Death Penalty - We can't carry out the irrevocable penalty fairly

By Gabrielle Ly Wyant-Perillo

Editor-in-Chief

The death penalty seems to have made a comeback. Not many years ago such a thing would have seemed impossible in the United States. There was a moratorium on executions in the U.S., backed by the authority of the Supreme Court. The hiatus lasted roughly a decade. Coming on the heels of a gradual but persistent decline in the use of the death penalty in the Western world, it appeared to some that executions would pass from the American scene (cf. Commonwealth, January 15, 1988). This seems to be a false appearance.

In a series of opinions the Supreme Court found that the death penalty does not violate the United States Constitution. The Court declared that states may enact and carry out death penalty laws if they followed correct procedures and standards, to the right kind of crime and to appropriate defendants.

Today, ten years since the Supreme Court's decisions, 37 states and two federal jurisdictions have death penalty laws, and over 3,000 men and women are on the death row.

Because of the ridiculously long appeals process, prisoners executed in 1987 spent an average of more than seven years waiting to walk, what society has decided, their last mile. This is itself cruel and unusual punishment. Yet appeals alone aren't the issue. Even with reviews of death sentences, mistakes are possible. Anything is possible.

The possibility exists that we may have made a simple mistake, a mistake that takes in the life of a human being. There are still questions and substantial doubts in the execution cases of Mississippi's Edward Earl Johnson and Florida's execution Willie Jasper Davison. There were substantial doubts of their guilt or innocence and we continued to "play God" and end their lives.

A society that believes capital punishment will solve its problems is an uncivilized society.

In a nutshell, we are failible beings trying to impose an ultimate, irrevocable penalty. We execute juveniles in this country. We execute mentally defective. We execute primarily offenders who kill white (rather than minority) victims. We execute many more black and Hispanic offenders than any other race. We execute, let me change the word to kill, people who participated less in a crime than their co-offenders who received lesser sentences. We kill people who have declined pleas bargain offered by the prosecution into which the state would have been satisfied with a medium-length prison term. We will inevitably kill innocent people again, again, and again.

Capital punishment has been imposed on people who claim they gave up, to deter those tempted to similar crimes and to restore the seriously disrupted order of justice. We rid society of the offender to better it, but society corrupts itself. It executes even the worst of criminals for the sake of vengeance.

The threat of death doesn't deter violent crime. Evidence suggests it's no more effective than long prison terms.

True, we have made some important gains on capital punishment. We no longer execute people for crimes other than homicide (two wrongs don't make a right). We no longer have laws that mandate the death penalty for some crimes. We no longer execute people after brief and unreviewed legal proceedings (how kind). We no longer have juries from which blacks and other minorities are systematically excluded (how thoughtful).

In these United States we have American executioners who electrocute, asphyxiate, shoot, and inject poison, all this in a society that wants to think of itself as civilized, humane and enlightened.

Why does the United States insist upon an official and ceremonious bloodbath? Virtually every other country with whom we share relations have abolished capital punishment. The international community, moral, political and religious leaders, and human rights agencies have called for the abolition of the death penalty. With all of this a majority of Americans sincerely believe the penalty should be retained. Even our beleived President Bush continues to emphasize his support for the death penalty, to deter those tempted to similar crimes and to restore the seriously disrupted order of justice. We rid society of the offender to better it, but society-corrupts itself. It executes even the worst of criminals for the sake of vengeance.

Letters to the editor will be accepted only if they are typewritten and signed and should not exceed a maximum of 250 words. Names will be withheld from publication only if appropriate reason is given. Pointer reserves the right to edit letters if necessary and to refuse to print letters not suitable for publication. Written permission is required for the reprint of all materials presented in Pointer.

The Pointer (USSN 0092-7681) is a second class publication published weekly from September to May and monthly during the summer term by the University of Wisconsin Stevens Point Board of Regents, 230 Communication Arts Center, Stevens Point, Wisconsin 54481. Distributed at no charge to tuition-paying students. Non-student subscription price is $8 per academic year. Second class postage paid at Stevens Point, Wisconsin.

POSTMASTER: Send address changes to Pointer, 104 Communication Arts Center, Stevens Point, Wis 54481.
Helping Hands

Dear Editor:

I am writing in regard to the article entitled "Helping Hands" in the January 26 issue. There are a few inconsistencies that I would like to straighten out.

I think a more accurate word in place should be assisted. I appreciate the people mentioned in the article, who were available to give me assistance when I went to them. However, just like other adjusting freshmen, staff members are not the only people who give assistance; friends also play an important part.

When I asked Ann Perkins, my RA about the different clubs and organizations on campus, she told me about the ones she thought I might be interested in. And as for the Homecoming dance, Ann went with her date and I went with my date, (Ann was not my date and I was not hers).

Michelle Treleaven, the Hall Director, did not come to see me frequently to see if I was having any problems. She did stop by to visit as she did with everyone else and just like everyone else, I went to her if I had a problem. Michelle never took me to hall meetings. She only showed me how to get to the first one.

Michelle did not put me in contact with John Jury. I met him at a hall program. The talks I gave at the area elementary schools were not Seeing Eye dogs, not about being blind. If I need a book taped or a test read to me, I contact John Timcak, but I do not go to him for psychological support.

One last important thing I'd like to mention, I did not appreciate my Seeing Eye dog's name appearing in the article without my permission. It is very important that no one calls her name, talks to her or peta her while she has the harness on. Since this was not mentioned in the article, people do not realize the distraction this causes the dog and the potential danger that it puts me in.

I would like to give a special thanks to all of my friends for making these past five months a great experience.

Sincerely,
Judy Staudinger

Get with the program

Dear Cal Kuphall, I am writing in regard to an incident that last weekend at the hockey game against River Falls. I understand that capacity limitations exist due to the fire restrictions, but if you have to turn one person away I expect that you continue to turn away everyone else who follows.

My sister, brother-in-law and their two young children drove over 100 miles to come up here this weekend for the basketball game. They never experienced a hockey game so we decided to stop in for the last period. We were turned away and understood at the time, but I was informed later on that you let four friends of mine in after you turned us away. I was very upset when I heard this, therefore, I decided to bring it to your attention. I hope that in the future you will be more consistent with these type of situations.

Sincerely, Judy Staudinger

Sorry - No Stud this week.

Watch for next week's Pointer!
An open book to Keith Sanders past

Chancellor Keith Sanders, wife Carol, and son Mark. Still at Southern Illinois University, he is expected to take his new position in April.

