Kent State and walleyes

by Jack Nettleton

Neil Young said it, "The most important lesson ever learned at an American institution of higher education." On May 4, 1970, Allison Krause, Jeff Miller, Bill Schroeder and Sandy Scheuer were killed by the Ohio National Guard, who fired into a crowd protesting the U.S. invasion and bombing of Cambodia. Nine more were wounded.

The Kent State anniversary is not a time to live in the past or "gleefully the acts." We've got problems enough to worry about in 1989 and both sides made serious mistakes twenty years ago.

The biggest mistake was an inability to tolerate the views, aesthetics and lifestyles of others. Both the Americans loved it or leave it "crewweed crewcut and the longhairs who wouldn't trust anyone over thirty were guilty.

Wisconsin is seeing its share of intolerance this week as the state threatens to pass another anti-segmentation law. I'm not here to choose sides—both whites and Chippewa have legitimate points of view and concerns. What worries me is the sheer ugliness one sees in the anti-indian crowds at the Bandings. The "equal rights for everyone" movement likes to compare itself to the non-violent civil rights movement. This analogy is a hypocritical concept. The civil rights movement protested in order to gain rights, which legally belonged to the people, but had been de­nied. The goal of the anti-treaty movement, on the other hand, is to re­strict or deny the Chippewa their treaties. One may argue the merits of these rights, but at present they are undeniably legal and protected by law.

More importantly, hurting rocks, racial epithets and death threats does not constitute "non-violence." Martin Luther King must be rolling over in his grave.

"Sections one through four, open only to education majors."

Tell you what Flo. I'm just going to: emphasize on homicide if I don't get section one!!

No dice. Threats only turn Flo on. So you assamble to a seat or plop down on the dusty gym floor, anywhere, scanning the timetable, knowing that each second more classes—classes you need—are snatched up by competitive classmates.

"Health Ed!" you holler. Only one credit but it will satisfy a GDR and you don't have to choose right now. You dash to the Physical Education area and in ten minutes are sitting down with as many of these assured "closed" lists behind them.

"Health edu"—you begin.

"Health ed is over there," says the student, opening only to education majors.

"What ed is over there!" you argue. How could you tell? So you jump into that line.

"Health education 104, section three?" you inquire.

"Health ed is that line," she says, pointing back to your choice.

"What do you mean?!!!" you mutter, not caring about profund. You dash back to the other table stating in a tone-too·friendly tone, "ONE OH FOUR Section THREE, TELL ME WHERE IT IS!"

"But I ah... she...she's got Health Ed," as you point at some one! "And you have the strangest sensation that your watching yourself, re­moved from your body. You gaze on. Your watching yourself and you are acting like Alt Naibal on board a jet airliner."

Your hand instinctively reaches for the nearest Health credit or this lady's gonna have to find a novel way to blow her nose! And you're next FLO!!! you scream in the direction of Section THREE.

And suddenly you have the feeling, the feeling that your college cards being shoved in you had to plan to the rest of the college career. "Gawd!!" you think to yourself, "This was so easy," and suddenly you realize the implications of the situation is easy. And other se­ments, we must resort to ter­rorism.

Is anyone listening?

Two members of Student Government win United Council awards President Brenda Lea­hy and past Academic Affairs Director Dan Gieskopf were the recipients of outstanding committee member awards. President Lea­hy was her awards for her hard work on the President's Committee dealing with administrative charge­backs. Director Gieskopf won his award on Academic Affairs committee con­cerning the approval of a State Committee to revise parts of a UW-system code concern­ing faculty. One award that eluded the President's and Gieskopf was for delegation of the year which went to a student committee from Stevens Point. Had won the award last year and was looking to win the award again, but there is no way to look forward to.

ORDER PAGE 2 Thursday May 4, 1989

Tree planting

URSP Information Services

It's tree planting time again and the Stevens Point Area Foundation is recruiting people to help with a pudding control forest project in Pfeiffer Po­int.

Orders are now being taken to plant a variety of shade trees along the riverfront in a project that began in the early 1980's. More than 40 trees have been added, mostly near the band­stand.

The donors have been individual­ists and organizations who have sponsored planting as me­moriais or in recognition of important events in the lives of their loved ones. Individuals will wish to sponsor a tree or portion of a tree and the fund­raising venture is also invited to participate.

Orders can be made in the next two weeks for the spring planting by calling Gary from the USP Student Services Program at 341-6140 or Carl Walliser of the Junction State Bank at 457-2621.

uwsp students speak

We hear daily, about the deteriorating conditions of our environment. If you ask the last of con­taminated wells in Portage County? We hear it so often that we are almost numb.

It is time to listen. Time to realize that contaminated wells of the past magically become un­contaminated. What was contami­nated on Monday's news is still contaminated on the following Monday. Time to realize that everybody pays for an all spill in Alaska. Notice the gas prices lately?

So do we blame Exxon? The people of our neighborhoods, our country, or ourselves, aren't we all depend­ent on the environment? It is time we all realize our lives do have a global impact.

For instance, do you know where the meat came from in your last hamburger meal? Odds are that is from somewhere south of the border, and I don't mean Mexico.

We live in a world that is in need of people being aware of the social and the environmental impacts. Universi­ty sends graduates out into all facets of society, well educated in their individual disciplines. It is time we educate our graduates to seek and explore their chosen career, we should keep in mind all things, jobs, and another. Whatever em­ployment opportunity is present­ed to each of us should not am­bitious the social and environ­mental values that may be present. We are not advocating the refus­al of all employment opportunities. I am helping to take the respon­sibility of knowing the employ­er's policies. The individual de­cides what actions, if any, to take with the awareness of self-choices.

There is a resolution in the Student Government hands that would incorporate a pledge in the graduation ceremonies. A pledge to take a simple yet strong step in in­vestigation of the social and envi­ronmental consequences of any employment opportunity that we might have. It is many concerned students from many colleges who are fighting for.

Last Thursday, SGA tabulated the resolution with no discus­sion. It will be brought for the first time to be brought before SGA the next meeting. They didn't even discuss it. For those of you who would like to see the resolution be­come reality, and/or those of you who would like to show SGA they are our representa­tive and have to alienated and sent to the student body, come to the SGA meeting to listen and check the Daily for location.

It is time.

