It's your senior year. Second semester. You go into Records and Registration for your final credit check. "Everything seems to be in order here," the secretary tells you. "You only need seven credits to graduate and only four of them need to be in a 300 level course." No problem. You think to yourself, "This will be easy. Only four 300 level credits!"

So, you go through registration and discover, that even though you are a senior and should have some right to get the classes you absolutely need to get out of this institution, all of the classes you chose are closed.

Your next move, therefore, would be to go through the infernal 'drop-add'. It's your last time you'll ever have to do it, so you put up with the run-around.

So, for the first week or so, you attend any class that will fit into your present schedule and see if the professor will allow you to add. Now, that's the easy part. The difficult part is finding a class that somehow still applies to your major and that will somehow help you in your career that you have chosen.

It seems to be the case that many students, mainly seniors, are having a truly difficult time getting the final credits they need to graduate this semester, many of my friends included. One guy I know is a communications major. He only needs 3 credits in a 300 level communications class. Since the beginning of the semester he has attended every possible class that fits into his schedule and that is still of some value to him. And since the beginning of the semester he has been turned down for adding the class.

Now I understand the position of the professors in that they have a limited amount of spaces for each class. I also understand that if they allow one student to add the class, then they have to allow anyone and everyone to add the class. But let's get real. These students who are having problems are seniors. They have spent the last five years saying or paying tuition prices and putting up with a lot of crap from the University long enough. All they are asking for in return is a decent education and the chance to take the classes they want and need.

I don't know what can be done to remedy this situation and I am really in no position to make those kinds of decisions. But I will say this, I am a senior graduating in May and if there is anything that I can do about this, I'll be glad to do it. I am thankful that I have not ever experienced this unfortunate situation. I hope that all you seniors who are struggling do not give up and get a hold of UWSP this May, get what you need and I also hope that any professors and people in the administration who know anything about this will do your best to help the student body here at the University of Wisconsin Stevens Point.

---

by M.R. Bernas

George Bush is president of the United States. More than half of the students in the country were appointed by the Reagan administration. Bush has already dropped his moderate stance (which got him elected) in favor of a right-wing stance which must have made Jerry Falwell stand up and cheer. It's been done slowly, calculated carefully and orchestrated with money, power and a precision taken from history.

Paul Kramer, member of "The Realist," and conspiracy researcher and investigator Mae Brussel paint an image (which got him elected) of the federal judges in the day in 1980 when Ronald Reagan was elected. Bush president of the United States.

I was informed later on that you let yourself down in my mind when you turned us away. I was very upset when I heard this, therefore, I decided to bring it to your attention. I hope that in the future you will be more consistent with these types of situations.

Sincerely,
Judy Staudinger

by Scott M. Maline

How well I remember the fall day in 1960 when Ronald Reagan was elected to be the 40th president of the United States. My heart and spirit were at the election night bushes held across the nation. My person, however, was at home anxiousantly awaiting the results of the election. Once the outcome had become clear, I finally relaxed knowing that my future was now holding outstanding possibilities. Ronald Reagan had just been elected president. The world would now become a better place, and the liberal Carter administration was on its down fall. Only now would America begin to climb out of an earthshaking recession.

Now, still a staunch conserva-tive yet somewhat mellowed, I have found myself wrapped up in what some might call "in-sane" emotion. I, for one, have grown quite accustomed to Rea-gan's face in the Oval Office. He embodied the spirit and style appropriate of a chief executive. He easily won the hearts of his hard-fisted critics. When he fired the air traffic controller who dared to strike, America knew it had a leader not afraid to make his position very clear and his stand very firm. It was a welcome change from the Carter regime. Shortly after this came the Reagan assassination attempt. America no, or at least, hoped to warm up to a man who could be a leader at a time like this! Even die-hard Democrats were impressed and admired his grace under fire.

He also seemed to temporarily tame the terrorist world.

Most of Europe was horrified when Reagan decided to bomb Libya military bases in 1986. He happened to be from Germany, saying to me, "Your president has just started World War III." I, however, was secretly proud in a country that wasn't afraid to give Colonel Gaddafi as good as he got. It quickly established Reagan's image of being a tough terrorist. The United States would no longer be vulnerable or intimidated from international terrorist acts.

I also remember that December night when the Intermediate Range Nuclear Forces Treaty was signed. The thrill that the world was safer because of the majority and solemnity of the setting. Cries for
The death penalty

To the Editor

The Feb. 2, editorial concerning the death penalty called for its reform.

The reason for the constitutionality of the death penalty is definitely included in this code of law.

The death penalty

Three months ago my brother and I made sacrifices to reach a desired goal, we chose, who migrated to Wausau because change of leader...
Orr assumes duties as director of General Services

Patricia Orr of Houston, Tex., assumed duties Wednesday as director of General Services at UWSP.

She succeeds John Sundstrom who left the university last December to become a professor at the Grand Valley State College in Allendale, Mich. Steve Patrick, director of Administrative Affairs, has been the interim administrator.

Orr's appointment was made by Greg Diemer, assistant chancellor for Business Affairs, who cited "her excellent background in private enterprise and at a major university. We're pleased she has joined us."

She was chosen for the job from a field of 16 applicants.

Orr will oversee management of the UWSP parking, telephone, telecommunication, central stores, networks and computing information and transportation service fleets, protective services and hazardous waste operations.

The units have combined budgets of about $1.5 million and sales credits approaching $2 million.

For the past three years, she has served as director of Development Support Services at the University of Houston System Administration where, among other duties, she managed multiple data bases related to alumni and fund-raising activities.

Previously, she was supervisor of Operations Support for Southeastern Bell Communications Inc. and communications consultant for AT&T Systems/Southeastern Bell Telephone Co. both in Houston.

From 1973 to 1982, she was office manager for Gaudier Storper & Company, both in Oakland, Mich., and an MBA in finance from the University of St. Thomas in Houston, Texas.

On February 3 is nature writing

by Molly Shallop

Contributor

Area writers and naturalists are invited to participate in a portion of nature writing workshops that will permeate the month of February.

Open to beginners and professionals alike, they will be held on February 3, 10, 17, 22 and 25 and will actively involve participants even and ears.

For more information, contact Molly Shallop.

Also, February 3 will kick off the series with a poetry reading event. War on War at 7 p.m., February 8, at the UWSP University Center. War on War deals with many aspects of war, especially the Vietnam War.

An English instructor at Fisher Valley Community College in Montana, Shallop also authored Native Land. Also, in the recipient of a National Endowment to the Arts Creative Writing Fellowship, comments poet William Stafford: "Lewell Jackson has documented his movement gone inside the feelings and thoughts that made the part of the century. He makes me realize the process, focused and engaged, it can be."

ASE now open for members

by Molly Shallop

Contributor

Members of the community and university concerned about learning and acting on issues related to the health of Stevens Point and the world beyond may join an alliance for a Sustainable Earth (ASE) next week.

Membership is $2.00 for the calendar year and may be obtained at the UWSP University Center, Room 6-10 from 11:00 a.m. to 2:00 p.m.

Currently in the planning stages is Rainforest Awareness Week for the end of March. ASE is inviting several experts on tropical ecology, culture and economics to create a panel and informally discuss with the public the status of the world's rainforests.

