of the courses is to get students involved in leadership positions and activities early in their college careers.

There are four phases which are currently being considered in the program. Phase One is entitled Emerging Leaders. Freshmen will be the target candidates. The class will begin in November of 1988 and last until the middle of second semester. It will meet on Thursday nights in the University Center. There will not be credit given for Phase One.

Those who complete Phase One will then be given the opportunity to move into phase two, Leadership: The Personal Dimension. Three credits can be earned for this Phase. Participants will be brought from other areas. They will also attend a seminar.

According to Scott West, head of student leadership at UWSP, Phases Three and Four are not completely set at this time. However, plans are being made to continue with the program through Phase Four. (The Final Turn to page 4

Domestic violence affects the entire family

by Sharon Hallett

Staff writer

Domestic violence is the leading cause of injury to women. This violence has serious affects on the whole family. Children who are raised in violent homes will likely grow up to be abusive adults.

Melissa Martin, a counselor from the Family Crisis Center, discussed domestic violence recently. She told the audience that every 18 seconds a woman is battered. Furthermore, the victim usually grows up in a violent home. Fifty percent of the women, and ninety percent of the men involved, witnessed domestic violence as a child.

The batterer generally feels weak, powerless, dependent and possessive. He will isolate his wife from family and friends by moving to the country and leaving her without a car. He finds it difficult to express his feelings and has rigid ideas about sex roles.

The victim believes men to be superior and feels she must submit to the abuser because he is supporting her. She usually has low self-esteem because the only feedback she receives is from her husband.

"Children in domestic violence situations are also in danger," Martin stressed. The oldest daughter can become an incest victim because she takes on the responsibilities of her mother. Boys in this situation will identify with their mother and try to help but may eventually accept it and later beat their own spouse.

Where can people turn to help in this situation? The Family Crisis Center. The Center is located at 1503 Water Street, Stevens Point. The Center will provide services for the entire family involved in domestic violence. Shelter for the abused woman and her children is offered. Although the address of the Crisis is not confidential (because of other services offered) it is a safe place for...
Major Points Of Interest In Wisconsin.
United Council looks back, plans ahead

Students lobby for $1.4 million financial aid increase

by Karen Rivdal

Editor

A $1.4 million increase in state monies for financial aid programs is one bright spot for students in the proposed 1988-89 state budget. (See chart) The aid amount won't be certain until the budget bill is signed by Governor Thompson, but student lobbyists are confident of success.

"Compared to the overall budget," said United Council President Adrian Serrano, "$1.4 million is not a lot of money to ask for. None of our requests were controversial."

United Council is the largest student lobbying organization in the state. Its approximately 134,000 members include most UW System enrollees. UW-Stevens Point is a member campus; all students pay fifty cents per semester in a segregated fee to belong.

United Council staff members work from their Madison-based office to lobby lawmakers on educational issues. Budget negotiations are an especially active lobbying period.

This year, Serrano said staff members were "just chipping away" to secure favorable votes at succeeding levels of state government. "We lobbied the governor first, then Joint Finance, then the assembly and the senate to increase aid programs. The increases have a very likely chance of staying in tact."

The Wisconsin Higher Education Grant (WHSEG) is the main general student grant program. United Council had initially sought a ten percent increase in this program. six percent to offset anticipated tuition increases and four percent for inflation. The organization has since settled for the proposed 5.7 percent.

Other state financial aid programs available in full or part to UW students include the Talented Investigative Project, the Differential-Abbey Grant, the Indian Grant, the Advanced Opportunity Program, the Laughton Underserved Minority Retention Grant, and work study. Remaining programs serve vocational-technical school students or private school students exclusively.

United Council representatives seem comfortable with this year's expected tuition hike as well, levied at 4.4 percent higher than last year's fee at the cluster universities, 4.1 percent at centers, and 4.7 percent at Madison and Milwaukee.

"We haven't actively opposed the tuition increase, and we're not planning on it, because it's finally at a level that's almost unexpected," Serrano said.

SGA picks student insurance

by Blair Cleary

Staff writer

Next year's student health insurance company again will be Blue Cross and Blue Shield United. The insurance is a service coordinated by the UW-Stevens Point Student Government Association.

Two other insurance corporations, Security Life and Parker & Parker, put in bids for the UW-Stevens Point contract.

According to SGA Executive Director Mike Mikales, Blue Cross offered the best coverage for the dollar. He stressed that none of these insurance companies were in this for a profit: "At best they're going to break even."

The Blue Cross plan will cost slightly more this coming year than it did this year. The increase was attributed to state-mandated items the policy must cover, an overall increase in coverage, and a projected increase in the number of student customers.

The price of next year's insurance will be $299 for a single person and $500 if a spouse is included. A whole family could run roughly $600. The coverage will run from September 1, 1988 until August 31, 1989.

Student health insurance is much like regular health insurance. It covers medical items ranging from oral surgery to ambulance rides to fatality re-patriation.

Mikales estimates that 600 students look at the student health insurance policy this year. Between 38 and 56 percent are foreign students, who require insurance by federal law.

United Council News

Current UC Legislative Affairs Director Jim Smith will be elected President of United Council for the upcoming year. After a grueling three hour election process, Smith won the majority vote of those attending the General Assembly meeting. Because only 77 members of the General Assembly were at the meeting and a majority vote of 60 was needed to win a presidential election, election rule 18.11. was suspended after the fifth ballot. This rule stated that the president must be elected by the majority vote of the entire General Assembly, whether they are present or not.

The other candidates running for president were Steve Cady, current vice-president of United Council and President of Stevens Point student government, and David Woldseh, current Legislative Affairs Director of UW Madison student government. Both candidates dropped out of the election before the third ballot. However, internal bickering within the General Assembly preceded quick, concrete election results.

After the sixth ballot was cast, Smith was officially declared new UC president. Although the outcome was a long time coming, Smith told the General Assembly he was ready to move forward with plans for the upcoming year.

"In the same way in which we've gained credibility within the Legislature, we're going to gain credibility as the campus next year," Smith said.

United Council chooses Jim Smith for President

Proposed state financial aid program increases for 1988-89

United States News Service

UWSP News Service

Officials at the UWSP expect "a curtail acceptance of freshman applications for the fall semester in little more than one week from now."

Mei Karg, director of high school relations, said that if students haven't begun the application process, they need to act immediately because it may take several days to finalize. In addition, the university requires that each applicant pay a $100 deposit.

The freshman class at UWSP will be limited to 1,170 students this fall, as it was last year. Last year, when tight admissions requirements were in force, the average academic standing of the freshmen was the top one-third of their high school graduating classes. This year, the requirements were slightly more stringent.

Tiresay observed that had UWSP not required new freshmen to rank in the top 50 percent of their senior classes or have high ACT test scores, the available seats for fall could have been filled by better qualified candidates.
The fall season traditionally brings to campus a new flock of freshmen, new coursework, a couple of new teachers, and the new fall fee rates. Tuition will increase 4.4 percent next semester, or about $41, at this university and most other four-year UW systems. The State Legislature decided that.

Internally-determined, on-campus fee increases for next year will claim most other areas as well, including residence halls, food, service, and segregated fees. These areas typically receive no state tax dollars; student and other user fees support them.

By an accident of age and requirement, freshmen and sophomore students are the most heavily charged enrollees on campus. A double room for a year will cost just over $100 more next semester. Food service will charge a standard $40 increase no matter what the food plan. And segregated fees are to increase overall at an average rate of 4.3 percent, or $12.

Cost of living increases, declining enrollments, administrative chargebacks, and the relative cost reduction for the same quality

Analytical administrative chargebacks are seen by some as a new way for university administrators to get more for their budgeted back at the expense of students. Since auxiliaries run on student fees, money paid out in charges is provided by students.

Chargebacks were assessed for the first time at UW-Stevens Point last academic year, were changed again this year, and could continue indefinitely.

Some auxiliary-area administrators say they have raised student fees to cover this new expense. Here’s what administrators had to say about fee increases:

Health Service: Dr. Hettl determines the Health Service budget. “We used the same figures they told us to use. We also paid in the chargeback. If the chargeback went out, we could obviously reduce the 6.7 percent charge.

Food service—Bob Buech supervises the University Center, saying food service is $158 the same cost for all the plans (this year). The basis was that students wanted more flexibility. The Any Five Plus Plans is the new one this year, a student can eat any five meals they want a week at Debit or Allen, for unlimited seconds and a large variety, and the rest are points. That’s what we’re hearing from students, that they’d like to go there once a day, really show down, but for the rest want flexibility.

Counseling: Comprehensive administrative chargebacks are seen by some as a new way for university administrators to get more for their budgeted back at the expense of the students. Since auxiliaries run on student fees, money paid out in charges is provided by students.

Chargebacks were assessed for the first time at UW-Stevens Point last academic year, were changed again this year, and could continue indefinitely. Some auxiliary-area administrators say they have raised student fees to cover this new expense.

New for the halls next year: cable television, two upperclass halls, Baldwin and Ryser.

The enrollment cut is a factor because it reduces revenue in all areas. And the way that’s made up is in an increase in the fees. If we didn’t have chargebacks assessed, the increase wouldn’t be as high. The main thing, though, is this drop in enrollment. The cost of living increase is exacerbated by having the cost of a smaller student body.

The 1978-79... from page 1

The Family Crisis Center has provided community services since 1979, and is operated by CAP Services, Inc. It is funded in part by the United Way of Portage County, through contracts with other social service agencies and by donations from community groups and individuals.

Services are offered free and are available twenty-four hours a day by a team of professional trained counselors and trained volunteers.

Leaders

Teacher assistants, from page 1

Teacher assistants, from page 1

Sixteen-week discussion sessions. Since Comm. 191 is a GDR requirement and incoming freshmen would be forced to take it, many would also be forced to have a TA or graduate student teach their class.

"One person might get a section that would be taught by a professor, while another might be forced to take a section led by TA," Mikalsen said.

The argument is that students are paying the same amount of money and not receiving the same quality education. And one of the attractions to UW-Eau Claire is that, in contrast to campuses such as Madison, most of the classes are said to be taught by professional educators and not assistants.

Next year, approximately one to three sections, will be led by a TA or graduate student. The TAs would have strong control over grades because seventy-five percent of it is based on speeches and class participation. These students will go through a screening process, followed by a one-week training sessions for the students chosen.

At present, the university is held on whether or not to hire more TAs. For now, the issue is dead until the fall when SCA meets again.

The School of Architecture and Urban Planning offers four new courses that will be taught by a team of professional trained counselors and trained volunteers.

Leaders

from page 1

Fronter! Phase Four will be a leadership training and development program. Participation in this phase will be able to take back to their homes and share those who are entering Phase One.

Student Life now has a proposal for the course syllabus. It is waiting to be approved for the start of Phase One in November.

Jonathan Edwards may have rolled over in his grave on Tuesday when the annual antics of Brother Jim and Sister Pat stirred the University of Wisconsin-Stevens Point campus.

The well-known evangelists set up shop on the sundial and, in no time, had an audience of hundreds assembled in the afternoon sun.

Brother Jim drew cheers and laughter as he told the story of how he was saved from a life of drugs, sex, and rock 'n' roll at a Van Halen concert. "The VAN Haalaan concert changed my life. I saw my god, David Lee Roth up on the stage with a bottle of Jack Daniels in one hand and a joint of m-a-r-a-juna in the other. When he blasphemed against the Lord I cried out in repentance."