Jennifer Varslik
More coverage, please

On Saturday, April 22nd, a contingent of 90 Steiner Hall residents, both as runners and drivers, completed the 9th Annual Steiner Hall Alcohol Awareness Fund Run. A 17km trek from Madison to Steiner Hall. As a result of the dedication and teamwork of the 1999 participants, we were able to raise $1790, a new mark for our run. This money is used to promote alcohol awareness on the UWSP campus, through the efforts of the Alcohol Education Office in Deihl Hall. In the past month SGA recognized us as an official UWSP organization. A Madison Channel 3 (CBS) News crew covered our departure from Madison as the Steiner Hall Alcohol Awareness Fund Run kicked off P.E.A.K. Week (People Encouraging Alcohol Knowledge) for the UWSP campus. Both Steiner Hall and P.E.A.K. Week work for alcohol knowledge.

I am disappointed by the coverage of our event in the April 27 Pointer. Our organization has been pleased with previous coverage by the Pointer. The Steiner Hall Alcohol Awareness Fund Run turned in press releases, and I understand a Pointer photographer was present when we returned. Our efforts focus on alcohol awareness and knowledge, but we didn't receive any coverage upon our return. I also noticed that P.E.A.K. Week news coverage was missing. This is my 3rd year as a member of the Steiner Hall Alcohol Awareness Fund Run, and I served as Co-President last year. Our organization has completed this event nine times, and works hard to promote alcohol knowledge and awareness. I believe we are a residence hall group that is a positive addition to residence life, and I feel the Pointer could have used the space devoted to the I HATE DORMS editorial to cover a more newsworthy event.

Sincerely,
Brian Brashaw

Indian spearfishing

TO THE EDITOR:

I would like to reply to several comments made in the Pointer column dated April 27, 1988, regarding the Indian spearfishing in the North.

I would like to address some of the incorrect statements in your article. First of all the comment, "various Wisconsin Indian tribes exercise their traditions of spearfishing in lakes covered in nineteenth century treaties, implies that more tribes are involved in this issue than the six Lake Superior Chippewa tribes. This can be construed as a negative comment directed at the Menominee. Stockbridge Munsee, Oneida, Potawatomi (Forest County) and Winnebago tribes who are involved. It is unfortunate enough that families, including mine, must endure the hatred and negative comments caused by this controversy.

Secondly, the comment regarding the Indians in Wisconsin using high powered lanterns and also forged steel spears in a statement I'd like to take issue with. One can assume that you expect the Chippewas to exercise their reserved hunting and fishing rights just as at the time of the treaties. My response to this is simply, the treaties were based on other laws, protect rights. The treaties agreements between the U.S. government and Indian governments establish rights, not methods.

Thirdly, the Great Lakes Indian Fish and Wildlife Commission is the result of the Chippewa tribes desire to react to the court decisions with moderation and determination to implement enforceable and biologically sound resource regulations. The purpose of this commission is to regulate, monitor, and limit specific quotas negotiated

Graduation Pledge Resolution

WHEREAS: Environmental deterioration of air, water, and land is global in extent and catastrophic in degree; and
WHEREAS: We are concerned citizens of Earth's environmental future; and
WHEREAS: The University of Wisconsin-Stevens Point is a renowned Wellness and Natural Resources Institution; and
WHEREAS: The University of Wisconsin-Stevens Point has many years of teaching its students to live a sustainable lifestyle; therefore

BE IT RESOLVED: The following pledge be incorporated into the UWSP graduation ceremony: "I pledge to investigate the environmental and social consequences (SEC) of my lifestyle and of any employment opportunity presented to me."

Waste to energy

Though the smoke stack pictured appears quite clean, it has emitted over 50 tons of sulfur dioxide into the atmosphere since November of 1988. Sulfur dioxide, when combined with water produces acid rain, which corrodes buildings and harms the environment.

The solid waste committee of Portage County is considering a waste to energy facility that would replace the power, reduce sulfur dioxide emissions, and alleviate landfill problems.

Some of the funds for the project would come from the UW system, according to Mike Sample, solid waste manager of Portage County.

Hunger Cleanup a great success

by Barry Ginter

UWSP's Second Annual Hunger Cleanup was a huge success, as 95 volunteers, mainly students, worked 10:00 a.m. to 2:00 p.m. Friday, raising $1,050.00.

Local, volunteers worked at Kohls, Kmart, and Jordan's, all public stores in Portage County.

The next Hunger Cleanup is set for April 13.

Compromise to smokers

by Barry Ginter

The peace proposal offered by students and the administration is not a compromise, but a smoking room.

Students have a right to protect themselves from undesired elements.

A smoking room need be made into a smoking dungeon.

The smoking room must have an automatic door, air conditioning, and a large, comfortable chair.

A complete smoking ban, however, would require the elimination of smoking areas on campus.

The smoking room must be open to all students, and the administration must be present at all times.

The smoking room should be located in the basement of the student center.

The smoking room must be equipped with a complete set of smoking equipment, including a complete set of smoking paraphernalia.

The smoking room should be open only to students who have a valid smoking permit.

The smoking room should be open during all hours of the day and night.

The smoking room should be located near the student center, and should be easily accessible to all students.

The smoking room should be located near the student center, and should be easily accessible to all students.

The smoking room should be located near the student center, and should be easily accessible to all students.

**Molly Rae**

Bhola Bohra, a 26-year-old University student in Nepal, was arrested over three years ago. Bohra was watching a politically-oriented outdoor play when he was arrested and incarcerated under Nepal's public security law, said Don Timmerman of Amnesty International. "Nepal's public security law," Timmerman said, "refers to anyone showing opposition to government." The law specifies a prison term of three years.

"Bohra has served over three years and recently received a nine-month extension to his incarceration," said Timmerman.

Amnesty International will have a booth at Saturday's Jamnesty International concert with a petition for the release of Bohra. The concert features four bands with a unique diversification in music styles.

Jamnesty will be rocking the University campus from noon to 6 pm. on Saturday, from the North Intramural field behind the Quandt Gym.

The Jamnesty concert is FREE. There will be a concession booth as well as a beer tent on the grounds. The Amnesty International booth will have literature about the organization, Bhola Bohra and other international prisoners of conscience. Donations aren't mandatory but would be greatly appreciated by the group. There will also be petitions for the release of other prisoners there available for anyone to sign.