Also, an open letter and petition to President Bush will be available for signing. It will alert citizens and politicians on the rainforest issue, possible strategies for dealing with it and ASE's official stance on it.

Rainforest Awareness Week will conclude with a Saturday field trip to the Milwaukee Public Museum for a guided tour of the rainforest exhibition there.

To arouse public awareness and action on urgent issues, ASE plans to sponsor guest speakers throughout the spring semester, including Paul Erlich as keynote speaker for Earth Week this April as well as an Earth First! representative.

Further on the horizon, ASE would like to initiate a Christmas tree recycling program for the city of Stevens Point.

Women's Affairs Committee up-date

By Susan Heinrichs

Contributor

The Women's Affairs Committee of the Student Association has decided that a weekly column will keep concerned students informed about happenings that affect them directly. During this semester we intend to update you on important statistics, available workshops and monthly meetings about women's issues.

We'll also be throwing in odd bits of information that you might find interesting.

United Council met in Oakshok this past weekend with various directors including myself. We updated everyone about the available for signing. It was also announced at the recent United Council meeting that the National Organization of Women is organizing a march and rally in Washington, D.C. on April 9, 1989. The local NOW plans to take a group to Washington. If you would like more information, contact Denise LaVerne, coordinator, at 341-534 after 4 p.m.

Also, don't forget that the Women's Resource Center is providing many valuable resources for all UWSP students. Take advantage of the Women's Resource Center, you haven't already done so. The WRC is constantly receiving information on workshops around the state. These are posted inside the WRC with Des Moines located on the third floor of Nelson Hall. There are also numerous job opportunities posted in the hall.

Take a look! Special job opportunities are women with children, many of whom are non-traditional students. A resolution was passed opposing these proposed rules, and our committee further decided to support proposals of the Legislature that would allow students receiving public assistance to continue to attend four-year institutions. There will be public hearings held 90 days these proposed rules in various cities. Concerned AFDC recipients are urged to testify at these hearings. For more information you can contact me at 346-400.

Sexual assault in Stevens Point

By Peter Teska

Contributor

Sexual Assault: It's not a pleasant topic, but nearly everyone has thought about it at some time in their life. With 99 percent of all sexual assaults being committed against females, it's something that all females should be especially concerned with. Statistics show that as many as 25 percent of all females, while attending college, will suffer some sort of sexual harassment.

In 1988, there were four assaults reported on campus. Of these sexual assaults, none were first degree, two were second degree, one was third degree, and one was fourth degree. In 1987, there were seven reported assaults. One was first degree, four were second degree and two were fourth degree. In 1986, there were three assaults: one first, third and fourth degree. In 1985, 1984, 1983, 1982, there were 3, 3, 3, and 3 assaults respectively. Comparing this to the city-wide statistics, the city reported 14 sexual assaults for 1988 and 18 for 1987. For 1987, six of the assaults were later unfounded. Being unfounded means that the police department felt that the assault did not actually occur and in mind that the city numbers include the campus numbers.

Whether or not these numbers reflect a large number of assaults, is open to many interpretations. Obviously one is too small, but it doesn't appear that this campus has the largest number of assaults, especially gang rapes, being reported on other campuses in the nation. This is probably due to several factors, which include a Woman's Resource Center that in locates a stoppage of time into sexual harassment. It is well behaved Greek Society. I found no reported cases of fraternities being involved in the sort of gang rapes that are sensationalized by the press in other cities.

It should be asked whether or not there are many more assaults occurring that aren't being reported. Undoubtedly there are. But it would seem that the neighboring area is no worse than any other area in the state. Indeed, state statistics for 1985 and 1986 show that Portage County is about average for the state.
A Poem (For Valentine's Day) by Stud Weasel

Darling:
You, the most perfect of all God's creations,
you mean more than the world to me
for in you and I, I can see forever
like two rose petals connected together
driftin down life's gently flowing stream.
You've taught me to live—to fly high as a dove
from you dear I've learned that to live is to love.
So with every day, I will love you more
and with every moment, the more will I be your friend
and never will I forget taking you home from the bar last night
Happy Valentine's Day....What's your name again?

SAVE HEAT - SAVE MONEY

Is your house ready to become an official artie ter-
ritory this winter? You don't have to suffer to stay
cheaply comfortable this winter.

—Insulate walls, ceilings and windows.
—Turn down the heat when you're not home.
—Bake bread to heat your kitchen.
—Have people over to raise your home temp.
—Don't heat unoccupied rooms.
—Dress warm indoors.
—Use a humidifier to stay comfortable
  at lower temperatures.

Try these tips, you'll be surprised!

Busch beer to sponsor spring break

JACKSON HOLE, Wyom­
ging, January 27, 1989—"Don't
join the crowd, join the club—this
Busch Ski Club!" Busch beer, the
nation's fourth-largest sell­
ing beer, is planning its second­
national skiing spring break, March 18-24, in Jackson Hole, Wyom­
ging. Joining the most com­
prehensive spring break pack­
age ever offered for ski buffs, the "Busch Ski Club" will treat
vacationers to nine days of ski­
ing on 5,268 acres of terrain on
six mountains.

"The Busch Ski Club spring
break at Jackson Hole will pre­
scribe a sharp contrast
to those who enjoy the
more traditional spring break in
Florida and other coastal
areas," said Michael E. La­
Broad, product manager for
Busch beer. "It will appeal
strongly to tourists who enjoy
relaxing, opportunities to kick
back, and live music.

High school valedic­
torians from their graduating classes
who enroll at the University of Wisconsin-Stevens Point this fall will
automatically receive $900
in scholarships.

The UWSP Alumni Asso­
ciation is sponsoring the awards for a third consecutive year.
In 1988, UWSP enrolled 13 freshmen who were leaders in their
high school classes. One
year earlier, 12 valedic­
torians came.

"We're pleased to continue
this recognition of excellence,
and to be competitive in reach­
 ing out to the finest high school
students," said Alumni Director
Karen Englehardt, adding, "Our
Alumni Association provides
scholarships to outstanding stu­
dents everywhere."
Northcutdon donates for business television courses

Bank of Wausau has donated $1,000 for development of a three-part program to help people develop greater skills in basic, advanced and cash flow management.

The grant has been awarded to the Central Wisconsin Business Development Center at UWSP, which has arranged the sessions from 8 a.m. to noon on Feb. 14, March 14 and April 11 in the bank's training room.

"We'll be showing the audience ways to squeeze more profit out of a business through smart financial management," says George Seyfarth, director of the business development center.

Ron Loeotter, UW-SP's controller, will be the instructor at the Feb. 14 session on basic financial management. He will explain relationships between income statements and balance sheets, how profits and losses relate to cash flow, and how to select an accountant.

Loeotter also will lead the advanced financial management session in which the March 14 sessions will deal with the use of financial statements in managing a business. Different types of financial ratios and how to use them to interpret such statements will be discussed.

Stephen Conway, director of client services for UWSP's business development center, will speak April 22 on cash flow management, demonstrating how managers can predict needs for months ahead, how to complete monthly financial inventories and accounts receivable/payable.

Case studies will be used in each session.

Continuing education credit is available for participation, as are veterans' benefits to those who are eligible.

Registration is being handled by the M & I First American National Bank, 500 Third St., Wausau, 1440-0808. There is a charge of $39 per program or $99 for the series. Special rates are available for multiple registrations of four or more from one company.