Taylor organizes fund drives

Taylor is winding up a fund-raising campaign which will not approximately $50,000 in private donations for special projects at UWSP.

Archbishop Weakland speaks

Archbishop Rembert G. Weakland of Milwaukee will discuss an issue in which U.S. economic decisions influence the lives of people in Central America during a talk Saturday, Feb. 11 at the University of Wisconsin-Stevens Point.

Taylor is assistant to the executive director of university advancement and of the UWSP Foundation. She also is physically handicapped, the victim of cerebral palsy. And, she is a black person in an almost exclusively white community.

Taylor has been at UWSP since 1987 as a coordinator of the annual fund drive. One of her innovations to the local campaign is a phone-a-thon.

The interpersonal experiences in Stevens Point have been positive, she says. "In fact, I've been treated royally." However, there have been what she calls discouragements in the areas of race relations, notably the reception flap over a racist remark by a member of the Stevens Point Board of Education. That incident has had a stinging effect on minority people, she believes.

Despite occurrences of this kind now and then, Taylor has found that living in predominately white communities is something with which she is comfortable. Ironically, her darkest memories are of a childhood in Chicago where, as a black, she was not in a minority. "I'm still intimidated by that city. I hated it," she says in her sharpest language.

It was there she was mocked for her physical handicap, her slow, deliberate speech and the candidly about any goal she might have when he assumes UWSP's top administrative post.

But he offered an open book to his past, mentioning the role he had as a boy growing up in the shadow of World War II in a community where coal was king.

There were three heroes in his early life. Jesus Christ, because Benton, Ill., is a religious community. John L. Lewis, leader of the miners' union, and Abraham Lincoln, the state's most notable son. "They didn't exactly bring me up and admired," he remembered.

In addition, there were Win- ston Churchill and Franklin Roosevelt, and to this day Sanders enjoys reading about them. The chancellor-designate was the first member of his family to attend a university and the only member of his extended relationship to earn an advanced degree.

One of the "many wonderful things that has happened to me," he says, as the result of higher education, is the friendship he developed with Donald F. McHenry, who later became U.S. Ambassador to the United Nations during the Carter Administration.

It was an agony and ivory combination. "Don was the first black person I ever came to know well, and for a kid coming from a town where there were no black people, it was a wonderful thing to happen to me," Sanders muses.

When McHenry was installed in his national position, Sanders and his wife, Carol, and their son Mark, were invited to the White House ceremony. It was a long trail from the days when the ambassador was the future chancellor's professor and de­bate coach at Southern Illinois University.

"I have always credited Don with my great sense of commit­ment to minorities because he was such a sterling example," Sanders continued.

During the interview, Sanders expressed some of his greatest interest in discussing the university's role in minority students and faculty members at UWSP. He con­ceded the work will be difficult at a campus which is located in the nation's whitest congressiona­al district.

The challenge, however, needs prompt and aggressive action, he suggested. "This is one of the most important prob­lems this country faces over the next 90 years—the integration of substantial numbers of minority people into the mainstream of American life. We think we can do it, but if we fall short and the United States could become seriously retarded, we'd be in a big trouble."

Sanders was part of a task force sponsored by the Illinois Board of Higher Education and State Board of Education that addressed minority student achievement. Members of the group concluded that a major effort should be made at the early identification of minority children with collegiate poten­tial, then close ties be developed and sustained between in­stitutions and these individuals. The interaction would begin several years before the students' arrival at a campus.

The new 49-year-old Sanders said he was appointed to the task force partly because of successes inged in minority re­cruitment in his college. When he became a dean in 1983, his college had four minority (i.e. black) faculty members and 256 black students or 1 percent of the undergraduate enrollment.

There are now 13 minority fac­ulty members and an ever-growing minority student population.

The challenge, he continued, has been to retain the students because many of them are pro­ducts of large inner-city schools "which don't equip them well for college."

Sanders has a special appreciation for the value of affirmative action. It is evident when...
**Black Americans recognized**

"Beyond the Dream—Civil Rights Achievements," a month-long observance of contributions made by black Americans will be held during February at UWSP.

Speakers, films, television presentations, plays and a dinner have been scheduled throughout the month.

James E. Sutton Jr., special assistant to the UW System President for Minority Affairs, will deliver a lecture on Martin Luther King and the UW System’s "Design for Diversity" plan. His address, which is open to the public without charge, will be from 1 to 3 p.m. on Wednesday, Feb. 22 in the Program Banquet Room. Sutton is involved with implementing the new plan for increasing recruitment and retention of minority students, faculty and staff on all UW campuses.

The month's events will begin with a racial awareness workshop for students, faculty and staff led by William Shulten of Indiana University's Department of Residence Life on Saturday, Jan. 31 and a soul food dinner on Sunday, Jan. 30.

Tickets for the dinner at 5 p.m. in Allen Dining Center are available at the University Center Information Desk. The cost is $1 per person, $10 per couple and $20 per family.

On Wednesday, Feb. 1, "Beyond the Dream: A Celebration of Black History," will be shown via satellite from Washington, D.C. The program, which will serve as the opening of the national commemoration, will be from noon to 2 p.m. in the University Center's Program Banquet Room. It will be repeated at 6 p.m., Monday, Feb. 20 in the Nicolet-Marquette Room.

"Expanding Dreams and Changing Realities," a talk by Kirby Throckmorton of UWSP's sociology faculty, will conclude the month's events. He will discuss achievements by black Americans and the overall problem of discrimination. The free address will be at 7 p.m., Tuesday, Feb. 21 in the Nicolet-Marquette Room.

**Black biology student presents paper**

A student at UWSP presented one of the six best research papers at a national meeting of a biology honor society held recently in San Juan, Puerto Rico.

Janet Harrison of Whitewater, a senior biology major at UWSP, received the Frank G. Stevens Award for Excellence in Student Research from Beta Beta Beta Biological Honor Society. She also won the Packard statistical calculator for taking first place in the ecology section competition.

Over 1,000 at the national level, Harrison competed against eight other students from throughout the country. She presented the results of her research on egg flotation to determine embryo age.

In the summer of 1987, Harrison worked as a research assistant for the Maryland Colonial Waterbird Project, sponsored by the University of Maryland at Frostburg. She helped to conduct ornithological field studies of the Black Skimmer, a seabird which lives in large colonies near the ocean. During her assistantship, she also designed and performed the study in which she measured the age of more than 400 eggs.

Harrison says the procedure, in which eggs are floated in water, is easier than the traditional candling process to determine embryo age. The test will allow scientists to estimate when large numbers of eggs will hatch so they can determine the best times to conduct banding and other research procedures.

