Drum roll, please. A drummer who performed at last week’s Benfest seems happy that the year is almost over. (Photo by Alan Crouch)

Vice chancellor explains unfair legislative audit of UWSP

Howard Thorye, the vice chancellor, said he is frustrated because of the complicated nature of the audit, gaining broad public understanding of the university’s side is extremely difficult.

The vice chancellor said that on the surface he cannot dispute the number of sections UWSP was able to offer in 1986 was in line with the number of students.

“Thus, as many as 12.5 percent of regular terms to 172.8 percent during 1987-89 didn’t generate the new class sections,” Thorye emphasized, because they were used to pay back the loan made to their usual standards.

The problems with the report.

In the fall of 1986, in order to cover instructional needs, UWSP borrowed 12 positions from the UW System and used them for instructional purposes. Because of this arrangement, the number of sections UWSP was able to offer in 1986 was inflated.

“Between 1986 and 1989, UWSP made numerous curricular changes which decreased the number of class sections offered without decreasing service or access to students. In mathematics, for example, three two-credit courses were changed to two four-credit courses, resulting in nine fewer sections.”

The audit delay only with group instruction at a time when UWSP is making several faculty assignments from group to individual instruction, further reducing the class section tally.

For instance, supervision of student teachers is considered individual instruction, and these changes in this area were imperative because the number of student teachers rose in a three-year period from 102 to 172.

Thorye said that between 1986 and 1989, the UW System deallocated a total of 14.5 positions at UWSP. Even with the addition of 15.5 positions in the following biennium, the net

Continued on Page 2

966 to graduate; only 52 percent ever do

Water resources and aquatic biology major Carrie Hitchcock is finishing up her degree this spring and said her education has taken the average five years to complete. “If I had to do it all over again, it wouldn’t start me five years,” said Hitchcock.

Some graduates have already been placed, but the majority are scrambling to get resumes sent out, interviews completed and wrap up their final semester of course work.

Elementary education major Jacklyn Sigourney is completing her student teaching assignment and sending out resumes to the surrounding area school districts.

“After all the blowup on the early retirement of teachers, the (current job market) is a real disappointment,” said Sigourney. “To find a full-time teaching job you must be willing to move out of the state.”

UWSP Career Services placement data on the class of 1989 reports 72 percent of non-educators placed in their field, 11 percent outside their field and 17 percent went on to further schooling. 88 percent of the 1989 education graduates were placed within their field, while eight percent were employed outside education and four percent went on to further schooling.

English major Ann Moran is excited to begin her new job as a creative services buyer upon graduation. “My debt from school is almost paid off by credit card bills,” said Moran.

The latest data available from the Financial Aid office, 1988-89 school year, reveals $6,320 as the average debt of graduating seniors. The debt load for 1991 graduates has probably risen considerably. “I have $10,000 in loans to repay,” said Hitchcock.

“It feels really good to graduate. It always feels good to accomplish something,” said graduating communication major Barry Radler. Radler is not alone, with his feelings of success this week.

Commencement will take place at the sundial at 2:00 p.m. and Erroll B. Davis Jr. of the Board of Regents will be speaking.

A room in Hansen Hall started on fire. Apparently, the resident forgot that putting Christmas tree lights over flags hung from the ceiling could spark a fire.

The gubernatorial race between Tommy Thompson and Tom Loftus was putting along. Do you remember who won?

United Council was still pushing for a tuition freeze. Pushing what, I don’t know.

The Health Enhancement Center/Convertible Dining Facility officially opened. The land leftover around it didn’t. The debate of parking vs. landscaping stayed planted.

What to do about ROTC was asked again and again. Should people be banned from serving based on their sexual orientation? Currently, 780 UWSP students are involved in the program.

Maintenance Workers cleared a room in Pray Hall where a cloud of asbestos hovered over.

A female was assaulted in Lot P on her way to the Patty Market. She described her assailant as wearing the latest in ski masks.
Missing: two little girls
Now the other side

The following is by Michael Wolter. 

A psychologist with social services determined there to be a high probability that the five-year-old Paige, who was molested by her stepfather Steve Berndt, and Lauralie Berndt, her mother, have disappeared.

Lauralie is a sweet, loving, caring mother, who always kept her house clean. Her children were always dressed nice and seemed happy, said Riley.

Lauralie and the children are safe now but that is unfair that they had to disappear when there was evidence in favor of Berndt. Wolter is currently working with Social Services for an appeal.

Wolter feels that Lauralie and the children are safe now but that is unfair that they had to disappear when there was evidence in favor of Berndt. Wolter is currently working with Social Services for an appeal.

Wolter had documents from Social Services, the Community Alcohol Drug Abuse Center, the Head Start Program, court testimony, psychologist reports and from Lauralie herself. Persoanlly, in my own judgment, she didn't have the money so she lost the case, said Riley. "I was never asked to come to court and she had told her lawyer about me." I fully believe that those children were molested. They were precious children and they won't grow up normal if they weren't assaulted.

The don't-blink-or-you'll-miss-it war starts. Students aren't apathetic, they sent the story.

A man fell out of his fourth floor window of Knutzen Hall and he wasn't in windows either. Campus security mentioned something about alcohol. Wolter.

Guess what really big contest was here again? Students march to "Take Back the Night" while still others cleaned up the city for Project Hunger.

UWSP gets caught with their hand in the legislative funds cookie jar. I guess it's better than getting caught with your pants down.

And then, finally, graduation. And that's all folks.

Audit

from page 1

Another female reported being assaulted just north of the library. She didn't see her attacker but did punch her in the face. Pointilll might burn tires for fuel and then they might not.

The Pointer was red and green for Christmas. Students really liked the pretty colors, oh, and the pictures were really nice, too.

Students couldn't quit climbing on DeBot fences and construction workers got mad.

Two males reported getting assaulted in Lot Q by rednecks. The same two males later reported to friends that they really weren't assaulted.

Semester Two...the rest of the story.

The don't-blink-or-you'll-miss-it war starts. Students weren't apathetic, they sent the story.

A woman was assaulted at 5:30 p.m. near the DeBot tennis courts.

Aerial Rugby Fest blows into town.

Former Pointer Keith Lenard Majers got thrown in the clinic, not for costing the UWSP 1987 Football NCAA Division III Championship but for forging checks.

A pedestrian flew through the air after getting launched by a van. Even crosswalks are dangerous now.

Two males reported a cross-fire. Well, OK, just a little target practice yet.

U.S. Airways fines were increased and so were liquor taxes but a can of beer is still 12 ounces.

Residents were evacuated from Pray-Sims and Thomson Hall. Now, it wasn't a false fire alarm. No, asbestos wasn't being removed. It was a real bomb threat. Now there's some news.

More news for less money. Yeah, right, SGA. The Pointer puts out a four-page issue scoffing at the $3,500 allocation. I think that the left-handed underwater basketsweaters even get more cash than that.

A football snivil in the village started a fight between a Timong male student and a caucasian male student. The Timong suffered a severe beating.