Seyfarth said Michele Elsberg and John Koch of the bank's commercial loan operations assisted in the development of the programs, which comprise the first series of its kind done by the business development center in Wausau.

Schulke retires from maintenance

Willard Schulke has retired after 35 years as a building maintenance worker at UWSP.

He received several commendations for dedicated service.

Schulke, who lives at 1865 Main St., intends to spend more time at his four-acre hobby farm on Oakdale Road in the town of Lanark.

With the exception of several short stints maintaining the Fine Arts Center, he has been assigned to the Professional Studies Building since it opened in the fall of 1971.

Schulke is a native of Lanark and worked on the family farm before he entered the Army in 1952. He spent much of his two-year term in Germany. After his discharge, he did factory work in Milwaukee, assisted in a poultry farm operation, did general labor and was employed at the foundry in Wausau. He came to campus in 1971.

Mind Extension University offers television courses

People across the United States will have opportunities to earn college credits without leaving home through new television courses offered by UWSP and Jones International.

Mind Extension University (MEU), a subsidiary of Jones International, Ltd., began broadcasting credit television courses last year. It started with Colorado State and Washington State, and has now expanded to sponsoring classes from universities throughout the country, including UWSP. Jones has 48 cable companies scattered across the country.

Beginning in mid-January, UWSP will offer English 355/555, Writing for the Elementary Teacher, a two-credit, split-level class taught by William Clark, and Political Science 499, Special Work: "Congress, We the People," a two-credit undergraduate course led by Ed Miller.

In Central Wisconsin, the courses may be viewed or taped on Channel 2. Broadcast 24 hours a day, the programs are distributed by satellite to Jones' 48 satellite dishes—the message is broadcast to instructors who receive a programming schedule.

A variety of courses from other universities also are offered on MEU, including classes in biology, psychology, physics, occupational therapy, French, history, English, anthropology, business and economics.

Beginning in January of 1980, a new interdisciplinary course entitled "Frankenstein Revisited," will be offered by UWSP through MEU. It will also be taught in "Electrical Language" class. Many of these courses are designed for teachers and can be taken for graduate or undergraduate credit.

UWSP faculty will have regular office hours to handle calls from participants, and special materials to guide independent study projects will be distributed. If students have access to a computer and modem, they are encouraged to use the Electronic Bulletin Board to communicate with faculty.

Prospective students may call 406-77-MIND for registration and further information. The costs will include $95 per credit hour, plus UWSP tuition ($99.33 per undergraduate credit; $99.25 per graduate credit).

Michael Offerman, director of UWSP's Continuing Education and Outreach, says he is excited about the chance it offers local faculty to teach television courses. All of UWSP's programs will be produced locally using facilities in the Office of University Telecommunications.

He says the television classes are especially appropriate for the Stevens Point area because out of 40 Jones Intercollege affiliates in the state, 31 are located in central Wisconsin. Another contributing factor was UWSP's campus television production capabilities. A 12-member faculty committee was involved in planning the program, it will be evaluated after a three-year trial period.

UWSP has been offering state-wide television courses for about 13 years. The five-state-wide radio courses for three years.

Also new to UWSP this year are communications television field service (ITFS), a microwave delivery system. The signal, which covers a 25-mile radius, will be broadcast from UWSP's Communication Arts Center in a tower on Rib Mountain which will cover from Wausau, Antigo and Medford areas. Participants may go to the Northcentral Technical College campuses to see and hear the classes and take part in discussions through telephone.

This spring's ITFS offerings will include two courses taught by William Kirby of the UWSP faculty. They are: Education 706, Basic Statistical Methods in Education, a three-credit graduate course broadcast on Mondays from 4 to 6:40 p.m., and Education 388/588, Interpersonal Relations, a three-credit, split-level course broadcast on Tuesdays from 4 to 6:40 p.m.

In addition, UWSP will sponsor a state-wide public radio course, History 350/506, Korean History Since 1800. The free, split-level class, taught by Hugh Walker of the UWSP faculty, will be broadcast on Sundays from 2 to 4:45 p.m. Also, courses in thinking skills for educators, using computers in language arts and the changing American family will be offered this spring through a combination of state-wide educational television networks (ETV/EKT).

Registration and further information about the radio course, ETV/EKT, and ITFS are available through Continuing and Outreach, 153 Old Main, UW-SP, (715)346-3727.

Peace and quiet are students' rights, too

By John Silber
President, Boston University

Earlier this year, Boston University proposed new regulations limiting overnight visit ing in our dormitories and controlling alcohol use. These proposed regulations were greeted with strident objections by those who viewed them as an infringement on students' rights as "adults." Properly understood, however, these new regulations are a defense of fundamental rights, such as the right to privacy and the right to study. The problems at Boston University that led to these regulations are not local; they are widespread and grounded in the recent history of the American university.

Thirty years ago, most college and universities unabashedly staked in the relation to their students known as in loco parents—a Latin phrase meaning in the position of a parent. This relation was most obviously manifested in living arrangements. Dormitories were actually segregated, and there were elaborate regulations governing their use which came to be known as "parietals," another Latin meaning within the walls. Curfews ensured that female students at least were on for the night by a decorous hour—perhaps 11:00 p.m. during the week and 1:00 a.m. on the weekend. And if they did not spend the night in the dormitory, they were required to sign themselves out to the campus radio station.

If you are organizing a dance party and you are too cheap to hire a professional DJ, you can call Chris Otto and Steve Braatz to provide the music and lights. They have earned quite a reputation for themselves having played such venues as Debby's Green Room, The Encore and Sentsy World. The UAB-organized Halloween party at The Encore last semester attracted more than a hundred people to the room while the Spring formal at Sentsy World last year attracted twice as many.

It all started back in 1986 when Chris and Steve were sophomores. The resident hall they were living in was organizing a dance and they volunteered to play music for the occasion. The dance was a success and other halls began asking them to deejay for other dances. Word got around and soon they were doing about two functions a month.

"We do it for the fun of it," says Chris, who is also an RA. "We don't really make a lot of money. Any money I do make I use to buy more records."

Chris already owns a collection of about 500 records, tapes and CDs.

"We do it because we love music," chimes in Steve who handles the lighting and helps select the music while Chris mans the turntables.

Like any other enterprise, they have had their share of problems, such as power failures and violent drunks insisting on hearing the Psychedelic Furs.

Once they had to drive all the way to Rapids to play for a dinner-dance. After spending three hours looking for the place, they showed up only to find almost everyone had gone home immediately following the dinner.

"It was a complete disaster," declares Steve, shaking his head.

"We once opened for Run-D.M.C. and Expose in Houston though," claims Chris jokingly as a sort of consolation for all the bad times.

"Run-D.M.C. even taught us about scratching and stuff," he further embellishes with a mischievous grin.

Well, you'll get a chance to hear for yourself if they did learn anything from Run-D.M.C. on Thursday night, February 9th, after 11:30 pm at Michelle's. They will be deejaying for A Different World at a party organized by Thomson Hall. Tickets will be available at the door during the first hour for $4.

Do they intend to continue deejaying after graduation?

"Sure," replies Steve. "By then, we hope to be working at a place like Bacles.