"Lusty, Lusty, Lusteeeee!" was the cry from Brother Jim as women with high hemlines made their way past the show. Jim warned us of all the dangerous HO-360 sexuals in the wicked state of Wisconsin.

SIN.

Many attendees challenged Jim's views on such issues as sex, drugs, and rock 'n' roll at other years' events. Although they weren't as illustrous, they certainly provided the controversy. Many students vehemently argued and quoted verses, while others were merely contented with the show.

I was fortunate enough to meet with Sisters Mary and Pat to ask a few questions after their bible-thumping session.

"I am no longer a born-again virgin. I think you can see a big difference in the students' interest. They seem more willing to listen than in years past."

Sister Pat: "To what church do you belong?"

Sister Lampereur: "We belong to no church. We are Christians. When we were young we were taught to go to church and never to go again. We were never really Christians until we were reborn." Lampereur: "One last question. How does one become a born-again virgin?"

Sister Lampereur: "When you repent your sin of fornication God takes away the guilt but not the shame. Shame is what you have to live with after the sin. When you repent for your sins and become a born-again Christian, you really start walking a different route. Students' parents can't deal with their drunkenness and fornication. Their professors don't have the time. Their so-called priests and pastors aren't close enough with them and their peers aren't qualified to give them counsel. We hope to act as big brothers and big sisters to them to get their feelings out in the open."

These are some of the staff who've brought you the Pointer this semester. Front Row, left to right - seated Bryant Ech, Tony Wood, Jim Mahweie, Karen Rivedal, Gabrielle Wyant - Peril- lee, Paul Jankowski, and Sharon Hallett. Second Row, left to right - seated Bill Kiehner, John Lampereur, Dawn Halberg, and Paul Lehman, Pete Kelly, and Rob Hynek. Last Row, Standing - Scott Huelkamp, Rich Feldhaus, and Cynthia Hyres. Gabrielle was elected Editor of the paper for next year by the Publications Board yesterday.

Brother Jim and Sister Pat visit UWSP

By John Lampereur

"Lusty, lusty, lusteeeee!" was the cry from Brother Jim as women with high hemlines made their way past the show. Jim warned us of all the dangerous HO-360 sexuals in the wicked state of Wisconsin.

Jim preached against the sinfulness of touching or kissing members of the opposite gender before marriage. On the controversial issue of artificial in-vitro fertilization Jim stated that it was no-no because "a man has to masturbate to do it."

Jim gave the audience his formerly-employed 3 step method to fornicational success. He described in detail how he used this process before he became a "born-again virgin."

Sister Lampereur: "Why do you come to Stevens Point of all places?"

Sister Lampereur: "How have the students received you compared to other years?"

Sister Pat: "Our visits have been successful. They seem more willing to listen than in years past."

Sister Lampereur: "To what church do you belong?"

Sister Lampereur: "We belong to no church. We are Christians. When we were young we went to church like many of the people here, but we never really believed until we were reborn."

Lampereur: "One last question. How does one become a born-again virgin?"

Lampereur: "When you repent your sin of fornication God takes away the guilt but not the shame. Shame is what you have to live with after the sin. When you repent for your sins and become a born-again Christian, you really start walking a different route. Students' parents can't deal with their drunkenness and fornication. Their professors don't have the time. Their so-called priests and pastors aren't close enough with them and their peers aren't qualified to give them counsel. We hope to act as big brothers and big sisters to them to get their feelings out in the open."

UWSP HUNGER CLEANUP

ire un for next year's project

April 22, 198... in conjunction with Earthweek.
**Nationwide study shows UW salaries lagging again**

State officials were told recently the gains of catch-up pay have been eroded and average salaries of faculty and academic staff in the University of Wisconsin System are lagging behind national averages again.

The finding was based on national information the UW System forwarded to the Department of Employment Relations (DER) from the American Association of University Professors (AAUP). The DER is under a directive from the Legislature's Joint Committee on Employment Relations to update the faculty salary comparisons used in the compensation study that produced the 1985-86 catch-up plan.

UW System President Ken Shaw said that in forwarding the AAUP and academic staff salary information, the university had met a commitment to make comparative data available. "The department will review our preliminary conclusions, do its own analysis, and report to the Legislature," he said.

The university report noted "substantial steps" were taken in the 1985-86 biennium to improve the competitive position of faculty and academic staff salaries, but added: "In 1987-88, UW faculty average salaries are again below the midpoint of the average salaries by rank of the peer group institutions. This is the impact of the two percent pay plan increase in 1987-88 UW System faculty as compared to increases of 5 to 7 percent at the peer institutions."

The report said the two percent increase set for 1988-89 while peer institutions receive increases expected to compare to their 1987-88 levels—will further erode Wisconsin's competitive standing.

The AAUP findings placed salaries for faculty throughout the UW System an average of 3.25 percent below peer institutions. UW-Madison was found to be the furthest behind at 4.17 percent. The lag was 3.37 for UW-Milwaukee, 2.04 percent for other universities, 2.96 percent for the centers, and 3.88 percent for extension.

A report from the Towers, Perrin, Forster & Crosby consulting firm, which compared UW System academic staff salaries with the 1987-88 external job market in higher education, concluded that overall academic staff salaries have fallen 4.77 percent below competitive levels. The UW System calculates the shortfall for academic staff at UW-Madison is exactly 4.77 percent, for UW-Milwaukee 3.79 percent, and for the comprehensive universities, UW-Extension and the UW Centers 3.01 percent.

Shaw said the drop in salary rankings for Wisconsin was "entirely predictable" and should not be any surprise to state officials. "In our meetings with the governor and key legislators," he said, "we have stressed the importance of a state budget committed to faculty and academic staff salaries that will assure continued quality education and service— and the response has been generally favorable and positive."

Regent President Laurence A. Weinstein noted the Board had made faculty and academic staff compensation its number one priority in the coming biennium long before the AAUP findings were made public.

"The AAUP report and academic staff salary data make it clear that we are not competing..." Turn to page 17

**Voluntary commencement prayer "dead"**

**By Paul Jankowski**

News Editor

The issue of a voluntary commencement prayer is "dead" for this year, according to Mike Mikalsen, outgoing Executive Director for Student Government Association.

Recently SGA passed a resolution favoring the reinstatement of a voluntary prayer at commencement. This resolution was forwarded to the University Affairs Committee where it was tabled last week. After this, Mikalsen and Mark Murphy, Speaker of the Senate, said that they would introduce a new motion from SGA containing the gist of the tabled one. They had hoped to bring this "new" motion up at either the University Affairs Committee meeting last Tuesday or the Faculty Senate meeting yesterday.

Unfortunately for them, their new motion was defeated at last week's Student Senate meeting.

Brenda Leasy, the new President of SGA, says that she will not take any action on the issue until next year, or unless she is specifically requested to do so by the Senate.

Leasy noted that this issue should be resolved through the use of "proper channels." Leasy also added that by slowing the process down, it would be beneficial to the interests of all the people involved with the issue.

**1988 Survey: Student leaders and editors speak out**

**National On-Campus Reports**

In its 1988 annual survey, National On-Campus Report sent questionnaires in late February to 1580 student government leaders and 990 campus newspaper editors. The response rate from both was 21 percent. The survey isn't a scientific poll, but indicates general trends.

If student government leaders have their way, Vice President George Bush will be our next president. He was clearly the favorite among leaders who responded to National On-Campus Report's 1988 survey.

It's still unclear who the winner will be among all editors and leaders in November, because so many editors haven't made up their minds. However, since most of them chose a Democrat, and since Gov. Michael Dukakis gathered the most Democratic votes he should have the edge among editors.

The real question, of course, is who will win the student vote in November. Or, what do the editors or the student leaders—best represents the overall college vote?

A Newsweek on Campus poll last fall reported an increase in the number of Republicans on campus since 1984 (15 to 24)

One student's adventure

By Paul Lehman

Staff Writer

Registering for fall classes can be a trying experience.
9:45. I stood outside of Quandt in a line comprised of people who looked even more hangover than I did. I had my packet and guarded it with my life, out of the fear that someone might try to steal my precious pink permit-

9:56. The doors opened and the crowd started to file in. About five minutes passed before I finally reached the person who stamped my green card and checked my permit to register. The first thing I did was to go to the English table and pick up my preregistration packet. My next task was a bit more difficult. I had to get into Communications 101, a class I've been putting off for three years.
10:00. I got into the Comm. 101 line. 10:00-10:15. I waited in the Comm. 101 line.
10:22. There are only two people between me and the table when they close my line and asked for Communications 101. I'm not going to be at the Comm. 101 line.
10:39. I waited in line for Communications 101. There are only two people waiting in front of me.
10:46. I got the card and left Quandt with twelve credits, promising myself that I would add more.

Schedule.
10:39. I found an empty space at the tables in the middle of the gym and tried to find another section that would fit my schedule.
10:40. I was still looking.
10:45. Discouraged, I decide to put it off for another year. At almost the same time, the girl I was going with at the beginning of the semester sat down in the seat across from me. She smiled and obviously decided I wasn't suffering enough. She told me how wonderful her life was since she left me and how much she is looking forward to spending a summer full of sin with her new boyfriend.
10:46. I looked for a suicide prevention class. None were offered so I decided to take art appreciation, even though it doesn't fit into my major.
10:47. I got the art appreciation class and proceeded to the chemistry table.
10:48. I got to the head of the line and asked for Chemistry 106. The man on the other side of the table was my Chemistry 106 professor. He pulled me aside and informed me that due to my terminal absenteeism, I had put my grade in jeopardy, and that it would be wise not to register for Chem 106 at that time.
10:50. I decided to take music appreciation, even though it had nothing to do with my major. I got the card and left Quandt with twelve credits, promising myself that I would add more in the fall.

These experiences may soon be a thing of the past. Registration in the future could be completely different if all goes as it should.

"Dad was right. You get what you pay for."

More people choose AT&T over any other long distance service. Because, with AT&T, it costs less than you think to get the service you expect, like clearer connections, 24-hour AT&T operator assistance, instant credit on wrong numbers. And the assurance that we can put virtually every one of your calls through the first time. That's the genius of the AT&T World Wide Intelligent Network.

So when it's time to make a choice, remember, it pays to choose AT&T.

Greg Riley - University of North Carolina-Class of 1989
Bratfest has returned

by Jim Malzewski

Features Editor

The sun is shining on Bratfest once again.

Last Saturday marked the return of the once annual, spring heat and beer festival after its one year layover. With sunny skies and temperatures in the 70's, nearly 300 students played volleyball, ate brats, soaked up rays, danced and, of course, drank beer. The event took place at The Cabin and, as usual, was sponsored by Sigma Tau Gamma.

Fraternity members, students, The Cabin, and city officials all seemed very pleased with this year's results. Fights and public disturbances, Bratfest's biggest problem in the past, were absent from this year's celebration, according to Sigma Tau past president, Bernie Benson.

The entire operation, said Benson, ran as smooth as silk. Although the fraternity anticipated a slight loss, when all the receipts are finally totaled, he said that they are still glad it took place. "We were kind of tired of getting kicked around," said Benson. "It was good for our self-esteem to have it."

Benson was optimistic about next year's Bratfest, saying that the fraternity wanted to work with the city instead of being opposed in one another. This year's Bratfest was left up in the air until two weeks prior to its scheduled date because of problems in obtaining a liquor license. The fraternity was denied a license by both the city of Stevens Point and the town of Hull. Finally, the fest was sidelined by using The Cabin's license.