More than 20 students and teachers from throughout the United States attended this year's national meeting at which more than 60 scientific papers were presented. Field trips were taken to coral reefs, the tropical rain forest and botanical gardens operated by the University of Puerto Rico.

Behind the veil of Raisa Gorbachev

by James De Cruz

"Behind every successful man is a forceful and equally successful woman" is a well known expression. What makes this "Carina" tick with "glamour" and "perestroika" seeing beyond the Berlin Wall? There are some avid observations of Raisa since becoming the Soviet's First Lady.

It is morning in Moscow, and a conspicuously important visitor, his face half hidden by a fedora, walks into one of the city's factories. He strides up to a worker and introduces himself: "I'm Mikhail Gorbachev."

"Oh!" the worker replies. "I didn't recognize you without your wife.

Not since Clara Nicholas wed Alexander in 1984 have Russians encountered a ruler's wife with such presence, such personality, such stamina as a subject of admiration and elevated eyebrows as Raisa Gorbachev.

She is the first spouse of a Soviet leader to weigh less than he does, and her tongue has it in Moscow, and the first "Carina," as some of her fellow citizens nickname her, to appear at the Kremlin since the fall of the Romanovs. She is also the first Soviet First Lady to use an American Express card and, as a member of the board of the future fund, the first since Lenin's wife to hold prominent public position.

Her frothy-intellect, sharp tongue and relatively lavish habits are the talk of Moscow. Almost from the day in 1983 when her husband took over as General Secretary of the Communist Party, Raisa Gorbachev has been one of the most notable, most gossiped-about females in the country.

What a change! For decades, while Soviet leaders went about the business of state, their spouses remained virtually invisible. The wives of Stalin, Krushchev, Brezhnev, and Chernenko "rarely appeared in public. It was not known for sure that Raisa Andreeva even had a husband until she showed up to Moscow him in his 1984 funeral."

Now, suddenly, there is Mikhail and Raisa, a pair who can hold their own in the international journalistic sweepstakes via-a-vis President Bush and Barbara, and, given the Gorbachevs' comparative youth (he is 27, she is 36), the Western press trembles with anticipation.

Even in this semiphenomenal age, prominent politicians' wives are somehow reduced to first names: Maggie, Cora, Nancy. Yet, despite her visibility, Raisa Gorbachev remains a riddle inside an enigma wrapped in a sa.

Is she the witty, cosmopolitan paragon of glamour, as some Westerners who have met her suggest? Or is she a hard-line ideologue, as others report? At a dinner with the Reagans during the 1986 Geneva summit, Raisa launched into a lengthy and pedantic monologue on Soviet foreign policy. After the Gorbachevs left, the Reagans may have spoken for the other guests when she fumed, within hearing of then White House Chief of Staff Donald Regan, "Who does that dame think she is?"

There seem to be several Raisas. Most prominent these days is the "Joan of Arc of Nancy.", The First Ladies' little cold war has been the stuff of tabloid headlines ever since Mrs. Gor­ bachev upstaged Mrs. Reagan by arriving unexpectedly at the 1986 Reykjavik summit (Nancy stayed home)."

"I missed you in Reykjavik," Raisa said when the two met in Washington last December. Nancy replied icily, "I was told women weren't invited."

At the Washington meeting, the U.S. First Lady was taken aback by her Soviet counterpart's relentsless questioning about historical and cultural minutiae during a tour of the White House. "I'm afraid I'm not much help," admitted Nancy, who was recovering from breast cancer surgery and mourning the recent death of her mother. "Their face-off was extraordinary," said one who saw the pair in action. "They didn't seem to understand each other."

As a remit, Nancy decided to tour Leningrad last June. Only if Raisa did not come along. Instead, Mrs. Reagan's official escort was Soviet President Andrei Gromyko's wife Li­ diya. Perhaps compatibility charts should have been drawn: Raisa, a Capricorn ("overexact­ ing, rigid"); Li, a Cancer ("touchy, unforgiving").

Nevertheless, Raisa is clearly qualified for the role. She graduated from high school with a gold medal for being top student in her class; Mikhail Gorbachev, at another school, came away with only the silver. In the 1950s, both attended Moscow State University and were neighbors in the school's cramped Gromyko Student Hostel. He pursued law. She studied Marxist- Leninist philosophy. He was 'a country boy, though self-possessed and con­ fident. She was popular, witty and cultured. They met at a ballroom-dance, and Mikhail and Raisa readily set about whittling down her small army of suitors. Mikhail and Raisa were wed in 1954.

On her initial trip abroad as First Lady, Raisa jokingly said to Danielle Mitterrand, wife of the French president, "Give me some advice. I'm a beginner at this job." She learned fast, and slowly became a hardliner. In the West. In Washington, accompanied by Vice President Walter Mondale and his wife Joan, and her husband made White House guests smile by leading the Soviet delegation in a rendition of sentimental Russian favorite, Moscow Nights.

As a message to the world, Raisa feels that, "The more we learn about the life of the people of our countries today, their concerns and their aspirations, the nearer we will have a better understanding of one another."

Odden appointed

E. Stephen Odden has been appointed to serve a third three-year term as chair of the Department of English at UWSP.

Justin Paul, dean of the College of Letters and Science, made the appointment on the recommendation of the English faculty but added, "Your fine record of ser­ vice was the primary factor considered."

The department is one of the largest on campus with more than 60 faculty. Odden has been at UWSP since 1979. He is a native of Morrow, N.Y.

Weakland's critics. He also has established himself as a defender of disent, interfaith Catholic Church.

A priest in the Milwaukee archdiocese once charged that Weakland was "setting up the foundation for an American Catholic Church — in a way he doesn't want much to do with the Roman Catholic Church." Another priest criticized by defending the archbishop for simply following principles of the Second Vatican Council. A guiding principle of that council was that the church "serve rather than dominate the faithful."

Weakland entered religious life as a Benedictine novice in his native Pennsylvania and was ordained a priest in Italy in 1981. He later studied music in Italy, France and Germany as well as at Juilliard School of Music and Columbia University in this country. He was a music professor for six years before being elected coadjutor archbishop of St. Vincent Archdiocese in 1983. In 1991, he was elected abbot primate of the Interna­tional Benedictine Federation and chancellor of the Interna­tional Benedictine College in Rome.