"But we'll still keep our day jobs."
Gridders, hoopsters spend much more time on sports than studies

(CPS) - College football and basketball players are generally poorer than other students, feel isolated on their campuses, and find it hard to make coursework their top priority and spend more time on athletics than on academics, the National Collegiate Athletic Association (NCAA) says.

The NCAA plans to present findings of a survey it did of how athletes spend their time on campus to its members when they meet in San Francisco later this month.

"This is the most extensive effort done in the field of intercollegiate athletics," said Robert Schultz, the NCAA's executive director.

"We don't believe there were any great surprises in these results," Mr. Schultz said. "University of Nebraska Chancellor Martin Mas- semag is a frequent visiting professor at University of Georgia, and basketball players spend an average of 30 hours a week on their sports even though most do not expect to make the professional ranks.

Schools that burden student-athletes too much practice time and not enough academic time are "not doing a good job," said Dan Smith, basketball coach at the State University of New York at Brockport, a Division II school.

The American Institutes for Research, which conducted the survey for the NCAA, surveyed more than 4,000 students, including those involved in extracurricular activities, at 42 Division I colleges and universities.

The study's purpose was to determine the "effect of intercollegiate sports on athletes on a broad level. It was not designed to focus on specific issues," said Terry H. Armstrong, associate project director.

The study found that college athletes involved in extracurricular activities such as band, drama and the student newspaper spent about the same amount of time in class (14 hours), preparing for class (12 hours) and in mental activities (18 hours) as other college athletes and 2.79 times more than most do not expect to make the professional ranks.

Although many athletes found tutors readily available, their grades suffered. On a four-point scale, the study found that football and basketball players had an average grade-point average of 2.60, compared to 2.61 for other college athletes and 2.79 for students involved in extracurricular activities.

Robert J. Ross, director of the project, said many college athletes feel isolated from other students on campus and believe living with other students helps ease their isolation.

Rocky Rococo's Heart-Shaped Pizzas...

SPORT, frequently imposed on unwilling roommates.

As president of a university, I began to receive complaints from students that their roommates were moving in "Signifi- cant Others" for occasional nights, or sometimes for every night. I suspect the proportion of willing voyeurs is no greater among college students than among the general population. I do know many students were outraged at being made unwilling audiences of their roommates' sexual behavior.

The offending roommates insisted on their rights as adults, which they interpreted as broadly as needed to cover their escapades. It is clear that such behavior is not an expression of freedom but of license. Unfortunately, the English language lacks a term meaning "one who has reached the age of majority while remaining an adolescent." This term would not properly apply to all college students, most of whom fully merit the label "adult." But it is clear that some do not.

At Boston University, we are committed to the proposition that the dormitories are an extension of our educational program. We do not require upperclassmen to live in dormitories, but we are determined that for those who live there, our dormitories offer an environment that is supportive of education rather than actively hostile to it. In furtherance of this commitment, we have developed regulations that will effectively limit noise pollution and drunkenness and remove involuntary voyeurism as an incident of college life.

One would have thought that few would object to these goals. Obviously, perhaps, they might find them threatening, but they must be no more numerous than the roommates they offend. Yet student after student argued that the proposed regulations violated their rights as adults. One student argued that anyone who was bothered by couplings in the bed across the hall was simply too immature to be in college. Such a claim suggests that the adult rights are assumed to include the right to be as childish as possible. There was surprisingly little concern for the problems we were trying to address—which, after all, are students' problems, caused by the incon siderate behavior of other students.

We have learned from this experience that the Sexual Revolution has its own version of the Brethren Doctrine: no bit of sexual territory, once "liberated," must ever be lost to the enemy. That sexuality should be reduced to a public exhibition forced on an unwilling audience shows the fraudulent nature of the "liberation" that has been carried out in recent decades.

At Boston University, we are committed to restoring a modest level of decorum and concern for others to our dormitories. We make no apology for that.

Yes, all the bizarre and eerie happenings that fascinate the deepest, darkest parts of yourself are now explored in this handsomely hardcover series. Order now and you'll receive your first book, Zombie Plumber, for a 10-minute trial basin. If you are not at least partially satisfied during this time, return the book and receive almost half your money back. After your first book, you'll receive a new volume every month for an incredibly high price. Keep only the volume we send you and quit when we say you can.

Plus, if you call our toll-free number right now, we'll include a free gift: An authentic demon summoning kit will be yours. You supply the pentagram on the floor, the sacrificial chuckens and soon demons will be fitting around your living room. Hours of fun for the whole family and ideal for parties.

So order Spooky Stuff today and get the stories like this one:

A man in England takes a coat hanger and bends it into the shape of an ancient religious symbol. He then puts it into an electrical socket, and is immediately blown to smithereens by a large jolt of energy and knocked unconscious. The experts dismiss it as stupidity. But Spooky Stuff knows this is the mystical forces behind it.

You've just finished the first half of the season and all you have to show is a 4-12 record. So you just hang on and ride the rest of the season out—right? Not if you're a Lady Pointer.

"Right now we've got nothing to lose and everything to win," stated Head Coach Anu Kaisan.

And winning is what the UWSP women's basketball team has been doing lately. The Lady Pointers have won three of their last four games, including an upset victory over UW-Platteville, one of the top teams in the conference. They lost to Platteville earlier in the season by one point in overtime.

Point's 75-55 win over UW-Whitewater January 25 snapped a six-game losing streak in which they fell victim to Oshkosh, Platteville, St. Norbert, Superior, River Falls and Eau Claire. The game against Eau Claire was the only one that wasn't really a game. The Bhagpals, who are currently ranked number one in the region, seventh nationally, and are tied for the conference lead with River Falls, beat the Pointers 73-8 at Eau home court. The Lady Pointers gave second place La Crosse a ride for their money before coming up empty, 94-2 (the one loss of the last four games).

"They (La Crosse) don't have a lot of talent or height, they're just scrappy," described Kaisan.

The Pointer women are coming off a 90-86 victory over Wheaton College of Wheaton, Illinois, to give them their first back-to-back wins this season (the win over Platteville was the first). The optimistic Kaisan, who agrees that it would take a miracle for her team to contend for a conference title, doesn't mean that she's giving up and looking forward to the end of the season.

"We haven't died, which is the most promising aspect of the season," noted Kaisan. "The morale of the team is incredibly good. The win over Platteville is what did it, but they (Pointer team) made it happen," said Kaisan.

The Lady Pointers are nearing the end of a long nine-game road trip which ends Friday at Stout. What does Kaisan have to say about the awkward schedule?

"It certainly hasn't helped us directly this year, and at the same time I don't want to say it's hurt us." Spoken like a true optimist.

The Lady Pointers' return home will be Friday, February 17, when Eau Claire rides into town. You can bet that this ride won't be as easy as the last.

Dogfish defeat Stout

by Sam Seigel

Sports Writer

Dual victories by freshmen Scott Krueger and Scott Thoma provided the dogfish with fuel needed to defeat Stout last weekend. Krueger's victories came in the 500 freestyle and 300 butterfly, while Thoma's victories came in the one and three-meter diving competition. Thomas' performance on the one-meter board earned him a chance to appear at the upcoming meet in March.

Other individual victories came from Kevin Parham in the 200 freestyle, Tom Woyte in the 200 individual medley, Dave Martorano in the 100 freestyle. Both the 400 medley and 400 freestyle relays claimed first place victories.