Benson said that the fraternity hopes to have 800 in attendance at next year's fest. "We'll slowly build up again," said Benson.

Scenes from Bratfest '88

It was a great year, except...

As I tried to explain to you last January, time really does fly.

Look where we are: In a week most of us will be completely done with the 1987-88 school year. Our books will be strewn throughout the return tables in the bookstore, our final answers will be blackened in on computerized test sheets, and a majority of the facts we have learned will be thrown into the "Oh, I know that...but I can't remember" section of our brains.

School is over. At a time like this it's only natural to look back on the past year. You know, take time out to get sentimental, reflect on your accomplishments. Of course, by accomplishments I mean academic or career successes. Not how many happy hours you went to and still managed to get a D in Math 31, although I guess that is an academic achievement for some. Or not how many times you got laid. And definitely not how many bras you consumed at Bratfest.

Academic achievements are things like the number of times you said hi to a prof that you despised. Or the number of times you got a D in Math 31, although I guess that is an academic achievement for some. Or not how many times you got laid. And definitely not how many bras you consumed at Bratfest.

Academic achievements are things like the number of times you said hi to a prof that you despised. Or the number of times you got laid. And definitely not how many bras you consumed at Bratfest.

Cohabitation: Nylons, beer and dirty underwear

by Kathy Phillipi

Staff writer

So you’ve decided to live together. All your friends are doing it, and your friends’ friends. Why not you? This year over one million American couples will live together without benefit of marriage. Is cohabitation really for you? If so, how do you convince your parents? What arguments do you use?

First, you must ask yourself, am I a Type A or a Type B personality? Type B personalities squeeze toothpaste from the middle of the tube and never replace the cap promptly after use. Type B’s never put the toilet seat down after use, or if they do, they forget to flush the toilet. Type A’s don’t go to the bathroom; they don’t have time.

As you can see, Type A and Type B personalities are remarkably different. Type B is laid back, patient and tolerant of others. But he also tends to be careless, unorganized and sloppy. Type A is upright, anxious and often hostile toward others. But he is also efficient, organized, and meticulous. Ideally, Type A’s should always stick with other Type A’s and Type B’s with their counterparts. However, the law of attraction of opposites usually assures that A’s and B’s end up together in the long run.

You may want to take time out to evaluate both you and your mate’s personalities before you hang up your pasty hose on the shower rod in the bathroom, and before he makes a home for his dirty socks in a remote corner of the bedroom. Are you tolerant of each other’s little quirks? Are you open-minded? Are you willing to compromise?

If you answered “yes” to all of these questions, you’re probably ready to take the big step. If not, you may want to rethink this move.

Another factor you’ll want to consider before moving in is the lifestyles that you and your mate are accustomed to. You may not take kindly to his beer-guzzling buddies invading your space every weekend and he may find your nights out with the girls a bit too frequent. If freedom is a high priority for you and you are adamant about maintaining your “space,” you may find yourself climbing the walls of your newly confining quarters. Finally, those of you who enjoy a lavish lifestyle may need to tighten your belt a bit, as shared expenses sap your financial reserves.

Whatever your lifestyle may entail, it’s imperative that you discuss it with your mate beforehand and resolve any differences. Compromise will play a key role. If you are willing to adjust your lifestyle to that of your mate’s, then you’ll have no problems. However, if you go into the relationship expecting the other person to change his ways, you’re sure to run into trouble. Cohabitation requires give and take from both of you.

If, after personality and lifestyle evaluations, you’re still bound and determined to give cohabitation a try, then by all means don’t let anyone stand in your way. You’ve convinced yourselves that this is the right thing for you; all that’s left now is convincing the folks.

Unless you parents are extremely open-minded, or unless you have something on them (i.e. blackmail material), you may have a difficult time. It’s best not to present your argument the day after your mother’s 30th class reunion at which she was the only one to show up in ankle socks and a hoop skirt in the style of the ’30s or during the ninth inning of the World Series with the score tied. No, it’s best to pick a time when both are calm, relaxed (maybe drugged) and able to focus their full attention on you. Perhaps February 29.

The presentation of your argument will proceed smoothly if you keep in mind your audience and their concerns. The following argument addresses the social, financial, legal, moral and emotional concerns that cohabitation fosters.

In 1962, a Barnard coed was expelled from school because she lived with a graduate student in an apartment off campus. Sixteen years later, in 1988, cohabitation has become an established part of the courting process, as people recognize students’ biological and ideological readiness for sex by the time they enter college.

Other strides have also been taken toward the reception of cohabitation as an alternative living arrangement. Improved forms of contraception are available on many campuses.

GOOD LUCK ON FINALS!
Fuel yourself for exams

by Toni L. Wood, R.D

Staff Writer

Tomorrow is the last day of classes. Finals begin Monday and most students are settling into the all too familiar routine of studying for exams.

During finals, there never seems to be enough hours in the day and if you're like most students, a seemingly unbelieveable amount of work remains to be accomplished. Exams, papers and projects require that you be focused and alert. The demands and stresses of finals week can lead to erratic eating habits which may result in missed meals, an intake of too many "empty calories" and excess caffeine.

if possible, try to maintain regular eating and exercise habits during this potentially stressful time. Established healthy habits will help you maintain the energy level you need to make it through the week and take the edge off the stress. Common sense would dictate that a balanced diet will provide necessary energy and optimal nutrition. You can't be at your best if you're not appropriately fueled.

Empty calorie, high sugar, high fat snacks have few nutrients and are no substitute for adequate meals. Snack foods that are laden with concentrated sugars will give you only a temporary energy lift. If you consume a candy bar or a rich dessert, for example, your blood sugar will rapidly rise and give you a short burst of energy. However, in response your pancreas will release insulin which will rapidly bring your blood sugar down and you will be no better off than before your sugary snack. Empty calorie snacks will simply not carry you through the long hours of finals week.

Snack choices such as low fat cheeses, peanut butter, unbuttersalted popcorn, whole grain crackers, raw vegetables, fresh fruits and juices are nutritious and satisfying alternatives to empty calorie items.

Granted, for some students the anxiety and pressures associated with exams may make it difficult to tolerate large or even average-sized meals. In this case, smaller amounts of food may be necessary to avoid heartburn or an upset stomach, but try to continue eating on a regular basis.

Another hazard to your system during finals week is excess caffeine. Caffeine, the most widely consumed drug in the U.S., is commonly found in coffee, tea, cola and non-caffeinated soft drinks, cocoa, chocolate and medications. Many individuals will turn to caffeine in the coming week in hopes of gaining a clearer head and sharper perspective.

The appeal of caffeine is the stimulation of the central nervous system which causes that wide-awake effect. Caffeine makes voluntary muscles less likely to fatigue; therefore, it increases speed and efficiency, sharpening reaction time. It's because of these effects that caffeine is so appealing and marketable.

However, beware; caffeine can let you down and kick back. Caffeine will sharpen your senses, but the effect is only temporary and in order to remain awake you need to consume more caffeine. The consumption of more caffeine may backfire and result in your remaining awake long after you anticipated being asleep. Unplanned lost sleep is the last thing students need during finals week.

In addition, caffeine is an irritant to the stomach lining and may cause a feeling of nausea or heartburn if consumed in excess or on an empty stomach. Sensations stressed students can do without. It's to your benefit to keep caffeine to a minimum.

Take time this week to eat well and wisely; it will help you the energy you need to make it through the week.

3. Name the Baltimore disc jockey who spent 10 straight days on the air while waiting for the Orioles to win their first game of the 1988 season.
4. Which boxer is pitching the new Right Guard Sportstake deodorant?
5. Name the long-time rocker who has just released and album of blues tunes with a new band called, "The Blues Notes."

"Happiness is not a state to arrive at, but a manner of traveling."

-Margaret Lee Runbeck

by Jodi Ott

Staff Writer

It's that time of year again. The time when students start pulling out their hair, consuming large quantities of No-Doz and highlighting anything that is black and white.

Yes, finals have once again snuck up on us. In honor of the occasion, I dedicate these helpful hints to all needy students.

Number one: don't get stressed out. So what if your whole career and entire future depend on your course point average? There is always next semester.

Ready for the next hint? What? You say that you're still stuck on the first one, then relax. Take time out each day of your hectic schedule (no, it doesn't have to be during your soap opera) just to relax. Do some heavy-duty brushing exercises, stretch out your tense muscles, just hang loose.

You can also avoid stress by being physically fit. Eat your Wheaties for breakfast. Get to bed before David Letterman or sleep past Sansome Street.

Are you ready for number two? Don't only be relaxed before finals, also relaxed while taking the test. Meditate while the professor is handing out tons of blue booklets. Think positive thoughts. Smile. You'll do just fine (that's what the F on your report card stands for).

And the last hint: if all else fails, take the professor and the rest of his/her department out to dinner and then maybe on a little vacation to Hawaii. After all, it can't hurt.

After you've studied these hints on how to study, read the accompanying poem. It's help you relax and see the funny side of finals. (I bet you didn't know that there was one).

Good Luck!

Evangelical trio livens campus

by Jim Malzewski
Features Editor

Once again, they've returned.

Brother Jim, Sister Pat and new recruit, Sister Mary made their annual migration to UWSP on Tuesday.

Their unorthodox attempts at inciting anger and frustration among those who witnessed their preaching throughout the sunny afternoon were, to say the least, a success.

Sister Pat, touching on issues of masturbation, abortion, suicide and promiscuity, received a showering of chocolate bars during her evangelical sermon: the PB Max bars were complimentary samples given out in the UC on Monday and Tuesday.

She was also met with pro-fan jeers, derogatory criticism, a male student's offer of an unpackaged condom, and a mountain biker's scream in the face as he whisked by with inches to spare.

Despite this onslaught of "friendly" fire (there were no injuries), Sister Pat said that she never feared for her well-being. "The mentality they demonstrate is that of six and seven-year-olds," she said. "It doesn't bother me. God protects us.

An example of this, she said, took place when her hiking friend fell moments after he screamed in her face. Attempting to ride on one wheel, the biker fell back and landed on the rough sidewalk between the Fine Arts Building and LIC. She said that this was a direct result of God. The biker, unaware of his awesome opponent, got up, took a bow, and was on his way - bloody nose and all.

Brother Jim, as always, seemed to be the most popular of the trio. When Sister Mary, who many students yelled "virgin" at because of her first appearance here, began to preach in her somewhat quiet, passive tone the crowd chanted, "Brother Jim, Brother Jim..

Brother Jim inflamed students throughout the afternoon by calling them whoremongers, killers (women, because of their freedom to have abortions), and frunkards. The trio vowed at the onset of their preaching, "We're going to give a moral speech (to the students of UWSP).

Sister Pat expressed her favor for UWSP, saying that our campus had great potential and that we always turned out in good numbers to observe their show.

The overall purpose of their preaching, she said, is to get kids to read the Bible. Sister Pat said it was up to them because "parents can't deal with it, professors aren't interested in it, and peers aren't qualified to discuss it.

Regarding the effects of their preaching, one thing is certain: They provided quality entertainment for thousands of students on a 70-degree, spring day.

Whether or not anyone read the Bible Tuesday night, well...

So it goes.

Sister Pat delivered her Born-Again Christian views to the student body in an attempt to get students to read the Bible.

Crowd participation is a highlight of the evangelical show. Student comments ranged from "Pat masturbates" and "We want you Brother Jim" to "Hey, the only difference between you and the chics here is that you sweat.