An earthquake hits Point. 14 windows on campus were broken. OK, not an earthquake but some brazen vandalism.

Audit

from page 1

campuswide position increase was two.

Thorey concurred with UW System President Kenneth Shaw who argues that a fairer comparison of section counts could be made for the period 1984 to 1989 instead of starting in 1986.

There are several other deficiencies in the audit according to Thorey such as: failure to consider an increase in subabi-

ties, failure to consider the unique administrative structure of staffing some courses offered overseas by the Division of Inter-

cational Programs, failure to account for overload assignments which occurred in 1986 but not in 1989, and failure to account for faculty positions committed to implementing courses mandated by the State Department of Public Instruction in the School of Education.

Thorey emphasized that UWSP personnel are "responsible stewards of our resources. While we may not be able to convince some legislators that we are financially responsible, the university's personnel and community supporters should hear why conclusions about use of resources should not be based upon the audit bureau report."

The bottom line in this issue according to both Thorey and Sanders is to provide students with enough sections so they don't get graduated. That is an ongoing goal, they reported.

The FAR SIDE

Out with the old, In with the new

by Ron Wirtz
I-Got-Those-Happy-Feet-in-Chief

One last time. Where does all the time go? I'm still learning to live. I know I have to leave. Progress. Turnover. Evolution.

That bums me out most is the fact that everything seems to go by so fast. You know the feeling you get, right after recess, when your neighbor comes up to you and asks you if your car has been inadvertently parked in a spot where stupid laws say it shouldn't be. We would really appreciate it if you could move it at your earliest convenience. Progress. Evolution. Warped sense of time.

It's an interesting ride, but there comes a time for everyone to get off. But as I step into the great abyss of life, a farm hand up for Sarah and her new staff. Good luck one and all. May your front pages be filled daily! before the ugly monster called education was slain for the season. I always try to keep my merry way - carrying on irresponsibly. However, year by year, one symptom of spring and summer has changed drastically, and that tingle in my stomach has ebbed to only a fraction of its former intensity.

Now that I have made the decision to attend college (I never cease to amaze myself) and the even more incredible decision to attend college (my parents love me for this - they didn't before), I have taken advantage of my gender's stereotype, and changed my mind. When April turns into May, and I walk around campus in the rain with my top quality umbrella blown inside out, it seems all too little to look forward to in finals, and of course, what everyone loves - searching the world over for a summer job.

I haven't been doing too bad this semester, only because I've had Ron's help. Ron who? You ask? Oh, he's the little red-headed guy who has my job now.

Drugs, professors and senioritis

by Sarah Newton
Incoming Foot-in-Chief

Ta-dah! Here I am, your new Foot-in-Chief. And here we all are, faced with another all too familiar round of spring finals exams, and another tear jerking end-of-the-semester farewell.

This time of year used to stir up a special zesty feeling in my stomach. I would realize it was only a matter of weeks (or even days) before the ugly monster called education was slain for the season. I always try to keep my merry way - carrying on irresponsibly. However, year by year, one symptom of spring and summer has changed drastically, and that tingle in my stomach has ebbed to only a fraction of its former intensity.

Now that I have made the decision to attend college (I never cease to amaze myself) and the even more incredible decision to attend college (my parents love me for this - they didn't before), I have taken advantage of my gender's stereotype, and changed my mind. When April turns into May, and I walk around campus in the rain with my top quality umbrella blown inside out, it seems all too little to look forward to in finals, and of course, what everyone loves - searching the world over for a summer job.

No need to worry, though. There is some good news attached to all this drizzle, and I've depressed you with my dismal summer attitude, I apologize. But let's face it, my paw-some about it! I was joshing anyway - I love Summer! But seriously now, I haven't been doing too bad this semester, only because I've had Ron's help. Ron who? You ask? Oh, he's the little red-headed guy that has my job now.

By the time you get out of here, you've become an adult with all the legal, ethical and ontological implications that go with it. Yea, right, as if you have had to deal with just a high-school-diploma job, besides getting drunk and the even more incredible things).

Try to remember that professors and administrators are not above reproach. Having your Ph.D., or Masters or Bachelor degree doesn't mean you're educated. Knowledge is a process, like most "things" in this life, and it leads to wisdom, another process. Your teachers are just people too, no better or worse. They only have pieces of paper and credentials and years of hard work and experience, as you will have or already do have. They are not gods, so don't treat them as such. If you weren't there, they would still be sitting at the desk writing the paper. It's reciprocal, you see? Question those who take offense at the world is printed here, and chances are they have something to protect and hide, but not something to accept or give. Check this hypocrisy out: Some parents and state propaganda apparatuses say, "Drugs are bad," while they use tobacco, drink coffee and have their after-work Martini to wind down, and yet they send their children to universities. Drugs are prevalent here and they too have their uses. But we won't know what good drugs are until we stop labeling them as bad or Class A. Yes, there's enough power in a word or how we perceive words to deprive us of good things as well as protect us from bad things. Nothing is inherently good or evil, no matter how much we will try to think it so.

So as Leary expounded, cajoled, and pleaded, "Just say know." And, students, if you don't like the status quo, do something about it because you're an adult. Obviously, current ways of thinking and acting still produce some problems. Don't ignore your world. We need some eclectic philosophical and a definite end to dichotomous thinking.

Confessions

Yes, it's graduation season. Remember high school during the spring of your senior year and that wonderful infe-

cation called "Senioritis?" Let me tell you something: The time that you think you want to get better at life. I love them? Sounds like a personal
d performance need not be more intense than anything you're likely to en-

counter. It's a unique peak experience.

by the time you get out of here, you've become an adult with all the legal, ethical and ontological liability that the title affords or courses you with, and you can even drink legally at a bar and you can even legally carry alcohol.

They--by the time you graduate, you should be wonder-
ing just who they mean--told you at your high school gradu-

ation you're an adult. Yes, right, as if you have had to deal with being on your own, roommates, poverty, legal entanglements with your peers, landlords, as if you've had to cope with the

very-real-world stress you can taste leading up to and during finals, as if you've had to sit through professors whose dry, lecture delivery styles are stronger than general anesthetics, like you've had to interact with professors who provoke such intriguing philosophical enigmas as "Hmm, is there any new mental activity after tenure?"

I believe that institutions are one of man's bigger goofs. My evidence lies in the fact that in the Pentagon--a group of people working for the Department of Defense, mind you--there is a Transcendental Meditation Club which meets regularly during lunch breaks. Go figure. People are basically nice, and I think that institutions check boxes at the door.

UUWSP is an institution. We are an institution for higher learning and we have forgotten what that means, ask yourself what college is intended for, besides get you a higher-paying-than-

just-a-high-school-diploma job, besides allowing you to get away from your parents and families, besides getting drunk at the square on Thursday, Friday, Saturday, Sunday, and Monday nights.