Other key performances came from Jamie Weigel, John Belew, Toby Skow, Mike McClain, Paul Kramer and Peter Zemski. Next for the dogfish is the conference meet to be held at UW-Eau Claire.

Men's basketball loses

by Timothy Rechner

Staff Develp

Giving up three free throws in the final 25 seconds, the UWSP men's basketball team lost to UW-Whitewater 83-82 last Saturday night in Quandt Fieldhouse.

"It was the third straight defeat for the Pointers, who fall to 5-10 overall and 2-7 in the Wisconsin State University Conference.

"The Pointers took a two-point lead in the final minute of the game on a layup by Jim Glanzer, but then failed to score after the Warhawk free throws.

"The Pointers took an early 2-0 lead following the opening tip-off, but Whitewater outscored UWSP 13-0 in the next five minutes. It was not until the final minutes of the game before Point was able to get the lead again.

"Chas Pronshinski led the Pointers with 21 points, Mark Waldon added 19 points and six rebounds for UWSP. Scott Anderson chipped in 14 points, Mark Harrison 12 and 5 for Point.

"The Pointers made 20 of 25 shots from the floor (.80), including four of 11 three-point attempts, while sinking 36 of 36 free throws (.100)." Stark weather's nine-shooters, with 28 of 51 from the floor (.54), including seven of 17 three-point attempts and an identical 28 of 36 from the free throw line.

Trophy back in Point

By Tom LaBoda
Sports Writer

While Wausau was hosting the first annual Badger State Winter Games last weekend, the Stevens Point Rugby Club was also hosting a tournament, the 12th annual Arctic Rugby Fest. Nineteen teams took to the fields to compete for the title, including a team from Knoxville, Tenn. When it was all over, the Point boys came out on top with their third championship in the last five years.

The old boys defeated Platteville, Marquette and Oconomowoc on their way to the championship game against, the Milwaukee Slugs. The Slugs outlasted Eau Claire, the Cats, and the Platteville old boys to set up the final.

In the final, Point Old Boys took control of the match on a drop kick for a 3-0 lead in the first half. They were able to add two tries in the second half for a 11-0 victory.

Wisconsin took home the consolation championship with a 4-0 win over Stoues. Stevens Point had three other teams playing in the tournament besides the Old Boys.

The NOS (New Old Boys) won their first match but were knocked out in the second round. Point A-Side played well but was also knocked out in the second round, the A-Side started ed out with a 3-0 win over the East Side Nationals, but then fell to Oconomowoc 4-3. Point back Jim "Osh" Oshanski, stated "Point A-Side got off to a good roll in the first match but got some bad breaks in the second round."

Point B-Side lost in the first round to Ripon, 1-0. However, they came back to defeat Platteville 24-0 in overtime. The B-Side then lost to Stout 7-6 in the consolation semifinals.

Oshanski said, "The B-Side showed great courage and guts in beating the Platteville A-Side in overtime."

Tim "Duck" Fendeko summed up this year's tournament best, he said, "Thank God that it's over."

Women swim well

By Sam Seigel
Sports Writer

Paired by double winners, Tri-city Wentworth and Debbie Hadler, the women fared well against conference rival Stout. Wentworth's victories came in the 500 yard freestyle and 200 butterfly.

First annual Badger State Winter Games last weekend, the competition, while Hadler claimed victories in the 1,000 freestyle and 200 butterfly.

Other first place victories came from Janet Gelwick in the 200 freestyle and Anne Watson in the 500 freestyle. Other impressive performances came from Anne Benson in the 50 freestyle, 200 backstroke and Stephanie Bass in the 200 individual medley and breaststroke.

Freshman Carla Lenske swam well in the 50 and 200 freestyles, contributing well to the team.

Other contributors were Pam Gifford, Teri Calcher and Darcey Hessenthaler. Next week is the University of Wisconsin conference meet to be held at the University of Wisconsin-Eau Claire.

Women track and field needs improvement

The men had a poor performance at Oshkosh Saturday losing 33-36.

"To say we got our butts kicked would be an understatement," said Coach Witt. Weather plays a role in performance according to Witt stating, "When it is tolerably cold we can work outside and progress, but with last week's below-zero weather we really did not get much done."

"We did, however, have some bright spots. Our sprinters looked good, especially Garrett Williams, along with Tony Bilo and Chas Princeno are improving very nicely," commented Witt.

Also cited by Witt were the men in the 800, particularly Menke and Houselet. In the field events and the vaulters, Mike Zummers and Mike McClose both showed progress as did John Gunderson and Blair Larsen in the weights.

For the women, Coach Hill cited their lack of practice for poor performance as Oshkosh has been practicing since January 4 and we have practiced for only two weeks. Cook Hill also thought Oshkosh is one of the finest teams in the country, citing their finish at last year's NCAA III national outdoors championships.

"In the running events, we had some good efforts that did not place as they finished behind Oshkosh's deep field," stated Coach Hill. Carrie Enger and Amy Voight both placed in the 400-meter along with Tami Aston in the 100-

1980's

North Star Camp for Boys and Birch Trail Camp for Girls, located in the beautiful Northern Wisconsin Lake Country near Hayward, WI. Mid-June to mid-Aug. Mature male and female counselors and activities instructors needed. We need instructors for: waterskiing - sailing - windsurfing - swimming - dance - gymnastics - tennis - photography - rocketry - riflery - archery - arts & crafts - overnight tripleaders plus others. Secretaries, nurses and food service personnel also needed. Rewarding summer experience.

Salaries start at $850 plus transportation, allowance and room and board. Call (collect) or write Robert Lebbey, 7540 N. Beach Dr., Milwaukee, WI 53217: 414-352-5301.
By Timothy A. Bishop

Sports Columnist

The place is definitely no Dane County Coliseum. The people are packed in like sardines, and many people are lined up along the ends of the rink as many as three or four deep.

The people are all bundled up against the cold. Even though this is an indoor rink, it is still more than a little bit chilly.

Why do these people put themselves through this? Why else but the best small college ice hockey team in the country, the UW-Stevens Point Pointers.

Only eight years ago, UWSP elevated its hockey program from club status to intercollegiate level competition. But with the increased competition came several seasons of dismal performances.

Then, in 1986, things began to change.

Mark Mazzoleni was lured away from the University of Illinois-Chicago, where he had worked as an assistant coach of a nationally-ranked powerhouse.

He took a team which was 4-20 the season before, and, with only two seniors on his squad, tied for the Wisconsin State University Conference title in only his first two seasons.

One of the first things Mazzoleni did at the helm was to get his team entered in the Northern Collegiate Hockey Association, one of the finest small college hockey conferences.

"I knew that to improve, we had to play against top-notch competition, and at that time Bemidji State and Mankato State were two of the best. I just had to convince the association that we were worthy of playing at their level," Mazzoleni said. And the Pointers have been strong ever since, finishing third last year, only three points behind champion UW-River Falls. This season, his Pointers have dominated the NCHA, leading by 13 points going into last weekend's action.

Mazzoleni feels that the most important factor in the quality of players you have. "The key to a successful team is recruitment," said Coach Mazzoleni. "People use a lot of the same systems in hockey, so..."