Other major roles in the church have been with the Commission for Implementing the Constitution on the Sacred Liturgy, the Catholic Bishops Conference and as member of the Vatican II Liturgical Com­mission.
A semester in Germany

by Gail Baxtler
Contributor

It was the spring semester of 1988 and, as usual, my concentration slowly began to drift away from my professor to various posters and pictures around the room.

One particular poster always seemed to capture my attention; it was the display for UWSP's Semester Abroad Program. I began to think about how great an experience it would be to actually travel to Europe. By, as you know, it was always the sort of thing that you thought about, yet you never took too seriously. Well, eventually I took it seriously.

During college is the most ideal time to go abroad. So many times people are afraid to actually commit themselves to something so drastic in comparison to the secure, sheltered routine of the average campus life. However, as I see it, it is the last chance you'll get to travel somewhere in which your accommodations, your travel arrangements, your tours and tour guides, etc. are all arranged for you so cheap.

Well, as the story goes, I committed myself to Point's semester to Germany. At first it was all a sort of dream, as meetings got more and more intense and when the first payment was sent, the whole deal became more serious and more real.

The entire summer of '88 I spent planning for the semester as well as working three jobs to make the money for it. By mid-August, I began to get "stressed-out" about the whole deal and nearly convinced myself that I should just go back to Stevens Point like I'd been every year for the past three years. Luckily, I talked myself out of that.

On August the 30th, I met, for the first time, all of the 17 other students from all over the U.S. who were to become my 1st family. The program took us through Czechoslovakia, communist East and West Berlin, Austria, and West Germany. And, for those who later died to stay longer and travel on their own, the rest of Europe was only a train ride away.

As students of the 1989 Program, we were the first U.S. group to ever acquire a visa to study for so long (three weeks) in communist East Germany. In fact, an East German newspaper printed an article on the group's presence in their country.

The experience of living in a communist country is one you never forget. People waiting three hours in lines outside grocery stores to get four bananas per family, since fresh fruits and vegetables are so rare there, 16-year-old为主线 lists to get a car, 12-year-old waiting lists for phones, fear of being listened to when you're in your own home. The list is endless.

The stay there was nearly a month; enough time to make us all appreciate what we have in the U.S. and have us all acting to get back into Western culture and civilization. Unfortunately, we had to leave behind many dear friends that we'd met there.

October brought us to Munich, West Germany, where we spent the bulk of our trip. Of course, October means Octoberfest and Octoberfest means beer and beer means... well, something was telling us that we were really going to like West Germany!

Color blindness caused by racism

by Tricia Deering
Staff reporter

You who have brown eyes; you are incompetent; drop out of school. You who have blue eyes: you shall conquer the world; you are omnipotent.

You, this is ridiculous, right? Yet, but these morals are what kept blacks out of public restaurants. These morals were cause a person to categorize football players as "dumb negroes." These morals are what cause a person to laugh at ethnic jokes.

Any of you anti-racists may be thinking "This doesn't include me. Racism went out before Greg Brady's bell-bottoms did. There's no difference between a caucasian and an oriental person; we're all the same." Bill Shipton, Department of Residence Life at Indiana University, disagrees. "There are some real differences, for example, between white and black culture."

We must open our eyes and stop this, our color blindness. A culture other than our own is neither better nor worse. But neither is it the same. It is a different way of life, one must accept, understand, and celebrate.

"Celebrating a culture is spending some time learning about it," says Shipton, "and this doesn't mean just reading about it. This means totally immersing yourself in it."

When is the last time you learned a few words in Chinese? Attended a Reggae concert? Tried tofu?

"In fall, "88, Shipton led a "Racial Awareness Workshop" designed for the most influential of our student body: SGA members, hall Council members, RA's and Hall Directors.

The 4-hour workshop consisted of discussions and several learning activities. One exercise had Shipton asking participants two questions: "What does it mean to be red, black, or yellow?" and "to be white?" The latter was more difficult to answer by most (interestingly, enough, of the 130 participants, 117 were white.)

"Being white," one student said, "means you never really have to think about it." CAucasians outnumber any other race in this country, he said. In fact, we have a minority population of less than 4%.

"Here at Point, people have never really been exposed to minorities," says Darrell Morse. Thomas Hall Director. "Because of this, we miss out on a lot of learning."

Remember the Melting Pot Theory? The theory that stated all people of different ethnic backgrounds should come to America and melted together to form one giant lump of a race. Shipton blatantly objects to this theory. He says America should be seen as a "giant tossed salad." To be a success (as all UWSP students in the Debent Center quickly realized), it doesn't take a different way of life, one must accept, understand, and celebrate.

Sometimes ingredients clash.

Issues of racism still exist. In dealing with these issues, people fall into three categories: the "Archie Bunker" active racists who see the world through their feelings about minorities; the "Wise Cracks" who make an honest effort to better understand a culture different from their own; and the pasty anti-racists (majority of today's society) who are afraid to deal with their feelings, so they partake in the "color blindness"
Semester abroad

More than 100 students from throughout the country are members of four groups which have departed for overseas travel/study sponsored by UWSP’s Office of International Programs.

The students and their leaders left campus recently bound for Great Britain, Australia, Spain and Taiwan. They will return in late spring.

Retired English Professor Lee Burruss, his wife, Maxine and Susan Rush of the theatre arts faculty are leading the 33 students to Great Britain. They will be headquartered for three months at the French Centre in London, followed by a three-week tour of the continent during April.

The group traveling to Australia will spend a week in New South Wales. They will be hosted for a month by students from the University of Waiiketo University. During a general weeks before returning home in late April.

The 21 visitors to Spain will stay with families in Madrid from January until mid-May when they spend a week in France and the Netherlands. The group also will travel to Portugal for two weeks during March and will return on May 30. Several UW-SP faculty and staff members, including Scott West, Philip George and his wife, Karen, John Zach and Dennis Tierney will take turns leading the students.

The 10 visitors to Taiwan will participate in activities at National Taiwan Normal University in Taipei. They will be hosted by the National University of Kaohsiung. The four visitors to Portugal will spend a week in Portugal and will participate in activities at the University of Lisbon. They will be hosted by the University of Coimbra.

The group traveling to South Africa will spend a week in Pretoria, a week in Cape Town, a week in Johannesburg, a week in Durban and will participate in activities at the University of the Witwatersrand.

A series of films, including five matinees, will be shown throughout the spring semester at UWSP.

The movies are sponsored by the University Activities Center’s Visual Arts Programs.