The music begins at noon with local favorites, Alter Ego. "It's really an honor for us to be a part of such an important campus event, and to host such really great talent right here in our backyard," said Shane Totten, guitarist for Alter Ego.

Folk artists Bell and Shore will perform from 1:15 to 2:15 pm. Bell and Shore, a duo from Iowa, are noted for their musicianship on guitar and mandolin and for their sometimes off-beat literacy.

Tony Brown was described by Playboy magazine as, "Reggae at its best...with soul." Brown is the premier reggae artist from the Midwest who has toured extensively throughout the United States as well as Canada and the Third World. Brown is performing from 2:30 to 4 pm.

Headlining is Freudian Slip, winner of the Wisconsin Area Music Industry (WAMI) award for best new artist of the year in 1988. They are high energy rock, totally original and totally unique in style with a definite commercial appearance. The reviews by critics are unanimous to the fact the Freudian Slip is the hottest thing in music in Wisconsin today. Their single, "Story of Love" was selected for inclusion in the WLS-FM Home Town compact disc compilation.

According to Marilyn Moore of WLS-FM, "Freudian Slip is one of the most exciting, most listenable bands that I've ever heard."

Freudian Slip has just released a self-produced cassette titled, "Think Out Loud," which contains nine original tracks including their single. They plan to tour the Midwest this summer with future plans to take their show out nationally. High-light performances this summer will include Milwaukee's Sum-merfest and the Milwaukee Lake Front Concert Series.

"The band is really hyped-up for the Jamnesty concert," said manager Bruce Gerth, "The guys are very politically intertwined which they illustrate a lot in their lyrics."

Jamnesty is the outdoor event of the year. Alternative Sounds coordinator, Sandi Anderson, emphasized that the concert is free and hopes it'll be a community-wide event. "I think it's a great chance for students to enjoy themselves one more time before finals and it's a great opportunity for everyone to learn a little about Amnesty International and what they do for world peace," Anderson said.

"I hope a big outdoor concert like this will become an annual event, and each year will expose students to other worthwhile causes."

From left to right, Chris Aschenberg (bass), Shane Totten (guitars), Jeff Walentowski (drums), Preston Hill (keys, acoustic guitar).
Kulick makes NYT headlines!

A former student at the University of Wisconsin-Stevens Point who is now a member of the Merce Cunningham Dance Company, has been profiled in a recent issue of The New York Times.

David Kulick, son of Ken and Helen Kulick, 34 Ridgewood Drive, Stevens Point, was featured in the newspaper's March 11 issue as one of nine artists "who draw the eye with some mysterious extra essence...who stand out in a special way in performances on concert dance stages and on Broadway." He has performed with the prestigious New York City Dance Troupe since 1980.

The reviewer wrote, "It is David Kulick's presence that first notices a presence that is grave and heroic." As a youngster, Kulick had taken recreation department dance lessons and performed with a Russia dance troupe in the Milwaukee area. When his family moved to Stevens Point in 1977, he became a member of the "Counterpointers," a high school choir. Following his graduation in 1980, Kulick moved to New York City and left look over advancing in 1983.

Kulick is one of fifteen to receive district citations at the awards presentation. Thirteen of the twenty-three district chapters were represented at the conference.

KULICK IS A PROFESSIONAL organization which was established in 1969 to give students experience working in public relations. The UWSP chapter was one of the first in 1983 with President Barry Solberg as advisor. Dr. Howard Thoyre took over advising in 1983.

Other students won citations at the Festival, a performance which had won recognition at the Merce Cunningham Dance Troupe, after only a few performances.

The reviewer commented, "I decided I wanted to be a real dancing technical en-" as he moved to New York. New York meant the Cunningham studio.

Cunningham told Kulick to keep working if he wanted to be accepted into the company, but "even before I was really strong enough to work for the company, I saw myself there," Kulick said. He broke his foot the night before he was to become an apprentice, "a low time in his life," according to his mother. After recuperating at his parents' home in Stevens Point, he returned to New York and reached his goal a year later.

"I don't think I will ever do anything in my life that's harder than what I'm doing now," the 26-year-old dancer said in The Times. "And that's why I like it. The physical challenge is what is always there, that I really enjoy the work. It's not a political situation. It just has to do with investigating dance and working. If you are interested in working on dance in the public eye, make great choreography for yourself."

"Also, "Cargo X," a work by the 78-year-old Cunningham which had its New York premiere at City Center last month, was reviewed earlier by the newspaper's dance critic. In the article, she described the performance as "superb," and added, "...while some dancers were noticeable in any case, it is David Ku-

lick, dancing with a mix of weight and melding flow, who dominates."

Kulick is the 14-member company's devoted a share of its time to touring, both in this country and abroad. To date, the company has logged well over a million miles, performing in 200 cities in 30 countries of the world. Last year the company appeared at the New York International Festival of the Arts, the American Dance Festival, and the Festival of Avignon in France, followed by performances in Massachusetts, California, Colorado and Montana, and a six-week tour throughout France.

This year's itinerary includes two residences, in Austin and Minneapolis, where Kulick's parents saw him perform in February, a week's engagement at the Kennedy Center, and appearances in Arizona, California, England and Italy.

The company's founder has choreographed more than one hundred works for his dancers, plus pieces for the New York City Ballet, the Paris Opera Ballet, the American Ballet Theatre and numerous other companies throughout the world. Among his honors, Cunningham has received the Samuel H. Scripps/American Dance Festival Award of New York's Award of Honor for Arts and Culture, the Dance/USA National Honor, and honorary membership in the American Academy and Institute of Arts and Letters.

Students helping students

The semester is coming to a close and the final exams are near. I figured the only way I could get good grades was to study really hard for them. I was wrong.

Somehow from my history class came up to me and said, "How would you like an A for Geography 101?"

It was a stupid question and so I gave him a stupid answer. "Oh, I would LOVE an A for my Geography III." "That could be arranged." "What do you mean? You're not in my geography class." He grinned.

"I work for your geography professor. I help him record the grades for all the quizzes and exams in your class. I saw your grade in the grade book. So I might as well help you out, you know, like adding a few points here and there." I was getting interested but remained cautious.