ECO BRIEFS

by Timothy Byers

Outdoors Writer

The Bush administration continues to stress environmental issues. You will remember that Bush claimed to be an environmentalist during the presidential campaign. But now that he is in charge, the Environmental Protection Agency, William K. Reilly, says that he wants to strengthen the Clean Air Act. A major area Reilly wants to focus on is acid rain. He proposes a program of reducing acid rain, which is caused by burning fossil fuels. This could be a step toward solving some of our growing environmental problems. For instance, "producing aluminum from scrap instead of bauxite, even if it costs energy, makes sense because it is so much cheaper and energy efficient to recycle aluminum. If aluminum is used and then thrown away, it is like throwing money away. Every aluminum can you throw away, is worth a dime onto the ground. It may sound like nothing but it adds up."

There is also the problem of groundwater pollution. Wisconsin has one of the worst groundwater pollution problems in the country and the burial of toxic chemicals into the ground can be a problem. The cause of this is an area. The pollution from coal-fired burning of fossil fuels is a major area. The pollution from coal-fired burning of fossil fuels is a major area.

There are numerous problems associated with landfills and other forms of waste disposal.

Throwing it all away

by Todd Steoebert

Outdoors Writer

As I lay in bed on a frigid winter morning, I was awakened by the roaring engine of a garbage truck. I hear the engine crash up its R.P.M.'s and then it picks up a dumpster. Slowly it rolls over the truck. The dumpster is then re-laid to release its contents. Crash, bang, crunch goes the garbage. The dumpster is emptied and it is slowly brought back to the ground. The garbage truck has completed its job. As I hear the truck depart, I wonder how much garbage in that dumpster could have been recycled

I often wonder how much garbage that is thrown away could be recycled? Why don't people recycle? Because, PEOPLE ARE TOO DAMN LAZY!

People just don't realize how much an impact they can have on solving some of our growing environmental problems. For instance, "producing aluminum from scrap instead of bauxite, even if it costs energy, makes sense because it is so much cheaper and energy efficient to recycle aluminum. If aluminum is used and then thrown away, it is like throwing money away. Every aluminum can you throw away, is worth a dime onto the ground. It may sound like nothing but it adds up."

THE OUTSIDER

A comm major struggling in a CNR world

By Timothy A. Bishop

Outdoors Editor

White UW-Stevens Point is host to one of the finest natural resources colleges in the country, it is not the only thing here at UWSP. There are many students here who are basically unknowledgeable about the issues which concern us every day involving the environment.

The problem is that, as non-CNR majors, these students do not have the technical background in these issues, and thus have difficulty trying to understand how these things affect them.

Thus, here are some "simplified" explanations about some of these issues for CNR majors, just think of this as your kindergartner ten-level stuff.

The "greenhouse" effect has been making headlines lately. This is described as a "global warming caused by an increased amount of carbon dioxide in the atmosphere." To the non-CNR major, this sounds like something good, like a way to control the weather. But, is it really that great? It's a feedback loop. No matter how much CO2 is put into the air, the temperature will rise, but then the water vapor from the seas will increase the temperature even more. This is the type of a feedback loop.

Acid rain is another pollutant that the environment is trying to control. The CNR majors are warning everyone about them. They tell us about how sulfur dioxide and nitrogen oxides are accumulating in the atmosphere, causing sulfuric and nitric acids to form. This acid, they say, is then falling and damaging plants with lime trees beds. There

These guys should be telling the non-CNR majors that it is when the stuff from the power plants gets into the air, it is like pouring the acid from your car's battery all over your desktop. It is not something good. We should make sure that it does not happen.

But what about the non-CNR major when it is realized that if the non-CNR major is wrong, he or she will cause his or her own death. We are all living in a world of our own. What if the students who have to do with the common, "non-CNR" people, would not make a difference.

"We could do the rest of us a lot of good if they just told us the truth.

What these people need to say

is that if the number of does

isn't kept down, then a lot more of us will have the fronts of our cars ruined by hitting deer. The depletion of the atmosphere is a very serious problem. The scientific types say that the problem is that "aluminum is a metal that is a lot easier and cheaper to pull away. They are destroying the ozone layer, causing more ultraviolet light to get through.

Does this tell the non-environmen
talists anything? Probably not. What should really be said is that spray cans are a serious danger to the environment. If we could just do something to help the ozone layer, we could do a lot of good.

The non-CNR types tell us a hundred reasons why we should preserve our resources such as national parks. They tell us about all of the scientific reasons why there should be parks and why they should be preserved.

Maybe they should be saying that the parks are a lot like Scrooge. If we don't save them, they won't be there when we want to use them.

What if all comes down to is that the people who know everything about the outdoors are shooting everyone else who knows nothing about the environment. What if the South Americans are rapidly losing their vast jungle areas. What does that have to do with the common people. That's not something we are going to do with the common people. That's not something we are going to do with the common people.

Cold weather cross-country skiing

By Timothy Byers

Outdoors Writer

When we left, the thermometer at the bank read -11. When we returned it read -15. What did we do for the hour in between? Why, what anyone would do! We went cross-country skiing.

You will note that the wind chill was not figured into the above temperatures. We're not sure what it was, but as we were mostly in the woods, it really didn't matter. We are my wife Cindy and myself. We have been skiers for a long time and thought a good snow day like this wouldn't be wasted, so we off we went.

You've probably noticed that things sound a little different in the cold. There seem to be a lot more cracks and grans than normal. That's true in the woods as well as your house! Ski poles sound a little more crunchy as they punch into the snow, and the hint of gliding skin has a little more snap to it.

When it's really cold, trees will sometimes "scream" as inner tensions cause them to buckle and snap. Cindy says her ski bindings "rung like little bells" in the cold.

But back to skiing. The wax of the day was Polar (what else?) that is good to about -22 degrees. There isn't a wax for temperatures below that which might tell you something about what the wax makers think of skiing then. We had no problems gripping and gliding and toured around a six-mile course in a little under an hour. Deer and rabbits were our only animate companions while we were out.

Now before you get visions of snowmobile suits, let me tell you what we wore for our little jaunt. Starting from the skin, we had light, long underwear under onepiece ski suit. Two pairs of socks, one light and one medium, went inside our ski shoes, and, insulated overshoes (like a mukluk) went on the outside. A pair warmem up pants completed the bottom, while a medium-weight, zipneck shirt went on top. Over that was a medium-weight jacke t with a windproof front. And on the head, lightweight bala clava (like a helmet) and stout hat! Our hands were kept warm with lightweight poly "Skins" inside regular ski gloves.

I've very important thing about all of those "clothes" was that none of them were restrictive of motion or circulation in any way. Another important point is that everything overlapped so there were no gaps for the cold to penetrate. I didn't mention materials because there are so many choices. Suffice it to say that there was some wool and a lot of wool substitutes.

Wool is a great material. It insulates well and does even so when wet, but it does retain a lot of moisture. Wool substitutes act just like wool except they don't retain as much moisture.

This makes them superior for active endeavors such as cross-country skiing.

So what was it like? It was crisp, that's for sure! After the first couple hundred yards, our internal heaters "kicked in" with heat to all parts of our bodies. This automatic adjustment can be extremely noticeable, once there's a little nip around the edges and the next there's heat to spare! We had no problems.