Admission to the films at 1:15 p.m. in Sundays in Room D108 Science Building, is $1 for adults and $0.50 for children 12 and under. The schedule is:

— Feb. 5: Somewhere in Time, a romance about a modern playwright, Christopher Reeve, who travels in time to find an actress who lived in the early 1900s, played by Jane Seymour;

— March 12: Club Paradise, a comedy about an ex-Chicago fireman who tries to rejuvenate a rundown Caribbean island resort, starring Robin Williams, Peter O’Toole and Rick Moranis.

Each poem is also considered for publication in the American Poetry Anthology, a leading collection of contemporary verse.

UAB sponsors films series

April 30: Dark Crystal, a live motion animation film created by Muppet masters Jim Henson and Frank Oz;

May 7: An American Tail, an animated movie about the adventures of Fievel the mouse, produced by Steven Spielberg.

Also, UAB will sponsor two "Blockbuster" films on Saturday, Feb. 4 and Saturday, March 11 at 8 p.m. in the University Center's Program Room. Admission is $2.50 for the public and $1.75 for students.

On Feb. 4, the feature is Moonstruck, Norman Jewison's romantic comedy about the lives and loves of an extended Italian-American family in Brooklyn, starring Cher and Nicholas Cage. The film on Feb. 11 is Bull Durham, a love story about minor-league baseball with Kevin Costner and Susan Sarandon.

RACISM from Pg. 7
theory," pretending that different colors of skin are non-existent.
Racism is a touchy subject, but is one that must be dealt with. We are brought up with a set of beliefs about our own race. Too often, this race is seen as the only "right" race. The only way we can open our minds to diversity is by dropping judgments of other races and ethnical colors of skin are nonexistent.
The only way we can open our minds to diversity is by dropping judgments of other races and being unaware of the others.

Like the time I spent the night at a topless bar in Vegas for the price of a Singapore Sling which I nursed for five hours.

The time I spent the night in a 24-hour porn movie theatre in L.A. for three dollars. There was no heat inside but at least I had a roof over my head and some entertainment. Most of the other patrons only wanted to be indoors and weren't particularly interested in what was going on.

I realized how easy it is to slip into a position like that of my new Nigerian acquaintance or, for that matter, any of the characters I have described. Any one of us might get mugged, lose all his money, his job and/or his home. The full meaning of the word "brother" became clear to me.
The homeless problem was no longer just an issue. It was very real.

SPECIAL STUDENT OFFER
SAVE 50% OFF REGULAR PRICE

Dear Student:

(UW Stevens Point - Spring Semester 1989)

Delivery service of The daily Milwaukee Sentinel, daily Milwaukee Journal and Sunday Milwaukee Journal for the Spring Semester is available on the following schedule:

March 27, 1989 - May 12, 1989, Inclusive

NO DELIVERY MARCH 18 - MARCH 26, INCLUSIVE

If you are interested in receiving The Milwaukee Journal or Sentinel for the Spring Semester, please fill out the following form and mail it with your check or money order to:

THE MILWAUKEE JOURNAL/SENTINEL AGENCY
1009 1st Street
P.O. Box 211
Stevens Point, WI 54481
(715)344-3393

Delivery service will not begin until your payment has been received. No adjustment will be made for late starts.

This offer is only valid in the town where the college is located.

YES!

I would like to order The Milwaukee Journal or Sentinel for the semester as follows:

☐ Daily Journal $22.00
☐ Sunday Journal $13.00
☐ Daily & Sunday Journal $35.00
☐ Daily Sentinel $22.00

☐ Special Student Rate $11.00
☐ $6.50
☐ $17.50
☐ $11.00

Regular Price

My Check[ ] or money order[ ] for $ (amount) is enclosed.

(3% Communications, (CI) is once again selling talents by presenting your Day singing telegrams. Don't forget that special with a loving message, suit for someone or so. Complimentary flowers (or dead) included with each telegram. You can be purchased in the Concours. See it!

NIPPER SINK RESORT
in Twin Lakes, WI. 1 hour from Chicago and Milwaukee
Remember NIGHT DANCING?!
(We’re just like the movie...really!)
Summer employment opportunities

Nipper Sink is the place to gain job experience. We provide all the training. We also work hard, but we play hard too! We employ 150 energetic students with outstanding personalities to serve nearly 14,000 guests throughout the summer. It’s intense...but, o, what a summer!!

Nipper Sink Resort has openings for...waiters, waitresses, buspersons, bellhops, front desk personnel, kitchen staff, bar staff, life guards, orders, housekeepers and housemen.

Nipper Sink Resort has openings on its outstanding and well known activity staff...social host and hostesses, athletic directors, tennis and horseback riding directors, young adults and teens directors, twins and play school directors.

All staff members with backgrounds in music, dance, comedy, magic and drama will have outlets for their talents and Thursday nights’ quest-staff talent variety show!!
We are extremely selective in choosing our employees. But it’s easy to get a position if you can: 1.) Offer energy, enthusiasm and a smile to every guest. 2.) Commit to providing service at the highest level. 3.) Put forth 110% every day. Co-ed dorm and meals are available. We will be interviewing in Point on Feb. 13, 1989 at the Job Fair in the U.C. PBR (P.O. Box 130, Twin Lakes, WI 53181).
Basketball team struggles

The UWSP men's basketball team continued to struggle its way through the season, dropping its fifth Wisconsin State University Conference game of the season, 92-76, to UW-Platteville Saturday night at Quandt Fieldhouse.

The loss drops the Pointers to 9-4 overall and 5-3 in the WSUC. The Pointers held Platteville close throughout most of the first half and a lay-in by Pointer Mike Hatch with 2:21 left in the first half tied the score. After that, however, Platteville went on an 11-2 run during the final minutes of the half. To take a 46-37 advantage into the locker room.

The second half of the one as all Platteville with the Pointers holding a double lead early for almost the entire 20 minutes. The closest UWSP could get in the second half was to within seven points with 17 minutes left in the game. In fact, the Pointers trailed by as much as 21 points three times in the half and never got within 12 in the final four minutes.

Scott Anderson led the Pointers with 14 points, while teammate Chas Pronschinsky added 10 points and seven rebounds. Michael Leibman also scored 10 points for the Pointers. The Pointers hit only 26 of 63 shots from the floor (.413) including only three of 16 three-point attempts, but managed 21 of 28 from the free throw line (.750).

Platteville made 32 of 58 from the floor (.552), including five of six three-pointers, and the Pointers made 23 of 27 charity shots (.852).

The loss puts the Pointers on the edge of the NAIA District 14 play-off picture. UWSP was ranked seventh in the Dunkel Ratings last week, but the loss to the Pointers (who were ranked second) may push UWSP out of the top eight.