Try to remember that professors and administrators are not above reproach. Having your Ph.D., or Masters or Bachelor degree doesn't mean you're educated. Knowledge is a process, like most "things" in this life, and it leads to wisdom, another process. Your teachers are just people too, no better or worse. They only have pieces of paper and credentials and years of hard work and experience, as you will have or already do have. They are not gods, so don't treat them as such. If you weren't there, they would still be sitting at the desk writing the paper. It's reciprocal, you see? Question those who take offense at the world is printed here, and chances are they have something to protect and hide, but not something to accept or give. Check this hypocrisy out: Some parents and state
Recycling good but not meeting need

Dear Editor:
I was ecstatic to see the city of Stevens Point putting forth an effort toward recycling. It is an investment that will benefit the entire world. I was astounded to find an article in the March 1991 issue of World Watch that manufacturers’ demand for plastic is running high, but not enough plastic is being collected to meet the need.

The nation is trying to recycle plastic several different ways; from floor cleaners in 100 percent recyclable bottles to fenders on Chrysler vans (possibly) by the year 1992. I was ashamed to find out that the United State throws away more potential resources that any other country with only 12 percent of the municipal waste being recycled according to Miller, 1991.

When the pros (recycling companies willing to pay money, and a better environment for the whole world) outweigh the cons (20-30 percent of landfills are taken up by un-recycled plastics, and a decreasing life span for the planet) how can we not afford to recycle?

The people of the world should start recycling any and every nonrenewable resource and shift to renewable. Let the community of Stevens Point get a head start and provide a future for their future.

Gidget L. Landua

Stop trash dumping

Dear Editor:
From my three years of living in southern California, I have learned one thing, don’t go near the coastal waters! In 1988, the Long Beach Telegram ran an article on the pollution of the local beaches and coastlines. I didn’t believe them, so I went to look for myself at these claims.

They were absolutely correct. There were needles, syringes, broken glass, tin cans, and acidic materials up and down the coast.

I wanted to find out the source of these hazards so I began watching ships go out to dump trash. The legal distance to dump trash from a coastline is 30 miles. The ship I was on dumped trash approximately 22 miles out. Other ships were dumping as close as 14 miles (just over the horizon). Some of the world’s most abundant fishing supplies has been declared hazardous due to toxic waste that has been dumped just five miles off the mid-California coast.

Action has finally been taken to clean up the beaches, but I’m afraid that the problem doesn’t end there. At the base of the problem are the ships that are doing the dumping. Somehow we need to enforce the international laws of dumping. I would like to see more effort put forth by government to adhere to these laws.

Lee Prioz!

Beware of greenhouse

An increase in skin cancer, shift of monsoon patterns, more frequent droughts and forest fires, melting of polar ice caps, and longer time to replenish lakes, to name a few. Essential, pushing ecosystems into a few notches throws entire ecosystems into turmoil.

If the U.S. won’t take modest steps, how can other countries be expected to do so. We act like we’re the leaders in everything else, so here’s our chance to show we care. Energy conservation and reforestation are our only hopes and survival. We can’t put this off any longer, the heat is on and it’s here to stay.

Julie Waldvogel

Care about the earth

Dear Editor:
From an early age we were taught that our individual actions had consequences, some direct and tangible, others abstract and beyond our foresight.

Technology decreases the size of the globe. It makes it easier to have Ethiopia’s starving people, Brazil’s rain forest depletion, India’s polluted rivers in our living rooms. Maybe some people see a connection, East St. Louis’ starving people, North Dakota’s wetlands being drained, and Lake Michigan’s polluted water, maybe some people still see it as half a world away. After seeing these problems globally it may seem futile to attempt to rectify them. As with many problems the more knowledge one has about the better they are equipped to solve it.

As UWSP graduates, potential leaders in a wide range of disciplines that come in daily contact with the environment, it benefits us to become competent not only in our chosen career but, our only environment.

Hold your breath: Ozone season is underway

With the 1991 ozone season underway in Wisconsin, a statewide network of tracking stations for the first time can monitor this problem air pollutant and report the health of the state’s air from now on.

Last November, the U.S. Environmental Protection Agency ranked a six-county portion of southeastern Wisconsin as one of nine metropolitan areas in the country with severe ozone pollution problems. Other nearby counties also experience problem ozone levels.

Since monitoring began more than 10 years ago, ozone levels in Wisconsin have violated the federal health standard of 0.12 parts per million each year, said Julian Chazin, chief of the department of Natural Resources Air Monitoring Section.

"In order for the ozone health standard to be achieved, the ozone level cannot be higher than 0.12 part per million more than one day a year during a three year period," Chazin said.

"Studies have clearly shown that ozone can cause short-term but serious health problems," Jay Goldring

Dept. of Health and Social Services

Ozone, the main component in smog, can cause headaches, diziness, difficulty in breathing and may increase the lung’s susceptibility to infection. It also damages plants, rubber, fabric and other synthetic materials.

"Studies have clearly shown that ozone can cause short-term report high ozone levels, but high concentrations there are usually short-lived, Chazin said.

"Inland sites don’t have Lake Michigan nearby acting as a sink for ozone and the pollutants that form it," Chazin continued.

"These pollutants come from large metropolitan areas to the south. We’ve found that areas more than one hundred miles away from large cities can be affected by ozone."

Wisconsin is also working with Illinois, Indiana and Michigan under the Lake Michigan Ozone Study to study smog around the southern Lake Michigan shore from Door county south to Milwaukee, Chicago, and around the lake as far north as Ludington, Michigan. Researchers are tracking ozone formation in the region from metropolitan areas and ozone transportation via lake winds.

Amendments to the federal Clean Air Act approved in November require each state with an ozone problem to protect the health of residents by developing and carrying out ozone cleanup plans.

Most plans will target automobiles, which in southeastern Wisconsin produce 60 percent of the ozone formed at ground level. New ways of reducing car exhaust in-clude mandating new technologies for businesses with over 100 employees,

expanded vehicle inspection and maintenance programs, alternative fuels for vehicles, reduction of gasoline, vapor recovery systems on gas pumps, stricter tailpipe emission standards and new traffic management plans.

Big talk for potentially dangerous discovery

by Steve Schmidt

Outdoors Editor

Have you heard about the latest environmental gossip, all that media hype about PCB-eating organisms saving our planet from contamination? Well, if not, here’s the scoop as smell as it may turn out to be.

Researchers at a school in Ann Arbor, Michigan say they’ve invented a bunch of deadly, pollutant-eating microbes capable of killing PCB contaminants. WOW! Look at the potential benefits should these bacteria prove to be effective. It would help diminish if not totally eliminate the current process of hauling toxic waste to landfills. This in turn, would reduce the risks of further environmental contamination by spillage or leaking.

Sensibly, the entire process of destroying these PCBs (polychlorinated biphenyls), chemicals found to cause birth defects and cancer in humans, is a combination of aerobic and anaerobic bacterial assaults. Each type does its thing to break down and convert PCBs to carbon dioxide and water.