"Beyond the Horizon" starts Friday

UWSP News Service

Michael J. Ormond of Stoughton will direct an all-student production of "Beyond the Horizon," Eugene O'Neill's first Pulitzer-Prize winning play, Friday through Sunday. May 6, 7 and 8 at UWSP.

Tickets for the performances in the Studio Theater will go on sale Friday (April 22) at the College of Fine Arts box office, and will be available at the door. The price of admission is $7 for the 8 p.m. shows on Friday and Saturday and the 2 p.m. show on Sunday.

Named the best American play for 1919-20, the drama is set in Massachusetts during the early 1890s. The story was based on a real love triangle in the playwright's life. The action revolves around two brothers, Robert and Andrew Mayo, portrayed by John A. Vought and Todd A. Stickney, both of Antigo, who are in love with the same woman, Ruth Atkins, played by Kelli Cramer of Wisconsin Rapids. She marries one of them, the other goes off to sea, then returns eight years later when his brother is seriously injured.

According to Ormond, the characters represent the material versus the dreamer, the natural versus the unnatural, the human tendencies to not really listen to what others are saying, and to do what we think others want us to do. But the director says the drama also portrays a message of hope which arises from its tragic circumstances.

Other members of the cast are: Chuck Almen of Racine,

Air Jam ‘88 a great success
by Molly Rae
Staff Writer
It was a damn ball, well-organized and well-attended. Over 500 people crawled into the Encore room last Thursday to watch and participate in the 1988 Pepsi Air Jam and WSPT guitar contest.
The big prize of the evening went to guitarist Leo Wurman, who took home the B.C. Rich Warlock electric guitar. Second place went to Gemini guitarist Kelly St. John, and third to UWSP Music Coalition president, Mark Montgomery.
The airbands battled it out all night long. And the winner was...PELVIS! The king was portrayed magnificently by Bruce Woodrell. The band and security team consisted of Todd Spencer, Jim Streicher, Mike Prange, Pat Land, Chris Hunt, Ross Thompson and Craig Schoenfield. When asked what they'd do with the prize money, they simply stated, "We're havin' a party!" Consequently, a Whitenake tribute, took second place because second place went to Savage Heart.

Shelton to perform

Special to the Pointer

Cellulose. To the bikini-bound, it's an ugly word with an ugly reputation. Many advertisers respond to consumer fears of its accumulation by offering quick weight-loss gimmicks. Beware of these fantasies.

Advertisers claim that cellulite, which is pronounced si-ooli-tay, is hard to get rid of in normal fat since it consists of fat cells that are saturated with water and waste products as well as of impurities functioning in the liver, kidneys, and other organs. By using this claim, advertisers have led many viewers to believe that they have a unique problem, cellulite, that needs a unique treatment.

One remedy they've come up with is a weight loss lotion which they claim is an all-natural pill. These tablets, in reality, contain some vitamins, minerals and herbs, but they also contain a diuretic which causes a temporary loss of water weight. That makes an individual appear slimmer until more liquid is consumed. Diuretics increase the volume of urine excreted, which could cause dehydration or other illnesses. In all cases, diuretics should not be used without consulting a physician.

Another remedy advertisers have come up with is a lotion. When rubbed into the skin, this lotion is supposed to "burn off" fat in the underlying body tissue. When used, this gives a sensation of burning or tingling on the skin. These lotions resemble a regular moisturizing lotion, but have one additional ingredient, the diuretic. When in contact with the skin, the diuretic causes the skin to reddens, and causes a burning sensation. When consumers report these sensations, they often believe that cellulite is being burned off even though there is no actual weight or size reduction from this treatment.

One other treatment, spot-reducing exercises, is misconceived by some advertisers.

Many customers have been misled to believe that exercising a certain area of the body will decrease the fat in that particular area. This is a myth. Fat cannot be lost in one particular area of the body without the same percentage of fat being lost in all other parts of the body. Spot-reducing exercises are used to tone the muscle underneath the fat layer. Once the muscle is toned, it is made smaller, which gives the appearance of fat that has been lost.

An example would be the stomach muscle. When that muscle is toned, it is made smaller because it is easier to keep that muscle contracted or sucked in. This gives the appearance of a trimmer waistline with the same percentage of fat remaining.

So, with the summer season blossoming, and many people in the midst of trying to trim and tone those not-attractive areas, I leave you with one pointer: before falling victim to the possibility of a gimmick, ask your doctor if there is any medical evidence to prove the remedy will be successful.

and the majority of colleges have abandoned the chaperone or "lack parents' function. Cohabitation has become a socially acceptable lifestyle.

Cohabitation, once being considered unacceptable, has also become a financially safe arrangement. Although two may not be able to live as cheaply as two, there is certainly more money and thus less personal comfort. A couple can be drawn up by the two of them and can be more accountable for the cost of a lawyer. This arrangement can be a protective device against legal complications that may arise in the future.

Moral questions raised by cohabitation often stem from people's religious beliefs. The link between one's religion and one's morals, yet often cause people to take a right/wrong stand on today's issues. In the past, the vast majority of people viewed living together as ethically wrong.

However, social acceptance for the alternative lifestyle of cohabitation has grown in recent years. Some alliance this opportunity to assess compatibility before marriage has resulted in a lower divorce rate. This factor, along with today's changing recognition of the function of marriage, has served to change a great many people's views on the ethics of living together.

Finally, the emotional benefits accrued through cohabitation are numerous. As a testing ground for marriage, cohabitation often leads to increased self-understanding for both involved in the relationship. Opportunities for personal growth, along with the provision of emotional support, are other emotional benefits that often stem from a cohabitating lifestyle.

Most parents will react positively to an argument they feel is well thought-out and clear. It is important that you recognize their concerns and assure them that this is the right decision for you.

So, you've presented your argument well. Now that all's left is to sit back and wait for your parents' reaction. If they're typical parents, you can probably expect a reaction similar to this:

Your mother will collapse against the couch, mumbling incoherently about where she went wrong and how she will never be able to show her face in public again. Your father will finally come from his paper to say, "Oh, hi hon, I didn't know you were home." And your little sister, overjoyed that once again you have set the precedent, will rush to the phone to share the news with all of her friends. Looks like you've been in the battle, but not the war.

Congratulations Buzz Busters for taking the challenge during PEAK Week to increase our awareness regarding alcohol consumption in today's society.
Reflections on the year

from page 8

night at Ella's or Partner's, and the popcorn runs out at 11.

What time is bar time? 2 o'clock? That's what I thought.

There are better ones though. Like going to the bathroom and finding out that the patron before you forgot to lift the seat.

Or, for girls, finding out that the previous customer was a boy... who did lift the seat.

There's also the advisor who doesn't know the difference between a green and a pink card. But you need his signature any way. Why doesn't the university make advisement optional? If you need help, you can get it.

Let's face reality. A professor who has a full toad of classes and meetings could care less whether or not you're taking the right section of English 101. Granted, he/she shouldn't have to.

There are others too.

"Friends" putting books in your backpack at the library so the alarm goes off when you walk out. The police, who are supposed to protect and serve, breaking up a party even though nobody has made a complaint. Making a fishing bet with an Outdoor Editor that doesn't pay up. The city giving you a $40 fine for not shoveling when a street not even a block away is covered with ice. The receptionist at Records and Registration, who makes you run to the bookstore to get a signature on a Drop/Add form even though there's no book required for the class. Teachers who fail to challenge students in class. Students who fail to learn anything. People who shouldn't be here who are. Closed-minded individuals who throw candy bars at preachers, even though they're obnoxious. Advertisers who take advantage of a student newspaper and refuse to pay their bills. People who don't take a stand on anything because they're too busy. Students who can't wait to get out of here, and consequently overlook what should be great times.

But the greatest tragedy of every school year is saying goodbye at the end. Bidding farewell to those who have helped you through the aforementioned problems.

Even though we hate to admit it, and often times don't realize it until we're left, things up here aren't too bad.

With this, I bid you farewell. Have a great summer!

SHE NEVER REALIZED THAT AFTER PEELING HER WHITE BOXY OUT OF A SNOWMOBILE SUIT ONLY TWO DAYS BEFORE, THAT 13 HOURS IN THE SUN, ON THE FIRST 80° DAY OF THE YEAR WOULD GIVE HER THAT LOOK AND FEEL OF BAKED CHICKEN.

Fund Run says

You's

Dennis Elsenrath and Frank O'Brien ran the last eight miles back to Steiner Hall with our runners, and also deserve credit. The Fund Run would not be the same without your presence in those last grueling miles. We would also like to thank Dale Christianson for driving a support vehicle on our entire trip from Madison.

Once again thank you to everyone involved in this year’s fund run, including runners, drivers, supporters, and sponsors; with your help we completed a successful run.

David J. Paulson
Brian Bradshaw

Let's be smart, savvier, smarter, sillier.
Congratulations Qualifying Seniors, RN's, Grad Students!

YOU’VE EARNED OUR RESPECT, ...and WE’LL PROVE IT!

$400 CASH REBATE
Qualified students are entitled to a $400 rebate toward the purchase of any new GM car, light-duty truck, or van when financing through the GMAC College Graduate Finance Plan.

$400 REBATE FOR LEASING TOO!
Check out our purchase and finance plans to find one to fit your needs. If leasing makes better sense for you than buying, your rebate may be applied toward the first month's lease payment or the security deposit. All GM cars, light-duty trucks, and vans are eligible.

90-DAY DEFERRED PAYMENT
Graduates have the option to defer the first payment for up to 90 days after the date of delivery. *Deferral of payment option is not available through the GMAC Buy Here, Pay Here Option Plan, Direct Leasing Plan, or when purchasing in Michigan or Pennsylvania, or on vehicles with a cash selling price of $10,000 or less in New Jersey. Finance charges accrue from the date of purchase.

BUICK REGAL GRAN SPORT
1989 GM DREAM CAR SWEEPSTAKES OFFICIAL RULES—1. ELIGIBILITY: Sweepstakes open to all residents of the continental United States age 18 or older who are high school seniors, registered nurses, or graduate students. Employees of General Motors Corporation, its subsidiaries, dealers, advertising agencies, and members of their immediate families, are not eligible. Enter as often as you like. Each entry must be postmarked or delivered by October 3, 1989. Entries postmarked after this date will be disqualified.

2. ENTRY: NO PURCHASE NECESSARY TO ENTER SWEEPSTAKES. To enter, please print your complete name on a 3 x 5 card and mail to: GM DREAM CAR SWEEPSTAKES, P.O. Box 2460, Flemington, New Jersey 08822. Enter as often as you like. Each entry must be postmarked or delivered by October 3, 1989. Entries postmarked after this date will be disqualified.

3. DRAWING: Five (5) Grand Prizes will be awarded. (1) Buick Regal Grand Sport (approximate retail value $11,825); (2) choice of either Chevrolet Camaro Z28 (approximate retail value $10,725) or Chevrolet S-10 Jimmy (approximate retail value $8,943); (3) Oldsmobile Cutlass Supreme International Series Coupe (approximate retail value $10,875); (4) Pontiac LeMans (approximate retail value $8,815); (5) Ford Torino (approximate retail value $8,169). Options other than those included in Grand Prize are non-transferable. No prize substitutions except by sponsor. One winner per household.

4. No substitutions. No cash alternative to Grand Prize. Winner must accept Grand Prize as offered. Grand Prize is not redeemable for cash. Winner's name and address will be used for future mailings. All prizes will be awarded. Sweepstakes is subject to all applicable federal, state, and local laws and regulations. General Motors Corporation is the sponsor of the Sweepstakes. Void where prohibited by law.