The Pointers are scheduled to host UW-Whitewater Saturday night at the Quandt Fieldhouse. Gametime is set for 7:30 p.m.

Meet the Pointers

On Sunday February 4th, the UWSP Pointer Hockey Team along with the Blue Line club will be sponsoring "Meet the Pointers." You can skate with the Pointers absolutely free from 3-4 Sunday evening at the K.B. Willett indoor ice arena. All the varsity players will be present.
Attention volleyball players

It's time to get your ears muffed out and your volleyball teams tuned in for the 10th Annual March of Dimes Arctic Volleyball Tournament!

Die-Hard enthusiast like yourself can have a wonderful time playing outdoors in the middle of winter: it's a great way to beat cabin fever. Have a fun day with close friends and also important...help the March of Dimes in our continuing effort to beat birth defects.

This is a co-ed tournament. The entry fee is $45.00 per team. Awards will be given to the 1st, 2nd and 3rd place teams and there will be prize drawings throughout the day.

Karate Club resumes classes

by R. Teska

On Feb. 2nd, the Karate Club will resume its classes. The club meets in Berg Gym from 6:00 to 7:30 on Mondays and Thursdays. Since its formation in the early '70's, the club has established itself in the campus and community.

Although teaching the style of Shotokan, the club's instructor and president, David Bruer, welcomes people from other disciplines as well.

Dave Bruer studied under world's founder, Tony DeSardi, for several years and took over the teaching duties a year after DeSardi moved to Chicago. Bruer has also studied under Hirokazu Kanazawa. Kanazawa is an eighth degree black belt from Japan and is one of the leading experts in the world.

Karate offers the advantages of increasing strength and flexibility while giving the body a good aerobic workout. The club also emphasizes the special concern of women's self defense.

The cost for the club is $25.00 for the semester, which is about $1.00 per lesson.

Pointers swim strong

It was a long weekend for both the men's and women's team at the Cow College Invitational held Jan. 27-28. With this being the championship part of the season Coach Blair has intensified the workouts, making it difficult for the swimmers to swim extremely fast. In spite of this most salient fact, both teams managed to swim well against scholarship schools such as U-W-Milwaukee, University of Wisconsin-Oshkosh, and UW-Green Bay. The men finished fourth against a strong field which included six other teams. The women finished third among seven other teams.

National qualifier for the women were Jan Gajewick, Teri Catchera, Tricia Wentworth, Deb Hadler and Anne Watson. For the men, Kevin Parham, Jamie Weigel and Dave Moraruzzo qualified for the upcoming national meet. This weekend the men swim Madison J.V.'s on Friday, this week the men and women compete against Shout Saturday.

Send your lover a line for Valentine's. Fill this size space - any message - only $1.00. Stop in the Pointer for details. Due Feb. 6th.

The environmental group Greenpeace is at it again. They have used the tactics of inter­vention in their efforts to pre­serve life on earth. Their latest adventure is with Japanese whalers in the northern Ross Sea near Antarctica. Green­peace activists in rubber boats loped all around the whalers to protect a pod of whales. The Japanese claim they kill whales for research these days. Neither Greenpeace nor the Internation­al Whaling Commission believes the research story.

The Iran/Iraq war has been going on for years and there has been evidence of the use of chemical weapons on the battle­field. Now U.S. officials say the Iranians are stockpiling chemi­cal weapons to make crude or­der chemical capabilities of the Iraqis. This new alarm comes on the heels of discoveries that Libya has the largest poison gas factory in the Middle East in operation. The officials say that... CONTINUED ON PG. 15

MADISON— Anthony and Cle­opatra. Romeo and Juliet. A pair of Peregrine Falcons, the first of the Wisconsin Bank. As lovers go, successful courtship last summer of two peregrine may not make great drama, but it seems less than a historic encounter.

This was the first time that we know of that one-year-old peregrine falcon successfully hatched and produced young,” says Charlene Gieck, a non­policy biologist in the department of Natural Resources Bureau of Endangered Resources (BER). Peregrines don’t nor­mally nest until two or three years old, explains Gieck, who headed the Wisconsin pere­grine recovery program for BER.

Unfortunately, the young male falcon didn’t adjust to fa­therhood. When the peregrine chicks began to fly, explains Gieck, the father “exhibited aggres­sive protective behavior.” Although this is natural behav­iour for peregrines who are very territorial, it is not normal behavior for a father toward his chicks.

“If he seems again in 1989, we expect this behavior to im­prove,” Gieck says. But, she adds, there are no assurances that he will return. The fal­cons that nested in Milwaukee were captive-raised birds re­leased from buildings in Minne­apolis and Chicago, as part of a peregrine reintroduction pro­gram in those states.

However, in the 1980s, main­ began to alter this course of fires clearing the land. For it was then that man began cut­ting out any and all fires which started in or around the park, no matter what the reason.

Over the 90 years before 1960, fire policy was managed to a large part by natural fires to burn themselves out. Now forest fires are controlled. Today, land is covered by dead material developed on the ground. Not only did this layer starve off new plant growth and limiting the diversity of the forest, but it also left a large amount of very dry, very combus­tible material.

This problem is said to have been happen­some. With that much material on the ground, the fires were on the way.

“The Great Yellowstone Fire,” however, is not the only item on note in this month’s Na­tional Geographic.

As usual, the editors of the magazine have put together a fine collection of pictures and writing.

In one contrast this month, NGI looks at the office buildings of large cities, and takes a look at residential life in Chicago’s South Side.

This program is followed by a look at the radium mines in Minnes­ota during the mid and late 19th century.

In a contrast, the other reports in the magazine are a look at the life and work of things that write the west of America through his pic­uresatory Resources Fund. Each chick cost about $1,800.

Gieck says the DNR plans to continue releasing peregrines through 1990 and then evaluate the pro­gram. The program has the goal of establishing 10 breeding pairs in Wisconsin by the year 2000. Gieck believes all six of those falcons survived and the program has been a success. It is likely night that peregrine recovery was an important project in the 19th and 20th centuries. By today’s standards, it appears to be a success.

Is nuclear power the future? By Todd Stoebeli
Outdoors Writer

Is nuclear power a way to solve our energy problem? Nuclear power doesn’t cause acid rain and it doesn’t emit carbon dioxide into the atmosphere, the Green­house effect. So what is the problem? Should nuclear power be our future energy source? No.