Skiing in extreme cold can be dangerous, but if you're careful (as we were) you can have fun. It's definitely deserted out there and you'll always be able to say: "I was out when it was so cold that even the bank thermometer was shivering!"

See you on the trails!

Eco-Briefs

By far, the most effective way of disposal, is through recycling. EVERYONE CAN RECYLE. There is no excuse not to recycle. If there isn't a recycling program in your hometown, why not start one? For more information about this write: Wisconsin DNR, Bureau of Solid Waste Management, Box 7821, Madison WI 53706.

Some things you can do are to separate your garbage into aluminum, newspaper and cardboard, plastic bottles and plastic garbage, glass, milk jugs and plastic bottles, must be rinsed and caps removed. These materials can be dropped off at Intra-Site Recycling Center on Francis Street by the Pored Brewery anytime of the day. Also, E.E.M.A. has blue balloon garbage cans out around campus and coming soon, bright red plastic garbage cans to collect aluminum cans on campus. Please don't be lazy and throw your pop can away in a regular garbage can. Make an effort to find a blue balloon or a bright red can! Please help stop environmental problems by recycling!

Connecting the World's First Walkman Dance!!

The sky's the limit now for women in natural resources, said a professor involved in a new program for Native Americans at UWSP.

John Houghton, associate professor of forestry, has developed a three-year program in cooperation with Haskell Indian College in Lawrence, Kan., to enable students attending Haskell to fulfill the general degree requirements for admission to the natural resources program at UWSP.

He says the agreement has been finalized at an opportune time because the recruitment of women and minorities is a top level priority at the federal, state and university levels.

Haskell is a fully accredited, two-year campus for Native Americans, funded by the Bureau of Indian Affairs. Students who successfully complete its curriculum earn an associate of arts degree. If they elect to attend UWSP for their junior and senior years, the students will complete a bachelor's degree in one of the specialty areas of natural resources.

According to Houghton, the program will benefit both institutions because Haskell is interested in attracting Indians from the Great Lakes states to its campus. The school currently has a student body of about 90 students, mainly from the West, Southwest and Alaska and hopes to increase attendance from the Midwest.

In the public workplace, Houghton says, a congressional mandate for "workplace diversity" has been set for federal agencies such as the U.S. Forest Service. The professor works extensively with the Service in setting up cooperative educational programs for students. "All Indian state agencies are now heavily involved in attracting minorities to their ranks," Houghton says. A similar commitment has been made by the UW System and its Continuing on page 19

CNR ties with Indian college

UWSP Information Services

The sky's the limit now for women in natural resources, said a professor involved in a new program for Native Americans at UWSP.

John Houghton, associate professor of forestry, has developed a three-year program in cooperation with Haskell Indian College in Lawrence, Kan., to enable students attending Haskell to fulfill the general degree requirements for admission to the natural resources program at UWSP.

He says the agreement has been finalized at an opportune time because the recruitment of women and minorities is a top level priority at the federal, state and university levels.

Haskell is a fully accredited, two-year campus for Native Americans, funded by the Bureau of Indian Affairs. Students who successfully complete its curriculum earn an associate of arts degree. If they elect to attend UWSP for their junior and senior years, the students will complete a bachelor's degree in one of the specialty areas of natural resources.

According to Houghton, the program will benefit both institutions because Haskell is interested in attracting Indians from the Great Lakes states to its campus. The school currently has a student body of about 90 students, mainly from the West, Southwest and Alaska and hopes to increase attendance from the Midwest.

In the public workplace, Houghton says, a congressional mandate for "workplace diversity" has been set for federal agencies such as the U.S. Forest Service. The professor works extensively with the Service in setting up cooperative educational programs for students. "All Indian state agencies are now heavily involved in attracting minorities to their ranks," Houghton says. A similar commitment has been made by the UW System and its

Bloom speaks on condors

By Timothy Byers

Outdoors writer

The world of species extinction is a growing one in the 21st century. Many plants, animals and other types of creatures are disappearing from the face of the earth, and the list is growing every day.

One species of North American bird, the California condor, was deliberately removed from the United States official list in 1987 to attempt to save it. Bloom, who told the last story last Wednesday evening in DOT of the Science Building.

Bloom is not an imposing figure, brown-bearded and of medium build, but the strength of his message came through. He showed slides of California condors and how he devised traps for them. He told of their decline and some reasons behind it. And he spoke with feeling of meeting the last few members of a wild race.

The California condor (Gymnogyps californianus) is a large bird that can have a nine-foot wingspan and weigh more than 20 pounds. Renowned throughout North America, according to Bloom, the scavengers (like vultures) that led primarily on the carcasses of large mammals until the 1800s. By 1900, the bird was confined to the West of hooved ungulates such as DNR scavengers (like vultures) that are now extinct. Many of the last slides in the program showed ACH, the last wild California condor. It was February 17, 1987, ACH was perched in an oak tree and watched as the next to last wild California condor was captured. Bloom said ACH seemed curious as he watched. On Easter Sunday, 1987, ACH was captured and the ambitious program to capture wild condors was launched. Bloom told us of the sound of a condor soaring, "like singing, with notes ranging from 100 yards away." He said that if we had not been so selfish, the world would not have lost this remarkable bird.

The efforts now being made to raise young condors in captivity should succeed. Indeed, Bloom implied, they must succeed if we are to justify playing God.

several steps to support these efforts have already been initiated at the university. A new administrative position, vice-chancellor for minority/displaced students, has been created at UWSP. One of the new official's duties will be to "provide essential services for Native Americans in Wisconsin, both on campus and in their communities," according to Vice-Chancellor Howard Thoyle. The position was announced in December at a meeting of UWSP officials and representatives of Wisconsin Indian Tribes on campus.

UWSP has long been known for its services to Indian students through its Native American Center, Education Opportunity Programs, Upward Bound, Weekend College, and specialized courses focusing on Indian cultures and issues. UWSP's other new initiatives include the appointment of a liaison between the School of Education and American Communities to assist students considering teaching careers. In addition, Alan Haney, dean of the College of Natural Resources, announced in December at a meeting of UWSP officials and representatives of Wisconsin Indian Tribes on campus.

Wausau bank donates for programs

The M & I First American Bank of Wausau has donated $1,500 for the development of a three-part program to help area people develop greater skills in basic, advanced and cash flow management. The grant has been awarded to the Central Wisconsin Business Development Center at UWSP, which has arranged the sessions from 8 a.m. to noon on Feb. 14, March 14 and April 15 in the bank's training room.

"We will be showing the audience ways to squeeze more profit out of a business through smart financial management," says George Seyfarth, director of the business development center.

Ron Lotetter, UWSP's controller, will be the instructor at the Feb. 14 session on basic financial management. He will explain relationships between income statements and balance sheets, how profits and losses relate to cash flow, and how to select and use an accountant.

Lotetter also will lead the advanced financial management session in which the March 14 sessions will deal with the use of financial statements in managing a business. Different types of financial ratios and how to use them to interpret such statements will be discussed.

Stephen Conroy, director of client services for UWSP's business development center, will explain April 15 on cash flow management, demonstrating how managers can predict cash needs for months ahead, how to complete monthly managing in- century and accounts receivable/payable.

Case studies will be used in each session.

Continuing education credit is available for participation as are veteran's benefits to those who are eligible.