"Aren't there any other records of the grades? I thought it's all computerized." "Not in this class. The grade book is the only record of the grades and I got it. All the papers are returned after the professor finishes marking them. You know that." It sounded too good to be true.

"How did you get a job like that anyway?" "Work-study program." "You mean anyone can get a job like yours just as long as he qualifies for work-study?" "Seems that way." "So there could be others doing what you're doing?" "Sure." I was shocked that there was such a gigantic loophole in the system and I didn't know about it until then.

"How can an instructor let a student be in charge of the grades?" "Hey, he trusts me." "And you don't see anything wrong in betraying that trust." "The way I see it, it's students helping students. We gotta stick together. I changed the grades for a couple of my friends last semester. No problem. Obviously, I can't change a D into an A. That's too much of a difference. So one got's hurt." "What if you get caught?" "That's the beauty of it. There's no way I can get caught." "That's what they all say, I don't know. I have to think about it. I mean I'm already doing pretty well in that class as it is." "Well, if you change your mind, you know where to find me.

And he left. It was tempting. I'm no saint. It's not like I've never cheated in school before. Sometimes the system made it so easy to cheat that I felt it was my duty to cheat just to teach them a lesson.

I decided to go look for the guy the next day.

(Note: Although the above situation is factual, the author has changed class names to avoid legal protection.)

Spotlighted Sorority: The Phi Omegas

by Stacy Hoyer Features Writer

The Phi Omegas are yet another sorority here at UWSP. Due to members graduating and taking semesters abroad, their total actives are seven with two in this semester’s pledge class.

Renee Neja, current President of Phi Omegas, said, "We have a very diverse group of individuals. We always try to promote the ideals of sisterhood and friendship. Our top priority remains academics, however." "Many of our members are also involved with such things as ACT and SGA. We also do a great deal of community work, for example: The Blood Mobile, "Jail and Bail," "Odyssey of the Mind," and work with the March of Dimes," said Neja. "In members we look for someone who is willing to share themselves and grow. At the same time we always try to develop their leadership skills. We also encourage activities with other Greeks and are looking forward to next year’s pledge class."

Jamnesty '89

"Jamnesty '89," an outdoor musical marathon to benefit Amnesty International, will take place from noon to 6 p.m. Saturday, May 6 at the University of Wisconsin-Stevens Point’s north intramural field.

Sponsored by the University Activities Board, the local chapter of Amnesty International and Stevens Point area businesses, the event will be open to the public without charge.

Four bands will perform throughout the day, including After Ego, a local group playing classic rock. Top 40 hits and its own original material. The group is made up of former UW-SP students Shane Totten, guitar and harmonica, Preston Hill, keyboards, Jeff Walters, electric keyboard and drums and percussion, and Chris Aschenbrenner, bass guitar. The musicians have toured extensively in Wisconsin and produced their first album, "March III."

Rock-flavored reggae and Jamaican sounds will be provided by Madison musician Tony Brown. The solo artist has been performing his brand of "international rock" in the Madison area for more than 10 years. This combination of reggae, jazz, folk, and blues reflects Brown's philosophy that music speaks an international language. A veteran of the music business for three decades, he has released five albums and recently completed a two-year cross-country tour.

Milwaukee-based band Frenzian Slip will play their energy rock 'n' roll that helped win it's 1986 New Artist of the Year Award from the Wisconsin Area Music Industry.

Professor Robert Baruch and Bill Shores along with Ty Bell and Shores will play original material that encompasses Irish folk and western swing. The duo makes social commentary with a comedic twist, providing their audience with a light-hearted alternative to mainstream radio pop. Nathan Bell writes the group's material and also plays lead guitar. He shares singing duties with partner Susan Shores, who performs rhythm guitar, mandolin and banjo. The group has previously appeared on National Public Radio's "Flea Market" and recently released a debut album titled, "Movies," on the Flying Fish label.

"Jamnesty '89" is a fund raiser for Amnesty International, a worldwide movement to benefit a comedic artist, or an individual who has been silenced because of his or her beliefs. The event will be open to the public without charge.

Donations will be accepted at the event and will support the group's continuing human rights efforts. Food and beverages will be sold through the University Food Service on a cash basis.

The show in the Jenkins Theatre, Fine Arts Center, will continue at 8 p.m. on May 6, 11, 12, and 13, at 7 p.m. on May 7, plus a 3 p.m. matinee on May 13. Tickets are on sale at the College of Fine Arts and Communication box office, $3 for adults, $1 for senior citizens, and $5 for UWSP students and youth.

Baruch, who served most recently in the administration office of UWSP's Division of Student Life, returned to full-time teaching in the department of theatre arts last fall. For his first production, he is directing a comedy which guarantees "a good time for the audience," the director and the technical crew.

Baruch call Caward, "the 20th century's answer to Oscar Wilde—urban, wizened, and a little bit deranged. The plot involves British mystery writer, Charles Conder, played by Neil Roberts of Long Lake, who is writing a book about the au.

### FAST TRACK

Bank One of Stevens Point has awarded $500 to Fast Track, an honorary organisation at the University of Wisconsin-Stevens Point.

Fast Track continues to recognise the academic and leadership excellence among business, accounting and economics students. They will use the funds for scholarships to honor two outstanding Fast Track members who exemplify growth toward personal excellence.

In preparation for the selection of the scholarship winners, faculty adviser George Seyfarth is collecting essays from the Fast Track members in which they explain what their goals and aspirations are for their lives; what adversities they have overcome as they strive to reach these goals; what role they have played in providing a positive influence on another person, organisation or community; and what differentiates them from others.

University Center 346-3431
D.J. LeRoy v UWSP
settled out of court

The case in which Donald J. LeRoy, former head coach of the Pointer football team, had filed against the University of Wisconsin, Stevens Point, specifically Philip Marshall, Donald Ajmone, Joan North and John Munson was settled out of court awarding LeRoy a lump sum of $40,000.

The settlement agreement stated, "This agreement is a resolution of disputed claims and causes of action and does not constitute an admission of liability by the defendants (LeRoy) for any claim or cause of action, whether filed or unfiled."

Howard Thayer, Acting Chancellor for UWSP, stated that, "We believe this settlement is in the best interests of the University, Mr. LeRoy and the public. Continuation to trial would have been very costly and time consuming."