5. WINNERS: Winners' names and addresses will be used for future mailings. All prizes will be awarded. Winners' names and addresses will be used for future mailings. All prizes will be awarded. Sweepstakes is subject to all applicable federal, state, and local laws and regulations. General Motors Corporation is the sponsor of the Sweepstakes. Void where prohibited by law.

6. QUESTIONS????
See any participating GM dealer in the United States for additional information.
Religious instruction, anyone?

THE GMAC COLLEGE GRADUATE FINANCE PLAN can put you in your dream car now! It's easy, it's quick, and it's designed especially for you!

Qualified graduating seniors, graduating registered nurses, and graduate students are now able to purchase a new GM car, light-duty truck, or van through the College Graduate Finance Plan and take advantage of the many timely benefits designed just for you.

\[

Religious instruction, anyone?

To the Editor:
I would like to address all of the issues your editorial raises, but the 250-word limit forces me to concentrate on the most crucial point. As one who has extensively read and studied the Bible, I can unabashedly say that it contains the answers to all of the questions posed in your article. I recognize your sarcasm, but if your opening lines express your true feelings, you should seriously consider this resource in your quest for the true God.

I recommend this book not only because of its unrivaled impact upon world history, but also because of its unity (and, I believe, true) claims. It claims to be God's revelation of Himself - a claim made by no other book.

I do not defend any denomination (I am not a member of any religious organization), since true Christianity is a relationship, not a religion. Many who

Student struggle with registration.

should. There will be only one more Quandt registration in December, and after that students will be registering by computer, according to Dave Eckholm, head of Records and Registration. Registering for classes by computer wasn't possible before because the university's old mainframe couldn't handle the load. The university has acquired a new computer that will allow computerized class registration.

Students will still have to see their advisors, but instead of going to Quandt on the same day as all other students, each student will have their own time in which to go to the registration office and program their classes. The registration will be stretched over a period of 4 to 6 weeks, probably in mid-April. So enjoy registration while you can. Lose a few class cards or erasers in front of Quandt the night before, because registration will never be the same again.

Freshman class,

from page 3

have been easily filled by last January.
The academic requirements are not as rigid for students entering UWSP in midyear.
The university is limited its enrollment on the basis of a decision agreed upon by local and UW System officials. The action is being taken because there is not enough state funding available to UWSP to accommodate the number of students who would like to attend the institution.
The $109 application deposit is believed to have helped UWSP admnistrators be reasonably accurate last year in projecting the number of students who would actually be present for the fall. There was a no-show rate of about 4.4 percent, and that has taken into account in the application process this year.

Fund Run says Thank You's

To the Editor,
The 8th Annual Steiner Hall Alcohol Awareness Fund Run held on April 22nd and 23rd was very successful. Thanks to all the runners who ran through the cold, sleet, hail, snow and rain, all showed a great deal of dedication. A special thanks to our sponsor, Pepsi-Cola of Wisconsin Rapids, as well as all of the businesses that supported our run.

Chancellor Marshall, Bob Mo­dier, Bob Nicolais, John Jury, and Juli. Gross deserve recognition for taking time out of their Saturday to be with us at our welcome home ceremony; your presence was appreciated by all.

Fund Run Co-President

Murphy lacks professionalism

To the Editor:
Re: Mark Murphy letter to the Pointer 4-28-86
Positively, you are right. We simply must demand of Mr. Burchnall that he conduct himself in a manner that is not "com­pletely unprofessional, immature, and absolutely inconsistent with shared governance." I believe the staff just happened to lose my letter and unable to publish it.
If the Pointer staff can manage not to lose this letter, I would appreciate its publica­tion. Thanks.
Sincerely, Kevin Hultman

Read Bible for all the answers

To the Editor,
I am writing in response to the ludicrous article you wrote on God in the Pointer, April 11. I understand you made an error. You claimed that if we tried to explain our "God to Shiite Muslims, they wouldn't get it." For your informa­tion, Karen, Shiite Muslims look to the same God as Christians and Jews. The major dif­ference is that they follow dif­ferent prophets of God - Mu­hammad and Ali. In fact, Chris­tians, Jews, Muslims, Mormons, Jehovah Witness worship the same God. Obviously you didn't know this when you wrote your wonderful article of ignorance. Mr. Murphy, you should have done some research on God beforehand. You seem to know very little about him.

I would also like to compli­ment you and the rest of the Pointer staff on keeping an in­credibly liberal bias Point­er this year. At times, one might have thought the Pointer was published by the Young Democrats.
It was my understanding that students would have the right to submit suitable letters for publi­cation. Three weeks ago, I sent in a letter concerning a current presidential candidate. Perhaps the bias Pointer staff did not agree with my conservative views. Nonetheless, the staff just happened to lose my letter and unable to publish it.
If the Pointer staff can man­age not to lose this letter, I would appreciate its publica­tion. Thanks.
Sincerely, Kevin Hultman

It's no secret that Wisconsin's bass lakes don't hold what they used to be. As many fishermen already know, bass are hard to come by in lakes throughout the state. Yet you're not alone if you believe there seem to be nearly as many bass in lakes as there were just a few years ago.

Now you're reading this and thinking, "Yes, well, a minute. Are there less bass or just fewer fishermen? What are the facts?"

Yes, there is more fishing pressure. This is an agreement most Wisconsin fishermen partake of, but at least due in part by those increased numbers of fishermen, there are fewer bass.

There probably aren't as many bass in your favorite lake as there used to be. The evidence isn't as much of the larger big one size that bass anglers fantasize about; on many lakes those five and six pound fish are a very rare occurrence. The available data supports a grim but discernible decline in bass fishing. As a result, some experienced anglers believe we are already being tried on certain lakes to determine whether whether we are going to be able to keep and conserve our bass resources. These rules are restricted not only to the number of fish we are allowed to keep, but are being enforced on the catch and maximum size. They may even become the future limit on bass fishing throughout Wisconsin.

In the meantime, it is time for all bass anglers to begin thinking about the consequences of their sport and to implement techniques on the waters of Wisconsin. It seems obvious that the better we learn to catch bass, the better we learn to keep them.

So far this year, bass fisheries are proving to be a challenge. For the expert, catching big sunfish or bluegills is a challenge for the angler interested in sport, they put up a good fight for their site. And for those who enjoy a sweat-free fishing with a peaceful catch with a bass, often bass anglers are unappreciated. These are the reasons the bass are often overlooked for Portage County is so heavily fished. The best place to catch bass can be considered in nature, McKinley is certainly in this category. Agri-cultural runoff and sediment keep the weeds growth here at the Conneaut Dam. Bass prefer the warm water type, such as sunfish and bluegills, have responded to the best catch and are a very high population point. Some gill netters hold most of the fish from spring to early summer. Bass anglers are also catching a lot of small cod, smaller water bass fishing is something that bass anglers are more interested in, and Bass anglers are finding anywhere around heavy cover are using them on McKinley pond is easy.

Fishing tackle for bass fishing should be as light as possible in the shallows with the larger presentation. Smaller lures, cooler, deeper water, McKinley offers ample opportunities for good fishing. The shallows themselves produce the greatest abundance of weed, and a source of food. Thic weeds catch and release sport fish in order to preserve a great game fish! Apparently, anglers are prepared for this. The greater question may be: Is the bass population as healthy as it could be? The answer to this is yes in the open waters, but not in the shallow areas where the bass are generally found in abundance. The statistics from current state studies are extraordinary. In five nights of shocking in the summer of 1986, DNR crews electroshock-milling on northern Wisconsin lakes caught 4 inch, 8 bass, 18 inches, and longer, 15 bass, and more than 50 bass in the lake. Also reported is that only one very large bass was caught, an 18" inch on opening day. In the same study, long-cored census on the lakes revealed that only one very large bass was caught, at an 18" inch on opening day. In the same study, long-cored census on the lakes revealed that only one very large bass was caught, at an 18" inch on opening day. Population growth and energy

Outdoor Notes

by Cindy Byers

United States oil production has plummeted since the oil price shocks of the 1970s and early 1980s. Regional economies that were built around foreign oil have seen their dependence on foreign oil as a result. Some people have begun to look for alternative power sources as a way of avoiding future problems.

When asked whether or not creation science is a "science," Foreman answered: "Creation and evolution straddle the line between philosophy and science. Either both must be handled as science or both must be handled as religion, both models are steeped in prior assumptions, yet both derive inferences from analysis of scientific evidence."

Jim Burns, Special to the Pointer

Who am I? Where do I come from? The last of these three basic questions of life served as the basis for Dr. Foreman's three part Earth Week address. The general question "Where do I come from?" is the driving force of life's origins, a question which science can only answer due to the mystery caused by the unobservable.

As one compares the two models of origins (creation and evolution), it becomes apparent that both scientifically diametrically opposed to one another. Creation science involves a process of special creation which is supernatural and contains purposeful design. (Vestigial organs don't exist to the creationist). Evolution, on the other hand, states that life came from non-life and is continuing to go through a process of changes from simple organisms to more complex life forms.

Wolf Pup survival

DNR- Rhinelander

Department of Natural Resources officials are predicting the past summer's record number of wolf pups may be decreasing the number of wolves in the next few years of decline. During the 1981 hunting season, biologists noted the sudden and unexplained disappearance of several wolf pups in northern Wisconsin. Blood samples taken from the pups were found to have rabies, a disease that is fatal to wolves.

1. At what point in a decade's life is the population growth in energy production balanced out? How does this relate to the cost-benefit analysis for alternative energy sources?
2. How does the author propose to balance the transition from oil to alternative energy sources? What are the implications of this transition on regional economies?
3. What is the potential impact of alternative energy sources on the reliability of energy supply? How does this compare to the current reliance on imported oil?

Trout season opens Saturday

by Andrew Fendos

Outdoors Editor

The surest way to catch a trout is with worms. Find a nearby spot to sit on a chair with a tackle box, quiet hole just downstream. Cast, and if necessary drift your bait and let it hang for a few yards. If you have a number 10 hook tied on a very small splitshot 15 to 20 inches from the hook, all that stands between you and the trout is patience.

Lead pollution in tap water

State health and environmental officials are advising Wisconsin residents to flush drinking water systems before drinking or cooking with water. "Low levels of lead may be contaminated with lead from pipes in household plumbing," said Dr. Robert Krill, water supply director for the Department of Natural Resources. "Lead is not commonly found in drinking water, but there have been occasional occurrences of rare species recovery in 1986. Nicolette, the director of the Wisconsin Department of Natural Resources, mentions the issue of Endangered Resources (BER), reflected in her work on birds, wildlife managers and volunteers as he traced the through the recently released 1985 BER Annual Report.

In 1967, Natural Heritage Inventory staff collected maps and computerized information on nearly 1,400 geographical occurrences of rare species and natural communities. The inventory also began tracking a number of species mostly invertebrates believed to be rare or declining in Wisconsin. "Most of our publicity has centered around endangered birds and mammals like the timber wolf, bald eagle and Peregrine falcon. But much of our work involves lesser known species," Nicolette said. "Our bureau also prepares recovery plans for plant species. Natural resource specialist Bob Martin is a member of the federal recovery team that is working on the rarest plants in our region.

Surveys and protection activities for butterflies, frogs and toads, snakes, turtles and hundreds of plants are featured in BER's annual report, as is the work to reduce lead levels.