I believe we are dependent on nuclear power to some degree but not as our sole source of power. What the U.S. should be doing is phasing out nuclear power and using other methods of generating power. That is why I propose a total shutdown of all nuclear power plants.

What is my definition of solar power? I feel that we are too dependent on nuclear power and safer types of energy can be harnessed.

Nuclear power has all sorts of problems associated with it. The most obvious problem is hazardous waste. How are we going to deal with this? A scientist believes that the safest way of disposing of nuclear waste is to use solar power. Solar energy is not only cheaper, but also safer and more reliable.

I think it is time for the American people to demand the government find alternative energy sources. How can we keep investing in oil and nu­clear power when the problems are associated with them are literally killing America and its people? It’s time we use safer and more reliable energy sources. The best solar panel we have is the sun. The sun emits unlimited amounts of energy a day which cannot be tapped. The sun is clean and can be tapped to generate more power, expand our homes and produce electric­ity. According to a Department of Energy Report to Congress "more than a million active systems and 250,000 passive sys­tems have been installed." The report also states that "passive solar homes now provide $46-­per cent, the money that nuclear power cost us." This is a tremendous step towards a more sustainable home owner and for America.

The Department of Energy has expanded its research in the solar power field. Its main concentration is on nuclear pow­er at the present time. By the time nuclear power is "inherently safe," it is safe from meltdown, the costs of solar pow­er will be much lower than nuclear. Does our country need nuclear power? It is use for the simple reason that we need more power, not power that is clean and efficient. As a citizen, you should write your Congress person and tell him your views about solar and nuclear power. The address is: U.S. Senate or House Representatives, Washington D.C. 20510.

Citizen action is needed to get solar power off the ground and into action.
companies from Germany, Asia, and the United States have supplied materials for the Italian plant.

The Milwaukee Journal has a feature called Earthweek: Diary of a Planet in its Sunday edition. The section tells of various environmental happenings around the world. This week there is a list of 17 places where interesting things are taking place. One example is a black rain that fell in Kenya. The rain may have been blackened by heavy agricultural burning in Tanzania and the Sudan. Another example is the Soviet Union's first underground nuclear test explosion of the year in central Asia.

Agricultural researchers have been working on developing bacterial strains that could be applied to crops to help them withstand disease and other problems. One type of bacteria shows promise at UW-Madison. This bug has shown some protection of soybeans and alfalfa from disease. It seems to promote growth of these two staple crops. This bacteria was found in farm fields, was isolated, and may be ready for more widespread use in farm fields by 1991.

This year's mild winter may be nice for our heating bills, but we could feel it in other ways. The lack of snow may affect groundwater supplies in southern areas of the state and that could affect crops and commodity prices next year. The northern tier of the state seems to have a good deal of snow, but there isn't as much agricultural land in the north as in the south. The snow drought is not limited to Wisconsin either, so next year's food prices may go up.

For those of you interested in the fires that burned in Yellowstone National Park in 1988, check out the February issue of National Geographic. With pictures and the magazine explores the after effects of the fires which burned nearly half of the 2.1 million acre park. The fires made a patchwork pattern throughout the park and researchers are already studying the next year's growth. Even as the last of the fires were burning out with the first snows, green shoots were poking out of forest ashes.

This winter scientists will study the stone layer in the stratosphere over the North Pole and Arctic regions. They are doing so because research has shown that the stone layer over the South Pole is somewhat depleted and recent discoveries also point to depletion over the Arctic. This could mean real problems for the protection from ultraviolet rays the stone layer provides. It was thought the southern hole could cause atmospheric disruptions. These conditions do not exist as strongly in the north.

With recent world attention focused on the ways in which man-made chemicals affect ozone in the stratosphere, the Arctic study could provide some sobering food for thought.

Outdoor report

MADISON, WI — There's an almost total lack of snow in the southern half of Wisconsin, but the far north has more than enough for winter activities like skiing, snowmobiling and snowshoeing. Warm January temperatures are encouraging outdoors enthusiasts to get out and enjoy it.

Snow depths in Iron County range from 18 inches near Mercer to over 30 inches in the northern part of the county. Most lakes have at least 18 inches of ice, but some also have a layer of slush on top, which may limit mobility. ATV and snowmobile drag races are being held at Kyes Lake in Florence County this weekend.

In the Woodruff area, cross-country ski and snowmobile trails have about a 16-inch base of snow and are in very good shape. Ice surfaces resulting from warm weather last weekend have been cut from the ski trails, and the trails have been regraded. The bumps that form on trails where snowmobiles stop and start are being cut down and leveled by local clubs.

Cross-country skiers should note there are areas in county and industrial forests where trails are open to the public free of charge. For instance, Consolidated Papers has three trails on its forest lands—one near Winchester in Vilas County, another near Minocqua in Oneida County and the third near Birr in Wood County. You can get maps and directions from Consolidated's timberland offices in Rhinelander or Minocqua, or from its public affairs department.

Ice fishing on Lake Superior's Chequamegon Bay continues to be slow, and ice conditions around the Apostle Islands are poor. Walleye and northern fishing on inland lakes is generally good, although some nice walleyes are being caught on Butternut Lake and the lakes in the Phillips chain. They're getting plenty on Rice Lake in Barron County, and panfish action is very good in Taylor County.

Bukolt Park Restoration Proposed

Department of Natural Resources

The City of Stevens Point is proposing to remove approximately 7,200 cubic yards of sand, gravel, and organic sediment from the bottom of the 8.6-acre Bukolt Park Lagoon, thus deepening them on the average of 4.5 feet. This project is an attempt to restore the lagoon as closely as possible to their original condition as they existed when first constructed by the Works Progress Administration (WPA) in the 1930's.

The City plans to block the inlet and outlet culverts at both the north and south ends of the lagoons and then dredge them by pumping into the Stevens Point Flowage. The bottom sediments are then to be removed with the use of an end loader. These materials are to be temporarily stockpiled on the gravel working lot at least directly east of the northernmost lagoon.

After the earthen dredge spoil has been adequately dewatered, it will be mixed at a 1:1 ratio with topsoil and used for various city street landscaping projects. The City has estimated that the lagoon restoration project will cost approximately $10,000.00.

The Department has made a preliminary determination that an Environmental Impact Statement will not be required.

Beaver control subsidy applications now available

Department of Natural Resources

MADISON, WI — Trappers and hunters in northcentral and northeastern Wisconsin can now file applications for the Department of Natural Resources beaver removal subsidy program, said Tom Hauge, department wildlife damage specialist.