LeRoy's attorney will make an announcement that the plaintiff was not responsible for the forfeiture of the national championship and the 1987 football season due to the ineligibility of Astron Kenney and Keith Ma-

Howard Thayer was thinking the university maintained its integ-

The settlement agreement stated, "This agreement is a resolution of disputed claims and causes of action and does not constitute an admission of liability by the defendants (LeRoy) for any claim or cause of action, whether filed or unfiled."

"Sentence" structure. Run-On "sentences." The Death "Sen­tence." None of these frag­ments are "sentences" or sen­tence. All this controversy over that new activist group? You can't resist Muffy, good an­swer. The Jacobins (which is supposed to be pronounced as Zhocko Beans I presume), has caused me to wonder what might be on the uncharted high­way of our beloved campus fu­ture. Their motives seem neit­her all good our evil; however they might resemble more of a comedy routine than a serious threat so far.

I would have to agree with the almost unanimous idea that you just can't help but laugh at the Jacobins. I'm in favor of radical groups, not just for their entertainment, but because they reveal things not always visible to our society—or things that are overlooked completely. The most astounding subliminal message that the Jacobins have been sending us is, believe it or not, Stevens Point is a small town. NO— you argue. You've got to be kidding. I thought Point was the most wildly booming metropolis this side of Kansasville, not to mention the rest of the universe. Well, folks, according to them, you're sup­posed to wake up and smell the coffee (not distributed in sinful styrofoam cups, mind you). Why don't we all jump on the CPC "banned" wagon? It seems like the logical choice for an activist group.

Now, I realize that everyone not bound in an insane asylum knows that Point is not a big city, and my concern is deeply rooted to that fact. The Jacon­bins, in Madison, Milwaukee, and what have you, would be widely accepted. But here in Point, they're social misfits. The reason they should feel like outcasts is because Point is small. And, much to their sur­prise, small towns always have smaller town attitudes.

In short, people here won't be as easily persuaded as in Mad Town. Small town citizen are comp.uners to their own norms, and local groups like the Jacobins get laughed off and cast out. My advice to them is either to pack up their bags and try their hand somewhere that will rec­ognize their cause, or else give it up. Most everyone I've spo­ken to has gotten much had a good chuckle over their efforts. Sorry guys—you're just too fun­ny.

Nobody here will ever take you seriously, unless you be­come terrorists, which I wouldn't advise, but who knows what you'll resort to get atten­tion. So, as Eddie Murphy says, "Get the $ A outta here!"

Apart from the facts that you dress like you just pranced out of a thrift shop, pronounce your name incorrectly, print your "paper" poorly on ditto copy, slap the Pointer, SGA, and any other established organizations in an ugly fashion (the sadly drawn caricatures of Gabrielle and Troy—you made fun of his artwork!), suppress THIS kind of attitude, and mislead words on protest banners, have you ever stopped to think about the ratio­nale of your cause carefully? Obviously not. A group model­ing itself after French activists is fighting for American rights? How's that for an ironic twist? Think about it. Whose airspace are we forbidden to use? "Now I know that you know, that you know that I know, that I know that you want to laugh at them. Go ahead! Knock yourself out!"

"Sentence" structure. Hello, May I have a word?

By Timothy A Bishop

The National Hockey League's 80-game regular season is just something to make money on. After all, of the four teams in the semi-finals of the Stanley Cup Playoffs, two finished fourth in their respective divisions during the regular season. The Chicago Blackhaws, who had to go into overtime on the last night of the regular season before they could clinch the fourth and final Norris Division playoff spot, ripped through Norris Champion Detroit and runner-up St. Louis in six and five games respectively and met Smythe Division champ Philadelphia for the Campbell Conference championship during the next weekend.

Meanwhile, the Philadelphia Flyers, who finished fourth in the Patrick Division, met the regular season and playoff champion of the Adams Division, the Montreal Canadiens. Now, just because Chicago and Philadelphia finished fourth in their respective divisions is no reason to count them out in the semi-finals, despite giving up home ice advantage.

After all, the Hawks played outstanding all-around hockey in the first two rounds of the playoffs, while the Flyers showed in their 3-1 upset over Montreal in Game One of the Wales Conference playoff. This year's playoffs should quiet those critics of the 1982-83 post season format. After all, if a team can finish near the bottom of its division and still be competitive against the best in the league, then it really does belong there in the playoffs.

Looking closer to home, congratulations have to go out to Brian Poek and the rest of the WFM sports and news staffs. In addition to their outstanding coverage of the 1982-83 Chicago Blackhawk season, WFM has also been acknowledged as one of the best college radio news and sports organizations on their coverage of last year's football season.

That really says something about WFM, WFRP and the School of Communications.

The National Basketball Association's playoff season under way, with the Milwaukee Bucks splitting the first two games at Atlanta. Falling to the Hawks on Friday before coming back to win on Saturday.

Other than that, with 16 teams in the playoffs, it's hard to say much after only the first weekend.

This week's playoff picks:

National Hockey League: Calgary is not going to have an easy time against Chicago than the Flames had in last week's sweep of Wayne Gretzky and the Los Angeles Kings. In fact, Chicago will win it next Friday, 4-2. In the other semi-final, Philadelphia will play well against Montreal, but lose it in seven.

The Stanley Cup Final is going to be classic. The Cinderella team of the playoffs, Chicago, will remain undefeated in the Chicago Stadium, but Montreal will own its home ice. Canadians in seven.

National Basketball Association: The dynasty is over. The Hawks that once resided in Minnesota will not make up NBA champs. Yes, the Los Angeles Lakers will not win it all. In fact, they won't even make the finals as it will be Phoenix. The Hawks, however, won't win it either. Rather, it will be the Detroit Pistons that will take center stage, avenging last year's seventh game defeat and giving Michigan another sports related riot (remember when the University of Michigan won the NCAA basketball national championship)? Detroit in seven.

Next Week:

The final edition of Striking Out will run next week (baring an unexpected reruns next fall). There will we take a final look at the NHL and NBA playoffs, as well as the picks for this major league baseball season.

Brain Food

by Mary L. Iwankw

The finals just around the corner again, students are pressured with finishing up projects typing up term papers and cramming for final exams. Along with their anxiety of study priorities, college students also make lots of needs for groceries particularly this list contains foods such as Daniel's, Popel, Mountain Dew, or some robust coffee, a variety of chocolate temptations and other foods high in calories, sugar and caffeine.