Get your water tested for lead. Flushing or filling a group of pipes or service lines that join pipes and can also dissolve more lead after drinking water passing through the pipes. Find out where your drinking water is hard or soft. Soft water is generally more acidic than hard water. It can prevent the coating of mineral deposits and form coating pipes and solder more quickly than hard water. Lead pipes and solder are used in the Milwaukee Inventory.

Private wells or rivers may have a different taste and smell than drinking water. Many people who drink well water don't realize it is contaminated with lead. But many people, especially when young, are used to drinking water that has a different taste and smell than tap water. They may not realize that the water they are drinking is contaminated with lead.

Adventures to travel made easy

Adventure travel is becoming the nation's favorite pastime. In 1988, approximately 15 million individuals enjoyed one form or another of adventure travel experiences. River running offers the most diverse variety of all outdoor adventure. While skiing, diving, sailing, hiking and fishing draw larger numbers, river running will include large segments of other adventures rolled into one. In addition, river running is an activity that all members of the family, age groups and physical abilities can enjoy.

Western River Guides Association members offer trips that are known for their clean, well-maintained, and well-controlled. They can take you down the Smith, Delaware, North Platte, Klamath, Guma and Redding, rivers that are not wilderness, but offer a great trip in the country that provides outstanding fishing, scenery and whiterwater.

Over 350 rivers are offered in the 12 western states with competent outfitters able to design trips for all ages and physical abilities. The trips offered are not only for serious and professional, but offer a great trip in the country that provides outstanding fishing, scenery and whiterwater.

These trips are geared toward self-development and are perfect for family vacations. SAFETY IS A PRIORITY.

All Western River Guides Association Trips are led by experienced and qualified guides who specialize in making the journey safe, exciting and memorable for adults and children alike. All meals are included in the trip and are prepared by the guides; you do nothing but sit back and enjoy the trip. Meals are usually prepared with both adults' and kids' tastes in mind.
Big Chip

sust with investigation and cleanup.

—Assembly Bill 730... provides funding for environmental studies of the Fox River and Green Bay waters. The study will allow the state to better understand how in-place pollutants interact with the waters, fish and wildlife. This work will assist in also solving in-place pollution problems in other areas of the state, and will serve to help Wisconsin achieve its $4 to $6 million in federal funds for remedial activities.

The legislation will also assist clean-up activities for the Milwaukee, Sheboygan and Menomonee rivers, and the Dutch Harbor.

—Assembly Bill 525... prohibits the distribution in the state of any pesticide containing chlordane, aldrin or heptachlor except under an experimental use permit. The new law also requires that manufacturers or distributors who receive returned product must repackage the person for the pesticide.

—Assembly Bill 259... incorporates requirements of the federal Environmental Protection Community Right-To-Know Act of 1986 into state law. Federal law requires a state administrative structure, local emergency planning, and proper response by facilities which store or use more than two pounds of hazardous materials.

—Senate Bill 464... prohibits the disposal of yard waste in a landfill in municipalities with populations over 1,500 — effective January 1, 1990. Municipalities and counties have discretion to decide how to manage yard waste within their localities, including whether to provide yard waste disposal sites and what other requirements to establish.

It is estimated that under this law, the total volume of solid waste landfilled each year would be reduced by 300,000 tons, or 15-20 percent. This reduction would improve the quality of landfills.

"This bill sends a strong signal that we need to do a better job of utilizing this type of yard waste in communities," Mayor Thompson said. "I believe there are markets and ways to efficiently deal with yard waste, and municipalities should continue to pursue efforts that have already begun in many Wisconsin communities.

—Assembly Bill 629... requires that certain plastic containers be labeled with information needed by recycling operations to properly sort materials made of different plastics that can be recycled or reused.

—Assembly Bill 464... provides that by January 1, 1990, all state agencies recycle at least 50 percent of all their wastepaper and wastepaper products.

—Senate Bill 458... authorizes the DNR to order nonpoint sources of water pollution to halt discharges in extreme cases where the source causes the water to be in non-compliance with water quality regulations. The law provides discharge limits with a one-year grace period to work with the Department of Agriculture, Trade and Consumer Protection and the DNR to solve nonpoint pollution problems that violate water quality standards, significantly degrading aquatic habitat, threaten human health and/or restrict navigation.

—Assembly Bill 498... streamlines the permit process for projects that have minimal impact on waterways, such as shoreline riprap, septic tanks, and docks. The new law also reduces the likelihood that frivolous objections to a project would require a contested case public hearing; allowing the state to limit landowners to only one structure (either a boathouse or a small boat house). —Assembly Bill 569... grants the town of Delavan special permission to construct a barrier in Delavan Lake to improve fish habitat, recreational use, and water quality of the lake.

—Assembly Bill 33... doubled the "Lakes Research Bill," the law that pays purchasers of heat and fishing licenses the opportunity to voluntarily contribute to lakes research at the time of license purchase. Governor Thompson also indicated that he is pleased with legislative approval of his key environmental initiatives in the current budget bill. They include:

1. New Clean Water Fund... maintains the state's commitment to assist local municipalities in making and maintaining sewage treatment facilities.

2. Petroleum Environmental Clean-Up Fund... provides funding for correcting certain pollution problems, such as petroleum spills.

3. Ice Age Trail Grant... provides state financial assistance to the private volunteers and groups committed to enhancement and maintenance of the Ice Age Trail.

TAP WATER

blood cells. Human fetuses, infants and children are most likely to be harmed by exposure to lead. Childhood lead intoxication is a chronic problem, threatening both developmental and behavioral development in children.

Dr. Anderson said lead in drinking water contributes between 10 and 15 percent of total lead exposure in young people. In infants, the figure rises to 40 percent because babies' diets largely consist of water-based liquids.

People's exposure to lead has been reduced significantly due to federal bans on lead in gasoline and paint.

from page 23

ENDANGERED SPECIES

"Peregrine falcons, trumpeter swans, and pine martens were the primary focus for recovery efforts in 1987. Fourteen peregrine chick releases were made in Milwaukee; eleven survived to migrate south last fall. Although twenty trumpet cygnet fledged in southeastern Wisconsin, none survived. "Endangered species recovery work is exciting, it's worthwhile, but it's never a sure thing," said Nocita. "We have altered our environment so much that suitable habitat and all of the subtle elements that make it up are dwindling. The Wisconsin's that exist for these species when they were in their prime have changed."

It's not all bad news, says Nocita. "Until this year, the Per­ egrine Lady River marsh was believed to be extinct. But Dick Lake, our department's Biology Research discovered two mature pairs in the Wis­ consin River last summer. And the queen snake, not seen in Wisconsin since 1979, was rediscovered in the area covered by the Oconomowoc River.

"Wildlife is a very adaptable thing," "We have had great successes in restoring and sustaining populations of bald eagles, double-crested cormorants and others. It's never easy and sometimes there's controversy, but it's worth it."

we have officially taken office and are determined to assist Wisconsin in its clean-up efforts.

Our new staff, which comes before Senate for con­ formation this evening, includes:

John Mielke
Brian Dan
Cassandura McGraw
Cheryl Gross
Amy Sanderfoot
Nancy Roth
Don Grosskopf
Susan Henriches
Ginger Womack
Executive Director
Budget Director
Secretary
Public Relations Director
Budget Examiner
Academic Affairs Director
Women's Affairs Director
Minority Affairs Director

During the summer we will be working to ensure that the studen­ ts' lives and learning is maintained throughout campus. Even though most students are gone, policies and decisions are still being made. Our goal is to maintain the fine reputation students have had all year.

We look forward to your input in the coming year. Together we can make a positive impact upon this University.

Best of luck on finals and have a great summer!!

Joe Andreaska
President

McDill

only 12 to 18 inches. This is good for the fisherman as a short line means a bigger sinker. A good sinker has better sagging and aids in setting the hook.

Another problem in other lakes is that unlike deeper water in Lake Michigan and Lake Superior, the water in Lake Winnebago is very shallow and panfish will not school tightly. They do tend to con­gregate in and around good cover. When one is caught, it pays to search the surrounding area for more.

McDill pond with its dense weeds produces an awful lot of fish for the taking. For me, some of the best fishing trips I've ever had. But McDill is also very close making short fishing trips possible, as well as profitable. Whatever your choice for fish­ ing here is, if you are not pulling fish into them in a steady rate re­ count what you've done and try a little of what works for me.

from page 18

Bass fishing

This is unfortunate be­ cause with the reporting in magazines and video and televis­ ion shows, a person can learn in a short time to become a life time bass fisherman.

The person who is coordinating the studies says similar evaluations are taking place to other lakes, and believes regulations are going to be put in place to prevent en­ sure needs of lakes around the state are met. The DNR has no plans to place regulations in some parts of the state, he predicted.

The new management policies must be simple enough to understand and successful enough to be able to understand and implement them.

If the views of some northern fisheries guides are any criteria for new regulations, the future for the plight of the stump. Not all rely bad news off of spawning beds. Even those that do, says, "It's not their clients to release the fish. One guide called the early opener does damage bass fish­ ing, but he is not convinced it's the only or major factor in re­ duced bass numbers. There are too many fishermen, he says.

He also believes in the old ad­ age about 10 percent of the fish being caught, the rest of the fish are buried in the mud, but few percent of the fish­ ermen now know how to catch them. In fact, out of the seven northern guide clubs who participated in only one said that the lakes could be made better.

While the debate goes on, there is some advice on releasing fish. If you catch a fish of a size that is a night crawler or worm, cut out its mouth to release it. Also, the chances of living are high. Re­ lease the fish with a hook through its lips and release it near its spawning area so likely the bass will return to the lake. If you use lures, carry a good pair of small scissors and cut a piece of line off short. It's better to waste a few hooks than kill or injure the fish.
Eating the great outdoors

by Andrew Pendos

Outdoors Editor

Food is one of my favorite subjects as I am sure it is with a lot of people. I was fortunate enough to have been taught from the start of my hunting experiences that eating small game is one of the true pleasures that nature provides. It all started when friends and mine began showing me the riches of small game hunting. You see, as wild about guns and as crazy as these graduates of the UW Stevens Point, College of Natural Resources are to be, they did have a deep loyalty to, and appreciation for, anything that a hunting license allowed to be eaten. And from this, I developed my interest and feelings for what hunting and the outdoors can be.

The upper northeastern corner of Portage County has one of the most isolated and far removed public hunting grounds in the area. In my early years of hunting it was here, on the end of Wigwam Road just off Highway 49, that I learned the woodcock. Cutting off their tiny beak laden heads and sticking my fingers through the opening was the worst of it. Holding it firmly and quickly pulling themost off, produced a small chunk of meat. After washing it off in the stream and removing the skin it became recognizable as the breasts.

Now placing a fresh cut green stick loaded with little breasts over a hot bed of coals may be a bit different to most people, but to me, after doing it just once, it became the major reason that game was not taken home any more. The taste is just one of those things that you have to try to believe.

Besides woodcock there is also lots of other game to be found here. One of the most plentiful is the squirrel. Squirrels, however, are a little bit more tricky to cook over an open fire. It must be done slowly so the meat doesn’t toughen up and you should use a metal stick or grill rack or you could lose it to the fire. The results are the same as with woodcock. An unbelievably edible taste or some type of sauce works great on roasted squirrel and it helps to prevent the game from drying out.