Trappers and hunters will be paid $7.50 for each beaver they remove from areas designated as beaver damage control areas. The subsidies apply to beavers taken from March 16 to September 30, 1989.

Participating counties include: Adams, Florence, Forest, Juneau, Langlade, Lincoln, Marinette, Marathon, Menominee, Oconto, Oneida, Outagamie, Portage, Shawano, Vilas, Waupaca, Washington and Wood.

“We encourage all interested hunters (those with a valid hunting license) and trappers to take part in the program,” Hauge said. “The subsidy program is the result of legislation enacted as part of the state budget bill in 1987. Its objectives are to increase the harvest of beaver to reduce beaver populations and the damage they cause to roadways, timber and trout streams.”

Concern about beaver damage has been increasing during the last 10 years. A survey from the U.S. Forest Service on the Nicolet National Forest shows a seven percent increase in active beaver colonies from 1987 to 1988. A total of 430 active beaver colonies were identified, amounting to one active colony for every mile and one-half trout stream.

“At the department, we’ve tried to respond to people’s concerns by removing the legal constraints on landowners wanting to take action to control beaver and remove beaver dams,” Hauge states. “In addition, we’ve increased the length of the beaver trapping season from 50 to 200 days to increase the beaver harvest.”

Application forms and pamphlets explaining the details of the subsidy program are available at most DNR field offices. Persons interested in participating will need to complete the application form and send it to Madison for processing.

Hauge indicated that there are no limits on the number of beaver for which participants may be paid. However, they will be required to register each beaver at a DNR-designated registration station to be eligible for payment.

For more information contact: Tom Hauge 608-267-7857.

Give Yourself A Pat On The Bock.

You’ve earned it. You deserve it. And now’s the time to enjoy the traditional rich, creamy taste of Point Bock beer. But hurry, this bock’s so special it’s available for a limited time only.

Hurry, Bock! This Good Won’t Last Long.
Taylor tried new things in high school—even ballet and basketball, though slowly. "But I did it," she recalls. By the time of graduation from Madison West, her classmates voted her the "Unsung Hero" award. She also received a citation from the Governor's Committee on Youth and Advocacy.

After graduating from Edge­wood College in Madison, she worked in Madison and Dane County on vocational and rehabilita­tion projects. Among other things, she taught self-advoca­cy classes to help people learn how to secure education, em­ployment and housing. "In all the classes, I mentioned that we may have disabilities, but we are people first."

Later, she earned a master's degree in community arts man­agement from Sangamon State University in Springfield, Ill. While there she was an Arts Management Fellow with the National Endowment for the Arts, doing a study of the distribu­tion of federal funds to arts organizations across the coun­try. She also served internship as communication coordinator of the Illinois State Board of Education-sponsored art train.

Back in Madison after earn­ing her M.A., she worked at the State Historical Society of Wis­consin as a research assistant in the fund-raising division be­fore coming to Stevens Point.

Taylor has high praise for her family for helping instill in her a positive attitude about her disability. Her mother was origi­nally from Columbus, Ohio, and grew up there when it had few blacks. The senior Taylor learned how to manage well in such a society and has been an example to her chil­dren. The family home is now in Deforest, near Madison.

Taylor's environment has giv­en her insight into problems in­volved with forced quotas in af­firmative action matters. She is leery of that approach. For places such as UWSP, she likes the idea of exchanges of faculty and students from institutions with large minority populations. "Then the real trick would be to have some spillover effect in the community," she adds.

R E S E R V E O F F I C E R S ' T R A I N I N G C O R P S

YOUR FIRST STEP TOWARD SUCCESS IS THE ONE YOU COULD TAKE THIS SUMMER.

As Army ROTC Camp Challenge, you'll learn what it takes to succeed—in college and in life. You'll build self-confidence and develop your leadership potential. Plus you can also qualify to earn an Army Officer's commission when you graduate from college.

Army ROTC Camp Challenge is a summer opportunity open to any high school student. Since 1987, the challenge has benefitted over 20,000 students. By participating, you will have the chance to take the next step in your future.

You'll learn leadership, teamwork and communications skills which will help you be successful in college. You'll learn about military values and the Army, and work with current Army leaders who will help you develop your leadership potential.

You'll also be able to meet Army ROTC students from other colleges and universities, as well as Army ROTC cadets from other branches of the military.

In addition to the leadership training, you will have the opportunity to experience Army ROTC activities such as Marching, Field Training Exercises, and other team-building exercises.

The summer program is open to students who have completed their sophomore year of high school. Applicants must have a cumulative grade point average of at least 3.0 on a 4.0 scale. Applicants must also be U.S. citizens.

For more information, contact the Army ROTC Office at your university. You can also visit the Army ROTC website at www.armyrotc.com to learn more about the Army ROTC Camp Challenge.

Find out more. Contact: Captain Mark Shriver Room 204, 555, 346-4016

AR MS ROT C THE SMARTEST COLLEGE COURSE YOU CAN TAKE.
Leaky landlords and stuffed pockets

For all you poor souls who couldn't make out the photo in last week's "Landlord of the Week" column, here it is again plus another. We are still looking for an apartment to profile for next week. If you have any suggestions, or an anonymous tip, PLEASE call 346-7007. We can only help if you call, so do it do today!

Editors Note: I would like to make clear the facts behind the "Landlord of the Week" or newly renamed "Leaky landlords and stuffed pockets" column. The idea of the column is to aid, protect and defend students whom we feel are being taken advantage. The facts about the living conditions are presented to us by the tenants. The Pointer observes these conditions and states an opinion. Many of the apartments are maintained at Housing Commission standards. However, for the rent many students are paying each semester the conditions are just not up to par.

I invite landlord rebuttals. The students need to know the reasons for the unacceptable conditions in which they live. If indeed there are reasons. Please send any comments to The Pointer c/o Gabrielle Wyant-Perillo, 104 CAC UWSP, Stevens Point, WI 54481.
ANNOUNCEMENTS

Speech and Hearing Tests (part of the admissions process to the Professional Education Program) will be held on Tuesday, February 7, in the School of Communicative Disorders (lower level COPS) from 4:00-5:00 p.m. Professional Education applications and/or Speech and Hearing information may be obtained from the Education Advising Center (478 COPS).

Learn about the relaxing and healing potential of the hands in UAB's introductory Massage Course inherited by Frank Bonner, Massage Therapist at Ford Chiropractic Clinic, and staff member at Wausau Fitness Center. Sign up at the campus activities office. $15 students, $20 non-students. For more info call 345-4317.