So far, Michigan researchers have done tests on sediments collected from the Hudson River and have applied to test EPA sites near Sheboygan, Wisconsin. And what’s the outcome?

Well, they haven’t found a way to kill all the PCBs, but they have markedly reduced concentrations of the chemical from

Twenty-two Trumpeter swans were released in northwestern Wisconsin

Art courtesy of WDNR Division of Endangered Resources

The program currently has more than 50 free-flying birds in Wisconsin, with close to 100 birds produced through the program’s activities, Matteson noted.

Outdoors Editor-Effect

Well, this is the last article. Next year I get to edit the entire column. This means that I have complete artistic control over the column. Heh,heh,heh,heh, I have successfully infiltrated the media. You silly human faithfuls probably don’t even know who the Xists are!

What does this mean to you? Fasten your seat belts. You’re gonna see a lot of stuff that will make you say “What? What in

Continued on page 8

300 parts per million to 50 ppm. SOUNDS WONDERFUL, HEY?

Well, say these little suckers are effective in combating PCB contamination. They would surely help clean up our pigsty of watersheds, the ones we so obviously take for granted.

But it sounds to me, however, as if these PCB pac-men are prematurely receiving the red carpet treatment, spoken about as if they will entirely END the PCB areas.

Well B.S. There will always be the danger of toxic substances in our environment, particularly PCBs. Furthermore, I fear this development may possibly increase the amount of undesirable discharged into our waterways.

For decades, we’ve been fighting point-source pollution. And for the most part, its begin to work. But with this current discovery, I predict industry will simply come up with a solution to toxic discharge.

 Heck, if we can come up with a solution to toxic discharge, why do we need to worry about PCBs?

I guess I’d just like to know what happens after PCBs bioaccumulate in these organisms. What’s preventing PCBs from being permanently introduced into the natural food chains of our lakes, rivers, wetlands, etc.? Will fish species be persecuted by bacteria? Will toxins then build-up in these fish and higher level consumers.

Continued on page 8
State fishery resources look bright
Tribal spearing causes no overexploitation

Anglers planning to fish Wisconsin waters in 1991-92 fishing season can be confident that healthy and plentiful fish populations are available to them, Lee T. Kernen, director of the Wisconsin Natural Resources’ Bureau of Fisheries Management, said.

The recently completed Joint Fishery Assessment of the Wisconsin ceded territory confirmed that fish populations are not being overexploited by Chippewa spearfishing, and that most fish populations meet or exceed population goals.

"The Joint Fishery Assessment was based on a comprehensive analysis of the status of the fishery resources in the ceded territory, and concluded fish populations are healthy," Kernen said.

"Sustaining methods of management applied to the fisheries data were state-of-the-art methods and resulted in a sound conclusion after analysis by federal, state, and tribal biologists. In short, the project demonstrated its ability to produce sound fishery assessment and harvest surveys will be completed readily.

"The bulk of the good walleye lakes in the ceded territory have self-sustaining fish populations through natural reproduction and do not need stocking. But stocking is an important tool for those lakes with inadequate recruitment, Kernen noted.

"The new hatchery expansion and renovation work planned will improve fish populations and fishing in hundreds of lakes across the state...” Lee Kernen DNR Bureau of Fisheries Mgt. Director

professor who raised hell when I missed a couple of lectures during the gun deer season. My final schedule is set, and you’re not one of my profs so here it is... "Tend back at the moon... Dork!

Igorrant anti-hunting sentiment is in the minds of many. And ignorance comes in small packages, ya know. Anyway, I’d like to thank all of you who have read my material each week and those who had the guts (but didn’t get the glory) to submit articles and photos. I got tired of boring professors, and material added spice to the outdoors section. Keep up the good work for Buck’s sake.

Thanks goes to Dr. Pete Stigo, Kelley, The Pointer’s senior advisor, who taught me how to use the art of rhetoric (or B.S.) and instilled in me the way of the position, despite thinking... I’m a bigot because of my anti-spearing beliefs. By the way, keep doing the Carpet Fresh commercials, dude. Thanks also to Ron Wirtz, for being a kick-butt editor-in-chief and excepting me all my tribes. And thanks for having the backbone to organize our radical protest against SGA. I’m not the liberal-type, but our counterattack was legitimate, necessary and most importantly, fun.

A special final thanks would be extended for all my dedicated readers who contributed to the heapsing pile of fan letters on my already messy desk. But I’ll save it, because there weren’t any.

So then, my special and final thanks goes to God, the supreme being responsible for working the miracles that allowed me to pass Thursday morning exams even though there wasn’t any time to study because of layout on Wednesday nights.

I also thank him for granting me the self control required to refrain from plugging our $8,000 computer system with five rounds of double-o buck shots when I couldn’t get it to function properly.

Oh ya, I almost forgot, thank you U.S. Tobacco Company in Nashville, Tennessee for providing the Copenhagen stuff that helped me stay awake those long hours in the office when I didn’t have a steady girlfriend. It really does satisfy.

And accordingly, I thank the campus building workers for not bitching... too much, about the chew spit in the garbage cans. Without your support and cooperation, I’d have been S.O.L. a long time ago.

Then to be fair, I suppose I should thank Partner’s Pub for cheap pitchers on Wednesday nights. They topped-off those late evenings, getting out of the layout room was very nicely. By 1 a.m., of course, it’s too late to study and too early to hit the hay.

O.K., that’s it... I’m finished writing. But don’t look so sad... or happy. I just might drop a note or two in next semester’s outdoors section. And who knows what my byline might say...
WISCONSIN FISHING

Fishing in Wisconsin is big business, worth $750 million to the state's economy each year. Wisconsin ranks third in the nation in fishery revenue, with $1.45 billion generated by its 15,000 lakes and streams. About one-third of Wisconsin's 15,000 lakes and 33,000 miles of streams are stocked.

If stocking is done correctly, it can be a very effective tool that can significantly improve fishing in selected waters. The trick is to fish these areas - and that's what fisheries managers do.

I'd like to share a few facts with you about walleye stocking. Wisconsin has 1064 walleye lakes (839 in the ceded territory) and about 350 of them are stocked every year. Like farming, the success of stocking, rearing, and stocking fish can vary widely from lake to lake because of weather and other related factors.

Walleye populations in Wisconsin's top walleye waters average about four walleyes (10 inches or larger) per acre. Stacked lakes typically have less than 2.4 adult walleyes per acre - additional stocking may increase walleye populations in these lakes and improve fishing.

Stocking walleyes in lakes with high natural populations is largely ineffective, but in other lakes where there is a "niche" of fish to be stocked, it can be highly successful. Fisheries managers use survey techniques to determine if the lakes that are stocked can benefit.

The Bureau of Fisheries Management has three major warm water hatcheries and associated rearing ponds. Approximately three million to four million walleye fingerlings (young fish 2-5 inches long) are produced each year from the 15 million walleye fry (newborn fish) that are hatched. With the hatchery improvements backed by Governor Thompson, we will produce another 2.5 million fingerlings.