But are these really the right things to eat for students to perform at their maximum potential? Just a few years ago researchers would have laughed at the thought that food and nutrients actually influence mood, performance and behavior. Recently however, a number of convincing studies have shown that dietary changes can affect the way we think, often by altering levels of neurotransmitters, the chemical messengers in the brain. The changes felt are subtle but significant.

The key to high performance for learning isn't avoiding some foods and gorging on others, but balancing the choices in a way that is best for the mind. Both the combination of foods in a meal and the sequence in which they are eaten make a difference.

One common sense guideline is to eat light meals. Heavy meals cause a significant drop in reaction time which is comparable to a person missing a night's sleep. Why does this happen? Any meal that diverts lots of blood to the stomach, where it is needed for digestion, will make it harder to concentrate, because blood is taken away from the brain. High fat products should be avoided for this reason. Fat is not only unhealthful, but hard to digest. Simple carbohydrates quickly increase the levels of sugar in the body and instill indirectly seems to help the amine acid tryptophan get from the blood stream to the brain. Once in the brain, tryptophan converted to serotonin, a neurotransmitter that promotes sleep. For this reason chocolate covered peanuts, sugar sweetened cereals and Hostess "NO NUT" make you sleepy. Ideally, a diet high in complex carbohydrates contains whole grain breads and cereals, fresh fruits and vegetables, pasta, rice and potatoes. Some people are more sensitive to this phenomena of carbohydrates than others and eating some protein will counteract the spurious effects of the carbohydrates. The actual carbohydrate slump may not hit you until half an hour to an hour after eating and results depend partly on an individual's sex, age and time of day the food is eaten.

Good examples of healthy meal and snack items would be:

1. Low fat cottage cheese with fresh fruit.
2. A banana with turkey.
3. Unsweetened cereal with skim milk
4. Pita bread filled with chicken, lettuce, and tomato
5. Fresh vegetable sticks with low fat yogurt dip
6. Air popped potato chips
7. Oatmeal with raisins and cinnamon
8. Pretzels or Rye Krisp crackers
9. Mixed fresh fruit salad
10. Pasta salad with vegetables

These foods will not give you the energy your body needs for digestion, will make it harder to concentrate, because blood is taken away from the brain. High fat products should be avoided for this reason. Fat is not only unhealthful, but hard to digest. Simple carbohydrates quickly increase the levels of sugar in the body and instill indirectly seems to help the amine acid tryptophan get from the blood stream to the brain. Once in the brain, tryptophan converted to serotonin, a neurotransmitter that promotes sleep. For this reason chocolate covered peanuts, sugar sweetened cereals and Hostess "NO NUT" make you sleepy. Ideally, a diet high in complex carbohydrates contains whole grain breads and cereals, fresh fruits and vegetables, pasta, rice and potatoes. Some people are more sensitive to this phenomena of carbohydrates than others and eating some protein will counteract the spurious effects of the carbohydrates. The actual carbohydrate slump may not hit you until half an hour to an hour after eating and results depend partly on an individual's sex, age and time of day the food is eaten.

CNR students help with sheep farming

By Timothy Byers

Students from UWSP are introducing the state’s largest sheep ranch to its newest occupants.

This is lamming time, and the biology and natural resource majors from UWSP are gaining practical experience helping the ewes have successful deliveries. The project is the brainchild of Kent Hall, a biology professor who has been teasing out sheep throughout this part of the country in recent months to find situations from which students might benefit.

In Hayward he made arrangements for several young biologists to assist at the UW-Madison College of Agriculture and Life Sciences Experiment Station. The staff of that facility maintains a flock of sheep, three of which students tended to in March when the lambing process began.

This led to a recommendation that students take part in UWSP’s back yard, the Wu-Zoon Ranch near Basecroft. Although Wisconsin’s largest flock, according to its manager, Randy Goffredon. Most of the students who have been helping with the deliveries are planning to be involved in some phase of veterinary medicine. At least one aspiring to a career in caring for animals in a zoo.

“They are really psyched up for this,” Hall observed, adding “Any handling of animals is appropriate, but I look at working with sheep and actually delivering the lambs a rare opportunity.”

He said that Department of Biology professors have “seen the wisdom” of the lead taken by their peers in the College of Natural Resources, who have long valued hands-on experiences in the curriculum. By the end of the year, about 100 biology students will have logged in some kind of field work in programs arranged by Hall.

The students are responding to their involvement with enthusiasm, Hall added.

So are the hosts of the places where the students are being placed. Take sheep rancher Goffredon for example. He said, “They’re just great—eager to learn and even willing to do the terrible jobs.” And, what’s terrible? The pitchfork work, he explains.

The United States has now detonated 800 underground nuclear devices. A test atomic explosion in March at Vuca Flat, Nevada was code named “Ingot” and was estimated at 158 kilotons. The code name for the southern ocean surrounding Antarctica is high-light environmental abuse planned for the last relatively pristine part of the earth.

Pointing up the need for more study in Antarctica, its needs and ecosystems, is a recent report that says two islands listed on world maps as land masses are actually huge icebergs. The Terra Nova in the North Victoria area were first mapped in 1841 by Australian cartographers. A German scientific expedition went “ashore” and discovered the mistake.

By Timothy A. Bishop

Driving down the road the other day, I saw a sign. All it said was: “Alpine Crossing Ahead.” Now just what did this sign mean? Are they trying to get you to look out, because there might just be a jet sitting in the middle of the road?

And that’s just one of the ideas that people have before you see every day.

For example, the bag and cup from a popular fast food restaurant have written upon them the words “Put Litter in Its Place.” Now, I was always told that litter was the stuff that is just thrown out on the sides of the road. The place for it is in the trash and it’s already there.

About nobody gets the wrong idea, I am not telling people to make more litter.

And what about that neat little sign with the sign out front which has “The air conditioned, scenic television.” Does this mean that the coasts have a pilot with a pilot’s license and the TV set with the picture of a tree.

Every spring, signs pop up along roads which just say “DIP.” What these mean I can’t tell you, but the sign is either so close to the bump that you hit it before or after you go through the top of your car, or it’s so far away you forget about it, and then hit it.