A business program being handled by the M & I First American Bank of Wausau, 3402-3000. There is a charge of $39 per program or $99 for four. Special rates are available for multiple registrants, four or more from one company.

Seyfarth said Michelle Edborg and John Kootz of the bank's commercial loan operations, assist in the development of the programs, which comprise the first series of its kind done by the business development center in Wausau.

UWSP Board of Visitors members re-appointed

Five members of the UWSP Board of Visitors have been re-appointed to serve two-year terms.

They are William Babbitt, Madison, a justice of the Wisconsin State Supreme Court and alumnus of UWSP; James Crane, Appleton, president of Crane Engineering Sales and former head of the UWSP Paper Science Foundation; Vern Holmes, Stevens Point, a retired executive of the Portage County Economic Development Corp. and retired executive director of the Portage County Economic Development Corp. and retired executive director of Sentry Insurance; Stephen Mazzoleni, Waupaca, former president of Sentry Insurance; and Joanne Regnier, Stevens Point, a retired director of human resources at Sentry Insurance and former head of the UWSP Academy of Letters and Science.

They were among the 15 original board members who were appointed by the UW System Board of Regents at the recommendation of Chancellor Philip Marshall in 1987.

The "visitors" meet on campus several times each year to be oriented to the institution's mission, achievements and problems; to advise the chancellor and administrative staff; to suggest ways the university's services and relationships with students, faculty and the public can be improved; and to conduct inquiries into specific matters whenever requested by the regents.

Joe Wausau County Bankers Association has provided a $2,000 grant to defray some of the expenses for a four-part series of programs this winter and spring to assist small businesses in its service area.

The sessions will be on minimizing taxes, accounting for small businesses, cash flow management and marketing. Each of them will run from 8 a.m. to noon.

Billed as "Education for Profits," the series is being arranged by the Central Wisconsin Business Development Center at UWSP.

Thomas KlineSmith and Michael Onemiro, both certified public accountants with separate offices in Wausau, will do the tax seminars. Marketing consultant Thomas Klismith and Michael Nyberg of the Milwaukee office will share insights on the "Minimize Your Taxes" program.

The session on March 21 at the Four Seasons Inn, Wausau. Topics of discussion will be tax law changes, tax planning and shelters for business owners, business structure impact on taxes, how to select and use an accountant, and tax planning for 1988.

The session on March 22 at The Rainbow in New London will feature Ron Lotetter, controller of UWSP, in a presentation on "Accounting for Small Business and Not-for-Profit Organizations." Lotetter will discuss how to build and understand financial statements, how to use the relationships between income statements and balance sheets, how profits and losses relate to cash flow.

Call 476-1907 to register while space is available.
Yoga?
A beginning course in Hatha yoga will be offered this spring at UWSP.
Classes will meet from 7 to 8 p.m. on Wednesday, Feb. 15 through April 12, in the Garland Room of the University Center.
Fees: $17.50 for the public and $11.50 for students.
Autumn Sobczak of the National Wellness Institute will teach yoga, a series of stretches and breathing techniques that lead to "a high level of fitness of the mind, body and spirit.
The non-credit course is sponsored by the University Activities Board. Further information is available through UAB, 346-2412. Registration is through the Campus Activities Office, located in the lower level of the University Center.

Air Force
prior service opportunities
Milwaukee, Wisconsin—The Air Force is seeking qualified veterans to return to active duty with the Air Force. Captain Richard V. Briggs, Chief of Operations, 355th U.S. Air Force Recruiting Squadron, said,
"If you're a recent veteran and quality, the door may be open for you to return to the U.S. Air Force. The training, education and entitlements are greater today than when you left...and the pay's better, too. I recommend that interested applicants contact their local recruiter to see if they qualify for the prior service program," he added.

Medically Speaking," St. Michael's Hospital physician lecture series, will feature the program "Sexually Transmitted Diseases" Thursday evening, February 16, 7-8:30 p.m. at the hospital.
The program, presented by Dr. James Zach, University of Wisconsin-Sullivan Point Health Service, will focus on various sexually transmitted diseases that infect more than 10 million Americans each year.
By attending this informative presentation, you will learn about the symptoms and treatment and prevention of many of these communicable diseases.
A question-and-answer box will be available to participants before the program.
The lecture is free and open to the public.

1-800-PASSAGE
Leaky landlords and stuffed pockets

by Rick Feldhaus

Investigative Reporter

Every year UWSP students leave the residence halls in search of the final independence of off-campus housing. This cycle of student migration has left its mark on many of the off-campus dwellings near UWSP. Homes are often left in varying stages of disrepair and landlords make themselves scarce in time of need. True, there may not be any housing code violations on the property, but some of the situations students must live under are just plain intolerable.

Last semester, five UWSP students moved into a house located at 134 Main Street and after only three months at this address, two of the tenants, Eric and Al, moved out to find a better place. They described their stay as a major disaster that began the first day.

Arriving in Stevens Point, ready to spend another semester at UWSP, Eric and Al found that the summer tenants had not moved out yet. This overlapping of leases caused them to impose on friends for the entire first week. When they did move in, the five roommates found their house had several problems that they wanted fixed right away. They presented a representative of the landlord with a list of things to be fixed which included placing locks with working keys on outside doors, fixing faucets that leaked hot water at an alarming rate, cleaning the kitchen including a filthy oven and repairing sagging ceilings in two of the bedrooms. Soon after, someone did come and clean the oven.

Two of the tenants withheld half of their semester rent until the rest of the specified repairs were made. Three weeks into the semester, the landlord sent another representative to the house in a carpet cleaning truck to claim the missing rent. The tenants had never seen the man before and doubted whether he worked for the landlord at all. They explained that they weren't going to pay in full until more of the repairs were made. To this he replied, "I don't have to take no s--- from no punk college kids. They just sent me here to pick up the money, but if you want to start anything with me, I can go back and have you evicted today." After hearing this threat, the two tenants paid the rent of the other roommate who also took part in the repairs. "You should have seen him. He took up the whole doorway."

This "agent" of the landlord must have left word that the tenants had some things that they wanted fixed because another representative was sent. This time it was someone from a really company. Again they provided a sheet detailing the same information as was given the first week of the lease. The incoming tenants who took their place when they graduated decided to move out in mid-November. At that time, the landlord had not yet returned to make the remaining repairs. When they moved out, the furnace was burning five gallons of expensive fuel oil a night, even with the furnace set at 60 degrees during the day and 68 at night. To attract tenants to sublet from them, Eric and Al detailed their security deposits, which they feel they shouldn't have gotten back anyway, to the incoming tenants who took their place.

Eric and Al feel they and a lot of other students are getting ripped off repeatedly every semester. Eric thinks that too many of the landlords are shysters. The college brings in so much money in the form of rent, the least they could do is provide us with a decent place to live.

There is a happy ending however. Eric and Al have met a roommate and bought a mobile home. It is a better deal for them because now they can sell their place when they graduate and get all or most of their money back. They believe that students who rent are just throwing their money away. We could still be paying rent but we would have nothing to show for it. The three of us bought our mobile home with the money we would have paid in three semesters anyway.

"I don't have to take no s--- from no punk college kids. They just sent me here to pick up the money, but if you want to start anything with me, I can go back and have you evicted today."