Usually, the larger a fish can be raised in a hatchery, the higher its chance of survival after stocking.

About one-third of Wisconsin's fishery budget goes to the hatchery program to raise both cool water and cold water fish. A two-inch walleye fingerling costs about five to 10 cents each to produce. An eight-inch walleye fingerling can cost more than $1 each.

In 1988 the state examined over 1500 lakes and streams and found that these lakes do not support a good fishery but can be raised to one of the lakes. Failure rates are lower for lakes with lower survival. Studies have shown that these lakes do not suffer from this egg removal. The water supply system, new ponds, and a hatchery will increase production of extended-growth walleyes and increase water treatment system and wastewater treatment system.

The Woodruff hatchery, which doesn't raise small walleye fingerlings now, will have capacity to produce 375,000 small walleye fingerlings and 15,000 extended-growth walleyes. The improvements will also increase musky production from 45,000 to 75,000 per year.

When all the work is completed, total hatchery production will increase to 2.9 million small walleye fingerlings, 125,000 extended growth walleye fingerlings, 100,000 large northern pike fingerlings (eight-inches or larger), and 125,000 musky fingerlings.

"The work at Spooner and Woodruff won't be done at the same time because the improvements will take each hatchery out of production for at least one year," Ives said. "Statewide production will be maintained through increased production at all other facilities while construction is going on."

OUTDOOR REPORT

Area wardens have seen an increase in the number of anglers cited for littering and ask that you help keep our outdoors clean by properly disposing of your aluminum cans and other trash.

Crappsies are bitting on Lake Winnebago; crappie action is also excellent along the shores, channels and sloughs on Lake Butte des Morts.

Walleyes are biting in the lower Wisconsin State Riverway. The run is not over yet. The latter migration will begin in the next few days. Most of us need a field guide to help us identify the many different species.

Deer and wood ticks are out now. Wear light-colored clothing to make it easier to spot them, and check yourself and your pets after you've been outdoors.

Buck's from page 6

the hell is goin' on here? Crazy stuff. More environment-mental. More carp.
A story. Once there was a boy who went fishing. All he could find was the one pristine aquene environment, where carp and associated rough fish. The boy pondered the situation. Further investigations revealed the source of the problem. In these areas, man's impact on the environment was so severe that only carp, an adaptable species, and other "rough fish" formerly confined to rare cesspools could survive here.

The boy was forced to make a decision: Fish for carp, or fight against seemingly insurmountable odds, clean up the environment and hope for the return of clean habitat species. He decided to do both.

Fishery from page 7

said. "It will include a new hatchery building, water supply, wastewater system and rearing pond construction."

At present no small walleyes are raised at the Spooner hatchery. After project completion, the hatchery will produce 1,455,000 small walleye fingerlings and will increase production of extended-growth walleyes (six-inches or longer) from 35,000 to 100,000. Musky production will increase from 75,000 to 170,000 per year.

The $2.6 million Woodruff Hatchery project is expected to begin in 1992 and will take about a year and a half to complete," Ives stated. "This renovation will include upgrading the water supply system, new ponds, and a hatchery building addition for a water supply treatment system and wastewater treatment system.

The Woodruff hatchery, which doesn't raise small walleye fingerlings now, will have capacity to produce 375,000 small walleye fingerlings and 15,000 extends-growth walleyes. The improvements will also increase musky production from 45,000 to 75,000 per year.

When all the work is complete, total hatchery production will increase to 2.9 million small walleye fingerlings and 25,000 extended-growth walleyes. The improvements will also increase musky production from 45,000 to 75,000 per year.

If the book will not be used on our campus but is still a current edition, we will offer you the amount listed in a used book company's buyers guide. We will be buying these books for the used book company.

The buy back percentages used are the normal standards for the used book industry.

We CANNOT buy back lab manuals, workbooks, annual editions, or books checked out from the Textbook Rental Department. Books must be in good condition. All buy backs are at the discretion of the Bookstore staff.

When shopping for books at the beginning of the next semester, check our stock of used books for the greatest savings. The used books now will be resold for 75% of the current publishers list price.
Central District has arrived. During this period, material such as leaves, grass, and other dry plant material are removed from our soil. As the growing season progresses, these materials dry out and become more flammable. The potential for wildfires is increased. During this time, dead material, such as snowfall to the north, the fire suppressions, and people's desire for outdoor recreation, the potential for wildfires is increased.

During this time of the year, homeowners and property owners are required to obtain burning permits before using fire to dispose of yard waste and other materials. Without a permit, the burning permits can be made to a fire safely. These permits must be adhered to, as a fire that gets out of hand can spread and cause property damage.

Many homeowners are using home burning barrels to reduce their household garbage. Many local landfills are closing, and the construction standards for new landfills are stringent, and the costs for disposal of our waste will continue to increase. In lieu of paying the increased costs of garbage disposal, some people are reverting back to using burning barrels. Here are some commonly asked questions concerning the use of burning barrels.

Is it illegal to own a burning barrel?

Owning a burning barrel is not illegal. The manner in which it is used may be illegal. Section NR 429.04(1)(e) of the Wisconsin Administrative Code prohibits the open burning of waste, combustible rubbish, garbage, oil substances, asphalt, plastic, or rubber products. Burning household garbage in a burning barrel is illegal.

What can I legally burn in my burning barrel?

Only clean, untreated, un-painted, unvarnished wood and cardboard can be legally burned in a burning barrel. Any type of an enclosed container used to hold the material to be burned is illegal. Air openings in the container should be no larger than 1/2 inch, and it must have a cover to prevent hot embers from blowing out. A 55-gallon drum placed on cement blocks, with a cover on it, works very well. Once the drum begins to rust out, replace it. Burning of household garbage has changed dramatically over the last 20 years. Many of the commodities previously packaged in paper or glass containers are now made of plastic. Additionally, many items previously constructed out of wood or metal are now constructed of plastic. When broken or no longer needed, they are discarded into the household refuse.

What makes the practice of burning household garbage in a burning barrel hazardous?

The health hazards from in-combustible products and some are known to cause cancer. Lead is common and known to be very hazardous. Why is the Department of Natural Resources allowing construction of municipal waste incinerators?

Municipal waste incinerators are specifically engineered and operated to minimize emissions of toxic compounds to the air. They operate at very high temperatures to assure complete combustion of the materials burned. Ultra high temperatures are required for volatile compounds to leave the materials. Dioxins and furans are some of the most toxic substances known to man and may cause cancer.

If garbage incineration is so hazardous, why is the Department of Natural Resources allowing construction of municipal waste incinerators?

Municipal waste incinerators are designed to operate at very high temperatures to assure complete combustion of the materials burned. The ash from these incinerators is closely monitored and analyzed for toxicity on a frequent schedule and, at a minimum, is disposed of at an approved, clay-lined landfill.

What are the alternatives to burning household garbage?