Some places get cute and put out signs when call drivers “DIP.” Now I have never heard of this and yet these are calling me names. One town put this sign up right after they closed off the road to the area. Does that mean that they are really saying “WELCOME TO OUR TOWN”?

Other places must have a low opinion of the area residents. They just put up signs that say “DIP IN ROAD” to warn you that some of the people who live there might be out to get your head and maybe even the shoulder.

I don’t know about those places and I have such a low opinion of their kids that they put up signs which say “FINISH CROSSING AT PLAY.” Now their kids might not be the smartest in the world, but calling them all slow is verging on child abuse.

Small towns put up signs which say “No Soliciting.” Now, one time I really wanted to stop and I could have, but I did not want some retailer to get thrown in jail because he wanted to sell you something.

Finally, the other day, I saw a billboard which said “God is the Answer.” What I want to know is, WHAT IS THE QUESTION?
**Computerized registration... finally!**

The computer has scored another victory at UWSP. UWSP's age-old system of registering students for classes in an arena setting has been conquered by technology.

Registrar David Eckholm said the signups to be done on April 26 will be the last. No more mass gathering by about 7,000 continuing students going from one table to another to secure cards for each class to be taken during the next semester.

Next fall, when students choose their courses for the spring semester, no more table upon table of class cards. The information will all be electronically stored. Also gone will be the throngs of people in a gymnasium, standing in lines wondering if they'll be able to gain admittance to all of the classes they have chosen.

Henceforth, registration will be done not on one day with the many, but over the course of many days with the few. A room in the Park Student Services Center will accommodate the class seekers.

Students will be invited to do their registration on a seniority basis-those with the most credits going first.

Eckholm said the new system will be quite similar to one operated the past five years for new freshmen, when they are here for summer orientation.

The use of computers for all registration has been a dream of campus administrators more than a decade. It has been pursued in earnest since the mid-1980s.

The conversion has involved considerable planning by several computer specialists at the university, vendors and consultants for manufacturers of hardware and software. "For everything to fall into place just right at the right time," hasn't always been the case Eckholm explained, and has resulted in an extension of the project a little longer than expected.

The registration on April 26, a Friday, was originally scheduled for the following day. A conflict of uses for the Quadrant Gym necessitated the change. Continuing students will sign up for their classes between 2 p.m. and 8:45 p.m., a timeframe that has never been used before but promises to be convenient for many people, Eckholm said.

Prairie seed farm restores native plants

MADISON—At one time prairie
ries covered about two million
acres in Wisconsin. Today, with
much of the state's landscape
verted to agricultural, urban,
urban development, only rem-
ants of native prairies remain.
Some native plants have be-
ome very rare.
Now those same freeways and
highways associated with de-
velopment and with promoting
urban sprawl may become a
stronghold of native plant spec-
ies.
Under a new program, three
state agencies will be cooperat-
ing to grow native plants at
"seed farms" to supply seed for
planting along highways and on
state lands.
The Wisconsin Native Plant
Seed Farm is intended to help
preserve Wisconsin's native
plant gene pool, reduce roadside
maintenance costs while en-
 rhancing roadside beauty, and
provide meaningful training and
employment skills to inmates of
the state's correction system.
The program is a cooperative
 effort between the departments
of Natural Resources, Transporta-
tion, and Health and Social
Services.
Paul Matthiae, chief of the
state's correction system, last
year put in place new hands-on
training and makes
state lands co-
nmercial landscaping. take
state agencies will be cooperat-
ing to supply seed for private
sources that sell
urban sprawl may become a
benefit.
"We don't want a high
seed production to
state agencies in
other areas.
Seed farms will be
four or more years before they
are in full
production. Inmates will
harvest the seed, which will then be sold back to
DNR and DOT at cost.
Matthiae stresses that the
seed will not be available to the
general public.
"We don't want to compete
with private firms selling na-
 tive seed. But the seed from
public sources is too costly for
planting in such large areas," he
says. Eventually the seed
may be available to other gov-
ernment agencies for planting
on public lands.
All three agencies involved
stand to benefit from the pro-
gram. One benefit to the DNR,
Matthiae says, is "the protection
of the state's native plant gene
pool." He is hoping the
program can be a way to save
some plant species currently threatened by
habitat loss.
Additionally, many wildlife
species benefit from native
plants. "Native prairie grasses
provide ideal nesting cover
for ground birds like pintails
and for waterfowl," Matthiae
says.
The Department of Transpor-
tation is hoping to significantly
reduce maintenance costs for
planting native species, accord-
ing to John Roslak, director of
the DOTT's Bureau of Environ-
mental Data and Analysis.
Roslak says DOT engineers
are expecting a better survival
rate during planting than spe-
cies brought in from other
areas.
"Nothing beats native plants
in terms of survival and extended wet periods," Ros-
lak says, "and nothing can compete with their beauty."
Matthiae agrees, saying prai-
rie plants in particular should
be very cost efficient for plant-
ing roadsides. "As much as 80
to 98 percent of prairie growth
takes place below ground. Prai-
rie plants have extensive root
networks that will stabilize soil
and build roadside banks that
will be held in place for dec-
ades."
Another benefit will be re-
duced maintenance and fewer
mowing operations.
"Native plants will require
much less chemical applica-
tions as co-director
Spangenberg to serve

Instructor of hydrology and
water courses will be eligible to
keep their jobs on behavior.
"They will be lecturing and prac-
tical exercises in the current
benefits of water re-
sources analysis taught by
members of the Geological Sur-
vey staff.
Spangenberg is one of 35
members of the American Wa-
ter Resources Association who
holds the honorary title of fel-

Eco-Briefs
From page 15

The University of Utah chem-
ist who claims that he and a
co-worker achieved nuclear
fusion in a jar of water earlier
this year announced new experi-
ments that show his claims
are not valid. The professor
has gained national notoriety
since the announcement of
the production of four times more power than
was needed to begin operations of
the Salt Lake City apparatus.

It has been more than four
years since the Bhopal gas
leak disaster in India. At least 3,259
people from exposure to the
gas that leaked from a
Union Carbide pesticide plant.
Survivors are still trying to prove
the effects. At least one gas victim
dies daily. Others of the
30,000 people who weren't killed
died immediately have chronic respira-
tory ailments. Children
dream of ghosts and dead bod-
es chasing them. The Supreme
Court of India recently ruled
that Union Carbide has to pay
$470 million in compensation.
Protesters say it isn't enough
and call for justice. They say
the small settlement shows that
third-world peoples are "consid-
ered guinea pigs by the multi-
nationals."