One of the better spots for squirrel hunting is across the stream. Once you walk in, it is possible to drive in, you’ll find that the road ends at a shaky yet usable foot bridge. Finding yourself on the other side you should have southeast. Here you’ll come across a broad lane of old, mast oaks. Sit down with your back up against one and wait. Squirrels love to talk and make noise so it should not be tough to locate some. A patient hunter will just wait until the three rodents expose itself, blast it, and walk away as a successful hunter.

The only time I use spices is when cooking small game and open flame is when I have just come across an unlucky grouse. Grouse can become unlucky very easily as the males are so macho-like and machine to beat their breasts. True that this is a part of their mating and territorial rituals but, it is disastrous to them. The beating of their breasts sounds like an old outboard motor that will start but will not stay running. This open fire is a bit hard to comprehend but once you have heard it, you’ll never forget it. The rest of finding grouse is simple. When you’ve heard it drumming, or beating its breast, start a slow walk in that direction. Grouse are semi-social and where you find one you’ll find a few. Keep your gun up; grouse will flush quickly.

Cooking them is a little more of a task. I like to remove all of the skin and fat. This will help get rid of the gamy taste but may cause the bird to dry out when it is being cooked. So, when cooking one I use a mixture of butter, salt and pepper. I found that the pepper and garlic bring out the true flavor of these birds.

Thus, from the hedonistic experiences of eating, this 40 acre public hunting and fishing grounds became one of my favorite places.

I’m sure that if you explore this area for hunting the way I turn page 22

Whiting paper mill moves out over river

DNR-Madison

The Whiting Paper Division of the Kimberly-Clark Corporation is proposing to expand its paper mill at Whiting, with a portion of the new building to be placed on the west side of the Wisconsin River (Stevens Point Flowsage 1).

The new structure would be located above the company’s dam, adjoining a portion of the dam and the west side of the existing paper mill. It would occupy 22,000 square feet on the bed of the flowage.

Some sediment would need to be removed if the structure could be placed on a solid foundation.

The company’s announcement of plans for the mill expansion states that it is intended to provide space for an additional paper-making machine to meet consumer demand, and that site.

A sporting good year
The year in review

So here we are once again. Not only are we nearing the end of another academic year, but an athletic one as well. Stevens Point sports fans weren’t disappointed by another stellar year of bunting balls, crushing tackles, and big splashes in the pool.

The quest for a third straight All-Sports trophy began in September and will end with the completion of tennis, baseball, and track. In keeping with the sports tradition at Point... 8AR is currently in second place in the all-sports race with 36 1/2 points. UW-Whitewater currently occupies the top spot with 39.

Some of the highlights from the season:

by Scott Hueslkamp

Sports Editor

A first time for everything

The Pointer football team, under coach D.J. LeRoy, had their finest season ever. They finished the 1984-1 and became Co-National Champions by tying Pacific Lutheran, 16-16, in the title game. Jay Downey was named defensive player of the game.

If one at by land, two if by air

Behind the rifle arm of Kirk Baumgartner, the football team spent more time in the air than on the ground. Baumgartner threw for over 5,000 yards and 40 touchdowns. Fifty-five percent of the offense was via the pass, 45 by the run.

Records, Records, Records

The football team also set over 25 new team and individual records, including most wins, longest pass from scrimmage, and most passing yards in a season.

Shot of the year

Point quarterback Todd Christianson nailed a 10-foot jumper at the horn to beat UW-Eau Claire (who would later finish third in the WSU Conference) at home. KC had demolished Point a week before at their barn.

Most underrated coach

Pointer men’s basketball coach Bob Parker is the easy choice here. His team finished the season with a respectable 18-13 record, despite his late appointment to the post after the departure of coach Jay Eck after the 80-87 season and despite the defection of two of the team’s more talented players, Tim Blair and Eric Gardner.

Comeback of the year

After sitting out the entire 85-86 year with a blown-out knee, Dimitrie Roseboro ran the Pointer attack from the point guard position, all the while sporting a knee brace.

Super Sophs

While most sophomores are still trying to adjust to college living, these three athletes rose to the top of their fields. Lady Pointer hooper Deb Shae was voted to the WWAAC first team all-conference squad, swimmer Nino Picciotta swam to two individual national titles and was named NAIA Outstanding Swimmer, and Baumgartner received first team all-conference and All-American honors.

Jimmy Connors revisited?

Doug Greenberg, a number three player on the UWSP tennis team, plays with a lot of fire and energy. Although most matches do not have officials (the players go on the honor system) you can always hear Greenberg gawping to himself a couple of courts down. He is also nicknamed “the Bakersfield flash.”

And they called it a streak

The Pointer baseball team rattled off 15 straight wins to start the 86 season, their best start since 1950.

Perfect Pumpe

Pitcher pitcher Scott Pumpe added to the winning streak in grand fashion by hurling a no-hitter against the University of Alabama-Monticello. The win was number eight of the streak.

Raise the flag

The banner for the National Championship, won by the Lady Pointer basketball team last year, was hoisted onto the walls in both the Quandt and Berg gymnasiums.

Super Senya

Lady hooper Sonya Sorrenson capped off her brilliant career by becoming the all-time rebound and scoring leader in Pointer history. And for icing on the cake, she was named to the Kodak All-American team.

Ruggers run past Ripon

by Tom LaBoda

Staff writer

Tom LaBoda

Everything finally came to gether for the Stevens Point Rugby Club this past weekend as they pounded out a 30 to 6 victory. Point used their superior speed and experience in the rout over Ripon.

Gerald Kadow put Point on the board early for a 4-0 lead. Kadow said of the try, “a couple of guys missed my call and I was able to slip in for the score.”

Costly mistakes by Point kept Ripon close in the early going. Ripon booted a penalty kick to cut the lead to one.

Point, however, came right back on a try by Tom Zeller to extend the lead to five, 8-3. The try was set up by a brilliant run by Ed Bradshaw, who managed to rumble down to the one yard line, where Zeller picked it up and downed it in the try zone.

Dan Vaughn added one more try for Point before the half and Dean Rammel converted the kick for a 14-3 halftime lead. Vaughn stated, “overall we played a pretty good match, the backs kept the ball moving and we kept them off guard.”

Point didn’t lay down in the second half and were able to add another penalty kick to slice the lead to eight.

Point then proceeded top put the game out of reach on two quick tries. Kadow added his second try of the day after receiving a nice pass from Mark Murphy.

Second row scrummer Jeff Griesentrog then took the encoun­tering kick-off and ran it back almost all the way before get­ting it to Bradshaw, who flicked it to scrum half Ralph Hutchins for the score.

Golfers second one day, first the next

Mick Gilbert used two birdies and 11 pars to pace Point with a three over-par 75 (38-37). Gilbert shared medalist honors with Charlie Brown of Stout and Dave Wente of Parkside.

“If the UW-Stevens Point golf team had to pick a slogan that would typify their spring season it would probably be “Home Sweet Home.”

Point, playing in Stevens Point for the first time during the spring season, placed sec­ond on Friday in the Pointer Open, held at the Stevens Point Country Club, then bettered that effort by one and won the Point­er Quadrangular played on the tosh SentryWorld course the next day.

Point finished with a 297 total, one stroke in back of meet win­ner UW-Stout on Friday. UW-Oshkosh finished third in the 16 team field with 398.

“I was hitting the ball pretty well,” said Gilbert. “But I played away from the big numbers. I think the highest number

Turn to page 25

Sports

Dean Rammel of the Point rugby team boots through an extra point during last Saturday’s rout of visiting Ripon.
Doubleheader results in double pleasure for Point

by Andy Goehr

UWSP head coach Randy Handel commented on game one, "I thought we were a little sluggish. We woke up in the sixth inning and came up with some big hits to get the lead."

In the second game Joe Kimmeth notched his second win of the year working two innings for Point. He gave up two runs, one earned, allowed one hit, walked one and fanned three. Scott Anderson picked up his first save of the season. Offensively, Hans Lyberg went 3-4 at the plate with one RBI. He also stole home on a double steal. Rob Olson, a sophomore outfielder from Stoughton, WI, was 3-4, with a triple, one RHI and two walks, to add to the Pointers' attack.

"We are giving up too many runs, we have to make our opponents earn their runs," said Handel.

"Defensively, I was a little disappointed with our play. At times we looked sharp and other times we looked a little sloppy. We are going to have to control what we can control and then get some help from the other teams in the league, if we are going to be in the title chase."

Golf

from page 24

I had an axe to grind this weekend. I was on the fairways and playing pleasant golf, but I wasn't putting that great."

Other scores for Point were John List, 78 (34-44); Mark Pukall, 79 (38-41); Jason Zahradka, 82 (48-34); and Joe Stadler, 83 (43-41).

The UWSP JV team, which played with 406, was led by Mike Frieder with a 79 (42-37). On Saturday, Point's consistent shooting as a team was the key to their victory and score of 406. Three better than second place Oshkosh. Stout finished third with 418, followed by Parkside, with 411.

John List's 77 (43-35) and Kurt Rebholz's 79 (43-38) led Point to the top spot at the winding, hazardous SentryWorld course.

Zahradka finished with an 80 (46-34), Pukall an 81 (39-42), and Stadler an 83 (43-41).

Stout's Jim MacFague captured medalist honors with a 74 (38-36).

Basketball recruit list

now at 10

Jon Julian, who was a second team all-state choice of the Illinois Basketball Coaches Association, has announced that he will enroll at UW-Stevens Point and join the basketball program, along with Alan Thomas, the leading scorer in the suburban Conference last season.

Julian, a 6-4, 219 pound forward, averaged 15.8 points and 8.8 rebounds per-season for Lena-Winslow High School in Illinois.

In addition to his state recognition, Julian was also a conference MVP for two years, was an all-area selection for two seasons, and was his team's MVP for three campaigns.

As a fine student, Julian was named academic all-conference and was the recipient of the Bouch and Educational Award. Pointer head coach Bob Parker calls Julian a "key recruit."

"Jon has boundless potential. He led his team to the state tournament and is an all-star."

Thomas, a 6-4, 219 pound center, averaged 18.1 points, 10.3 rebounds and 2.1 assists per-game for head coach Sherman Smaisme at Oak Creek High School. He shot 53 percent from the floor and 60.6 percent from the line.

Thomas was first-team All Suburban conference and was special mention all-area. He also participated in the Easter Seals All-Star game.

In addition, he is also a solid student and was the student representative for the West Suburban Field Rotary Club of Milwaukee.

Parker sees Thomas as a player who could really develop into a solid collegiate athlete.

"I consider Alan the sleeper in the state. He was an excellent high school player who played like a former Pointer Tim Latarkovic (who also attended Oak Creek)."
That’s smart.

Two golfers, Kurt Reiholz and Mike Frieder, and one swimmer, Andy Wilde, were awarded with the academic All-American award for their classroom excellence.

Flip of the year

While an interesting practice a week before the national qualifying meet, Point’s 142-pound favorite to qualify for the meet, Bob Cadinis, was accidentally flipped by an underclassman and landed on his head, injuring his back. After a couple days of rest and lots of Tylenol, Cadinis competed, despite a sore back, qualified for Nationals and barely missed becoming an All-American.

What an impact!

In his first year only at UWSP Aaron Kenney has excelled in two sports. The native of Dallas, Texas, caught 13 touchdowns for the football squad, received honorable mention All-American honors and was drafted two weeks ago by the NFL’s Indianapolis Colts. The first-footed Kenney then proceeded to win the 60 yard dash at the indoor track and field championships. And now he has to be the favorite at 100m at the outdoor nationals.