Composting is another environmentally sound way to dispose of food scraps, coffee grounds, and other wet rubbish. It can be added to grass clippings, garden weeds and lawn clippings in a compost pile. The compost can then be used next year on the garden or the flower bed as fertilizer. The health hazards from in-combustible products and some are known to cause cancer. Lead is common and known to be very hazardous. Why is the Department of Natural Resources allowing construction of municipal waste incinerators?

Municipal waste incinerators are specifically engineered and operated to minimize emissions of toxic compounds to the air. They operate at very high temperatures to assure complete combustion of the materials burned. The ash from these incinerators is closely monitored and analyzed for toxicity on a frequent schedule and, at a minimum, is disposed of at an approved, clay-lined landfill.

What are the penalties for burning household garbage?

If you have a burning permit to burn in your barrel, you can still be arrested for burning wet rubbish, plastic, asphalt, oily or rubber substances. Your burning permit only authorizes you to burn clean wood or wood products.

By burning any other materials, you will be burning without a permit, which carries a maximum fine of $91. In addition, you can be referred to the Attorney General's office for violating the state air pollution laws. Forfeitures for that range from $50 to $25,000 for each violation, depending on the severity of the violation.

Protecting our natural resources is not only the job of the Wisconsin Department of Natural Resources. It is the job of every individual. Therefore, we are asking for your cooperation in following the burning laws and regulations. We understand that burning is sometimes easier and cheaper method of disposal, but the long-term effects of burning illegal materials are extremely dangerous to our environment.

YO, YO, YO, HOMEOOOOOYYSSS! The Pointer Staff is out of here! But a whole new set of fools will be here next year to torment you! Good luck Sarah Newton and Posse in the 1991-92 school year. Never use the word Poontang!

Looking both ways before graduation

by Julie Akper

Features Editor-Elect

It's that time of year. The last week of classes and the pre-stress of finals is upon the student body of UWSP. The rumor of spring has people scoring a few points at Ivenor or wearing shorts and hoping their legs don't look too white. Well, believe me, I've seen them and most of you look like Casper the Friendly Ghost.

For about a thousand students, graduation from this institution is more than just around the corner. Its on the front porch and knocking on the door. The senior's man....its Chancellor Sanders with a diploma that has your name on it. Your full name.

If you're not graduating, you know someone who is. People are leaving friends, enemies, girlfriends, boyfriends, yes, even the Bruiuser's scam who looked so hot after a few, but the next morning needed you visit from "The Doctor," Dr. Migliucci.

The list of grad's goes on, students we fondly know as "Shank," "Tits," and "Hormone" are busy filling out their senior survey and paying $15 for their polyester/poofy satin Saran Wrap gowns and multicolored tassels. By the way, those pink ones have to go. Expectation will soon be complaining of hat head from their motorboats and hoping Aunt Ethel remembers them with big bucks.

At this point, I'm anticipating the "Dominion" year and very happy for now to sit on the sidelines of the Sundial. At least for a while, I'm satisfied not to receive a price of paper which represents years of studying, finals, stress, stress, stress and more stress. So instead of preparing for a big farewell, I offer you students a rare view of a quickly vanishing breed...the graduating senior.

An informal survey of future alumni at numerous social gatherings and finer Stevens Point drinking establishments has given me a good evaluation of graduating's feelings on the subject of entering the "real world." All deviations aside, either you're a "Counter" or an "I Can't Believe I'm Graduating" (known as ICC-BIGs).

Counters are those students who at any minute of the day can give you a hourly countdown till May 19. "Not 12 days, 3 hours, 15 minutes and 2 seconds until Grad Day!" they say with a grin. Counters start their countdown the first day after we get back from Christmas break and become increasingly focused on the phrase "let's blow this popplete stand." Discussion of salaries jobs, not required uniforms or serving food is the Counter's eye glaze over and encourage them to mumble about life insurance and dental plans. Tired of studying for nonapplicable classes, Counter start to run fearing niles on "power ties" and sport Beaver Cleaver haircuts. These future yuppies will tell anyone who will listen, that THEY are buying the first round at Partner's Homecoming festivities.

After all, by that time, they'll be pulling down $40 G's at least...once they start working for IBM.

On the other side of the bar stool, are the ICC-BIGs, usually in tears. As their name suggests, these poor students don't want to grow up and face life past the door of Ella's. Necessities of the real world such as getting up at 8 a.m. breakfast meeting or staying in on Wednesdays make the ICC-BIGs start to consider grad school as a last option. Three semesters of credit overload taunt them, so the clock ticks away the last of after bars, Billy Joel sing a longs, and late night Hot N Now olive burger munches. "Why was I so stupid and actually found a major I liked?" they ask. "Why didn't I continued on Page 21

A professor's greatest compliment

crude for IBM.

The class meets three times a week, Tuesday, Thursday, and Friday at 10 a.m. The walk is a long and cold one that seems to last an eternity. There is, however, a strong pulling sense that gets you to go to the every day. This pulling sense is brought on by the man at the head of the class, the right. Once you get to your distant destination, a feeling of relief and relaxation fills your body. You feel that all is right with the world and peace is everywhere.

As you near "the room," you can picture the faces you'll see and the places they'll be sitting in. No face is more prevalent in your mind, however, than that of the man at the head of the class, to the right.

Tuesdays are filled with the experiences of reading and hearing everyone's stories from the week before, with outstanding readings by "our leader" (he's not sick). These days are looked forward to by all, not only to hear our stories read aloud, but to hear the outstanding and hilarious comments made by "our leaders" sidekick, Art. (We also like to see who wins the weekly wager on whether or not Art will show up.)

Fridays are days of low attendance due to the Thursday night bashes, but they are also the days for the "Pointer Protocols," or the "Pointer Praises." This day belongs to us as we are in charge of the discussion. These days are sometimes slow as those of us who are there are either too hung-over to function.
Psychology Awards

A 69-year-old grandmother is the recipient of this year's 1991 Albert Harris Award as the senior with the highest grade point average in psychology at UWSP. Dorothy Rogers, 3200 Water St., Apt. 127, was honored at the psychology department's 11th annual awards program and banquet April 18 at the Hot Fish Shop. She received a certificate and a $25 check, and her name will be engraved on a plaque that is displayed on campus.

The award caps a long list of citations received by Rogers in the past year. She was given a Senior Merit Award, Academy of Letters and Science Achievement Award and became a recent inductee into the Honor Society of Phi Kappa Phi.

Rogers, who grew up in Schofield and graduated from high school in Wausau in 1939, says she had a lifelong goal of attending a college or university. However, she recalls that her mother discouraged her and suggested instead that she study commercial subjects to ensure her future employability in offices.

After raising her family and having a career as an accounting and personnel administrator at what now is Qualex Inc. photo finishers here, she has spent her retirement as a regular UWSP student.

Her plans following graduation next year are to pursue graduate study in counseling psychology and to eventually obtain a Ph.D. "At my age, I was told I'd have a better chance getting a job if I have a doctorate," she said matter-of-factly.