The Worldwatch Institute, a
Washington D. C. based re-
search group, says that wide-
spread economic and social dis-
ruption can be expected in the
1990s. They say this will happen
unless world leaders make a se-
rious commitment to
the deterioration of the earth's
environmental system.

The group's president, Lester R.
Brown, says, "Unlike the threats of climate change, ozone depletion, soil erosion, de-
forestation, and population growth are brought under con-
tract by 1990s, economic decline may be inevitable."
between the Chippewa tribes and the state of Wisconsin. All fish that are speared by the Chippewa are recorded by the Great Lakes Indian Fish and Wildlife Commission for data that will enable that agency to better monitor their natural resource. My question to you as a sport fisherman is: Do you have to record your daily limit of fish with the Department of Natural Resources every time you fish? No, of course not!

Finally, you stated "...Perhaps the Indians did get a raw deal in the 1890’s, but is it time to get on with history. Treaties which were made during that period no longer hold the best interests of the people of Wisconsin (Are the Indian tribes people of Wisconsin?) or the independent Indian tribes or nations." To say the Indians did get a raw deal in the 1890’s is an understatement. The 1837 and 1842 treaties certainly did hold the best interests of the U.S. government at heart and not those of Chippewa people.

You do not make reference to treaties written during this same period of time with other Wisconsin tribes. Is this to mean that you fully pleased with all other issues related to Indian people or that you lack knowledge of them and choose to take issue with hunting and fishing rights.

In order to understand the treaties I suggest that anyone concerned should enroll or check into the Indian Treaties course that is offered, here at this school. To my knowledge UWSP is the only college in this state, at this time, to offer such a course. You may then, be a little compassionate and understanding of our people rather than be outraged by the decision of Judge James E. Doyle, U.S. District Court Judge in the Western District of Wisconsin in February, 1987. Judge Doyle ruled at that time, "that the Chippewa have a right to harvest all natural resources used at the time of the treaties; a right to use methods both traditional and modern; and the right to extract a modest living from the sale of the harvest." I, too, hope that both sides can listen to each other.

Sincerely,
James A. Van Zile

NATURAL RESOURCES OF COSTA RICA
STUDY TOUR
How would you like to give up three weeks of Wisconsin January weather for one of the most beautiful tropical countries in this hemisphere? UWSP’s Natural Resources of Costa Rica Intensive program will again be offered next winter, and as in the past will include visits to cloud forests, rain forests, estuaries, mangrove forests, coral reefs, beaches, dry forests, and active volcanoes. Ample time is available for exploration, with leatherback turtles, anteaters, quetzals, crocodiles, sloths and howler monkeys frequently observed. Leading resource managers and biologists in Central America accompany the tour, and pre-departure lectures and field studies in how Costa Rica is dealing with problems of deforestation, soil erosion, and land use. Time will be spent at research facilities and field sites observing agro-forestry, soil conservation, watershed management, and other resource conservation practices. Costa Rica has a long tradition of democracy and hospitality, and serves as a model for conservation efforts in the tropics.

Dr. Hans Schabel, Professor of Forestry, and Ron Zimmerman, Director of the Schmeeckle Reserve at UWSP will lead the tour which runs from December 27, 1989 through January 18, 1990. For further information write Dr. Hans G. Schabel, CNR, UWSP, Stevens Point, WI 54481, or phone (715)346-4230.

AT&T
The right choice.

Some long distance companies promise you the moon, but what you really want is dependable, high-quality service. That's just what you'll get when you choose AT&T Long Distance Service, at a cost that's a lot less than you think. You can expect low long distance rates, 24 hour operator assistance, clear connections and immediate credit for wrong numbers. And the assurance that virtually all of your calls will go through the first time. That's the genius of the AT&T Worldwide Intelligent Network.

When it's time to choose, forget the gimmicks and make the intelligent choice—AT&T.

If you'd like to know more about our products or services, like International Calling and the AT&T Card, call us at 1-800-222-0300.

The younger generation: Too dumb or no respect?  

by Kurt Williamson

Contribution

The younger generation, they're either too dumb to figure out what activities are really fun, or they just don't have any respect for their elders. In fact, just the other day I had to set a couple of them straight on what sport is really the most sporting.

Yes, two of the pups were heckling me about being a snide old goat. They claimed that I was boring, and that my hobbies and pursuits were boring. But they went too far; they picked on the one topic where it's possible to eat at my craw: they abused my favorite summer sport, waterskiing. They said it was e r like me to —

Water skiing (falls) are rated on a scale from 1 to 10. And each number on this scale is a total number of points acquired by the waterskier when the following categories are added up:

- Body abuse and pain involved
- The height flown and the distance gained on each bounce across the water, and the gymnastic ability shown by the skier when he's airborne.

As an interesting aside, we've found, through years of research, that the scores received by the skiers correspond almost exactly to the mental temperaments of the skiers being judged. For instance, Gandhi is said to have gotten a rating of 1, while skiing on the Thames River in England, back in 1946, while Charles Manson claims to have gotten a 10 in one of his previous lives. Enough of this though, back to rating a skier's fall. To rate a skier's fall you must first analyze the fall carefully, and then judge it using the following scoring system:

1. A score of one is given to the faintness. Those skiers who whisper out and let go of the rope so that they can glide lightly to a stop. More respect is given to Rodney Dangerfield than to the skier who attempts a move like this.

2. Twos are also given to those who let go of the rope, but these gulls are given a point for an exceptional job of acting like they fell; even though they did let go of the rope.

3. Threes are given for a no-frills fall. These falls usually occur because of imbalance problems. The skier gets too good, his head swells, and he gets imbalance problems.

4. Fours are given for falls in which the skier slides across the top of the water; a good slide will go over 50 feet, and my first mentor, "the Orisco Kid," once had a slide that went 190 feet 7 inches. Be careful to control yourself on this move, because as beginning fall judges you'll be tempted to give this one a higher score than it merits just because of its artistic looks.

5. A score of five is given by the skier if he did any single maneuver that looked like it