Best group of nicknames

How about these nicknames, all on one team, namely the Stevens Point Rugby Club.

Pontier male athlete of the year: Kirk Baumgartner.

Pontier female athlete of the year: Sonya Sorenson.

Zowin-Polston reach semi-finals, but no further

by Scott Huelskamp

Sports Editor

The tough competition at last weekend’s NAIA National Qualifying tennis meet took its toll on all the UWSP players except the doubles team of Bryan Zowin and Gary Polston. Zowin and Polston made it to the semi-final doubles match before losing to eventual winners, the brother team of John and Jeff Aranda from UW-Milwaukee.

Among the team competing were UW-Stout, Eau Claire, River Falls, LaCrosse, Milwaukee, and Oshkosh.

The tournament format consisted of single elimination for both singles and doubles matches. The pairings were strictly random.

Pat Davidson, UWSP’s number six player, played tough against LaCrosse’s three man before bowing 54, 67.

Points number two player, Gary Polston won his first match over Oshkosh’s sixth man, but then ran up against the top player from Stout. Polston hung tough before going down in three sets.

Bryan Zowin went into the tournament as one of the top ranked players, but only lost two rounds. He knocked off Stout’s five player but then was upset by Tim McClure (2, Eau Claire) in three sets.

Points number three player, Doug Greenberg, received a bad draw by having to face the number one player from LaCrosse. Greenberg had to settle for a 34, 67 (6-7) loss.

Shu Stone (4) and Todd Hastings (5) both were eliminated in first round action. Hastings, only a freshman, commented on the tourney, “Being a freshman, I was a little nervous, but I had to play a freshman right away from LaCrosse so I immediately felt comfortable.”

He added, “Being a freshman in the WSUC is a little nerve wracking, but I’m glad I had seniors like Bryan (Zowin), Doug (Greenberg), and Gary (Polston) guiding me along.”

“Our team performance was very disappointing, as we only had two wins in singles.” said Greenberg. “Hopefully we can peak this weekend at the conference meet where it really counts.”

Stevens Point’s only victories in the doubles competition were provided by Zowin-Polston.

Madeline will be the site for this weekend’s WSUC meet. Stout returns as the defending champion and Zowin, seeded second, will be one of the favorites to win it all.

Counsell to retire

Dauane K. Counsell will retire at the end of May as a faculty member in the School of Health, Physical Education, Recreation and Athletics at the University of Wisconsin-Stevens Point, with 31 years of service.

“It’s been a great field to be in. I’ve enjoyed every bit of it. Of course, this is a great school to be at,” he said.

Since informing colleagues and friends of his retirement plans, they have made arrangements for the establishment of an endowment in the UWSP Foundation to support an annual scholarship for a student-athlete planning to become a teacher, recreation leader or coach.

In addition, a dinner has been planned for Counsell on Friday night, May 13, at the Sky Club in Plaue. The event is open to the public and tickets may be purchased from the Health, Physical Education, Recreation and Athletics Office at 346-3147.

Counsell and his wife, Wanda, are planning to move to their native Wisconsin Dells where he owns and operates Parsons Canadian Trading Post. The business is reputed to be the largest of its kind in the Midwest dealing in Indian arts and crafts. His parents took over that business about 60 years ago and he has been involved in its operations during summers for most of his life.

At the university, Counsell has coordinated the instructional program in the area of recreation and also taught specialty courses in driver training, safety education and physical education.

From the time he joined the faculty in 1957 until 1968, he was the head football coach, leading his 1961 team to a conference championship with a 9-1 season record. Counsell also was a head baseball coach and assistant basketball, wrestling and track coach for the Pointers.

After graduating from Wisconsin Dells High School and attending UW-Madison for a short time, Counsell entered the Army and served on World War II duty from 1943 to 1946 in the 78th Infantry in Germany. Upon his return, he and his wife enrolled at UWSP, both graduating in 1949. For one year during his student days, he served as a quarterback on the Pointer football team. He later earned a master’s degree from UW-Madison and studied at several other campuses across the country, doing extensive doctoral study at Indiana University.

He served from 1949 to 1955 as a teacher and coach at Wisconsin Dells High, where he was named the “winningest coach” in football in 1951. He later taught and coached at West Allis Central High for one year.

Counsell is amused to recall changes at the university, considering it had only 688 students when he came to campus as a freshman 62 years ago. But he says he is impressed with the quality of its programs. Because of its central location, he believes that with effort from coaches, there can always be enough good athletic recruits to assure the school of being “repre-sentable in any sport.”
The nagging hamstring injury that has plagued the season of UWSP hurdler Mike Christian surfaced again last weekend at the Drake Relays, in Des Moines, Iowa.

But luckily, this time, it happened after he placed second in his 400 intermediate hurdle heat with a time of 53.97, to qualify for the National Track and Field meet in two weeks. It held him out of the final as his hamstring was very tight and we did not want to take any chances," said coach Rick Witt. "His time in the prelims would have been good for fourth place in the final."

"He was excellent in the hurdles. His time is the best in the NCAA to date. He was the only non-Division I athlete to make the finals."

Other Pointer individual efforts were turned in by Tom Morris, 10th in the 5,000m run (14:38.9) and Eric Fusaro in the steeplechase, 12th in 9:17.3. Triple jumper Scott Laurent sprang to a 47-4 leap and earned praise from Witt. "Laurent tied the second best jump of his life and would have jumped better with three more attempts if he could have made finals."

UWSP's top relay finish at the prestigious invite was the 4x800 relay team of Steve Wolmer, Curt Justin, Rich Moelke and Joel Skarda, which placed ninth in 7:43.3. Skarda had the top split time of 1:54.0. "The team missed causing placing with the four men running at Drake for the first time."

The sprint medley also placed ninth, despite the last minute replacement of Christian with Pete Larsen. Rob Witt and Tim Jalakie ran the first two 200ms in 22.6 and 23.2, respectively. Larsen then flew to a 49.8 400m and Steve Allison ran a 5:1 in the 800.

"The sprint medley guys did a great job especially Larsen who filled in for Christian in the 800. Allison's 400 was awesome and that is an indication that in a month he will be ready to go under 1:50," said Witt. The same four runners combined for an 11th place in the 4x1000 relay in 42.7.

Although the distance medley squad did not place, they ran to 10:16-4 clocking. Steve Allison started off by running a 5:08 for the three-quarter mile course, followed by Brad Hodest's 49.6 400m. Steve Wolmer covered the 800 portion in 1:54, and anchor Tim Moria moved in with a 4:08 mile. "The distance medley did not run as well as they are capable of," said Witt. "Three of them were running for the second day and were not up to par. Olson came down with a sore throat and was also sub-par."

Wayland Baptist won the overall mens title. Women's Results: The Pointer women's team recorded only a fifth place heat finish in the sprint medley relay. The team of Becky Sherwood, Maureen Seidl, Barb Kniese, and Carrie Enger finished in 5:52.27.

Three field event performers placed second and one placed third at the Roseme Open in La-Crosse on Saturday. Shot putter Beth Mears had a throw of 12.64 meters and a throw of 32.56 in the javelin. Sue Collar cleared 5'4 in the high jump. Jenny Schoch clocked a 10.13.4 in the 3,000m run.

The mens team will compete in the Wisconsin State University Conference Meet this Friday and Saturday, while the women will be competing for the Wisconsin Women's Intercollegiate Athletic Conference title. Both meets will be held at Eau Claire.
When it comes to ordering telephone service, there are two schools of thought. One, order immediately after August 1st, and prepare yourself early for the fall semester. Two, wait until the semester begins, then rush, along with a host of other students, to the nearest telephone and order. If you live off campus, consider adopting the first philosophy. And, if you must, save cramming for your first exam.

ORDER TELEPHONE SERVICE IN AUGUST, AND AVOID CRAMMING IN SEPTEMBER.

pies taken during radio-collar ing and heat monitoring field work potentially linked the losses to canine parvovirus (CPV), a relatively new disease discovered in dogs in the late 1970s.

Studies conducted by DNR wildlife disease specialist, the late Dr. Terry Amundson and veterinarian Jeff Zuba, confirmed the susceptibility to CPV. Wild raccoons are susceptible to a similar but different strain of the parvovirus.

CPV is an intestinal virus spread through infected feces. It causes diarrhea, vomiting, fever, dehydration and sometimes death in dogs. A vaccine has been successful in preventing the disease in domestic dogs.

CPV may be one of many diseases which can significantly reduce wild wolf populations. A wolf's susceptibility to this disease is dependent upon factors which affect the overall health status of the animal such as age, nutrition, climate, existence of parasites and other diseases, according to researchers.

It is not known what specific factors cause some wolves to die and others to survive CPV infections.

"In an effort to combat the effects of CPV, we attempted to capture pups in 1986 and 1987 to vaccinate them against the disease," said DNR wolf biologist Richard Thiel. "Unfortunately, the wary adult wolves kept their pups away from the traps and only one pup was caught and vaccinated in each of the two years." Research is continuing to try to identify a better method for delivering the vaccine to wolf pups.

In 1986, DNR biologists carefully monitored the presence of a litter of wolf pups in Lincoln County's Averill Creek pack because CPV infected feces were found at their den site. "One pup that was captured had the disease, but when we caught him again last summer when he was a yearling, he was healthy," said Thiel. Thiel documented litter survival in another pack later that year.

By 1987, litter survival was approaching the pre-1983 levels. One pack, the Bootjack pack of western Oneida and Prince counties, successes of the past two summers are encouraging," he said. Surveys conducted this past winter indicate that pups are present in four of the five packs in which litters were born last spring. This brings the total timber wolf population in northern Wisconsin to between 22 to 24 animals.

Wolf pups receive temporary immunity to CPV and other disease agents through their mother's milk. Since this temporary immunity will dissipate over time, these endangered animals will always face the possibility of contracting this and other potentially life-threatening diseases.

"Commercial vaccines are still being investigated for their safety and effectiveness, so there is hope that disease can be somewhat controlled," said Zuba. "Vaccination of susceptible wolves by DNR biologists against CPV and other diseases may increase their chances of survival."

Most of all, they want library services expanded and student unions built or improved. They also want more funding for education/lower tuition and better communications with the administration. The editors ranked funding (5 percent) above communications (4 percent), while the leaders reversed the two—communications 9 percent, and funding 4 percent.

Several respondents listed minority recruitment and services for non-traditional students as major problems. And a number of them were concerned with academic issues. One editor wrote, "The biggest problem facing this university is faculty retention. We tend to lose our best faculty because of below-average compensation." A student leader complained of "poor teaching and a mediocre learning environment for undergraduates."
Summer Rentals - Single rooms - Dog-friendly - Nicely furnished house - Near campus - $750 includes utilities - 341-3126. Full rental - Space for one male in nice house - 1/2 block from Old Main - 343-3156.

Serve you to admirable - Love you. - PERSONAL

Hey Strachota. Lets blow this Branco drive to Nippersink and get our Lifeguards job: Love, your foxy little pug! p.s. How's your Mike Lorent? Reino. Its almost over...the future holds nothing but excitement...Love, Tricia

Sara is seriously going to fly!! It will be the best. Tomorrow, now watch us may have to get in at 11:00 at love. Love ya T.

Mikes 3 at 50 months. Last one! See you at Butl! Ex Sa:

Judging the Consequences.

N.P.L. Draft Astron "A-RM" Kamney. The Indianapolis Colts could have picked a better man for their team. Show them what you got, "Sweets," we're on the right side of two favor­