She has gained considerable experience in her field as a volunteer since becoming a student. Her involvement has been as a writing tutor in the Academic Achievement Center and as an intern at the Family Crisis Center, where she facilitates a women's support group.

Rogers is one of more than 1,300 undergraduates beyond the age of 25 who are classified as non-traditional students. This population has grown by about 100 in the past five years.

"Students like Dorothy Rogers add much to the diversity of our university," said Chancellor Keith Sanders. The challenge of UWSP nowadays is to not only serve the needs of the vast number of traditional students but those who are far beyond the age of 18.

Another local student, Heather Gotham, 3925 Jordan Lane, a graduating senior, received an Academy of Letters Award. Continued on Page 14

It’s A Staff Poll

Kris, What do you have to say about locker room interviewing—barring women from them sexist? If not, is it a good time?

Attnotion poets and peacemakers

The International Society of Poets (I.S.P.) is accepting poems for its “World’s Largest Poem for Peace.” Anyone may contribute to this worldwide effort. Responses have already been received from President Bush and nearly every governor.

The World’s Largest Poem for Peace, a document expected to be longer than several football fields, will be presented to the Secretary General of the United Nations following the Society’s August 16-18 National Poetry Symposium in Washington D.C.

In addition to this literary donation, I.S.P. will donate ten cents to the United Nation’s International Children’s Education Fund (UNICEF) on behalf of everyone who shows support for world peace by submitting a poem.

To be a part of this monumental effort, send one original poem (20 lines or less) to: World’s Largest Poem for Peace, P.O. Box 627, Owings Mills, Maryland 21117.

“I’d have to say that if I was married to a professional athlete, I wouldn’t want a woman to run around in the lockerroom. As far as a good time, I’d say that goalse are a darn good time!!

Professor exhibited

A member of the art and design faculty at UWSP is showing one of his works in an exhibition at the Milwaukee Art Museum.

Professor Daniel Fabiano’s pencil and ink drawings “Steel, Plastic, and Sky Series No. 1,” are part of a continuing show, “Ideas/Images: Wisconsin Art,” which opened recently in the Cadby Gallery of Wisconsin Art.

The drawing is part of a series, “City of Sculptures,” funded by a grant from the University Personnel Development Committee and reflects the artist’s interests in communities, fast movement and architectural structures. He says this combination represents a blending of the past and present. They have been frequently juxtaposed in large cities he has visited.

Recently, information about Fabiano’s work and career were included in a new book, “American Artists: An Illustrated Survey of Leading Contemporary.” In addition, two of the artist’s drawings from the series were chosen for inclusion in the annual Beloit and vicinity exhibit at Beloit College’s Wright Museum of Art.

Spring weather?

by Bill Horbach
Contributor

Well, I’m sitting at my house looking out into the beautiful spring night when out of nowhere, I’m awakened. Oh, I was only dreaming again. Then I get out of bed to take a look outside but outside is nothing like my dream. The weather outside is miserable.

I thought spring was actually here a while ago, but guess I was mistaken, it is Fall. Fall, what? Does this mean that I’ve missed summer? I’ve heard all about this weird thing that happens as you get older that everything seems to go much faster, but this is ridiculous.

Boy, was that a great summer? It was so much fun I hardly remember it. Not to mention how fast spring went this year also. I must really getting older in a hurry.

My whole gripe today is this crummy weather. It’s supposed to be nice enough to go frisbee or have a softball game. It’s so bad out there I was seriously debating whether it would be in my best interest to brave the elements and attend class.

So, I got out my winter clothes and here I am. Boy it was nasty out there. Maybe I’ll just go back to sleep and dream about the warm sun and hanging around outside backing in its warm glow. What was that? Oh, thunder and lightning! What is going on out there? Even my dreams have crummy weather, what next?

The Big Chill at UWSP
by Victoria Christian

People have got more on their minds than just finals -- and that's what makes this last week hell.

For the freshmen out there, you don't realize how much you will miss everyone you've met, drinking too much and gotten close to, in the past couple semesters. But you will soon find out.

Sophomores and juniors know the feeling of having to return home to parents, summer suddenly stretches much too long.

Many seniors are freaking out! Along with final exams, they're graduating. They now must become a member of that dreadful club, "The Real World," and begin the search for a "real job." They're leaving behind many friends and tons of college memories and beginning a new phase of life.

Everyone, students and professors alike, will breathe a sigh of relief when finals week is over, but it is also a sigh of sadness. Friends, lovers, boyfriends, teammates, when it's all over and everyone is gone, summer suddenly stretches much too long.

Because for all the passing and moaning we do about classes, exams, and homework, we love college. We love the sporting events, the parties and most of all the people that help us make it through the toughest stretches much too long.

The 1991 Venus International Pageant is an International Model Search for Miss Venus International 1992. There will be preliminary pageants held throughout the United States, Canada, and the Caribbean! Each location will choose a Finalist who will go on to compete in the International Finals in Mid-September. There will be a Pageant Series beginning Thursday, June 20th at:

Baseball ends season third in WSUC

By Kris Kasinski
Old Sports Editor

The UWSP men's baseball team completed their season with a double header last Friday against UW-Whitewater and a double header Tuesday against UW-Oshkosh. The Pointers split with Whitewater and were swept by Oshkosh. These games brought their overall record to 12-18.

UW-Whitewater 5
UWSP 1

In the first game of last Friday's series with the Warhawks, Whitewater jumped out to an early lead, scoring once in the first inning and three in the second, and they never looked back. The Pointers only run came in the fourth inning. Whitewater's fifth run came in the sixth.

The Pointers had four hits on the game against Whitewater but five errors.

Leading hitters for the Pointers were Bill DuFour, 2-3, Matt Kohle, 1-3 with a double and an RBI, and Ken Krug, 1-2.

Scott Eckholm suffered the loss for the Pointers, pitching six innings, giving up five hits and five runs, walking six and striking out five.

UWSP 7
UW-Whitewater 2

The second game proved to be much better for UWSP as they regrouped to beat the Warhawks 7-2.

It was the Pointers this time jumping out to the early lead, scoring once in the first inning and three times in the second inning. Whitewater closed the gap to two after scoring one in the fourth and in the fifth, but the Pointers crossed the plate two more times in the sixth and once in the seventh to secure the win.

Leading the way for the Pointers was Brian Brown going 2-3 with one run scored and two RBI's. Don Radomski went 1-3 with two RBl's, Rick Wagner went 2-4, and Russ Belling was 2-4. Also coming through at the plate was Shawn Timm, 1-4 with two runs scored, four RBIs, and two walks.

In the 100 meter dash of Point finished sixth in the 100 meter dash with a time of 11.27 seconds. In the same race, Bill DuFour placed eighth with a time 11.32 seconds.

In the 400 meter dash, Point Dean Bryan came in first place with a time of 47.62 seconds. Marty Kruikman finished eighth in the same event with a time of 50.87 seconds.

Chris Larson placed third in the 110 meter high hurdles with a time of 15.19 seconds. Tim Bristow and Todd Skarban finished sixth in seventh respectively with 15.51 and 15.55 seconds.

In the 400 meter hurdles high hurdles Larson came in fourth and Dave Voyak sixth. Larson had a time of 55.46 and Voyak had a time of 55.95 seconds.

Women

The women also traveled to Oshkosh to participate in the 20th annual WWAC Outdoor Track and Field Championships. The women fared better than the men placing third in a field of eight with 71 team points. Oshkosh came in first with 237 points and La Crosse came in second with 182.33 points.

Both Mears of Stevens Point came in first place in the javelin with a mark of 121 feet and 2 inches. In the triple jump, Sarah Sonnenmann placed fifth with a mark of 39 feet 6 inches.

Mears finished second in the shot put with a mark of 46 feet 6 inches. Kaye Demer got ninth by throwing 39 feet 6 inches.

In the 1500 meter run, Point Marnie Sullivan came in sixth with a time of 5:42.21. In the same race, Tina Jar captured eighth with a time of 5:00.8.

The 10,000 meter run had Swiss Jandrz of Point come in third with a time of 39:21.70. Sara Salaz finished second in the 100 meter dash with a time of 12.59 seconds. Julie Greco got fifth with a time of 12.90 seconds.

Salaz placed third in the 200 meter dash, timing at 26.68 seconds. Greco came in fifth in the same race with a time of 26.89 seconds.

In the 400 meter dash, Amy Voight of UWSP timed at 59.47 seconds to come in third. Tami Langton participated in the 800 meter dash and came in third with a time of 2:18.94.

In the 400 meter relay, Stevens Point placed third with a time of 49.53 seconds behind La Crosse and Eau Claire. In the 1600 meter relay race Stevens Point also came in third with a time of 4:03.30. La Crosse came in first and Oshkosh second in the race.

Softball ends with leadership

by Kris Kasinski

Sports Editor

The UWSP women's softball team finished their season under first year coach Sharon Stellwagon with a fourth place finish in the WIAC and a 10-23 record overall. Leading the Pointers in the conference tournament were Ellen Paul and Lisa Mortensen, as they were named to the All-WWIAC team.

Leading the Pointers in offense throughout their 33 games this season was Kelly Anklam. Anklam, in 33 games and 96 at bats, had 31 hits, 18 RBI's and 10 runs scored for a batting average of .323. She had a slugging percentage of .438. She had five doubles, three triples and walked 12 times and struck out 6 times.

Tina Peters was second at the plate for UWSP, with 31 hits, 16 RBI's and 15 runs scored in 99 at bats. She had three doubles, four triples and one home run for a batting average of .333 and slugging percentage of .455.

Adriene Krueger was 13 of 42 on the season for an average of .310 with a slugging percentage of .500.

Michelle Krueger followed Carwright with a .302 batting average and .344 slugging percentage. She was 29 of 96 in 31 games played. Leading fielders for the Pointers were Michelle Krueger, Kelly Anklam and Adriene Carwright.

On the season, the Pointers hit a .254 average with a .352 slugging percentage. The Pointer pitchers had an overall ERA of 3.34, while their opponents had an ERA of 2.40. The Pointers had eight double plays and left 217 on base.

Points of Interest from '90-'91

** Pete Lucas, a two-time All-WSUIC and an All Americans offensive tackle in 1990, became the second Pointer football player to go in the NFL draft, held in April. Lucas, 6'4, 320 pounds, was taken in the tenth round by the Georgia, the first week of May.

Last season, Quarterback Kirk Green Bav Packers.

The 1990-91 Pointer basketball season officially ended on Sunday with the annual banquet. The team honored senior Captain Chas Pronschinske, both members of the NCAA Division III National Champion Pointer Hockey team, joined a select few when they were both invited to the United States Olympic Team Hockey trials. The Olympic Trials also serves as the hockey portion of the U.S. Olympic Festival.

** The new Health Enhancement Center on the UWSP campus will be the site of the 1992 NCAA Division III Indoor Track and Field Championships. The meet, in mid-March of next year, was awarded to UWSP this past winter.

** Todd Chin and Paul Carfield, both members of the NCAA Division III National Champion Pointer Hockey team, joined a select few when they were both invited to the United States Olympic Team Hockey trials. The Olympic Trials also serves as the hockey portion of the U.S. Olympic Festival.

** Deadiine

No textbooks will be accepted after 4:00 p.m., June 3, 1991. After this time students will be required to purchase all of their texts at FULL PRICE and pay a $3.00 late fee.

** Deadline for late book return is June 3, 1991. The University Store will be open Monday through Friday from 8:00 a.m. - 4:00 p.m. Books will also be accepted by mail. A $3.00 late fee will be charged for all overdue textbooks.

Basketball players honored

by Angela Laun

Contributor

The 1990-91 Pointer basketball season officially ended on Sunday with the annual banquet. The team honored senior Captain Chas Pronschinske, the most valuable player, the best free throw percentage shooter, and the leader in assists. Pronschinske is the second best player in Pointer history in this category.

Jon Julius, a third year Pointer, led the team in scores, rebounds and field goal percentage. Julius also became a member of the Pointer 1000 point club this season.

The most improved player of the season was Mike Harrison, who was also named WSUC player of the week early in January.

The shot block leader was second year Pointer Jack Lothian. Vince Nichols led the team in steals, and Buck Gehm was awarded newcomer of the year.

The ushering in of
Julie Apker
from page 10

realize what I was doing to myself by being responsible? The only way to dry their tears is with a hard boiled egg and stories of the good ole days when you guys toilet papered the dorm when you were freshmen...with used toilet paper. The Ick-Bugs don't want to go, but they must, for student loans are beckoning to them. Resumes must be written and networking done. The time has past when wearing sweats and a Miller Lite cap to a job interview was acceptable. The guy interviewing them was probably dressed the same way.

So where do these philosophical observations leave the ongoing UWSP student? Basically, jis a message, to be aware or beware of these type of graduating animals, party or otherwise. Be kind in your deeds and words to both, because G-day will happen to everyone. The ushering in of our lives is with a hard boiled egg and stories of the good ole days when you guys toilet papered the dorm when you were freshmen...with used toilet paper. The Ick-Bugs don't want to go, but they must, for student loans are beckoning to them. Resumes must be written and networking done. The time has past when wearing sweats and a Miller Lite cap to a job interview was acceptable. The guy interviewing them was probably dressed the same way.

FINAL EXAMS

Nature: A tool to cherish
by Nilesha Timbadia
Contributor

A herd of deer, beautiful birds, a few bears, a couple of skunks, a badger, an ice cold stream, little towns, large farms, Holstein cows, friendly wisconsinites, distant drumlins, dry fields, a flock of geese and a million stars on a clear night sky. These are some of the experiences that will remain imprinted in my memory of Wisconsin.

Nature is a very interesting part of earth. It never abuses but is always abused. It never destroys but is always destroyed. Also, nature provides us the sustenance, serenity and peace in our lives.
